ERRATA.

P. 121, col. 1, line 6, for "Fredrich," read "Friedrich."
P. 147, col. 2, line 14, for "M. B. Slingerland," read "M. V. Slingerland."
P. 175, col. 2, line 65, for "Points" read "Pints."
P. 220, col. 1, line 70, for "truths" read "breaks."
P. 220, col. 2, lines 22, 23, for "Rabbi Ben Ezra" read "Karshish."
P. 259, col. 1, line 48, for "father" read "brother."
P. 259, col. 1, line 49, dele "these and."
P. 259, col. 2, line 1, dele "were schoolboys."
P. 259, col. 2, line 2, for "Schumann not" read "Schumann were not."
P. 310, col. 2, line 8, for "Gerbert" read "Gerhart."
P. 335, col. 2, line 41, for "Revista" read "Rivista."
P. 361, col. 2, line 36, for "and" read "which is."
P. 361, col. 2, line 52, for "Revista" read "Rivista."
P. 369, col. 3, line 54, for "Ressegna" read "Rassegna."
P. 558, col. 2, line 32, for "external" read "eternal."
Vol. LXXXVII, p. 586, col. 2, line 49, for "Tela tirata" read "lacis."

The Nation.

NEW YORK, THURSDAY, JANUARY 7, 1909.

The Week.

In the press dispatches summarizing the decision of the Supreme Court, in the 80-cent gas case, several large principles stand out, as they doubtless will in the complete opinion. The power of the State to regulate public-service corporations is implicitly affirmed in the broadest way. There is no limit, except that of confiscation of property. But it is not enough merely to allege that a given measure will be confiscatory in effect. The fact must be proved. That the Consolidated Gas Company had not clearly demonstrated that gas at 80 cents would deprive it of a due return on its capital, is the main reason assigned by the Supreme Court for dismissing the injunction of the lower court against the enforcement of the law. As to what is that reasonable return upon capital into which no Legislature can cut, the court fixed no rule. According to the decision, the rate may vary according to time and locality. The court suggests, in this particular case, 6 per cent. But what is its capital? That was the very point hotly in debate, both before the Legislative committee, the Master who heard evidence, and Judge Hough. The company claimed property worth $90,000,000. The Master cut this down to $83,000,000, and Judge Hough further reduced the sum to about $60,000,000. On this matter, the Supreme Court makes no pronouncement in its decision. It does, however, fix one or two principles governing the proper estimate of capitalization: "The rate proposed must be with reference to the value of the property at the time when the rate takes effect." That is to say, the gas company is entitled to a due return, for example, on the land which it owns, and the return must be upon the present value of the land, not merely upon the sum which was paid for it. This principle, if applied throughout to plant, mains, etc., would make the cost of reproduction, not necessarily actual investment, the standard of valuation.

One vexed question remains—the capitalization of the company's franchises. These the court allows, or appears to allow (we must wait for the full opinion), as fixed by the constituent companies themselves, at the time of consolidation, namely, $7,781,000. At any rate, the court says that such a valuation having been made "pursuant to the statute," "the State should not now be heard to question the value of the franchises." But the court is careful to limit itself to the particular case before it. The questions respecting the capitalization of franchises in general it expressly leaves "undecided." But these questions are of the highest importance. If a public-service corporation can go, "pursuant to the statute," and fix any value it pleases upon its franchise, then the public is helpless—except in one way. It cannot by legislation compel lower rates from the company, for to do that would be to confiscate its property, if a swollen valuation of its franchises is legally a part of that property; but it can construct parallel enterprises of its own. Lax permission to capitalize franchises, at inflated values, is then a direct encouragement to municipal ownership. That was doubtless in the minds of the framers of the New York Public Service Commissions Law of 1907, when they forbade the capitalization of franchises altogether. That, of course, governed only the future; but it is plainly desirable that the same principle should be applied, so far as possible, to corporations organized before the measure of Gov. Hughes became the law of the State. The new era upon which the States have entered in regard to regulation of public-service corporations promises to be a long one, filled with interesting and beneficial experiments. With the way for them now fully opened, legally, the idea of municipal and government ownership should recede further and further into the background.

The President's versatility and supple political talent come out once more in the special message on the Secret Service which he sent to the House of Representatives. Throughout, he roars with a most welcome gentleness. His words give the lie to the stories from Washington that Mr. Roosevelt was spoiling for a fight with Congress; that he was "collecting ammunition" for a savage bombardment, out of which many Congressmen would emerge badly hurt. The actual bombardment turns out to be only with cotton wool. The President is both soft-spoken and grieved. He has been misunderstood. Nothing was further from his thoughts than to charge Congress or any members of it with corrupt motives or acts. Let him explain. What he said was true, as intended, but had been misinterpreted. Anyhow, he begged Congress to join him in letting those unhappy bye-gones be bye-gones, and in striving to reorganize the whole government detective service so as to make it a real terror to evil-doers. The message thus conceived may be taken as an apology, a plea in abatement, or a clever bit of tactics. All depends, we should say, upon the temper of Congress. If disposed to meet Mr. Roosevelt half way, it could drop the whole matter with a resolution of satisfaction that the President had not meant what his words seemed to mean, and intended no insult to Congress. But this is hardly to be expected. The feelings of Congressmen were mightily stirred up by Mr. Roosevelt's original language, and further action may be urged as necessary to vindicate the wounded dignity of Congress.

Mr. Taft has again expressed his ardent hope that the South may soon begin to divide on political lines, like the rest of the country. It is plain that he means to make the breaking up of the solid South a main policy of his Administration. He said on Saturday that he plans, early in his term of office, to visit the leading Southern cities. Beyond doubt he will get the heartiest of welcomes. The South takes to him personally, and likes his political ideas. Just now it is peculiarly effusive, partly because it looks upon him as a guest, and partly because it is glad to show how much it dislikes Bryan. The opportunity of the next President, therefore, to do something to bring about more normal political conditions in the Southern States, will be inviting. It will, however, have its perils. Mr. Taft has already shown, by his letter on the Maryland suffrage proposals, that he is not ready to consent to injustice to the negroes in order to curry favor with the South.

It is to be hoped, also, that he will not allow appeals to be made, in his name, to the cupidity of Southern protectionists, or to the itch of office-holders. Getting office is what is really meant by many when they talk about restoring to the South her old place in "the councils of the nation." But if, avoiding all these political pitfalls, Mr. Taft shall be able to make Southerners see the folly of always voting one ticket, he will have deserved well, not only of the South, but of the whole country.

It is good news that C. P. Taft has been induced to forego his aspirations to enter the Senate. Not only Ohio, but the country, is to be felicitated. If Senator Foraker was to be displaced—and that was inevitable—it was incumbent on the State to select a successor who should have something like his ability. Apparently, this truth has finally penetrated the minds of the powers that control the Republican organization of Ohio. This means the election of Congressman Burton. His success will be a great victory for public opinion over the machine; for it is clear that, while the bosses, big and little, were against him, the people of Ohio were for him. Not the least hearty congratulations are due to W. H. Taft. He will be freed from that most serious embarrassment—having a brother near the throne.

The Senate's approval of the bill appropriating $400,000 for the purchase or erection of a building in Paris, to be used as a residence for the American Ambassador, means, in all probability, that within a reasonable time the United States will own embassies in all the important capitals. From many points of view this is altogether desirable. The strongest argument in favor of the change is that it will enable the American diplomats to live in accordance with their station and the custom of their diplomatic associates. By relieving them of the added expense, it may be, too, that we can lure back into the diplomatic service men whose chief distinction is not their wealth.

The designation of Rear-Admiral Capps, the chief naval constructor, as acting head of the bureau of steam engineering in the Navy Department is the first step toward that consolidation of bureaus which has so long been needed. It is final proof of our contention that many reforms could be accomplished within the Department wholly without legislative aid or authority. Eventually, there should be but two bureaus, one of *matériel* and one of *personnel*, and then the Department will be organized more like a private business of the same scope. We cannot, however, help feeling some regret that the discredited chief naval constructor should be the one to inaugurate the system. His blunders in the construction of our recent battleships and his obstinate standing by these blunders, in the face of the prevailing sentiment among naval experts, make it unfortunate that he is to be the link between his own bureau and that of steam engineering, which is manned throughout by line and generally by sea-going officers. When the cruiser Yankee went on the rocks last autumn, Mr. Capps conceived the brilliant idea of floating her by pouring cement into her until the holes were covered. But he and his subordinates failed to ascertain that a jagged rock projected into the Yankee's hold. After cement worth $125,000 had been emptied into the boat, it was discovered that the total effect had been to cement the Yankee to the rock, and Mr. Arbuckle's wreckers had as their first duty the undoing of this folly. If this is not a scandal of magnitude, what could be?

The inaugural address of Gov. Hughes was no perfunctory affair. It revealed the fact that he has been reflecting deeply upon the nature and needs of the government of this State. The Governor did not, it is true, anticipate the recommendations of his message this week, but he gave the general outline of his programme, and a distinct intimation of the spirit in which he means to carry it out. Not greedy of power, he yet will not shrink from the full responsibilities of his office. In his quiet statement that the Governor is the representative of the people, and that, "in common with all representative officers, it is his privilege to justify his position to the people to whom he is accountable," there is evidence that he will take no backward step in his plan of going to the people, if the Legislature will not heed. Nor were the Governor's powers of analysis ever better applied than in his description of the real reason why it is desired to keep control of the party in the hands of a snug little close corporation. It is, said Mr. Hughes, in order that the domination of selfish interests may be made easy, and that protection may be given to "those who find profit in law-breaking." The entire address was in the Governor's best vein of seriousness, with an edge of vigor that undoubtedly portends further valiant efforts on his part to render, in his own words, "loyal service to the people."

As truth will come out even in an affidavit, according to the saying of an English judge, so it sometimes comes out in a public document. House Document No. 1,208, of the present session of Congress, contains the correspondence leading up to the appointment of an American delegate to the recent International Copyright Congress at Berlin. In pointing out to the Secretary of State the fact that the United States had no right to be represented, because we have not adopted the Berne Convention relative to literary property, the Librarian of Congress suggested that this government regard itself as a "non-union participant." The phrase falls pat with current terminology. It seems to make us a "scab" among the nations, in the matter of copyright. Unfortunately, that is very much what we are. The leading civilized nations have formed a union to protect literary and artistic property, but we have refused to join it. Under labor-union practice, they are entitled to attack and outlaw us; but instead of that, they are courteous enough to receive us at their Congresses as a "non-union participant." Their hope undoubtedly is to kill us with kindness, or lead us to see the error of our ways and adhere to the Berne Convention with the rest.

Full accounts of the meeting in Bath, Maine, last week, in behalf of Charles W. Morse, show it to have been an extraordinary outpouring of the best citizens to testify to their regard for a convicted criminal. The Mayor of the city presided, and merchants, shipbuilders, and bankers were present to prove their undiminished confidence in "a most loyal son of Bath," "in his hour of trouble." The resolutions from which these phrases are cited, are a remarkable hodge-podge. They recite that Morse

was "innocent of any criminal act or intent," but at the same time, ask only that the reviewing court give him "the benefit of every reasonable doubt," and free him, if possible, from a "disproportionate" sentence of fifteen years, which, "to a man of Mr. Morse's age, is practically a life sentence." But the underlying sentiment is the really significant thing. Mr. Morse has been good to Bath, therefore he cannot be a bad man. In short, all moral and legal principles are to be lost sight of, when it is a question of "sympathy." A set of burglars passing resolutions in the interest of a "pal" could not be more indifferent to law and justice than these eminent citizens of a New England city. The least they can do is to refrain from any criticism of labor leaders, or any other class, who seek to have orderly legal process set aside, because it hurts their friends.

One of the worst of literary offenders is the critic who drags up out of the gray sink of oblivion men and books of no importance to current life. He is fairly open to protest, even though he revives a few pleasant things, as Walter P. Eaton has done while resuscitating Frederick Goddard Tuckerman in the January *Forum*. This Massachusetts lawyer of the mid-nineteenth century did not sing for the world. He cared so little to please that he neglected the elementary technique of his art. His admirer says there is not a perfectly formed sonnet—let alone a perfectly conceived one—in his one thin volume; and the sonnet was his favorite medium. Often he surrenders rhyme and rhythm. His messages are primitive: the old love of sunsets and rain, the puzzled pain over life's mysteries, grief for a departed wife. Almost every line is the voice of a simple nature-lover humming to himself in his garden, while, far away to the South, the civil war rages. There is scarcely a thought that has not been sung a thousand times before and since more exquisitely. On this score Tuckerman himself was probably not deceived. Humbly he accepts oblivion in the Berkshires and learns to like it, almost to pray for it:

> I walk, unknowing where or why;
> Or idly lie beneath the pine,
> And bite the dry brown threads, and lie
> And think a life well lost is mine.

Shall we not let him be well lost? Between gentlemen, it is worse than rude to tear the winding sheet from a decently interred minor poet. It is unfair to the singer himself, and still more so to latter-day readers. The limping sonneteer, the echoer of platitudes, may have been a delightful gentleman; his conversation or his intimate life may have revealed a soul above stanzas; but, revived in a later age, he falls an easy prey to the critic, the historian, or—most dismal!—the sentimentalist. Better for his good name and peace, had the spell of forgetfulness never been broken.

Lord Cromer has been trying hard of late to show wherein the recent nationalistic stirrings in Egypt differ from those in Turkey, which have been so welcomed by the English people. Not long ago, at the time when several natives were executed at Denshawi for an attack upon British officers, Lord Cromer said that the basis of the trouble in Egypt was not political but religious; that the agitators aimed at Pan-Islamism, and therefore were to be repressed unless the situation of all Christians in Africa was to become dangerous. But to-day Lord Cromer avers that happenings in India, Persia, Turkey, and Egypt bear out an old prophecy of his that "intercourse with Europe would cause the bond of nationality to be substituted for that of religion." So it is a matter of nationality rather than of religion, after all. More than that, Lord Cromer thinks now that the first effect of the popular movement in Turkey has been to discourage the Pan-Islamists in Egypt. That is, a realized desire for self-government and a constitution in Turkey has not stimulated that dangerous fanaticism which was to make every European in Africa sleep upon his arms, but has weakened it. As the Manchester *Guardian* points out, the net result upon Egypt of the Turkish upheaval is that the "demand for popular reform has been strengthened and the stock European objections to it weakened."

Lord Cromer insists, however, that the difference between conditions in Turkey and Egypt, is that the "Turkish movement was based on solid grievances; the Egyptian on sentiment." But there was a great deal of sentiment in the uprising of the Young Turks—a sentimental desire to have a voice in their government, and it is precisely this same sentiment that is causing the stirring in Egypt. The only difference is that in the one case the Turks were misruled by Turks, while in Egypt the people are well ruled by the British. Human nature is so constituted, however, that people of all climes prefer being plundered by their own, even if it be a Tammany Hall, rather than being well-governed by lordly persons of a different race and religion. That view does not suggest itself to Lord Cromer; but it is the secret of the Egyptian unrest, if not of that marvellous aspiration for modern institutions throughout the East, an aspiration which, because of its essentially democratic character, has such a great promise for all the world. Lord Cromer goes so far as to declare that he would become an ardent Egyptian constitutionalist at once if somebody could "show him a prospect that an Egyptian constitution could be created which would truly represent the views and interests of all the inhabitants of the Nile Valley," safeguard the rights of Turkey, and inspire the confidence of Europe. Well, in the light of recent events such a constitution does not sound so impossible.

After prolonged debates in Parliament and in the press, the French Chamber has refused by a vote of 330 to 221 to sanction the abolition of the death penalty. The majority is not so overwhelming as to discourage those who believe in the essential wrongfulness of capital punishment and its inefficiency as a deterrent of serious crime. The French Chamber acted undoubtedly under the stress of something like panic, induced by a succession of revolting assassinations, and a general increase of crime which has been attributed to the practical suspension of capital punishment through the exercise of Presidential clemency. As a matter of fact, the period of years taken to show an increase in crime is altogether too short. The case for abolition of the death penalty is pleaded in the *International* by Lino Ferriani, Italian *procureur-général*. In Italy, he asserts, where no sentence of death has been carried out since the time of King Humbert, the number of serious crimes is decreasing, "even in those districts disposed from early times to violent crimes owing to the ignorance and poverty of the population."

THE EARTHQUAKE IN ITALY.

The news of what may turn out to be the most terrible single calamity Europe and America have ever known failed to make at first a sufficiently deep impression on the minds of men. We of the modern world are spoiled for high emotion. We are so accustomed to have the little events of the day trumpeted that the great shock finds our senses dulled. The adventures of Harry Thaw are spread over three pages, and the Mediterranean catastrophe takes no more space. The lie manufactured in the newspaper office is proclaimed as loudly as the tragic destruction of San Francisco or St. Pierre. It is not that we have lost the sense of wonder, but that we are called upon twice and thrice a day to wonder at the petty ignominies and events of the market-place, the saloon, and the gutter. Add to this the fact that in this country, especially, our sense of the value of human life has become cheapened. Where Europe thrills at the loss of a dozen lives, we have grown accustomed to a yearly toll of thousands in mine and on railway. But if the newspapers have taken the edge off our emotions, they have immeasurably widened the range of our interest. In China, in Africa, in South America, men can no longer suffer or perish without the world's knowledge. And in such a disaster as has befallen the Italian people, the brotherhood of man becomes something more than a phrase.

Yet here again our country occupies a position apart. Other nations can give devastated South Italy food and money. In these measures of temporary relief we, too, can join, as Russia, China, Japan, and Martinique will testify. But for the means of permanent recuperation it is to the New World that Europe's unfortunates look. Europe can help in the crisis, but she cannot absorb the beggared Calabrians and Sicilians, who are sure to seek a new livelihood across the seas. Thousands will go to Argentina and Brazil, many to Tripoli, but the greater number of refugees will come to this country. Trade unions and champions of Anglo-Saxon dominance may cry out in horror, yet it is at times like these that America rises truest to her historic mission. This country has been peopled and nourished by the famines, the massacres, and the oppressions of the Old World. It is still the natural asylum for the victims of Kishenev and Calabria.

In so far as Italy herself is concerned, the vast calamity is made worse by the fact that it has stricken the region which could least bear it. It will tend to emphasize the line of separation between the northern and southern parts of the Kingdom, which constitutes one of the greatest impediments to Italy's progress, remarkable though that has been. In their economic condition, in education, in nearly every form of advancement, the people of the old kingdom of the Two Sicilies are far behind their northern neighbors. Now there must come years of poverty and disorganization. Sicily loses its second largest city. In Sicily and Calabria a population of nearly 5,000,000 is brought to the verge of destitution. The effect must be felt in turn throughout Italy. When the government must lend its aid, instead of collecting taxes, the burden on other parts of the kingdom will grow appreciably heavier. But it must be added that admirable courage and resourcefulness have marked Italy's history since unification.

The enormous loss of life was due in part to the congestion of the population. Italy as a whole supports 305 inhabitants to its every square mile. In Sicily the ratio is 375; and about unhappy Messina the ratio rose to 456. We think of Sicily as so exclusively an agricultural country—the land of wheat, oil, and citron—that it is surprising to find over one-fourth of its population of some 3,800,000 congregated in cities having more than 25,000 inhabitants. The soil is parcelled out among great landowners, holders of the ancient *latifundia*, who, with their tenants and sub-tenants, crowd together in the cities, when the week's or the season's cultivation is done. That a tremendous earthquake coming upon such human congestion should work immense loss of life, was inevitable.

Will the dreadful fate of Messina, of Reggio di Calabria, of numerous smaller towns that have gone the way of earthquake, fire, and flood, doom them as sites for future human habitation? Not if the example of other similar disasters may be taken into account. Man's capacity for getting used to living on a volcano's edge, actually as well as metaphorically, is an illustration both of the potency of habit and of the optimism inherent in human nature. Or, if we wish, we can call it a sublimated pessimism, a disenchantment which recognizes that death lurks as well on prairie and sandy ocean beach as on volcanic formations; so why take the trouble? It would seem that Messina has had ample warning and foretaste of what has befallen her, yet for twenty-seven hundred years people have gone on believing that the blow would not come in their time, or would fall on their neighbors, never on them. Great cities are founded on sites offering some natural advantage or other, and it seems likely that the value of Messina's harbor, like that of San Francisco's, will continue to outweigh the danger of earthquake. And, after all, nature, which works havoc, can also be kind. She has untold riches. The wealth of the world increases rapidly, and within two decades a devastated San Francisco or Messina may rise complete again from its ashes.

SICILY.

After the common compassion of human nature, the Sicilian disaster must have brought to many minds a sense of tragic incongruity. The very name of Sicily is a forgetfulness of the present and an evocation of long romance; and suddenly into this charmed memory there breaks the outrageous reality that is always waiting at the heart of the world. Travellers in that island, looking down on the columns of great temples that have lain for ages among the flowers, muse sentimentally on the beauty of decay; and in a moment the actual forces of ruin are at work, cruel and hideous and not at all considerate of sentiment. Even the dryasdust historian has been beguiled of his dulness by the Sicilian legend, and we have heard that Freeman, bearded pedant as he was, would wander over the hills in a kind of childlike trance. And well he might, for he walked in fairyland.

On that island, in the gray dawn of romance and history, Odysseus, blown into the Western seas far from his Ithacan home, landed with his men, and by a cunning stratagem outwitted the Cyclops. Through the Strait of Messina also he sailed between the two rocks whose monstrous rage reads like the reminiscence of some volcanic catastro-

phe of the far past or the vague prophecy of some disaster to come:

We groaning sailed the strait. Here Scylla lay,
And there divine Charybdis, with huge throat
Gorging salt waves, which when she cast away
She spumed with hisses (as when fire makes hot
Some cauldron) and the steamy froth upshot
Wide o'er both rocks. But when she gorged again,
Drunk with abysmal gurglings, one might note
The dark sands of the immeasurable main
Gleam iron-blue. The rocks loud bellowing roared amain.

There, too, Æneas landed, fleeing from Troy to Italy. There his aged father died and was buried. On that strand the games were celebrated, and from this beach the women of the band looked out over the deep sea, sighing over the toils still before them, and plotting to surrender the promise of an eternal city for present ease. Their words, it is said, were often on the lips of Littré, the lexicographer, as without rest he finished one task and prepared for another:

Heu tot vada fessis
Et tantum superesse maris!

From legend Sicily emerges for a while into history that is almost as romantic: Phalaris and his brazen bull, whose terrors the great Bentley renewed in England when he smote the pretenders to learning; the battle of Himera—fought, as was popularly believed, on the same day as Salamis—when the Carthaginians, losing a hundred and fifty thousand men dead on the field, left the western sea to Greece as the Persians left the eastern; the ruthless destruction of the Athenian army at Syracuse, which ended forever the supremacy of Athens.

And then from the clash of armies we pass, not again to adventurous romance, but to a literature that weaves a conscious, voluntary spell. Some of Pindar's greatest odes were written for the Sicilian lords victorious in the games, and in his lines we still see the young men of Greece, as we see them in the sculpture of Phidias, moving in procession with the gods, themselves divinely fair and proud. In the court of Hieron at Syracuse might be seen, perhaps at one table, Epicharmus, Æschylus, Simonides, Bacchylides, and Pindar; and in the same city Plato undertook to bring down to earth the laws of his ideal republic—and lost his pains. But if Plato failed philosophically to make Sicily the wedding-place of the real and the ideal, another visitor from the East succeeded. Since Theocritus, a scholar from Cos, wrote his idyls of the Sicilian goatherds and fishermen, Sicily, like Arcadia, has been the magic pastoral land of the poets. In this secret valley the sorceress sang her midnight imprecations to the moon:

Turn, magic wheel, draw homeward him I love.
Hushed are the voices of the winds and seas;
But O not hushed the voice of my despair.

In that wattled hut the two fishermen dreamed of catching golden fish. On this strip of windy beach sat the Cyclops Polypheme, piping his songs of love to the ocean nymph Galatea, while she leaped in the foam and pelted his dog with apples. So completely was the island identified with these pastoral tales, that Virgil mingles the names of Sicily and Arcadia together as if they were one land—or no land:

There forests murmur aye, and pines discourse;
And lovelorn swains, and Pan, who first reclaimed
From idleness the reed, hath audience there.
Begin, my flute, a song of Arcady.

In that no-man's land Virgil places the one incident that seems to be reminiscent of his own youth in northern Italy:

Within our orchard-walls I saw thee first,
A wee child with her mother—(I was sent
To guide you)—gathering apples wet with dew.
Ten years and one I scarce had numbered then;
Could scarce on tiptoe reach the brittle boughs.
I saw, I fell, I was myself no more.

By an odd coincidence, these lines with their close of almost mystical passion—

Ut vidi, ut perii! ut me malus abstulit error!—

were picked out by both Voltaire and Macaulay as the best in all Virgil's works.

Modern poets, writers of epic and pastoral and drama, have carried on the tradition to the present day. Milton, wishing to find a symbol for Paradise, could not do better than compare his garden with

. . . that fair field
Of Enna, where Proserpin gathering flowers,
Herself a fairer flower, by gloomy Dis
Was gathered—

as indeed Paradise is but an Arcadian dream among the Jews. Matthew Arnold's most romantic scene is from the summit of Ætna, looking over

. . . that other fainter sea, far down,
O'er whose lit floor a road of moonbeams leads
To Ætna's Liparean sister-fires
And the long dusky line of Italy.

And so again we meet with romance playing above these forces of ruin, and the mind returns to the actual devastation of the land. Who shall read the lesson of this incongruity of fancy and reality? Who shall tell the moral of the present event? In a moment a whole people is obliterated, "as a wet sponge obliterates a painting," our trust in evolution and some far-off divine event seems, in the sight of such things, like another idle vision of the poets.

A EUROPEAN CONFERENCE.

The movement of events within Turkey has diverted attention from general international politics in the Near East, which only a few weeks ago threatened a serious crisis. We, who watch European affairs from a distance, content to make broad estimates for comparatively long stretches of time, cannot see the problem in the same way that Europe does. To her, the minute shifting and balancing of diplomatic business carry serious meaning from day to day. As we look upon it here, there is no reason why Austria's annexation of Bosnia-Herzegovina should provoke war. The deed is done, and Europe, including Turkey, is prepared to recognize the accomplished fact, provided certain concessions and rectifications are made. Such readjustment can be arranged either through a European conference or through separate negotiation among the various states. But the latter procedure is, on the face of it, so cumbrous, so adapted to intrigue and counter-intrigue, and so likely to excite irritation, that from the first the calling of a conference has seemed inevitable. All this aside from the fact that Austria's undoing of the work of one European congress naturally calls for another congress to lend its sanction to what has been done.

Austrian diplomats have, it is true, been fencing and delaying. Thus the Turkish boycott on Austrian goods served as an excuse for protracting negotiations. Austria would not discuss the question of a settlement with Turkey until the boycott was suspended. Then, when in that matter the Turkish gov-

ernment assumed the correct attitude and was ready to begin parley once more, Austria experienced a sudden change of mind. She was reported to have conceded Turkey's claim to an indemnity, was supposed to be negotiating on that basis, when all at once she decided that an indemnity she would not pay, and a conference—well, a conference she might like or mightn't, she wasn't quite sure yet. Thus the affair seems to stand at present, and thus Europe, following, as we have said, the almost hourly fluctuations and rather vague "an if I woulds" and "an if I mights" of professional diplomacy, is inclined to be somewhat disheartened at the slow progress towards a definite understanding. The Paris *Temps*, which, as the inspired voice of the French government, came out, the first organ in Europe, for a conference, now speaks in disenchantment. Where do we stand, it asks. True, "it will never be too late to turn pessimist," but the *Temps* feels quite sure "that it is much too soon to play the optimist," and can only deplore the sad waste of time, "ten weeks lost for agreement and pacification, ten weeks of useless *pourparlers*, and ineffective intercommunication of views, ten weeks of impotent diplomacy. Europe, regarded as a moral entity, does not move forward at all."

Looking, however, beyond the vicissitudes of the day, it seems probable that a conference for settlement of the Near Eastern question will meet. As early as the middle of October, France, Great Britain, and Russia had come to an agreement not only on the necessity of a conference, but upon a common programme. To this programme, it is true, Russia has been adding demands of her own in her private negotiations with Austria, but that does not affect the question of a conference in itself. Italy's position was clearly formulated in the early days of December, when Foreign Minister Tittoni declared formally to the Chamber that "changes effected in international agreements are not to be seriously thought of until they have secured the ratification of all contracting parties." Of Germany's attitude there was, and still is, some doubt. Von Bülow has stated in the Reichstag that he agrees with Sir Edward Grey in thinking that a conference "may be a great sedative or an exciting stimulant. We wish that it may act as a sedative." Von Bülow added that in any case Germany would stand by its ally, but the general inclination is to interpret his pronouncement as in favor of a congress.

If Europe, then, is pessimistic, it is not with regard to the chances of a conference, but with regard to its outcome—as to the terms which the conference will attempt to impose upon Austria and the terms which Austria will accept. Austria is apparently determined to make no concessions to the Servian population within or without her boundaries. Russia is believed to be insisting on such concessions—substantial compensation of some kind to Servia and Montenegro, and guarantees for the incorporated population of Bosnia and Herzegovina. Agreement upon the former point would not appear difficult; on the latter Austria will probably remain firm, since she can hardly permit a foreign Power to question her conduct towards her own subjects. Turkey will ask for money. That concession should not be difficult, since the Ottoman government can damage Austrian commerce to an amount greater than any indemnity that might be suggested. As for the programme drawn up by England, France, and Russia, in October, of its nine points, only one will be combated by Austria—territorial compensation to Servia and Montenegro by a "rectification" of the boundary between Bosnia-Herzegovina and Novi-Bazar. Yet greater interests than these have been disposed of by general conferences. Tangible ground for pessimism is therefore very slight.

FIFTY YEARS OF DARWINISM.

American scientists celebrated at Baltimore last Friday the centenary of Darwin, and the fiftieth anniversary of the publication of "The Origin of Species." Many came to praise, and some, very likely, to bury him. Buried, at any rate, his speculations about pangenesis may easily be under the shovelfuls of counter-hypotheses which have since been proposed or come into vogue—Kölliker's saltation, Nägeli's automatic perfecting principle, De Vries's mutants, and so on. It is, of course, the prerogative of a great pioneering genius to leave some minor errors which give dozens of smaller men a chance for fame in correcting them. This has been eminently true in Darwin's case; there has been a flood of articles and pamphlets and books setting right his observations at this point or that, and checking off or enlarging his facts. Furthermore, we are told that Darwin was not so original as has been asserted. His theory was foreshadowed by poets like Lucretius, Emerson, and Tennyson, was anticipated by Lamarck, entered into Spencer's philosophizing, was hit upon independently by Wallace. All true, but what does it signify? Where others dreamed, Darwin saw and showed the actual fact. For guesses, he gave proofs. We know what Huxley thought of the gossamer spinnings of Herbert Spencer, compared with the solid structures of Charles Darwin. Not to those who dimly groped at truths "darkly joined, deep-seated in our mystic frame" do we yield all honor, but to the man who made them current coin.

Honest Darwinians will admit that much nonsense has been uttered in Darwin's name, and that his doctrines have been tortured into baneful shapes and cruel applications. It is true that the shibboleths of Darwinism have often been used to darken counsel by words without wisdom. Under the pretence of making it strictly Darwinian, education has sometimes been turned into a travesty. Similarly, morality has been described as merely a "protective coloring," or a device of the strong to keep the weak in subjection. The truth has been defined as only the idea that outlives its rivals. Murderous competition has been defended because nature is shown by Darwin to favor the swift and the powerful. For these and other perversions of his teachings he has been, and doubtless will be again, charged with responsibility. But what does all this matter?

With every allowance or needed concession, it remains undeniable that Charles Darwin compelled two generations to think in terms of his thought. No really educated man, no scholar in whatever branch of learning, has been able to expel from his mind the ideas which Darwin lodged there. His great conceptions of descent with modification, and of environment and struggle as the chief causes of variation, have permeated not only science, but history, religion, and all studies of society and of politics. We cannot get away from them. Even if we try intelligently to attack Darwinism, we have to do it

with the weapons of Darwinism. This is greatness enough for any thinker. He may have been wrong in a given theory, but he at least taught men for fifty years how to theorize. Setting aside all his discoveries for the moment, and admitting that he put no infallible organon into the hands of thinkers, and did not solve the ultimate mysteries of the universe, he yet forced his contemporaries, and the generation following his own, to make their thoughts flow in the moulds which he first shaped. We can no more avoid thinking in terms of evolution than we can cease breathing.

This second nature, mentally, which Darwin imposed upon the world was born partly of his themes and partly of his method. His subjects were of universal human interest. How the earth about us and man upon it came to be what they are, is a question which concerns every man with a soul above the clods. Thus Darwin was sure of his audience; and, having got it, he gripped its attention by a supreme exhibition of scientific method. Vast and patient labor in accumulating the facts, each one tested in a very passion for accuracy and a profound belief in "salvation by verification"; then the employment of the highest powers of the scientific imagination, controlled by the severest canons of deductive logic; finally, a cautious marking out of causes and of consequences—this was the work of Darwin as exponent of the scientific way of attacking difficult problems. It was a model by which the whole world was impressed, and to which it has more and more sought to conform. Darwinism as a body of doctrines men may qualify or reject; but the methods of Darwin they cannot disavow, without writing themselves down champions of inaccuracy and apostles of loose thinking.

The indirect, subtle, and almost unperceived effects of Darwin's teachings are more remarkable than his direct achievements. He wrote very little, explicitly, about theology, yet he modified it from skin to heart. Charles Darwin never figured as a polemic, but his doctrine has, to many a man, been like a sword, piercing to the dividing asunder of soul and spirit. Old beliefs vanished, not because Darwin attacked them, but because they could not live in the mental atmosphere which he created. It is true that one doctrine of theology he directly attacked and destroyed—the doctrine of special creation. All frank and intelligent theologians now admit that the old argument of final causes—the argument from design, the argument of Paley and the "Christian Evidences" generally—can no longer be employed. But to many another article of the orthodox faith did the dissolving acid of Darwin's scientific method quietly spread. It was not that he combated it; it simply evaporated and disappeared before him. Men could not always give an exact account of what had happened to their creeds. They simply knew that Darwin had given them a new way of looking at everything, and had made many old things pass away, for them, forever.

On its practical side, Darwinism has undoubtedly had a depressing effect upon some who could not see or could not bear the whole truth. The reign of natural law may seem to crush out individual initiative, and to make mercy and justice sound like idle words. But this is only so long as we do not perceive that natural law covers human energy, too, and shows it how best to wreak itself. In the new way of looking at things, which came to the world from Darwin, there is hope and cheer, if we but take the matter aright. Only consider what his doctrine of the shaping power of environment is leading us to do in bettering the conditions of the poor, the defective, the prone to crime. His demonstration that circumstances may make or break a man, is a clarion call to humanitarian zeal. And his teaching of the infinite variability of species, and of the indefinite progress which man may make in the cultivation of humane and moral qualities, is one that looks distinctly to the perfectibility of the race.

GROWTH OF THE AUTOMOBILE INDUSTRY.

The annual automobile show in this city indicates that the automobile "craze" has not abated in this year of financial depression. Indeed, the bad times seem to have helped the manufacturers in several directions. Some weak and ill-managed concerns have gone to the wall, and others have consolidated to their mutual benefit; while the prices of the product of still others have fairly been cut in half. This is emphatically a case where lowered cost means an increase of business. The automobile has long since passed out of its original classification as a toy of the rich. It has become as much a necessity as the trolley car, and the bounds of its usefulness have not yet been reached; the farmers of the West, for instance, are only just beginning to understand the financial advantage in being able to make quick delivery of produce or to send rapidly to town for some sudden need. As soon as a standard cheap car can be produced, of a simple type, that does not require special mechanical aptitude in the operator, and that may be run inexpensively, there will be no limit to the automobile market. Already there are cars for $500 and $750 that give excellent service: and the extraordinary drop in the price of tires, in some cases from $96 to $37, has cut down the maintenance charge which bore most heavily upon the motorist of slender means.

Hitherto, the manufacturers have found it difficult to supply the demand; the check the industry has received will probably enable them to catch up. In the future, then, there will be more care in the construction of cars, a greater desire to produce strong and simple engines, and that striving after improvements which is the greatest benefit of keen competition. Hitherto, almost anything called an automobile has sold, and sold easily. The whole movement now is towards the production of motor-cars that shall have in their names a recognized certificate of merit. Some of the more popular cars have already attained to this fortunate position, but even the specimens of the best of them are very unequal. The American mechanic, although more versatile and self-reliant than the French or German, is not so thorough; hence cars that follow each other out of the same factory sometimes give very different grades of service to the purchasers, and the fault is not altogether with the chauffeurs.

The industry, in brief, has needed an opportunity to "settle down" and to get through some of the phases of growth inevitable when one considers what an infant it is in years, and what a giant in respect to the capital invested. The value of the American motor-car product in 1907 reached the astounding figure of $100,000,000. This is the output

of some 253 manufacturers, of whom nearly 100 are of importance in the trade. Yet the business is only ten years old on this side of the ocean. Naturally, so sudden an expansion has brought with it evils, both in manufacture and marketing—witness the extravagant salaries and commissions, the needless outlays for press agents and racing cars. But, all in all, these excesses of prosperity are easily curable, and the fact remains that within a decade the skill and ingenuity of American workmen are producing cars that compete with the best foreign makes, as appears from the steady annual decrease in the value of imported cars.

We are not of the opinion that the automobile trade would be seriously disturbed even if the present tariff of 45 per cent. ad valorem were wholly done away with in the coming revision. As the Italian Chamber of Commerce of this city pointed out to the Ways and Means Committee:

> In no other country is the material entering the manufacture of automobiles—viz., steel, iron, brass, wood, leather, rubber, glass, etc.—cheaper or as cheap as in the United States, and this economic advantage, securing already to domestic manufacturers a natural protection, is more than sufficient to counterbalance any difference in the cost of labor, especially considering that in this line of manufacture, requiring specially skilled labor, the difference between wages paid abroad and in this country is by no means notable, if at all existent.

In addition there are, of course, the freight rates and insurance premiums to be taken into account. Moreover, many foreign cars built for European conditions are unfitted for use in America, especially in rural districts, such as those of the Middle West, where the roads are of a kind wholly undreamed of in Europe. Indeed, it is the mud of these highways that accounts for the high-wheel automobile buggies many farmers are now using. Again, foreign competition is as great a stimulus to American inventors and makers as is the domestic, and such competition is likely to prevent the formation of an automobile Trust. Moreover, as Charles H. Sherrill pointed out to the Ways and Means Committee, our New York city carriage-makers might have been driven to the wall by the rise of the automobile, but for the fact that American bodies have been placed on 90 per cent. of the imported chassis. As the value of all the chassis entered at the port of New York aggregated $16,896,983.71 for the four years ended June 30, 1908, an idea may be obtained of what the 90 per cent. of this business has meant to our carriage-makers.

However the tariff be adjusted, the opportunities for American makers, we repeat, are enormous. The field for low-priced cars is theirs exclusively, and with the $500 car they may yet invade Europe. If any one doubts that the final disappearance of all horse-pulled vehicles except for pleasure-driving is near at hand, let him walk up Fifth Avenue some afternoon. The success of the taxicab is driving "back to the country" many a well-worn cab-horse. The commercial automobile is only at the beginning of its development—another great chance for the manufacturer. Already large concerns like the General Electric Company and the American Locomotive Company are attacking the problem, and some of the best makers of high-priced cars are likewise turning their attention to this matter.

A TEACHER OF THE OLD SCHOOL.

Benjamin Franklin Clarke, professor emeritus of mechanical engineering, and for more than forty years a member of the Brown faculty, died in Providence last week. This, with two or three lines more, was all the New York papers printed, and indeed all the event was worth as mere news, but those of us whose memories run back a generation or more cannot but be moved by the fact that these words recorded the passing of another of the few surviving college teachers of the old school. They were—we are beginning now to speak of them in the past tense—seldom great scholars or distinguished investigators; but they were faithful and competent instructors, men of cultivation and high character, whose influence was exceedingly wholesome. Of this class Professor Clarke was an excellent example. In discussing his labors and achievements we have in mind not so much the individual as the type; and our object is not to praise those who have passed beyond the reach of our voices, but rather to express our gratitude to those of that rapidly dwindling company who are yet with us.

He came to his work when as yet the function of the highly trained specialist was scarcely understood by our educators. Nearly every college chair was occupied by a professor who was, as the phrase is, expected to fill a whole bench. One man would often have as his field mathematics and all the natural sciences; another, all the modern languages; another, all the classics; and still another, literature, metaphysics, ethics, and economics. The scholarship which was possible under such circumstances—unless the professor were a man of uncommon energy and capacity—was rather elementary. The teacher had gone but a little way beyond the point to which he carried his classes. Graduate study was hardly known in America; and the youth who had taken his bachelor's degree with credit, was thought to be fairly prepared for a position in the faculty. The modern discipline is, of course, far superior. Three or four years of research, crowned by a doctor's degree, afford a technical equipment with which that of forty or fifty years ago is not to be compared. Our young Ph.D.'s know more of their subjects than many of their predecessors ever dreamed of acquiring. And yet, if the young Ph.D. has the defect of his virtue—an intense narrowness that makes for erudition rather than wisdom—the old teacher had the virtue of his defects, that is, a wide range of interest and sympathy that gave him ripeness and wisdom and made him an effective instructor and leader of youth. He could play many parts, and play them well. Professor Clarke, for instance, was twice drafted to act as president of Brown, for a year each time. The duties of a *locum tenens* were delicate and difficult; but he discharged them admirably. Tact, firmness, poise, judgment, grasp of multifarious details, dignity and appropriateness in public utterances—these features of his administration would hardly be looked for in the latter-day mathematician of the straitest sect.

From what we have said, it is clear that the strength of the old-fashioned teacher lay in his personality rather than in his attainments. Whether one learned much from him or not—and how little actual knowledge one gets from the best of colleges and teachers!—it was a good thing to be with him. By example as well as by precept, he inculcated the sound gospel of attacking one's tasks steadily and without whimpering. Boys were not expected to like their lessons, but they were expected to learn them—thoroughly. "Hinnessey," says Mr. Dooley, "it doesn't matter what

a boy rades so long as he hates it." That view would have seemed rather extreme to Professor Clarke; but once at the end of a weary day he remarked that the kindergarten seemed to have produced freshmen who thought everything must be made amusing, and he feared that illustrated stereopticon lectures would soon be the only means of capturing the wandering attention of these lads. At any rate, he would have agreed with Horace D. Taft, who declared in a recent issue of the *Yale Alumni Weekly:*

> There is in this life a great deal of work to be done that is dry, hard, and uninteresting, and a vital part of a boy's education, if not the vital part, is the learning to do hard things, even drudgery, with courage, determination, a sense of duty, and even cheerfulness.

It was his sense of faithfulness to duty that filled the pupils of Professor Clarke as well as his colleagues with profound respect for him and a genuine affection.

These lofty ideals of conduct and character are not destroyed by the process of specialization, but in emphasizing as strongly as our college authorities do the necessity of technical acquirement, they appear now and then to neglect the weightier matters of the law. Sane men can have no quarrel with research and the advancement of science; but in this world there are other ends also to be served. At Baltimore last week Prof. Edward L. Nichols said very truly: "We need not merely research in the universities, but universities for research." There is a distinction, however, between the university and the college; and the corollary to Professor Nichols's theorem is: "We need not merely good teaching in the colleges, but colleges devoted to good teaching." The term good teaching includes not only proper drill in the various branches of the curriculum, but that more potent instruction and inspiration that come from contact with men of moral as well as intellectual substance. We hope, then, that in the visible reaction against excessive specialization, our colleges may remember one great source of their strength in the past, may be more content to leave to the university those graduate studies that belong to the university, to stick less rigorously for the Ph.D. as the essential qualification for a place in the faculty, and to set a higher value on men of general cultivation and fine character; in short, to keep alive that race of teachers of the old school which, as the death of such men as Professor Clarke reminds us, is now threatened with extinction.

THE ECONOMISTS AND SOCIOLOGISTS.

Atlantic City, December 31.

The twenty-first annual meeting of the American Economic Association was held in Atlantic City December 28 to 31. Three smaller bodies, the American Sociological Society, the American Statistical Society, and the American Association for Labor Legislation, convened at the same time and place. Several joint sessions were devoted to subjects of common interest. The economists and the students of social science canvassed jointly the theme of Modern Industry and Family Life, while Employers' Liability, Industrial Insurance, and Public Boards of Arbitration provided matter to engage at once the attention of the economist and the reformer of labor laws. The experiment of meeting at a place where no academic institution exists to play the rôle of host was generally pronounced successful. There was no disruption of the programme by intruding luncheons, receptions, and private dinner parties.

On the closing night the Economic Association held a public dinner attended by over a hundred. There was an excellent commingling of speeches by economists and jurists. Three of the judges of the Supreme Court of New Jersey spoke, and Judge J. B. Dill acted as toastmaster. The annual address of the retiring president, Prof. Simon N. Patten, of the University of Pennsylvania (previously printed in the *Economic Bulletin*), was devoted to "The Making of Economic Literature." Though the prescription offered by Professor Patten will hardly be endorsed in its entirety by many economists, its central thesis—the avoidance of over-elaborated technical hypothesis and the primacy of a first-hand acquaintance with the facts of the market—is highly salutary. More disputable perhaps is Professor Patten's ambition to exorcise the economist from the library and to convert him into a journalist pure and simple with a hankering for the purple patch and the telling phrase. One advantage of printing the address in advance of its delivery was seen in the well-considered and judicial discussion it evoked. If the critics had not had time to reflect after reading it, a testy and perhaps a diverting, but a profitless debate would probably have ensued.

The chief paper on pure economic theory was read by Prof. J. B. Clark of Columbia, on "Collective Bargaining." In essence it was a reply to the query whether law-abiding labor unions which make no attempt at monopoly through the closed shop or the closed union "can materially help men to get as much as the true standard of wages requires." (The "true standard" of wages, according to Professor Clark, is the value of the marginal product of social labor.) The conclusion drawn was that union treasuries allow the unionists to hold out longer in case of an eventual strike, and thus to drive a better bargain for the speedier adjustment of their pay to the value of their product. When rival employers invade the territory of the employer whose mills are shut down, "the enforced yielding point of the employer comes earlier" than that of the men. Unfortunately there was not time for full discussion—indeed "all eternity's too short" for threshing out most of the issues raised in these meetings —but several suggestive criticisms were offered to the solution presented or the philosophy on which the solution was based. Prof. A. C. Miller of the University of California, contended against the view that the wage-earners are the only class whose actual pay lags behind the values they create. Prof. T. S. Adams of the University of Wisconsin was inclined to challenge the naïve productivity theory of wages out and out, insisting that bargaining power was an essential determinant of wage-contracts, and differed essentially from objective productivity. A real contribution to the facts of collective bargaining was made by Prof. G. E. Barnett of Johns Hopkins. He made it clear that as regards money wages the individual worker unaided can often enforce his claim to a warranted advance, but that collective bargaining alone can force concessions in the duration of the working day and in other conditions under which labor is performed.

The joint session to consider legislation affecting laborers was opened by an address by Prof. H. W. Farnam of Yale, president of the Association for Labor Legislation. He distinguished sharply between legislation passed in the interest of race preservation, and legislation designed to bestow benefit on operatives at the expense of other classes. Laws of the first kind are illustrated by enactments for the protection of women and children in factories. Laws of the second kind are such as impose on employers the insurance of their employees. Race preservation, or what has been dubbed "posteritism," he held, was amply justified. The chief drawback to sane legislation in this matter is found in the fact that "of all the industries of the United States lawmaking is perhaps the most backward." Legislation of the second sort was pronounced generally fraught with risk. It was a rather notable fact that the assumption seemed to go without protest that additional protective labor legislation was necessary. Some of its

practical difficulties, from the point of view of the statute draughtsman, were pointed out by Prof. M. O. Lorenz of Wisconsin; and F. L. Hoffman, Newark, N. J., insisted on the imperative necessity of making a trustworthy statistical inventory of industrial accidents and the attendant illness before embarking on a policy of industrial insurance.

In the joint session with the Sociological Society the chief interest centred in the papers descriptive of the recent social census of Pittsburgh. These papers were very much in point since the general topic for discussion was the influence of modern industry and city life upon the family. Miss Margaret F. Byington took Homestead for her text, to which she has devoted some weeks of intensive study. She spoke discriminatingly from personal knowledge, well analyzed, and certainly presented a sombre picture of the reaction of the industrial conditions upon the home life of the workers. The general purpose and results of the Pittsburgh Survey were summed up by Dr. Edward T. Devine. The aim of the survey was to offer "a structural exhibit of the community as a whole," and the extent of the investigation was rendered possible through the assistance of the Sage Foundation. It was enough to make the ears of a sensitive protectionist tingle to hear this exposure of the economic life of his Mecca. The spot of all others on earth where the worker's wage should be highest is found to be characterized first, by "an altogether incredible amount of overwork by everybody, best typified by the twelve-hour shift seven days in the week in the steel mills and on railways"; second, by "low wages for the great majority of the laborers employed by the mills, so low as to be inadequate to the maintenance of a normal American standard of living; wages adjusted to the single man in the lodging house, not to the responsible head of a family"; third, "still lower wages for women"; fourth, "an absentee capitalism with bad effects, strikingly analogous to those of absentee landlordism"; and—thrown in to make good measure—such trifles as over a thousand deaths annually from typhoid fever and industrial accidents. The terrible indictment concluded by painting "the contrast between the prosperity on the one hand of the most prosperous of all the communities of our western civilization" with "the neglect of life, of health, of physical vigor, even of industrial efficiency." Only once during the sessions of the association was there any spontaneous demonstration of approval. That outburst greeted the declaration:

> Not by gifts of libraries, galleries, technical schools, and parks, but by the cessation of toil one day in seven and sixteen hours in the twenty-four, by the increase of wages, by the sparing of lives, by the prevention of accidents, and by raising the standards of domestic life, should the surplus come back to the people of the community in which it is created.

The unusually long programme included three other general sessions devoted respectively to Tariff Revision, the Establishment in the United States of a Central Bank, and the Public Regulation of Security Issues by Corporations. The paper on the Tariff by Prof. H. C. Emery of Yale, was frankly opportunist. Historically, he maintained, the crusade against protection had been a failure so far as it had been founded on the consumer's interest. Free trade, he contended, had prevailed only when urged by the selfish interest of special groups of producers. The moral he deduced was that economists should cooperate with producers who are now anxious to abate duties. Such coöperation on the economists' part need not blind him to the motives of those now urging tariff reduction, nor to the false philosophy of international trade on which the reduction is based. Years back such a proposal would probably have evoked heated repudiation, but nowadays among economists, so far as tariff reform is concerned,

> . . . despair itself is mild,

and the discussion wandered on to the relative merits of maximum and minimum tariffs which N. I. Stone of the United States Bureau of Statistics weighed against the system of special reciprocating commercial treaties.

The two leading papers on the establishment of a Central Bank were contributed by Paul M. Warburg of Kuhn, Loeb & Co., New York, and by Horace White, New York. In general they both supported the project. Mr. White advocated it rather on the ground that the jealousy of our country bankers would render an analogue to the Canadian system politically unattainable in this country. To Mr. Warburg the Ceutral Bank has demonstrated its feasibility by virtue of its workings abroad. Of special interest in Mr. Warburg's portrayal of our situation was his insistence on the absence of "modern and readily saleable [commercial] paper which in critical times we can offer to foreign markets" for re-discount. This, with our bond-secured currency and our decentralized reserves, and the unfounded prejudice against anything bearing the name of a "Central Bank" are the *cruces* of the deplorable state of our banking system. Mr. White did not attempt the detailed construction of a Central Bank as did Mr. Warburg; but his caustic scoring of those who have come to regard "clearing house certificates and rubber stamps" as "desirable *per se*" . . . "as something like Pond's extract, or Peruna, which should always be kept in the house," was deliciously incisive.

The concluding session was taken up by an able but detailed paper by Prof. C. J. Bullock of Harvard, who argued that legal restrictions imposed in Massachusetts on the issue of securities by transportation companies had driven capital from the State, and arrested the growth of needed railroad facilities in New England generally. The Hon. Milo R. Maltbie of the Public Service Commission of New York, of the First District, broke a lance for the public regulation of security issues by railway companies. Mr. Justice Swayze of the New Jersey Supreme Court outlined the New Jersey law in the premises, and expressed a qualified skepticism as to the efficacy of minute restrictions by statute or administrative commission upon the terms of such issues.

The next annual meeting of the Economists is to be held in New York City, and will be devoted to celebrating the quarter centennial anniversary of the founding of the association at Saratoga in 1885. The incoming president is Prof. Davis R. Dewey, of the Massachusetts Institute of Technology, and Prof. T. N. Carver of Harvard University was elected secretary and treasurer.

W. M. D.

THE HISTORICAL AND POLITICAL SCIENCE ASSOCIATIONS.

Richmond, Va., December 31.

Socially, the annual meetings of the American Historical and American Political Science Associations at Washington and Richmond, December 28-31, were notably successful. The hotel arrangements, permitting the great majority of members to live for the time being under one roof, facilitated the personal conference which forms so large a part of the value of these meetings; for it must be admitted that the obligation to listen to papers and discussions sits less and less heavily upon the members as the years go by. In both cities there was the usual generous provision of private and corporate hospitality, including at Washington a reception at the British Embassy, and at Richmond the courtesy of the New Year's festivities at the Westmoreland. The rich historic interest of Richmond and vicinity made a strong appeal, and an excursion to the University of Virginia at the close of the sessions attracted many.

The programme of papers and conferences, while, as usual, full of variety and information, developed fewer distinctive excellencies than has sometimes been the case, or than the announced titles would in some cases lead one to suppose. Of the presidential addresses, that of Ambassador Bryce before the Political Science Association, on "The Relations of Political Science to History

and to Practice," naturally awakened the greater anticipation. In a way at once luminous and philosophical, Mr. Bryce pointed out the essential limitations of the respective fields of history and political science, and the futility of looking to political science for conclusive guidance in matters of public conduct. Both may, both indeed must, use the accepted scientific methods of observation, comparison, and deduction, but neither can profess to be in the full sense a science. As for the elaborate speculations about the nature of the state with which the literature of political science so greatly abounds, Mr. Bryce had emphatic, though courteous, condemnation, rightly reminding his hearers that facts, not theories, are the things to which they should most attend. The presidential address of Prof. George B. Adams of Yale before the historians, on "History and the Philosophy of History," while in large part to the same effect, called particular attention to the invasion of the field of history by political science, economics, sociology, and other branches of inquiry, with all of which, affording as they do a "common standing-ground for all workers at what are really common tasks," the historian ought to sympathize, while sticking to his own task of ascertaining what actually happened. That the facts thus ascertained tend to prove some theory of history, the historian may well believe, even though imperfect knowledge may prevent a complete verification of the theory. The frank admission that history is, and must always remain, a leading branch of literature, was a refreshing note for a time in which the flood of ill-written monographs portends the worship of another "dismal science" of historical composition.

It is rather a significant commentary on the nature of historical study in this country that so many of the most interesting and valuable papers presented at these meetings should be in the field of European history; and the programme this year was no exception. Prof. C. H. Haskins of Harvard, in an extremely suggestive paper on "Normandy under William the Conqueror," showed how considerable was the political and social development of Normandy before the English conquest, and how markedly certain Norman institutions, especially the registration of land and the system of local magistrates, influenced political development in England. Prof. Oliver H. Richardson of Yale, speaking on "Religious Toleration in Brandenburg-Prussia under the Great Elector, and Its Material Rewards," developed the thesis of religious toleration as both a political and an economic necessity for the growth of the Prussian state; Dr. Ernst Daenell of Kiel discussed the leading ideas of the Hanseatic commercial system; and Prof. C. W. Colby of McGill appraised with commendation the public life of Chatham.

The field of American history was accorded two formal sessions, at one of which the important subject of the use of census data and newspapers as historical material was discussed, while the other presented contrasted criticisms of the Wilderness campaign by Gen. Edward P. Alexander of the Confederate army, Col. William R. Livermore, the well-known writer on military history, and Major Eben Swift of the present General Staff. Besides these formal sessions, five conferences gave opportunity for the consideration of a considerable range of American topics. A conference on geography discussed the influence of the geography of the South Atlantic States on their history; that on history in secondary schools debated, with singular inconclusiveness, the need of modifying the recommendations of the Committee of Seven on that subject. A conference on the problems of State and local historical societies, a subject to which the Historical Association has given, of late, special attention, developed practical suggestions regarding cooperation, the use of photography in archive and historical work, and the conduct of historical exhibitions. Three conferences on research in English, American colonial and Revolutionary, and Southern history, respectively, brought out some of the larger opportunities for investigation in these several fields, with special reference to bibliographical conditions.

Mr. Bryce's injunction to beware of prophecy, served to emphasize the generally practical character of the proceedings of the Political Science Association. A striking though hardly profound paper by Prof. S. B. Leacock of McGill, on the limitations of Federal government, did, indeed, suggest the ultimate breakdown of Federal government, if such problems of uniform and consistent control of labor and capital as have lately arisen continue to press; but, with this exception, the leading papers confined themselves chiefly to the description of phenomena. A complete enumeration of papers and writers would be too extended for inclusion here, but reference should be made to a group of papers on recent constitutional development in New England, the Middle West, Michigan, and Virginia. Prof. J. A. C. Chandler of Richmond College, discussing in this connection the Constitution of Virginia, adopted in 1902, pointed out that under the new system of registration no man could be denied the right to vote who could read and write his application and properly mark his ballot, and that more than one-fourth of those who could have registered under the old Constitution are now disqualified, including in this number both whites and blacks. Interesting and timely, also, was a group of papers on certain active agencies in the betterment of municipal administration, in which the New York Public Service Commission and Bureau of Municipal Research, the Boston Finance Commission, and the National Municipal League, were described and appraised; and another group on the increase of Federal influence and power in the United States, as illustrated by Federal control of commerce and the growing interference with State activities by the Federal courts. The international law section was distinctly up-to-date, with a paper on aërial navigation in its relation to international law, by Arthur K. Kuhn of New York city. Stranger things might happen than that the nations should before long have to consider, as was facetiously suggested, something akin to a three-mile limit in dealing with airships.

The material and scholarly activities of the two associations show healthy growth. The Historical Association adds to its established undertakings the proposed publication, in uniform annual volumes, of the Justin Winsor and Herbert B. Adams prize essays. The Justin Winsor prize was awarded to Prof. C. E. Carter of Illinois College, for a monograph on "The Influence of Great Britain in the Settlement of the Illinois Country." Both associations meet next year at New York.

PHILOLOGISTS AND ARCHÆOLOGISTS AT TORONTO.

Toronto, December 31.

The joint meeting of the American Philological Association and the Archæological Institute of America, held December 28-31, at the University of Toronto, was noteworthy in more ways than one. In the first place, the societies had never before met outside of the political boundaries of their country, and the acquaintance of their members with the Canadian universities had been very slight. The meeting did much to quicken mutual recognition and friendship between colleagues working along similar lines on either side of the national *limes*.

Another noteworthy feature was the admission by the council to affiliation with the Archæological Institute of America of five newly formed Canadian societies, that give promise of much vigorous life. They will be organized, at their own desire, as a Canadian branch of the Institute, but this provision will not interfere with the essential equality of all the societies of the Institute, Canadian and American, as harmonious members of one great international association. Several newly-born American societies were also admitted;

and the work of the Institute, in both the native and the foreign areas of research, was reported as in most flourishing condition. In connection with the School of American Archæology, an interesting item is the approval of an offer by the territorial government of New Mexico to give for the permanent quarters of the school the old Governor's Palace at Santa Fé, which has been occupied by a long succession of Spanish and American rulers of the surrounding country. A museum of antiquities of the Southwest will be installed within the ancient walls. The school at Jerusalem is also well on the way toward the acquisition of a home of its own in that city. It has amply justified its existence by the execution of much good work, with a surprisingly small expenditure of money. Prof. Robert F. Harper of the University of Chicago is the director for the present year. The school at Athens reports excellent progress with work in that city, as well as at Corinth, and chronicles some striking excavations on a small island off the north coast of Crete, of which much will doubtless be heard hereafter. The school at Rome has published a second volume of papers (see the *Nation* of December 3, 1908, p. 554), and has other important investigations approaching completion.

The united societies telegraphed to the Italian government resolutions of sympathy on the disaster that has befallen the region about which so much of their interest is centred, and promptly started a subscription in behalf of the sufferers. They also joined substantially all the learned societies of the country in formally petitioning Congress for the abolition of the import duty on scientific books published in English. The feeling was, of course, unanimous that the duty is nothing less than a burdensome tax on that portion of the population best deserving assistance instead of hindrance in the struggle after knowledge.

The papers presented before the societies were almost too numerous, but many of them were of high interest and importance. As usual, they covered a wide range of subjects, and a goodly number treated of previously unpublished material. It is impossible even to mention all of those deserving especial commemoration. Three on themes less usually discussed in such meetings may be briefly noted. Prof. J. H. Breasted, recently returned from the Nubian expedition of the University of Chicago—the first in that district since the invention of photography—called attention to the existence in the Temple of Soleb of a connecting link between the basilica-like (higher nave and lower flanking aisles) construction of the well-known temple at Karnak, and the ordinary structure of high pylon and lower walls that is seen in so many Egyptian temples. A. L. Frothingham of Princeton, N. J., presented arguments in favor of the identification of the porphyry sarcophagus of the Empress Helena, in the Vatican Museum, with the sarcophagus of the Emperor Marcus Aurelius. The communication of Prof. George Hempl of Leland Stanford on his solution of the centuries-old problem of the Etruscan language (and also of the Venetic and Old Sabellian dialects), which had already been flamboyantly exploited in the daily papers throughout the continent, was naturally received with great interest and attention. The stubborn riddle, according to his letter, yielded to him with hardly a struggle. The conflict began one morning, and was ended before bedtime that night. The more slow-moving minds of the assembled philologists did not so readily succumb. The conclusions regarding, for example, the lexicography of the Etruscan language, reached by the patient study of many men for many years, and the comparison of manifold inscriptions, did not seem to deserve summary rejection, until many more than fifty selected inscriptions, mostly brief, had been examined by the new light, and the arguments of other scholars carefully discussed. A fuller publication of Professor Hempl's views will be calmly awaited, and, meanwhile, *Procul, o procul, este profani!*

The most generally interesting session of the societies was the memorial meeting, in honor of Charles Eliot Norton, the first president of the Archæological Institute. Dr. Edward W. Emerson of Concord, Mass., read a paper analyzing the character of Mr. Norton as man and scholar with perfect acuteness and sympathy, and in exquisite form and manner. He was followed by Prof. William Fenwick Harris of Harvard, who described the service of Mr. Norton to liberal studies in America. The address of Mr. Harris was worthy of the high company it kept.

The two societies meet again in joint session a year hence, at Baltimore, and the Philological Association showed its regard for Prof. Basil L. Gildersleeve of Johns Hopkins by electing him to serve a second time as president—an honor rarely awarded. The Philological Association appointed a large and representative committee to consider further the question brought before it last year of a possible uniform scheme of requirements in Latin for admission to American colleges.

MODERN LANGUAGE ASSOCIATION.

PRINCETON, N. J., December 30.

Owing to the good attendance and to the admirable management of the local committee of the Princeton faculty, the twenty-sixth meeting of the Modern Language Association held here December 28-30, was one of the most successful in recent years. The majority of the papers were about equally divided between English and French, whereas German, Italian, and Spanish were represented by two or three apiece. There was a fairly even distribution between literary and philological subjects. But one contribution was strictly linguistic, that of Prof. A. M. Elliott of Johns Hopkins, on the origin of "Chauvin," which was read only in part, owing to the absence of its author. Some papers should have been relegated to the innocuous list of those "read by title": what is confessedly a mere collection of facts, bibliographical or philological, should not be inflicted even upon those whose sense of duty leads them to sit out a complete session. It seems, too, a doubtful practice to present anything not a genuine contribution to knowledge. A restatement of discovered truth or a discussion that throws no new light upon already published work is hardly in place at such a meeting.

The address by the president of the association, Prof. F. M. Warren of Yale, was a plea for the study of mediæval Latin. Though the subject seemed to go beyond the work of the association as defined by the constitution, it was kept within bounds by being shown to be contributory to a fuller and more exact knowledge of the beginnings of French literature. In the valley of the Loire at the close of the tenth century, the period of the early renaissance, many Latin tropes and hymns were written and have been preserved. These furnish a basis for a study of the ideas of the people which come to us in no other form, except the most fragmentary. Thus this Latin is the connecting link between the old literature and the new. A very interesting discussion of French literature at the other extreme of its development was presented by Prof. Brander Matthews of Columbia. He attempted to explain the phenomenon that English readers often find French poetry less satisfying than Italian or German. Three reasons were suggested: First, the extreme clarity of the French tongue left nothing to the imagination, none of that vagueness which to the English consciousness is part of the very emotions themselves; second, the absence of pronounced rhythm in French verse deprives it of that emotional appeal which always goes with the rise and fall of passion from the days of primitive man to the present: the very monotony of the verse strikes the English ear as unappealing; third, words primary in effect to the French often seem secondary to us, since the simple Anglo-Saxon words are almost universally used to present the fundamental emotions: Romance words serve for the secondary emotions.

Two papers, one slightly connected with the romantic movement, the other treating of a direct influence upon this movement, were read respectively by

Dr. R. D. Havens of the University of Rochester and Prof. E. E. Hale, jr., of Union College. The former showed that along with the influence of Milton's octosyllabics upon the romantic poetry of the eighteenth century went the no less certain influence of his sonnets upon the sonneteers of the century. The sonnet was not written to anything like the same extent as poems of melancholy inspired by "Il Penseroso," but it showed the Miltonic influence where it appeared. It was Miltonic in form, in contrast to the Elizabethan and the Italian, as well as in content, since it was concerned not with love, but with some special event or emotion. The other paper dealt with the influence of Salvator Rosa upon the work of the early romantics. The delight in the wild and the fierce aspects of nature, later called picturesque and romantic, was in marked contrast to the conventional landscape of the century. This was, in part at least, due to Salvator Rosa, as was shown by quotations from Henry McKenzie, Mrs. Radcliffe, Horace Walpole, and Scott, all of whom refer directly to him and show that they were more or less consciously affected by his wild and rugged landscapes.

A paper of general interest was that of Prof. C. von Klenze of Brown, on the history of the varying attitude of the Europeans, especially Germans and French, towards the United States, from the middle of the eighteenth century to the present time. The Roussellian love for wild nature joined during the American Revolution with the newly arisen democratic fervor and love for the simple life to make America appear as the very embodiment of the highest human aspirations, as seen especially in the work of Chateaubriand. With the waning of romanticism a reaction set in with Lenau, and nothing too violent could be said in detestation of the United States. In the second half of the nineteenth century, however, the civil war and the writings of Emerson revealed to Europe a nobler side of American life, and towards the end of the century the rise of industrialism and the Spanish war compelled attention, to be followed by the close of the century by the critical studies of Bryce, Münsterberg, and—as Prof. A. Schinz of Bryn Mawr pointed out in the discussion that followed the reading of the paper—of De Tocqueville. The fuller knowledge of the country by the peasant class was also indicated by Prof. M. D. Learned, of the University of Pennsylvania, who remarked that several thousands of pensioned soldiers have returned to Germany and have given more exact information of this country than the learned class get from books.

Among the papers more special in character was Percy Long's discussion of the personal allegory in Lyly's "Endimion," a theory which he rejected as untenable with the exception of the usual identification of Cynthia with Elizabeth. He preferred to treat the leading characters as representatives of the usual *dramatis personæ* of Platonic love. Cynthia is heavenly, or Platonic, beauty, Endimion is heavenly love, Tellus is earthly beauty, and Corsites is earthly love. Such an interpretation fits in with the plot and the characterization of the play, as all personal identifications fail to do.

In the business meeting of the association it was recommended that a test of the candidate's ability to speak French and German and to interpret them when spoken be required for admission to college. It was also recommended that steps be taken to bring about closer relations between the association and the Carnegie Institution of Washington. A resolution was passed petitioning Congress to remove the duties upon works of art and their reproductions including photographs, upon all books printed in foreign countries, and upon scientific instruments intended for the private use of investigators. Prof. M. D. Learned of the University of Pennsylvania was elected president for the coming year. The other officers are: Vice-presidents, G. Gruener, Yale; E. W. Olmsted, Cornell; and W. A. Neilson, Harvard; secretary, C. H. Grandgent, Harvard; treasurer, W. G. Howard, Harvard; executive council: A. Fortier, Tulane; Charles Harris, Western Reserve; John M. Manly, University of Chicago; C. A. Smith, University of North Carolina; George Hempl, Leland Stanford; Lewis F. Mott, College of the City of New York; and Henry A Todd, Columbia.

The most enjoyable feature of the whole meeting was undoubtedly the brilliant and witty address of ex-President F. L. Patton before the association in the grill-room of the Princeton Inn on Tuesday evening. J. W. T.

Chicago, December 30.

The fourteenth annual meeting of the Central Division of the Modern Language Association was held in the Northwestern University Building, Chicago, December 28-30, with a large attendance. The admirable address of welcome of Dean T. F. Holgate was followed by the address of the chairman, Prof. Oliver Farrar Emerson, of Western Reserve, a finished and judicious paper, on "The American Scholar and the Modern Languages." The programme contained thirty-nine papers, including eleven read by title, and the range of subjects was gratifyingly broad. As usual, the Germanic side was the most fully represented, with fourteen contributions. Ten were devoted to English, eight to the Romance languages, two to Celtic, and five were of a general character. Both in the Germanic and the English, there was a marked tendency to deal with modern literature, a large number of the topics being chosen from the nineteenth century. In the main, the discussion of the papers left something to be desired in the matter of definiteness. In the meeting of the English section the discussion of the introductory college course was continued from two years before. In spite of some disagreement in matters of detail, the consensus of opinion appeared to be in favor of a rather full course, combining lectures with class discussion and written work. The chief point of disagreement was in the proportion of time to be devoted to the earlier periods, the suggestions ranging from a study of Old English in translation to a practical ignoring of the writers before Chaucer. In the case of one institution, marked interest in Beowulf and other early works was noted among sophomores. The length of time devoted to the course varied from two hours a week to four. In the German section, the chief attention was paid to methods of teaching the spoken language; and in the French section, in addition to the discussion of methods, a paper was read on the opportunities for the study of Romance languages in Europe and America. The following officers were elected: Chairman, A. G. Canfield of Michigan; executive committee, Otto Heller of Washington University, H. A. Smith of Wisconsin; and C. G. Dunlap of Kansas. C. R. Wilson of Iowa University was reëlected secretary for a term of four years. The next meeting will be held at Iowa City.

NEWS FOR BIBLIOPHILES.

A "Bibliography of Henry David Thoreau," compiled by Francis H. Allen, has just been added to the series of bibliographics of American Authors, published by Houghton Mifflin Co. This is a volume of 220 pages printed for the most part on only one side of the sheet, with the frontispiece a portrait of Thoreau not heretofore reproduced. Thoreau's life-work was his journal. His first two books, "A Week" and "Walden," the only ones printed before his death, were for the most part merely selections from the journals. He sent the leaves to the printers, copying over again into a new book the portions he did not use, giving them the title, "Gleanings, or What Time Has Not Reaped of My Journal." After his death his contributions to periodicals, further extended selections from the journal, and his letters were collected by his friends and printed. Finally, in 1906, the journals were printed *in extenso*, as written. Mr. Allen's bibliography comprises Thoreau's books, selections from his writings, articles, and poems first issued in magazines, biographies, books, and periodicals containing biographical or critical matter about Thoreau, and records of sale at auction of the more important items. The work is well done, and is an important addition to the series.

The sale of the third part of Henry W. Poor's library will be held by the Anderson Auction Co. of this city on January 12-14. This section includes a number of choice books. There is one Caxton, an imperfect copy (containing 301 out of 450 leaves) of Higden's "Polychronicon" (1482). This is probably the most common of all Caxtons, but perfect copies are extremely rare. Indeed, Gordon Duff, the latest writer on Caxton and his books, is unable to find a single copy absolutely perfect, with all the five blank leaves. The Poor example, formerly Bishop Hurst's, brought $1,400 at the sale of his library in 1905. Among other incunabula are the Sermons of Saint Bernard, printed in 1481 by the Brothers of the Common Life at the first press established in Brussels, and a Latin Bible, Koburger, Nuremburg (1477). The sixteenth and seventeenth century English books include Bacon's "Of the Proficience and Advancement of Learning" (1605), first edition; Bourne's "Regiment for the Sea" (1584); Braithwaite's "Two Lancashire Lovers" (1640); Chaucer's Works (1598 and 1687); Daniel's "First Foure Bookes of the Civile Wars" (1595); Dekker's "Magnificent Entertainment given to King James" (1604); Coryat's "Odcombian Banquet" (1611); Selden's "Table Talk" (1689); Drummond's "Poems" (1656); Fraunce's "Lawier's Logike" (1588), the book from which Shakespeare is supposed to have acquired his legal knowledge; Gower's "Confessione Amantis' (1554); Katherine Philips's "Poems" (1664), first edition; John Taylor's "Workes" (1630), with the engraved title by Cockson; and Waller's "Poems" (1645), one of the four editions issued that year and generally called the "first genuine edition." Of later English authors there are the first edition of Goldsmith's first book," "Memoirs of a Protestant condemned to the Galleys of France for his Religion" (1758); the very rare "Poems on the Death of Priscilla Farmer" (1796), by Charles Lloyd, including a poem by Charles Lamb; various first editions, including some of the rarer titles, of Edward FitzGerald, Andrew Lang, Mathew Arnold, and Oscar Wilde. Of American authors, first editions of Bryant, Hawthorne, Longfellow, Lowell, Poe, Eugene Field, and others are included. A few items of historical Americana are notable: the Italian Cortez, Venice (1524), but, as usual, lacking the plan of the city of Mexico; the first edition of "The Federalist" (1788); Smith's "History of New York" (1757), first edition, in the original sheep; Smith's "History of Canada" (1815), 2 vols., uncut; and the two American editions of Burns's Poems (Philadelphia and New York, 1788). This part also includes many publications of book-clubs and private presses issued in limited editions.

The Merwin Clayton Sales Co. of this city will sell, on January 12 and 13, a collection of books including minor Americana, local histories, Burns's Poems (Berwick, 1801), and first editions of American authors. With this catalogue was sent out a mimeographed price list of the sale of December 15 and 16, and similar price lists of future important sales will be distributed to customers.

Correspondence.

APPEAL FOR THE ITALIAN SUFFERERS.

To the Editor of The Nation:

Sir: The Canadian and American membership of the Archæological Institute of America and of the American Philological Association, in their meeting here, have opened a subscription for the relief of the Italian sufferers; and they beg all persons whose lives have been enriched by the memories of the Ionian Sea, to join with them. Checks may be sent to Prof. Frank Gardner Moore, secretary, Trinity College, Hartford, Conn. The money will be forwarded, through Director Jesse Benedict Carter, of the American School in Rome, to the Italian government.

Elmer Truesdell Merrill,
Frank Gardner Moore,
C. U. Clark,
Committee.

Toronto, Ontario, December 30.

A DRAMATIC MONOLOGUE FOR "HAMLET."

To the Editor of The Nation:

Sir: The flood of discussion concerning "Hamlet" seems to indicate that this is the least clear of Shakespeare's dramas; but no one, I believe, has pointed out that the main reason for its obscurity is the unfitness of the pure drama as a literary form for the treatment of such a subject. Hamlet is a problematic character. His motives, his real purposes, are so puzzling as to lead to important differences of opinion among even the most noted critics. Not even to Horatio can he unburden himself fully. And Shakespeare admits the inadequacy of his exposition of Hamlet's personality by resorting, in four notable instances, to that clumsy device, the soliloquy. In no other play does he find himself driven to so many lines addressed merely to vacancy; and this may therefore fairly be regarded as tantamount to a confession of defeat. Shakespeare probably realized that, fascinating as he had made the problem, he had not indicated any clear solution. And this because in the pure drama it was impossible for him to explain so subtle and complex a character.

By a grim irony of fate it was reserved for a man with an almost hopeless reputation for obscurity to discover the proper literary form for the analysis of a problematic character. Browning, in his dramatic monologues, is much clearer than Shakespeare in "Hamlet." After reading Caponsacchi's luminous monologue in "The Ring and the Book," it is not necessary to ask, What manner of man is this? Though the accusations of enemies had seemed to prove him to be a lascivious hypocrite, this impression is eradicated by his speech before the court—a speech the effect of which upon the judges is admirably indicated by Browning—and the devotion, the idealism, of this "soldier-saint" become incontestable.

Now turn back to Hamlet. Had he survived the arrest of "that fell sergeant, Death," long enough to defend himself by a speech to the populace, by whom Shakespeare assures us he was so beloved, would there have been any danger of his leaving "a wounded name" behind him? Does not Shakespeare's device of making Hamlet prevent Horatio from committing suicide, in order that Horatio may render clear to the king's subjects the true course of events, prove that a dramatic monologue was necessary in such a case? But did even Horatio know his friend well enough to take the task of explanation from his shoulders? The spiritual isolation of Hamlet, his apparent inability to find any one who can understand him to the full, is the source of much of the pathos in the play. The inadequacy of Ophelia is felt almost at the outset. Horatio is the recipient of confidences; but to him also the secret of Hamlet's wonderful personality—perhaps closely akin to Shakespeare's own—is "within the centre hid." Not only does this hero's soul pass to the "undiscovered country" at his tragic death, but that soul is during his whole life an undiscovered country to both friends and enemies. Claudius comes nearest to discovering him at one point; yet how little does even that smooth villain understand! Only Hamlet could make Hamlet clear; and by missing the monologue form Shakespeare has failed to make this solution possible.

One may readily admit that it is solely from the point of view of clearness that "Hamlet" would have been improved by a transfer to the new literary form suggested. Doubtless the result of such an experiment would have been less interesting, less complex in its study of human life, and would not have given Shakespeare an opportunity to show his consummate skill in painting a large canvas. It was Browning's inability to handle a great number of characters and to develop an action patiently and flawlessly from inception to crisis which led him to adopt the dramatic monologue; for it was only after several failures in the pure drama that he found himself, in the alternative form. But his success in this new form is admitted even by the most rabid Tennysonian. How infinitely tantalizing, then, are the possibilities opened to us when we fancy the results, had Browning made a new Hamlet.

Harry T. Baker.

Beloit College, Wis., December 23.

"FOUGHT TO A FRAZZLE."

To the Editor of The Nation:

Sir: In the interesting and extremely suggestive volume, by Eliza Frances Andrews, recently published and entitled, "The War-Time Journal of a Georgia Girl," is the following (p. 133):

> I might take more credit to myself for keeping Lent, if I had anything to wear, but my one new dress isn't made up yet, and everything else I have is too frazzled out to wear.

This is a diary entry of April 5, 1865. Gen. Gordon, of Georgia, used his expression, well-known to all students of our Civil War literature, and which presumably suggested the phrase to President Roosevelt—"Tell Gen. Lee that my corps is fought to a frazzle"—about the tenth of the same month, or within a week of the date of Miss Andrews's diary record.

A few lines further on, Miss Andrews records that her sister's "hair that she lost last fall, from typhoid fever, has grown out curly, and her head is frizzled beautifully all over." The last term is,

of course, familiar as connected with certain methods both of cooking, and of dressing the hair. The companion word, "frazzle," it is apparent, was a term in common use with Southern women in connection with their dress, and was somewhat equivalent to "frayed out."

The noticeable thing now, however, is this example-of-record of the use of the word "frazzle" in its proper colloquial sense by a girl in Georgia almost at the very time Gen. Gordon was using it in Virginia in connection with his battle-worn army corps. C. F. A.

Boston, January 4.

[The "New English Dictionary" describes "frazzle" as dialectic, and used in the United States. It gives the following citations, the first of which is forty years earlier than that quoted by our correspondent:

Robert Forby, "The Vocabulary of East Anglia": *Frazle*, to unravel or rend cloth. *Frazlings*, the threads of cloth torn or unravelled.

1893. *American Missionary:* One's garments get frazzled in the grass; one's mind and body and spiritual sense sometimes become frazzled, torn to pieces, good for nothing.

1894. Columbus (Ohio) *Dispatch*, January 2: Two years ago his nerves were worn to a frazzle over an attempt made to levy a tax.

1895. *Nebraska State Journal*, June 23: Every one believed that Thomas would . . . plant the frazzled banner of the distillers in its place.—Ed. Nation.]

TARIFF AND REVENUE.

To the Editor of The Nation:

Sir: "The belated diversion the high tariff people are trying to make, in their anxiety about the revenue," by pointing to the existing deficit, according to your editorial of December 24, recalls the fact that the McKinley act of 1890 was entitled "An Act to Reduce the Revenue and for Other Purposes." That law was the high tariff response to the demand of Mr. Cleveland's message of December, 1897, for a reduction of duties because of the then increasing surplus under the much lower tariff of the law of 1883. The remedy then administered by protectionism for the condition which then confronted the country was to raise the duties so as to make them prohibitory, and so reduce the revenue, resulting from the act of 1883. The remedy now, when a deficit, instead of a surplus confronts us, would seem to be, as you suggest, to reduce the present duties; and this was the remedy prescribed by the high tariff doctors of 1890. Charles B. Wilby.

Cincinnati, December 30.

THE HETCH HETCHY VALLEY.

To the Editor of The Nation:

Sir: The *Nation* and its readers can, by a prompt appeal to Congress, assist in the effort to preserve for the public one of the most remarkable of our national parks. I refer to the one embracing Hetch Hetchy valley and its watershed, in California. This, with the neighboring Yosemite, probably has no superior for grandeur of natural scenery. But a united and determined effort is now being made to batter down the protection of the national park boundaries, to the end that its water resources may be commercially utilized. The farmers on the lowlands claim a large part of the flow for irrigation, and can, if they will, impound it without entering the park; individuals and corporations wish to develop electric power plants; but San Francisco leads the fight by demanding that Hetch Hetchy be converted into a reservoir to supply her with water.

San Francisco exerted great pressure upon the Secretary of the Interior, who yielded, in a moment of weakness. He granted what was asked, under some limitations; but these limitations are not regarded seriously by the San Francisco promoters, who confidently intend to eliminate all restrictions. If San Francisco had no other source of water supply she would be justified in taking this course; but this is only one of a dozen sources that are available, and of all these, this is the only one that is important to protect, because of its remarkable scenic value. The Sierra pours a vast flood upon the great valleys of central California, and gives ample opportunity for enormous development for municipal supply, for irrigation, and for electrical power.

Hetch Hetchy is not well known, as yet, even in California, as it has been somewhat difficult of access. Its walls rise some 3,000 feet. The towering granite is marked by several waterfalls of great height and remarkable beauty. Its floor is comparatively level, having a meadow at the lower end, and the upper covered with great ferns. It is shaded by a primeval forest, among which are giant pines and firs, 200 feet high. The Tuolumne River flows clear and placid through the middle of the valley, with the beauty of an emerald. The floor of the valley has an elevation of some 3,000 feet; but at its head the cañon of the river rises rapidly between tremendous granite walls, which at one point extend 5,000 feet above the stream, that races and roars along its bed in a continuous series of rapids and waterfalls. This cañon can be made accessible to the public by trails. Some twenty miles above the Hetch Hetchy the cañon terminates and the river flows quietly through the Tuolumne meadows, which are some ten miles long, and vary from one to two miles in width. The meadows are surrounded by mountains having peaks covered with perpetual snow. In this neighborhood are Mt. Dana, Mt. Ritter, and Mt. Lyell, the two latter rising above 13,000 feet, and each bearing small glaciers. The entire region is finely timbered, up to the snow line, and intersected by many beautiful streams. Here and there are found the little Alpine meadows, grass-carpeted and spangled with flowers, which are the gems of the high Sierra.

This wonderful region was explored by John Muir and his eloquent pen has done much to make it known. To him is due the chief credit of having the best of it included within a national park, presumably safe from invasion for all time. Indeed, had it not been so preserved for the public, San Francisco would have had no opportunity to acquire it, as it would have been appropriated long since for other purposes. And if San Francisco succeeds in ousting the public from the rights which have been reserved for all, she eventually will demand the exclusion of tourist and camper from the entire drainage to prevent contamination of the water supply; just as armed guards now expel intruders on the drainage of its present supply.

This region is part of the rich heritage of the older States of the Union, as well as of California. They should help to preserve it, by demanding action on the part of their representatives in Congress. There is urgent need for such support, for the controlling Californian sentiment is deplorably avaricious and utilitarian. The chief promoters of the San Francisco water scheme are men who represent a high average of the ordinary level of culture here, and who are active generally in promoting what they believe to be the best interests of the public. They denounce their opponents in this matter as "scenery cranks." Their course regarding Hetch Hetchy gives point and force to a recent characterization in the British Parliament, when a matter under debate was disposed of with the remark that the measure was unworthy of cultivated England and might have emanated from one of the semi-civilized States of Western America.

This matter has nothing to do with the national policy regarding forest reserves. It relates exclusively to the policy of protecting a few localities which possess such remarkable natural attributes as justify their being set apart as national parks.

George Edwards.

Berkeley, Cal., December 27.

THE PICTURE OF HOMER.

To the Editor of The Nation:

Sir: With reference to Amasa M. Eaton's letter about a picture of Homer, in your issue of December 24, it is possible that his engraving was taken from the picture described by André Beaunier, and that Beaunier's description is correct, even though the poet's left hand rests on the boy's shoulder in the one and the right in the other, while the right arm is raised to heaven in the painting and the left in the engraving. Massard most likely engraved directly from Girard's painting and not from its reflection in a looking glass, so that when the proof was taken from the plate, what was left in the painting was right on the impression, and vice versa. Nearly all, if not all, the old engravers worked in this way. Marc Antonio Raimondi so copied Raphael's drawings. Rembrandt, Whistler, and Seymour Hayden in their etchings invariably reversed what the French call the *orientation*, and Pennell does so to-day. B. P. S.

New York, January 1.

INDIAN STATISTICS.

To the Editor of The Nation:

Sir: Will you allow me a little space to correct a misapprehension which may arise among readers not familiar with Indian statistics from a perusal of your article of November 19, upon the New India? The writer of that article appears to hold the view that India is getting poorer, and that official statistics confirm this melancholy opinion. This is not the case; the statement that the Hindu earned four cents a day in 1850 and three cents a day in 1882, and less than two cents in 1900, which he quotes with approval, is a conjecture of the late Mr. William Digby for which he alone is responsible and which every scien-

tific statistician has repudiated. The estimate for 1850 does not profess to be official and is a singularly wild conjecture, for the number of people then living in India is not known, the first census having been taken more than twenty years later. As even such elementary statistics as are recorded in a census did not exist in 1850, it is obvious that the materials for such a delicate calculation as the wealth per head of the population are absolutely wanting. Even now that the statistical material is much enlarged, no reasonable man can feel any confidence in these hazardous calculations which profess to estimate the wealth per head to a penny or a fraction of a penny. We do not know even approximately what the annual production of wealth in India may be, nor have we yet any statistics upon which to estimate it. We have, however, since 1872 (the year of the first census of British India), a few figures upon which we can rely with confidence and they certainly do not bear out the theory that India is getting poorer. We have, for instance, the figures for imports and the figures for population. Here they are:

Year.	Rupees. Imports.	Population.	Rupees. Per head.
1872.....	364,000,000	185,000,000	2.
1907.....	1,735,000,000	237,000,000	7.5

The rupee in 1872 was worth one shilling and eleven pence; in 1907 one shilling and four pence, so that imports in 1873 were worth 92 cents per head, and in 1907, $2.52 per head.

The reason why it is difficult to estimate the wealth annually produced in India is that India is a land of small holdings, and there are many petty by-products on a small farm which escape the statistician, but which add materially to the comfort of the farmer's family. A patch of vegetables, a goat, and a few hens will very appreciably contribute to the health of the children, but they will elude the most vigilant statistician. As a matter of fact, the government of India does not include even the value of the straw in its estimate of the farmer's income, when imposing taxation, and therefore this not unimportant by-product of husbandry (which in India serves as cattle fodder) escapes enumeration. The truth is that both the profits and the expenses of the small farmer are made up of such petty items that they baffle the economist who would express them quantitatively. An Indian proverb well sums up the situation: "If the cost of cultivation be counted up in *money*, not even the goad will remain." Forgetting this, industrious statisticians like Mr. Digby pore over Blue Books and come to the astounding conclusion that, owing to the pressure of the land tax, the Indian farmer makes nothing out of the cultivation of his holding or works it at a loss. If statistics do indeed prove this, so much the worse for the statistics. The Indian peasant certainly does not think this is the case, for he will buy land, on which he will have to pay the tax, at as high a rate in some places as 1,000 rupees ($330) an acre. The Indian peasant may be uneducated, but he is shrewd enough not to pay four or five thousand rupees in cash for the privilege of making a loss. That something more than a bare living is to be made from a small holding in India, after paying the government land tax, is further shown by the practice of subletting which prevails extensively. In Madras, for instance, where the farmers usually hold direct from the state, it is common to find the holding sublet to an under tenant upon the metayer principle; the farmer pays the land tax and receives from the sub-tenant one-half, two-thirds, and even sometimes three-quarters of the produce. The practice of subletting is to be regretted, but at least it reduces most of Mr. Digby's calculations to so much waste paper.

T. MORISON.

Ashleigh, Weybridge, England, December 20.

[It may be worth while to recall that the point of our article was to show the existence of widespread discontent in India and some of the reasons for it. Our correspondent's statistics as to imports, if offered as proof of the prosperity of the Indian peasant, have some of the defects which he attributes to Mr. Digby's calculations. The figures themselves may be trustworthy, but to average them over the entire population of India may be misleading. The total of imports includes a large amount of supplies for the construction and maintenance of public improvements, for the English officials and for the rest of the 5,002,000 "persons of independent means" discovered by the census takers of 1901.—ED. NATION.]

Notes.

In view of the Lincoln centennial, Thomas Y. Crowell & Co. have reissued in their Astor Edition a book first published by their firm in 1865: "Abraham Lincoln: Tributes from His Associates, Reminiscences of Soldiers, Statesmen, and Citizens." The book contains articles by George William Curtis, W. H. Herndon, Gen. Howard, and others.

The "Autobiography of Captain Zachary G. Lamson" (Boston: W. B. Clarke Co.) gives all too briefly some of the incidents of an active and honorable career in the merchant service between the years 1797 and 1814. Capt. Lamson's courage and capacity entitled him to unqualified success, but ill fortune seems to have dogged him at every turn. His story is extremely interesting. It is especially valuable in the many side lights it throws upon nautical matters during the time of the Napoleonic struggle. It is edited by O. T. Howe, who gives a painstaking and accurate account of the state of the American mercantile marine at that period and of the international complications which beset our efforts to carry on trade under the prohibitory conditions of Napoleon's Berlin and Milan decrees on the one side and the British Orders in Council on the other. Few books of its size, if any, contain so much in these respects that is worthy of reading and preserving.

R. A. Guerber's "Myths of the Norsemen" (London: Harrap & Co.) is an agreeable reminder of a branch of legend that has been overmuch neglected. Owing, perhaps, to a certain brutality, a certain deficiency in grace, these Teutonic stories have rarely been chosen for treatment by the artist and the poet, nor have they stamped themselves with any great vividness on the popular fancy, the English-speaking peoples in particular being surprisingly ill-acquainted with them. The unprejudiced cannot but think this a matter for regret, since if these tales are not so alluring as some national legends, they are superior to most in moral elevation and human feeling. The present volume includes, as well as the myths of Asgard, the Frithiof Saga, and most of the adventures of the Volsungs. It is illustrated with reproductions of various already existing works of art, and has two indices.

French writers have given a good deal of attention in recent years to the feminine side of the house of Bonaparte. Whether in pursuance of the anthropological dictum, *cherchez la mère*, or from sheer interest in a fine old crusted character, the study of Letizia Bonaparte is fully worth while; and her daughters, their appearance, their ideas, and their adventures, transcend life and glow with the enchanting unreality of the creations of Dumas. In English they have been comparatively neglected, and here H. Noel-Williams has found an excellent opportunity for his art. His book "The Women Bonapartes" (Charles Scribner's Sons) makes no claim to contribute to the world's knowledge, but the literature of the subject has been thoroughly and intelligently used; selection has been happily made; and the mass of material has been handled lightly, with a remarkable power of condensation. Even thus, the narrative could hardly have been contained in its two volumes, but for the virtual omission of Napoleon. Of course, he is felt on every page, as the very condition of existence for his family; he is to the story what Egdon Heath is to "The Return of the Native"; his relatives watch him as a sailor watches the weather; but his own career comes before us only as it is reflected in Pauline's allowance, in Murat's infatuation, and in the cheese-parings of Madame Mère.

The title and cover of W. R. H. Trowbridge's "Seven Splendid Sinners" (Brentano's) are worse than its contents. The Duchesse de Châteauroux, the Duchess of Kendal, Catherine II of Russia, Elizabeth Chudleigh, to name the first four of the seven, are not savory subjects for biography, but Mr. Trowbridge writes with sufficient decorum, and partly justifies his choice by the historical or social significance of his subjects. The life of Elizabeth Chudleigh, the notorious Duchess of Kingston, is, perhaps, the most interesting of the seven, and here Mr. Trowbridge has drawn on a little-read source as well as Walpole's letters and the other familiar memoirs of the day. Miss Chudleigh was a characteristic phenomenon of Georgian society. In his life of the Duchess of Kendal, Mr. Trowbridge gives the usual account of Lady Darlington's relation to George I, but in his preface he retracts all this and accepts her innocence in accordance with the notes of Graf Kilmansegg's recent "Briefe des Herzogs Ernest August zu Braunschweig-Lüneburg." The editor of those letters has both national and family reasons for attempting to whitewash Lady Darlington and to refine the gross portraits of the first Brunswickers left by British writers. We can only say that an examination of his notes does not

convince us that the English sources are substantially false.

The time has not yet come for a critical study of the period and the frame of mind we call "Victorian." We are still too near it and become, in discussing its chief manifestations, either too angry, or too reverential. Fitzgerald Molloy ("Victoria Regina," Dodd, Mead & Co.) seems to have perceived this truth. At any rate, he makes no attempt at criticism. He skates serenely on the thin ice of the conventional view, hurts nobody's feelings, regards with gentlemanly regret the events of '48, takes everybody seriously except Macaulay and Carlyle, and does his best to cast a glamour over the stubborn little figure of his protagonist. The book ends with the death of the Prince Consort in 1862.

"India: Its Life and Thought," by John P. Jones, D.D. (The Macmillan Co.), is the outcome of a thirty years' experience in this land, whose inhabitants are the least understood and the most easily misunderstood of all men by the people of the West. To all who desire to learn something of the conditions and characteristics of their life and thought, it will prove exceedingly helpful. Beginning with a lucid account of the present prevailing unrest, its cause, and remedy, Dr. Jones explains at some length the system of caste, showing how it degrades manual labor, opposes commerce, and is a deadly foe to nationality and individualism. Not only so, but by its laws, fifty millions of people, the outcasts, are not permitted to enter any temples and have no right to receive whatever comforts religion may confer. An exposition of the principal religious beliefs and ideals, together with the reforms now in progress, occupies the larger part of the volume, which closes with a chapter on Christianity in India. Though the dark shadows prevail, yet there are many bright gleams and justice is paid to the redeeming traits in the Hindu character and literature. The make-up of the book is unusually good and its attractiveness is increased by sixteen full-page illustrations.

An instructive story of the ups and downs in the methods of secondary education is found in the recent Festschrift, edited by R. Büttner, under the title, "Geschichte des fürstlichen Gymnasiums Rutheneum zu Gera," and issued on the occasion of the three hundredth anniversary of this famous school (Gera: H. Kanitz), is really a history of German educational ideals *in petto* during these three centuries. The book is illustrated.

The political training and education of the masses as a burning need of the times is the theme of the new work of P. Rühlmann, in his new volume, "Politische Bildung; Ihr Wesen und ihre Bedeutung eine Grundfrage unseres öffentlichen Lebens" (Leipzig: Quelle & Meyer).

"Das nächste Geschlecht, ein Buch zur Selbsterziehung für Eltern: Das sexuelle Problem in der Kindererziehung" (Giessen: Alfred Töpelmann), by Hans Wegener, author of "Wir jungen Männer," is like many other discussions that come from positivistic and monistic circles, devoted to the interests of the coming generation. Its chief purpose is to prepare young people for rational parentage. The popularity of this and kindred works in Germany can be seen from the fact that, although "Wir jungen Männer" is only recently published, 85,000 copies have been printed and the first edition of the present work is 20.000.

"Deutsche Reiter in Südwest: Selbsterlebnisse aus den Kämpfen in Deutsch-Südwestafrika, nach persönlichen Berichten," edited by Gen. F. F. von Dincklage-Campe, issued with many illustrations in twenty parts (Berlin: Deutsches Verlagshaus Bong & Co.), is a unique addition to colonial literature. It is a collection, from many sources, of adventures and experiences of German colonists in Southwestern Africa. The contents are exceedingly varied, touching problems of missions, commerce, and culture, although naturally emphasizing military events.

"Am Webstuhl der Zeit: Ein Jahrbuch," prepared by Emil Freiherr von Grotthuss (Stuttgart: Greiner & Pfeiffer), is the second issue of an exceptionally good annual, the purpose of which is chiefly to furnish an intelligent idea of the progress of thought and life during the past twelvemonth in every department of activity. The different parts are written by specialists, who, in some cases, however, do not report with perfect objectivity, but rather plead for special scientific and philosophical ideas that are still *sub judice*.

Eduard von der Hellen, in his recently issued fifth volume of "Goethes Briefe: Ausgewählt und in chronologischer Folge mit Anmerkungen" (Stuttgart: Cotta), which contains letters from 1807-1818, is approaching the close of this work. The next volume will be the last.

Students of the Nibelungenlied and the literature that has grown up about it will welcome Theodor Abeling's "Das Nibelungenlied und seine Literatur," which contains in its 257 pages a complete bibliography and four essays on the subject (Leipzig: Eduard Avenarius).

The G. Grote'sche Verlagsbuchhandlung of Berlin is just issuing a new work in two volumes, "Jesus und die neutestamentlichen Schriftsteller," by the veteran Prof. Adolf Hausrath; the first, of 712 pages, has appeared, the second is promised early in 1909. The author, in his introduction, declares that this work is not intended to be controversial, but for reading and study. Not the critical but the historical and literary point of view determine the character of the contents, which are intended largely for teachers, preachers, and careful students in general. The author has sought to interpret the contents of the New Testament writings, and especially the teachings of Jesus, in the light of the historical background. Due attention is given to modern problems and perplexities.

Wilhelm Ernst, in his "Aufgabe und Arbeitsmethode der Apologetik für die Gegenwart" (Berlin: Trowitzsch & Sohn), undertakes, within a narrow compass, to adjust the problems and perplexities of apologetics to the thought of the times. The author, who evinces a good deal of independent thought, and writes suggestively, is evidently anxious to be fair to both sides, the conservative and the advanced.

The posthumous works of the independent Catholic theologian of Würzburg, Dr. Hermann Schell, have just been issued (Paderborn: Ferdinand Schoeningh) in a solid volume of more than seven hundred pages entitled "Kleinere Schriften." This volume, edited by Dr. Karl Hennemann, "mit kirchlicher Druckerlaubnis," consists of essays, addresses, sermons, and the like, all with the characteristic features of Schell's progressiveness of thought. The same house has also issued lately a brochure entitled "Hermann Schell über die soziale Frage," von W. Hohoff.

Michel Épuy has just published the "Œuvres choisies de Rudyard Kipling," with preface, critical analysis, and a portrait of Kipling.

The London *Times* of December 17 summarizes the annual report on the operation of the Rhodes scholarship system, issued December 16:

The results of the year's examinations are given in detail. In the final honor schools there were 4 first, 19 second, 15 third, and 3 fourth classes gained. Of the firsts, 3 were gained by Americans, and 1 by a colonial scholar. Three scholars took the B.Litt. degree, 3 the B.Sc., and 3 the B.C.L. The School of Economics appears to attract the German scholar, 2 of whom took the diploma "with distinction." Failures as well as successes are recorded. Two German, 3 colonial, and 4 American scholars failed to pass the examinations which they attempted. The statement made at the Colonial Institute by Professor Egerton, but not referred to in this report, that only one Rhodes scholar out of the whole body was reading for a pass degree, shows at least that the failures are incurred in facing the more severe tests of the university. The All Souls fellowship [to which a Canadian, Mr. Archibald, was elected] was the most striking success achieved during the year, but in addition to this there were gained a Burdett-Coutts scholarship in natural science, a senior demyship at Magdalen, the Beit prize and Brassey scholarship in colonial history, the Passmore Edwards scholarship in classes and English, and a geographical scholarship.

The account in the *Times* closes with this paragraph:

Most satisfactory of all, perhaps, to those who watch the working out of the idea of Cecil Rhodes, is the tribute paid by Sir William Anson in the discussion on Professor Egerton's paper last week in the Royal Colonial Institute, when he said it was felt that the Rhodes scholars had as a whole brought to the university a spirit of earnest work, and were doing Oxford good. The approval of his alma mater, and the form in which it is thus given, is what the founder himself would have most valued.

The Turkish Division of the Bosnian and Herzegovinian Institute for the Investigation of the Balkans, in Serajevo, has recently received valuable additions to its collection—a large number of archives coming from old Turkish and Bosnian noble families, together with 160 copies of Arabic, Persian, and Turkish manuscripts, which begin with the year 549 of the Hegira.

J. P. Gordy, professor of the history of education in New York University, died by his own hand, December 31, at the age of fifty-seven. Grief for the loss of an only daughter, who had just died of pneumonia, was apparently the cause of his act. Professor Gordy had written largely on educational and historical topics, including "The Growth and Development of the Normal School Idea in the United States," "Text-Book on Psychology," "History of Political Parties in the United States," and "A Liberal Education in the Elementary School."

Mary Evelyn Moore Davis ("Mollie E. Davis") died in New Orleans January 1 at the age of fifty-six. Her published works include "Minding the Gap, and Other

Poems," "In War Times at La Rose Blanche," "Under the Man-Fig," "An Elephant's Track, and Other Stories," "Under Six Flags," "Wire Cutters," "The Queen's Garden," and "Jaconetta."

Émile Honoré Cazelles has died at Paris at the age of seventy-seven. He was best known for his spreading the knowledge of English philosophy in France, and his published works include translations of many volumes of John Stuart Mill, Herbert Spencer, Bentham, and Grote.

THREE AMERICAN LEADERS.

John C. Calhoun. By Gaillard Hunt. Pp. 335. [The American Crisis Biographies.] Philadelphia: George W. Jacobs & Co. $1.25 net.

Life of Stephen A. Douglas. By William Gardner. Pp. 239. Boston: Roxburgh Press. $1.50.

Robert E. Lee, the Southerner. By Thomas Nelson Page. Pp. 312. New York: Charles Scribner's Sons. $1.25 net.

Persons who a generation ago read Von Holst's highly metaphysical "Calhoun" will naturally wonder how Mr. Hunt's biography of the great South Carolinian differs from it. Von Holst knew so few personal details of Calhoun's life that, with all his imagination, he could not, he said, fancy himself walking or chatting familiarly with the nullifier, as he might with Webster or Clay. He dealt with his hero under broad, impersonal chapter-heads, which made Calhoun seem like an extraction from history. The Calhoun of Hunt's narrative, on the other hand, is a product of personal, local, sectional, and national details. As we are early made familiar with Calhoun's antecedents and traits and the shifting political influences to which he was exposed, we see no mystery in his change from nationalist to sectionalist. During the nullification movement, when personal minutiæ, social conditions, and local colors are important, Hunt is ample, vivid, and instructive. During the later period—when Calhoun attacks this, defends that, and demands something else, all in support of his theories of State rights, which were designed to shield, then strengthen, and then expand the interests on which Southern society rested—Von Holst became more and more psychological, yet as irresistible as a geometric demonstration. Mr. Hunt, however, having already shown us Calhound and the forces that affected him, does not always point out the significance of new factors during the last two decades of Calhoun's life, when he was a national leader. Von Holst is vastly superior in his philosophical grasp, but Hunt is unrivalled in description and literary flavor. It is no slight mutual compliment that two biographers, with altogether different antecedents and tastes, writing a quarter of a century apart, and working in historical materials that were only partly the same, should reach similar conclusions. This general agreement is not much disturbed by the fact that Hunt looking up to Calhoun from a commonwealth calls him a statesman, while Von Holst looking down to Calhoun from the nation is unwilling to grant quite so much.

David Franklin Houston, in his scholarly and independent "Study of Nullification in South Carolina," says (p. 72) that not Calhoun, but Robert J. Turnbull was the father of nullification: "Only the name is wanting." Mr. Hunt, however, bluntly asserts (p. 78) that Turnbull "never presented his readers with a sight of the theory of the right of nullification. Apparently he knew nothing of it or thought nothing of it." But let us give Turnbull and Calhoun each his due. Turnbull, prior to 1828, was an agitator, a political recruiting officer, but he went far enough to describe the general plan ("Crisis," pp. 152, 163): "Resistance, and *firm resistance*, is the only course to preserve the Federal Constitution in its pristine purity, and with it, the hopes of freedom." Again, "Let South Carolina act for herself, and the other States for themselves." He thought that the Legislature could express the sovereignty of the State. His expectation was that such resistance would suffice to annul the objectionable features of the tariff, "perhaps" without even "calling out the militia." Then how did Calhoun, who, until the eleventh hour was a nationalist, become leader of the sectionalists? The "tariff of abominations" (1828) made it certain that South Carolina would resist. This certainty called for a leader who understood the requirements of a campaign against the Federal government, which Turnbull did not. Calhoun, the Vice-President and new convert, was consulted and promptly wrote the "Exposition of 1828," which was a protest, a pronunciamento, and a programme, all in one. The general aim of single-State resistance within the Union, on the basis of State sovereignty, was still unchanged. Hence it is equally evident that Turnbull antedated Calhoun in demanding the substance of what was now called nullification, and that Calhoun preceded Turnbull in elaborating the details for argument and action.

Politicians, when viewed historically, are, like fordable streams, unimpressive, whereas statesmen, like navigable rivers, have a certain dignity and command respect. It is not the least of the virtues of Mr. Gardner's biographical sketch—for such it is rather than a "life"—that he treats Douglas as a politician. Any one who has closely studied Douglas's career will find hardly a new fact or thought or phrase, and at first he will wonder why the book was written. But the reader will soon discover that he is following a political sketch that is a model for clear, concise, frank expression, and is a remarkable example of a successful combination of the usually incompatible qualities of sympathy and criticism. Here are a few sentences from a characterization of Douglas that show the distinctness of the lines in this excellent biographical etching:

> He was a practical man of action, whose course was generally gulded by the accidental circumstances of the hour, rather than by fixed principles. . . . He entered the great political arena with little of either mental or moral culture. . . . His real sin was that he did not rise above the ethics of the times; that he remained deaf as an adder to the voices of the great reformers who sought to regenerate the age, and who were compelled to grapple with him in deadly struggle before they could gain footing on the stage. . . . While his ethics has fared hard, his mental gifts have been over-estimated. The availabll-ity of all his resources, his overwhelming energy and marvellous efficiency among men of intellect, gave rise to the impression that still survives that he was a man of original genius. But of all his numerous speeches, heard or read by millions, not a sentence had enough vitality to survive even one generation.

The ideals, methods, and temperament of the genuine historian or biographer are very different from those of the story-teller, who deals in colors, sentiments, impulses, contrasts, exaggerations, and almost anything that will help him to his desired climax. In fiction, it usually suffices if there is verisimilitude or plausibility. Every tradition, every common belief, every positive statement may be taken as good material to be wrought with, if it harmonize with the general setting. As a story-teller, Thomas Nelson Page compels our admiration. With the best of intentions he has written a biograpny of General Lee that would be admirable if it might be judged by the canons of fiction. Being convinced of the accuracy of traditions and reports, he accepts them without a thought of careful investigation. Accordingly he believes that secession was a Constitutional right; that Virginia was a thoroughly loyal and Union-loving State, and her convention of 1861 was almost unanimously Unionist, until the National Government by usurpations and aggressions drove the convention into secession. Lee's well-known declaration that secession would be revolution, is quoted incidentally, but not his opinion, written three days after Virginia had passed her ordinance: "The whole South is in a state of revolution, to which Virginia, after a long struggle, has been drawn." It is nothing that those opinions represent the historical fact, for tradition tells a different story.

We recall no influential military critic who, within a decade or two, has ques-

tioned that Lee was great in attack, all but invincible in defence, and about equally audacious and successful in both strategy and tactics. Then, too, Lee's moral, like his military, qualities are now, thanks to Charles Francis Adams's fascinating and philosophical address, quite generally admired. But Mr. Page imagines Lee assailed, depreciated, sinned against, and heroically rushes to a defence that is carrying coals to Newcastle. Find a first-class villain, a traitor, even, and your hero becomes almost superhuman. It will be remembered that after Lee's death, when Longstreet had affiliated with the Republican party, the Rev. Dr. William Nelson Pendleton, a West Pointer and a clergyman, who had been Lee's chief of artillery, made a very sensational public accusation, that on the evening of the first day's fight at Gettysburg, Lee ordered Longstreet to make a flank attack on the Federal left wing early the next morning; that Longstreet inexcusably delayed and disobeyed Lee's order, and by various acts. delays, or failures to act then and later wilfully caused the battle of Gettysburg, and consequently the whole struggle, to be lost by the Confederates. Both Lee's and Pendleton's official reports on Gettysburg belie the gravamen of the charge, and Longstreet continued to be Lee's favorite. Yet to thousands, this story was balm for old but lasting disappointments. Any one could easily gain much popularity in the South by attacking Longstreet, whom no one cared to defend. Longstreet's final and thorough answer, "Lee and Longstreet at High Tide" (see the *Nation*, January 19, 1905, pp. 53-55), was published soon after his death, and more recently General Alexander's "Military Memoirs of a Confederate" (see the *Nation* of June 13, 1907, p. 542), refuted all the charges that were grave. Rank, fierce, and unchristian injustice to a gallant brother officer, who was not, indeed, without his faults, was supposed to have received its quietus. Nevertheless, Mr. Page acts as if the accusations against Longstreet had never been questioned, although on other subjects he refers to Alexander's "Memoirs." Beginning back in the campaign of 1862, Mr. Page gradually and skilfully inspires a prejudice against Longstreet until the reader is prepared for this sentence (p. 187):

> It used to be common soon after the war for old Confederate officers to declare that he [Longstreet] should have been shot immediately after the battle [Gettysburg], and that Napoleon would certainly have done so. But Lee was cast in a different mould.

There's a fine climax, indeed!

To make the villain all the blacker, the fleet and ready Jackson is put in contrast. But even "Stonewall" was slow and fatally disappointed expectations in the peninsular campaign. Next to climaxes and contrasts, fiction-writers have a genius for rescues. Mr. Page recently received a letter whose writer says (pp. 106, 107) that at the time of the battle of the first Cold Harbor, Jackson's guide told him that Jackson arrived late because the road had been lost as a result of changes wrought by the armies. This hearsay evidence—only forty-six years old—is conclusive, and the letter is printed as an appendix. But, alas, the serious blot on "Stonewall's" record is that, a few days later, he lost a whole day at White Oak Swamp, when he heard the guns near Glendale (Frazier's Farm) and knew that he was expected and needed. With a light touch, Mr. Page says (p. 103) that "the failure of some of his [Lee's] lieutenants to grasp the situation prevented the complete success of his plans." To have named Jackson would have shown that he was twice delinquent in a few days, and would have made a parallel instead of a contrast with Longstreet.

Among many other choice historical novelties, Mr. Pages furnishes touching and conclusive evidence that Gen. Sherman made war on women and children by saying (p. 168) that when Howell Cobb's plantation was devastated by Sherman in 1864, Cobb "was in his honored grave two years ere this, having fallen at the foot of Marye's Heights, as a brave man falls, holding back brave men." Who knows but that if a kind Providence had not decided that Howell Cobb was to survive the war several years and die in the peaceful old Fifth Avenue Hotel, he might have fought in Virginia, and even have been among the honored dead at Fredericksburg?

The perfect biography of Lee will be the one that gives the facts in a plain and limpid narrative, for Lee's irresistibly noble character needs none of the arts of fiction nor the errors of tradition. And his greatest virtues and talents were so superior and rare that it would be vanity to claim that they were typical of any State or section or nation or race.

CURRENT FICTION.

Kincaid's Battery. By George W. Cable. New York: Charles Scribner's Sons.

In "The Cavalier" Mr. Cable startled some of his old admirers and made many new ones by producing a story of adventurous and even sensational cast, wherein were many more heroic feats and hairbreadth 'scapes than seemed to the point—for Mr. Cable. The charm of the early tales was independent of mere happenings: it lay partly in the quaint indigenousness of his material, partly in the playful deliberation of his style, the affectionate raillery with which he pictured the life of old New Orleans. There was always the sense of historic reality in his human types and their settings; but they seemed as far as possible from the stage puppet and back-scene of the ordinary historical novel. "The Grandissimes" belongs to that vivid moment in the life of New Orleans which followed the cession of Louisiana. Who can forget the great Numa, the patriot and artist Raoul Innerarity, poor Palmyre—above all, the ladies Nancanou? The very perfume of that romantic hour is treasured up for us in this essential book. "The Cavalier" seemed neither better nor worse than other war-time romances, unless—as was not impossible—one were to consider its style by itself—its style rather in the smaller sense.

"Kincaid's Battery" stands upon distinctly firmer ground. There are, to be sure, incidents in it of a superfluously exciting or confounding nature, and a person or two in whom it is impossible to believe. The beautiful and villanous Flora Valcour and her equally wicked and charming grandmother-accomplice are too bad to be true. And the machinery provided for our adventuresses—the hidden sliding panel, the stolen treasure, and that mysteriously prolonged immunity from the ordinary rewards of theft, slander, malice, and all uncharitableness—are ancient devices indeed. Anna Callender marks a return to Mr. Cable's earlier type of heroine from the stalwart she of "The Cavalier." She loves with a soft ferocity, and with a soft ferocity denies her love and beats back the object of it—till the moment of absolute surrender comes. It is she rather than the creole Flora who reminds us enchantingly of Aurore and Clotilde Nancanou. Perhaps the tale pleases us chiefly because it takes us back to the old scene and the old figures. The place is New Orleans and the time the outbreak of the civil war. In Kincaid's Battery, equipped and blessed by the ladies of New Orleans, are enrolled a Fusilier, an Innerarity, divers Grandissimes, and (Ah, lovely Clotilde!) two Frowenfelds. The pale features of Doctor Sevier and the cheerful or anxious faces of other old acquaintances hover in the background. We could well forego the story for the sake of drawing somewhat closer to these ancient intimates.

From the point of view of the romance-reader that is no doubt a delightful incident which brings together between two opposing battle-lines the hero (who ought to be commanding his battery), the heroine, who, without knowing that he is anywhere near, has called to him audibly on general principles, and the adventuress, who has followed him and takes the opportunity to cling about his neck in full view of and to the utter confusion of the heroine. It will be rather deplored by Mr. Cable's older readers, who yet may, by way of recompense, find so much elsewhere in the book to reassure them of his con-

tinued power to weave the old spells. The theatrical inventions might, we say, be dispensed with. The atmosphere of the tale, the aroma of that war-time beauty and valor of the South, are as distinguishable as that perfume of the older Louisiana, the Louisiana of "The Grandissimes" and "Doctor Sevier."

Mirage. By E. Temple Thurston. New York: Dodd, Mead & Co.

If "Mirage" were less well-written, it would be less exasperating. As it stands, the old Vicomte has an undeniable reality that makes one resent a certain suggestion of gloating in the author's way of bedecking him with borrowed joys only to pull them off again, leaving him all the colder for having known what warmth might mean. One by one—not by the will of Fate, but by the unmistakable agency of the writer—Monsieur du Guesclin is given a cottage in the country, the promise of a fortune, the ghost of an old love reincarnated in the loved one's daughter. The girl naturally turns to youth; her uncle, who has dabbled disastrously in speculation, recoups himself through the generosity of her elderly suitor; the promised fortune proves a delusion, and we leave the poor old seigneur back in the detested city, the shades of the prison-house of a London lodging closing about him, stripped even of the few trinkets that linked him to the past. We are quite resigned to his loss of Rozanne—he would never have been so happy with the reality as with the dream—but we rebel against the sacrifice of the snuff-box. At that point the author crosses the dangerous line between the pathetic and the merely irritating. This tendency gratuitously to over-scarify the reader's feelings mars slightly even the charming quaintness of the loves of Courtot, the Vicomte's servant, and Mrs. Bulpitt, kindly and homely souls that the average reader will pronounce the real hero and heroine of the story.

Das hohe Lied Von Hermann Sudermann. New York: Imported by G. E. Stechert & Co.

It is difficult to judge the later work of Sudermann without referring to the earlier. The issues so strongly presented in his first story, "Frau Sorge" (known in the English version as "Dame Care"), the powerful drama of the sins of the fathers unjustly visited upon the children in "Der Katzensteg" (called in the English translations "Regina" and "The Cat's Bridge"), and the tragedy of wrong and repentance in the life of his Leo Sellenthin in "Es War," force comparisons between the new writing and the old. The moralist who startled Berlin audiences with his early dramas of contemporary German life, "Ehre" and "Sodoms Ende," is also behind the novelist Sudermann. But neither he nor his readers have stood still in the twenty years or more. While in his early stories he was content with suggesting the moral lesson, in his recent novel he conveys it by picturing depravity with an abundance of minute and repulsive detail as needless for artistic effect as for ethical purpose. He commands respect for his seriousness and insistence, but he fails to win the sympathy of his readers.

"Das hohe Lied" is a masterpiece of the Sudermann of to-day. For construction of plot, characterization of his people, and faithful reproduction of atmosphere few recent works of German fiction can compete with it. The title, too, is well chosen; for the great unappreciated work of genius, which the Kapellmeister Czepanek has composed to the words of the Song of Songs, strikes the keynote of the tale. The heroine had heard its sensuous melodies in her cradle; she had grown up with them until the day when the erratic musician, her father, leaves wife and child for a life of liberty in regions unknown. The manuscript remained her only solace and treasure, when, after the mother's incarceration in an insane asylum, she is alone in the world and enters upon the sordid struggle for her daily bread—a life almost commonplace in its typical sequence of poverty, temptation, and defection. The girl, who, in order to escape the misery of insufficient food and clothes, agrees to wed an aged libertine, is unfortunately not a rare specimen of womanhood. Nor does the inevitable awakening which comes to her with all its obvious consequences tax the author's inventive powers. Reality furnished him with all the raw material.

The strength of the book lies in the sympathetic individualization of character. A curious product of heredity, social conditions, and adventitious circumstances, the heroine has withal some redeeming qualities. Without claiming for her the unsullied purity of Wassermann's Renate Fuchs, the author fairly succeeds in convincing us of the innate goodness of Lily Czepanek's nature. The man whom she marries, a colonel of the army, reconciles us by the sincerity of his cynicism. When their married life closes with an ugly discord, one feels that both have reaped their reward; she for having sold body and soul for material comfort, he for having sought nothing but the satisfaction of his senses. The objectionable features are the minor characters and incidents which the author crowds into his canvas, evidently for the purpose of convincing his readers of the hopelessly vicious life of the Berlin Bohême. Even if there are characters like the journalist Salmoni, the artist Kellermann, and the charming Frau Jula among the men and women of the newspaper and studio world of the German metropolis, one would rather be spared the minute portrayal of them, and the elaborate description of their pastimes.

The Making of Ireland and Its Undoing, 1200-1600. By Alice Stopford Green. Pp. xvi+510. New York: The Macmillan Co. $2.50 net.

A positive mania for publishing abroad the virtues and glories of the Irish race, and for correcting the numerous wrongs and misconceptions to which it has been exposed, has pursued Mrs. J. R. Green like an avenging fury for the past half-dozen years. The present work—consisting of thirteen essays on various phases of Irish life in the Middle Ages and Tudor times—is a valiant effort to accomplish this double result. But the book utterly fails to convince. Its proud scorn of the traditional authorities on its subject—as, for instance, Bagwell's "Ireland under the Tudors"—evokes at first sight a hesitating admiration; but on second reading we find ourselves wishing that Mrs. Green had at least kept in some touch with, even if she could not implicitly trust, the work of previous laborers in this vineyard. On the other hand, the quotation of a number of objurgations and abusive epithets, culled here and there from the reports of English officials in Ireland, without the slightest regard to the circumstances under which they were written or the persons to whom they were addressed, is not a very telling method of proving that Ireland has been shockingly misrepresented from the earliest times. One might as well cite Henry VIII's well-known characterization of the rebels of the Pilgrimage of Grace as the "rude commons of our shire, and that one of the most brute and beestelie of the whole realme," as evidence that the English kings never comprehended the undoubted virtues of the inhabitants of Lincolnshire. We look in vain for a frank statement of the many causes that justified the Tudor sovereigns in taking Ireland firmly in hand, especially the divergence in religion and the fact that it was a continual refuge and harboring place for Spanish plots and hostile expeditions. And the chief landmarks of Irish history, to which we have been accustomed to look for guidance—such as Poyning's Acts, Henry VIII's assumption of the title of King of Ireland, the landing of the first Jesuit mission there—are either slurred over or completely ignored.

That the Irishman has been abominably misunderstood and maltreated by the Englishman at different stages of his history, no one is disposed to deny, and we must be grateful to Mrs. Green for forbearing to utilize the rich material afforded by the history of the last three centuries in further support of this well-

established fact. But that English misconception and maltreatment are the sole or even the most important cause of the miserable condition of Ireland today, that there has been a "long perversion of Irish history" in the interest of politics, or that it has always been supposed to be the business of the historian of Ireland "to seek out every element of political instability, every trace of private disorder, every act of personal violence, every foreign slander, and out of these alone, neglecting all indications of industry or virtue, to depict a national life" (p. xi), may well be doubted. The Irish race has always possessed certain sterling qualities—warm-heartedness and personal devotion are among the most prominent—but, on the other hand, it has been singularly lacking in capacity for self-government, stability, and union. Though it has had many heroes, their work has always been of a character rather local than national, and the glories of Irish history have suffered in consequence. In so far as Mrs. Green's book is a plea for a fuller and more impartial study of the field with which it deals, it is heartily to be welcomed; but we fear that future writers who follow to their logical conclusion the lines of argument which she has laid down, will find, ere long, that they serve to obscure rather than to illuminate the truth.

From Peking to Mandalay: A Journey from North China to Burma through Tibetan Ssuch'uan and Yunnan. By R. F. Johnston. Pp. xii+460; with maps and illustrations. New York: E. P. Dutton & Co. $5 net.

This is the story of a wanderer in search of things strange and beautiful. His chief aim was to learn something about that wild border-land on the far west of China. Its interest lies both in the loveliness and grandeur of its river and mountain scenery, and in the number and diversity of the races by which it is peopled, of whose origin and history, social, physical, and linguistic peculiarities little is known. Having travelled extensively in China and learned the language, Mr. Johnston was well qualified for his task. Leaving Peking in January, 1906, he went by rail to Hankow, and thence up the Yangtse by steamer and through the famous rapids and gorges by "red-boat." This is the name of the government life-boats now stationed near each of the most dangerous rapids and manned by skilful and daring river-men, who annually save many lives from the wrecked junks. At Wan-hsien he left the river and went overland to Ch'eng-tu, the capital city of the province of Ssuch'uan. On his way thither he found posted in the towns and villages proclamations calling the attention of the people to a railway which the government proposed to construct from the capital to the Yangtse. The announcement pointed out the great benefits to the trade and prosperity of the province, and invited subscriptions for shares. To those who can remember that only thirty years ago the prejudice of the Chinese against railways was so great that the government bought the little road running out of Shanghai, sold the plant, and tore up the rails, this is a remarkable indication of progress. In Ch'eng-tu there is a provincial college with about three hundred students, who are being educated in Western as well as Chinese branches of learning:

> There is an Englishman who lectures on chemistry and physics, there are several Japanese lecturers and a staff of Chinese teachers who have a knowledge of European languages.

From this city he went by the mountain region which constitutes the western frontier of the empire through Yunnan to Burma—the whole journey taking a little over five months.

The larger part of the book is devoted to this little-travelled region, and as the author's object is to give information rather than to furnish entertainment, the work is not easy reading. There are minute details of the route followed, numerous references to the different tribes encountered, and their racial affinities and origin, a summary of the results of his and other travellers' ethnological investigations, a discussion of Chinese Buddhism, with special reference to a visit to the shrines on the sacred mountain Omei, and many suggestions as to feasible trade-routes between Burma and China. An indication of the undeveloped mineral wealth of that western region is to be found in the fact that in one place coal was so abundant that the poorest peasants freely used it for heating and cooking. The concluding chapter upon the present conditions in China is suggestive and valuable. In Mr. Johnston's opinion, the stage of civilization which the Chinese have reached is much higher than is generally believed. As a proof of their law-abiding character, he tells us, from his own experience as district officer and magistrate of the leased territory Weihaiwei, that in this district, 200 square miles in extent, with about 200 villages and nearly 100,000 inhabitants, there are only eight policemen; yet during a recent period of six months there were only reported three cases of robbery. "During more than two years in Weihaiwei I have tried Englishmen and Japanese for being drunk and disorderly, but never a single Chinese." The neighboring districts under Chinese rule, he adds, are just as well behaved, if not, indeed, better. The book contains an excellent index and an appendix containing notes, vocabularies of six tribal languages, and the itinerary. The illustrations are reproductions of photographs, many of the wonderful mountain scenery, a fairyland of beauty.

Primary Elections. By C. E. Merriam. Chicago: University of Chicago Press. $1.35.

The preëminence which ancient Greece has long been accorded as a bazaar of political curiosities can no longer be conceded, in view of such an exhibition as Professor Merriam makes in his "Primary Elections." The aspiration of Edward Everett's school-boy orator that Columbia's soil may—

> Exceed what Greece or Rome has done
> Or any land beneath the sun.

has been satisfied in this particular. It is amazing what an intricate plexus of legal regulation has grown up about what was originally, and still is in other countries, a very simple matter. And the process of change continues, producing additional complexity, in conformity with the general principle that one organic change tends ever to initiate another. Professor Merriam remarks that no sooner was the movement for compulsory regulation of party action generally successful than a demand arose for abolishing the convention system, and for establishing the direct primary. Now that the direct primary is so widely introduced that it is the predominant form of party action, "there is discernible a powerful movement in favor of nomination by petition as a substitute both for the convention system and for the direct primary" (p. 135)

Professor Merriam himself thinks that the advantages of the direct primary outweigh the defects, but he points out that there are possibilities of abuses that have already begun to excite demands for further reform. Some of the defects are decidedly curious. For instance, Mr. Anderson has a substantial advantage over Mr. Zimmerman in candidacy, because of mere alphabetical priority. To secure equity in this respect, it is suggested that "the order of printing may be changed in such a way that the name of each of the candidates shall appear first an approximately equal number of times" (p. 143). Another point is advantage derived from casual notoriety:

> There is much evidence tending to show that the well-known man, regardless of what he is known for, has an advantage in the race for the nomination over one better qualified, but less generally known (p. 122).

So then, when the suffragettes get their inning, the name and fame of a Lydia Pinkham may become a valuable political asset. The expense of the direct primary is also a trouble. Professor Merriam admits that there is serious dan-

ger that "the man without large means may find it almost impossible to enter the primary lists, or that he may incur obligations of a character that may interfere with his usefulness to the public." It is suggested that this danger may be mitigated by public appropriation "to defray a part of the expenses of candidates in primaries" (p. 174). In support of this suggestion reference is made to President Roosevelt's recommendation of public subsidies to party campaign funds. The adoption of this policy would be a new point of departure for evolutionary process that should yield interesting developments. Infant industries in party-manufacture and candidacy would naturally claim generous consideration.

Altogether, the facts presented by Professor Merriam abundantly sustain his conclusion:

> No friend of direct nomination should indulge the pleasant dream that the adoption of a law providing for such a system will, of itself, act as a cure for the present-day party evils.

Indeed, the great merit of this work is that it is a timely demonstration of the absurdity of the present multiplicity of elective offices. While he is an advocate of the method, Professor Merriam admits that the direct primary "will not achieve its full results until the number of elective offices is materially reduced." Perhaps, then, the importance of the whole subject may be correspondingly reduced.

Science.

THE MESSINA EARTHQUAKE: PREDICTION AND PROTECTION.

When the man of science is asked "What caused the earthquake?" he must confess to ignorance. It was either subterranean steam, or unequal yielding to internal contraction of immense blocks of the earth's crust, or deep-seated movements of lavas slowly rising under Ætna. Or, what is still more likely, it was all three of these in mutual dependence. If we maintained earth observatories as we do astronomical ones, we might know, and we might perhaps have predicted and forewarned.

This new catastrophe is the thirteenth of the century, and brings the death-list to about 300,000, or 100 persons a day since January 1, 1901. An eruption of Ætna is also beginning and may still further swell the fatal roll. The record includes Guatemala, Martinique, St. Vincent, Mobile, Galveston, San Francisco, Valparaiso, Jamaica, Kartaghan, India, Calabria, Vesuvius, and Messina. The property loss is countless millions. Eight of these places are American. At all of them the destruction has been wrought by natural agencies. In the cases of Mobile and Galveston, there was definite prediction by the Weather Bureau. This office, which systematically records the movements of the atmosphere at widely distributed stations, is now recognized as one of the most efficient, valuable, and humane scientific organizations in the world. Similar meteorological establishments are maintained by all civilized nations. The other disasters were occasioned by volcanoes or earthquakes. The coast-lines of the world are dotted with volcanoes, and no region is known which is exempt from earthquakes. No geologist in the United States would venture to deny, for example, the statement that New York city is just as liable to a great earthquake disaster as was Charleston in 1886. With these facts before us, it would seem justifiable to call science to account for its attitude with regard to the lithosphere (or rock-crust) as contrasted with its point of view concerning the atmosphere. Sometimes a great affliction, like this which has stunned and mutilated Italy, may work beneficently by stimulating men to a new vision of their usefulness.

A great convention of American geologists has just completed its deliberations in Baltimore. All of these men are interested in earthquakes, but probably not half a dozen members of the society have any technical or mathematical knowledge of them, and not many more have ever experienced one. The idea that such experience is important for a geologist would be scouted as a jest. Many of these men are teachers in universities. If a Martian astronomer were to appear suddenly among them, after returning from a visit to the Lowell observatory at Flagstaff, where his own existence had been so wonderfully interpreted, the following dialogue might be expected:

"Where you know the heavens so well, of course your own earth is to you as an open book?"

"Yes," reluctantly.

"You have observatories for the recording of all earth phenomena?"

"No."

"What! Did you not learn everything about local terrestrial motions before you studied the stars?"

"No, we do not know anything about terrestrial movements."

"Do you mean to tell me that you have not many instruments for observing them?"

"We have the seismograph, but none of us understands it, and as for other earth motions, all we know we have learned from the physicist and the astronomer."

"But you live on the earth, and have to meet every crisis as it arises; can you foretell nothing?"

"Well, you see, we don't think of it that way. We treat it historically, and make notes, and use a hammer and a compass, and are very much interested in the bones of Jurassic reptiles and in making maps of the rocks, and in finding out all about iron and coal. But we have no such precise knowledge as the astronomer."

"But surely, in teaching your young men in the universities, you begin by precise instrumental study of the present earth and its processes, and have a vast accumulation of experience concerning those processes, in the form of tables, measurements, formulæ, curves, diagrams, and computations?"

"No, almost nothing has been done in accumulating experience or empirical data, *except by the Japanese*. When a volcanic eruption or an earthquake occurs we send a geologist to study the results, and he writes a thick and learned report. We do not know anything about what the conditions were during the months before the disaster. We teach our young geologists first a little physics and chemistry, and a few generalities about earth process, and then set them to work mapping ancient rocks. The *highest* development of geology is the unravelling of the history of the past. We haven't time to go into prediction and humanistic geology."

The above is not exaggerated. The blame does not rest with the geologist, it rests rather with the haphazard growth of the science. The very proximity of the earth has made terrestrial observation and measurement difficult, in view of the littleness of man. This plea, however, can no longer be urged in extenuation of the neglect of the study of earth process. We have a considerable knowledge of physical science, and there are many instruments applicable to the earth. There is a very precise science known as geodesy, which has for its object the determination of the figure of the earth. There is geology, which aims to decipher earth history. Between these two there is needed a new science, many phases of which are now being studied, and this might well be named geonomy, the science of the laws which govern the earth.

There is one grave difficulty in the way of rapid development of this science, and that is expense. It is a science that calls for the establishment of observatories in many lands. These observatories will have for their objects the study of the changes which are going on in the crust of the earth under them and the relations of those changes to astronomical and meteorological changes. The new science, like astronomy and the study of the atmosphere, deals with moving things and so requires continuous local records, through weeks and months and years. Seismographs, microphones, magnetographs, gravity, pendulums, pyrometers, tromometers, gas-collecting apparatus, and many special instruments adapted to

local needs are among the devices with which an earth observatory should be equipped.

The natural places for establishing such observatories at first are lands where the earth movements are most rapid, regions of volcanoes and frequent earthquakes. In such establishment, the Japanese have taken the lead, and their island empire is girdled with observatories. The writer has before him a pamphlet, in English, printed in Tokio in October, 1908, containing eleven contributions to practical seismology by a Japanese investigator, F. Omori, the first of which bears the significant title "On the Fore-Shocks of Earthquakes." Dr. Omori declares, "My belief is that a large destructive earthquake will be foretold in its epicentral region by some fore-shocks," and this belief he substantiates by exact instrumental proofs.

With reference to Sicily, it is well to make note of the fact that an American volcanologist, Frank Alvord Perret, has predicted disaster on Mount Etna for two years past. Mr. Perret, who was decorated by the Crown of Italy for his splendid service to science and to humanity on Vesuvius in 1906, wrote in the *World's Work* of November, 1907:

> By the rational methods of scientific research, we know that a great eruption of Mt. Etna is impending, the only uncertainty at present being which side of the mountain will break open.

Great volcanic eruptions are preceded by great earthquakes, and the Messina disaster of December 28 comes on an earthquake date ("terrestrial maximum of gravitational stress") actually platted in advance by Mr. Perret on his diagrams for 1908. Like Dr. Omori, he is a man whose whole time is unselfishly devoted to these studies, but he has no observatory and no adequate means of support. A few business men in Springfield, Mass., last year came valiantly to his aid, and now their foresight is worthy of all honor. When young men think of making science their life-work, it would be well to remember Pasteur, and to consider carefully whether the highest development of the investigative faculties may not concern itself with humane rather than with historical motives. To those who will give time and money to the establishment of earth observatories, there will come by way of reward some of the most astonishing discoveries of the twentieth century.

Plans have been prepared in Boston for an earthquake-proof observatory and museum, built on Japanese lines, to be equipped with instruments for measuring earth tremor, earth waves, earth sounds, earth tilt, earth gravity, and earth magnetism. It is proposed to secure an endowment which will provide for expeditions as the most important work of the observatory, whereby trained men will be sent to volcanic lands to carry on research which may not be done at home. The Geological Society of America has passed urgent resolutions strongly recommending "to governments and to private enterprise the establishment of volcano and earthquake observatories." What should be done in New York? It may be well to state briefly the vision of what *could* be done to set an example to the world: Provide $4,200,000. Erect ten small observatories costing $20,000 each, in New York, Porto Rico, Canal Zone, San Francisco, Alaska, Aleutian Islands, Philippines, Hawaii, Scotland, and Sicily. With $200,000 per annum, the income of four millions, supply each observatory with $10,000 per annum to maintain its director, assistant, and expenses, and reserve $100,000 for the central office for administration, exploration, and publication. Define the objects of the work to be direct measurement and record of earth process with a view to the benefit of humanity. Define three immediate goals for the investigators: (1) Prediction of earthquakes; (2) prediction of volcanic eruptions; (3) engineering and construction in volcanic and seismic lands. The objects of the two European stations are to cover the important volcanic fields of Iceland, the east Atlantic, and southern Italy, and to keep in touch with the advance of European science. The work would be strictly American, and if it were carried out, it would be epoch-making in the history of science.

T. A. Jaggar. Jr.

Massachusetts Institute of Technology, Boston.

J. G. Spurzheim's "Phrenology," which attracted attention seventy-five years ago, has been reprinted, with some abbreviations, by the J. B. Lippincott Co. As a literary curiosity it is even more interesting than Dr. Gall's classical fantasies.

"Kulturpflanzen der Weltwirthschaft" is an illustrated volume written by different authors (Leipzig: Voigtländer), containing interesting accounts of the discovery and development of tea, coffee, cotton, and other useful plants, their diffusion among various nations, as well as their influence on industrial, commercial, and social life and on the growth of civilization and human customs and character in general. Especially entertaining and instructive is the chapter on the origin and cultivation of tobacco. One aspect of these investigations deserves special mention. The stamp impressed by the physical world upon races and its influence in determining the peculiarities of men and nations have long been recognized; and there are systems of anthropology and ethnology and philosophies of history, which admit only these material causes and derive from them all so-called moral and mental characteristics. But it is only in comparatively recent times that the counterpart of this view has been considered and that the effects of human action in modifying the aspect of nature and in changing the physical condition of the earth have attracted the serious attention of scientific men. One of the most interesting phases of this subject is the transformations produced in the flora, as well as the fauna, of a country, a phenomenon which has been observed on a large scale since the discovery of the Western hemisphere. In Greece and Italy these processes have greatly changed the primitive physiognomy of those lands. Imagine the effect of removing the aloe and the cactus from the rock coast of the Mediterranean; and yet these prickly plants of bluish-green with fleshy leaves and gorgeous blossoms, which harmonize so well with the landscape, have been introduced from South America during the last three centuries. The cypress, with its gloomy but grateful shade, is a native of the mountains of Afghanistan; the orchards of olive and fig-trees are from Palestine and Syria; and the splendid palms in the cloistered court of SS. Giovanni e Paolo on the Cælian Mount and in the magnificent grove of Bordighera between Genoa and Nice are exiles from Arabia and the oases of the Sahara.

The advent of the Chinese woman doctor was celebrated a few weeks ago by the conferring of diplomas on six graduates of the Women's Medical School at Shanghai. It was founded three years ago, the funds having been provided by Li-Ping-Shu, president of the Chinese Town Council. The principal is a Chinese woman who has received an advanced education in Canton and Hongkong; and there are thirty students. Each of the six graduates read essays, two of which were in English.

George Washington Hough, professor of astronomy at Northwestern University and director of the Dearborn Observatory, died suddenly January 1 at his home in Evanston. He was seventy-two years old. Professor Hough's greatest contributions to science were his observations regarding the planet Jupiter. He discovered and measured more double stars than any other astronomer now living, about 550 in all. His inventions include a device for making maps of stars during observation, and many other scientific instruments now used in observatories. Besides contributions to the magazines, he published "Annals of the Dudley Observatory."

The death is announced of C. E. Stuyvaert of the Royal Observatory of Belgium. He was born in 1851, and began his work at the observatory (then at Brussels) in 1879. He was engaged, at the time of his death, on a large-scale globe of the moon

Drama.

The Bohemian Jinks. By Porter Garnett. San Francisco: The Hicks Publishing Company.

Mr. Garnett has written an interesting book, describing the origin and growth of the forest dramas, produced annually in midsummer by the Bohemian Club of San Francisco. When these celebrations began, thirty years ago, they were exceedingly informal, but gradually, after the club had acquired possession of two hundred and forty acres of forest land,

at Guerneville, seventy-five miles from San Francisco, they began to assume a distinctive and elaborate form, of a musical, dramatic, allegorical, and spectacular character. Thus, within the last decade the performances have included pieces—akin both to the ancient masques and modern fairy extravaganza—bearing such titles as "The Enigma of Life," "The Man in the Forest," "Montezuma," "The Hamadryads," and "The Triumph of Bohemia," the work of well known literary men and artists, members of the club, and presented with striking instrumental, vocal, and electric effects. The peculiar feature of these performances is that they occur at night in the natural woodland and that all artificial mechanism is carefully hidden. The proscenium of the theatre is formed by two huge redwood trees, at the foot of a steep ascent, thickly covered by brush. A series of foot-paths connect invisible platforms, constructed one above another, on the face of the hill. From the front, the effect is one of virgin forest, but actually there is a stage of many tiers, conveying a sense of space and distance, and facilities for grouping, impossible in the ordinary theatre.

Open-air drama, of course, is no new thing, either in the old or new worlds, but these Californian Bohemians appear to have improved upon precedent, by devising allegorical spectacles suitable to the natural conditions and on that account peculiarly impressive. They have succeeded, also, apparently, in making romance realistic by a complete avoidance of theatrical convention. Mr. Garnett, perhaps, overrates the significance of these celebrations as a new type of drama—their characteristics being directly traceable to local influences and special opportunities—but there seems to be no doubt that in literary and imaginative quality they are out of the common.

"Aristophanische Studien," by Hugo Weber (Leipzig: Theodor Weicher), is a recent book which treats in scholarly fashion some leading perplexities in the comedies of Aristophanes.

A noteworthy collection of famous German dramas is edited by Prof. Georg Witkowski under the title, Die Meisterwerke der deutschen Bühne (Leipzig: Max Hesse). Recent additions are Karl Gutzkow's comedies, "Zopf und Schwert," "Das Urbild des Tartüffe," and "Der Königsleutnant," with introduction and notes by Dr. Alfred Klaar. Dr. Klaar is also responsible for the introduction and the notes of Gutzkow's tragedy, "Uriel Acosta," which is perhaps the best known of his dramas, and which has been translated into English by Richard Hovey. Heinrich Laube's "Karlsschüler," the famous play which makes use of some of Schiller's experiences at the school of his patron, the Duke of Würtemberg, and his tragedy, "Graf Essex," are introduced and annotated by Prof. Alexander von Weilen.

The Volks-Schillerpreis of 3,000 marks was recently awarded to Ernst Hardt, in recognition of his five-act drama, "Tantris der Narr." His competitors were Julius Bab, Hugo von Hofmannsthal, and K. Gjelleruv.

Music.

Edvard Grieg. Von Gerhard Schjelderup and Walter Niemann. Leipzig: C. F. Peters.

Larger Piano Compositions. Edvard Grieg. Boston: Oliver Ditson Co. $1.50.

Fifty Songs. Edvard Grieg. Boston: Oliver Ditson Co. $1.50.

Edvard Grieg is dead, but his music is more alive than ever. In addition to the copyrighted Copenhagen and Leipzig editions of his works, there are more than forty American reprints of them, and no name on a concert programme is more popular than his. Books on his art and personality also are multiplying rapidly. For many years Closson's French brochure was the only source of information. Then came Schjelderup's biography, in Norwegian, which was followed by the first book in English, H. T. Finck's "Edvard Grieg" (in John Lane's Living Masters of Music series), of which a greatly enlarged new edition is now in press. George Bell & Sons published last spring in their Miniature Series a little book of eighty pages by E. Markham Lee. A month ago the Leipzig firm of C. F. Peters, which has published Grieg's music ever since 1863, issued a quasi-official biography by Schjelderup and Niemann; and the latest issue of the Peters catalogue also announces the forthcoming reminiscences (including 198 Grieg letters) of his friend, Julius Roentgen, the eminent Dutch composer and editor of Grieg's posthumous works. These works, which are just out, include a string quartet, eleven songs, three pianoforte pieces, and the orchestral score of the "Peer Gynt" music complete.

During the last decade of his life Grieg was repeatedly offered large sums for his autobiography, but his health was too poor (for forty years he had only one lung to breathe with) to allow him to undertake a task requiring such a prolonged effort. This is to be greatly regretted, for the story of his life, told by himself, would have made very interesting reading. His letters are characterized by the same clearness, individuality, directness, northern sentiment, and mingled melancholy and gayety as his songs and pianoforte pieces. His skill in literary composition was publicly revealed in articles on Schumann and Mozart which he wrote for the *Century Magazine* and one on Verdi, which was printed in the *Nineteenth Century* and *Littell's Living Age*. Parts of an amusing and vivid autobiographic sketch covering his childhood and his student days at the Leipzig conservatory appeared in the *Contemporary Review*. The whole of this sketch, in the original German, is reprinted in the volume by Schjelderup and Niemann now before us, and will make every reader wish it had been continued. Schjelderup, who contributes the biographic half of this volume, is one of the ablest of the younger Norwegian composers; and, what is more, he knew Grieg personally. Some letters to him from the great composer are included, but what gives this book a unique value is the interwoven letters to his Leipzig publisher, Max Abraham (head of the Peters firm), with whom Grieg corresponded forty years. These letters are not only delightfully intimate, but in some cases they take the place of chapters in the missing autobiography. After the death of this friend, they were addressed to his nephew and successor, Herr Hinrichsen, to whom he wrote among other things a most vivid account of two days spent with the German Emperor on his yacht—a letter which shows the Kaiser in one of his most characteristic attitudes as a musical enthusiast. There is also a full epistolary account of the festivities attending Grieg's silver wedding.

From these letters and the details supplied by the author, we learn that Grieg, despite his ill-health, enjoyed life on the whole and seldom felt the *tædium vitæ*, as his friend Liszt so often did. He even joked about his infirmities, regretting only that they so seldom allowed him to enjoy the raptures of creative work, or make arduous excursions to the mountains for the collecting of folk songs. Concerning old age, he agreed with his friend Herzogenberg, who said: "Life is a dinner. I have come to the cheese, which tastes very good." He might have lived longer, could he have resisted the invitations to give concerts. On this point he wrote, in March, 1906:

> From a financial point of view, I can get along without these concerts, and a public appearance is the most terrible thing I know of. My nerves, my entire person, suffers indescribable tortures, but a certain something, I know not what, urges me on irresistibly. A beautiful orchestral performance of my works and a sympathetic audience are things I cannot resist. That, I think, is what makes me act so foolishly.

Grieg's compositions are analyzed at considerable length in the second part of this volume by Walter Niemann, with an enthusiasm tempered by criticism. A few errors have crept into the last chapter. Grieg did not speak English so well as he did German and he did not write his article on Mozart in English. The *Century* is not published by the Macmil-

lan Company, and the Old Norwegian Romance is not opus 50 but 51. There is a good bibliography, and a considerable number of pictures and facsimiles add to the attractiveness of the volume.

Greig is now also represented in the Musicians Library of the Oliver Ditson Company. Two volumes have been issued at once. One contains six of the more important works for pianoforte—the Humoresques, the sonata, opus 7, Sketches of Norwegian Life, the Ballade in G minor, the antique suite "From Holberg's Times," and the admirable concerto, with the orchestral part arranged for the same instrument, so that it can be played on two pianos. The editor of this volume is Bertha Feiring Tapper, who has supplied a brief introduction. The other volume contains Grieg's best fifty songs and has a more elaborate introduction by Henry T. Finck, who is so fortunate as to be able to cite Grieg's own opinion of this selection:

> Always the critics have pointed out my least important things as the best, and unfortunately also, vice versa. How happy I am that this is not the case with you. You have in the main dwelt on the very songs which I myself consider the best.

E. H. Hadow, one of the leading musical scholars of England, is at work on a life of Schubert, which will no doubt be the last word—and the best—on that subject. He has the private notes collected by Grove for his work on Schubert.

Art.

The Flowers and Gardens of Japan. Painted by Ella DuCane; described by Florence DuCane. New York: The Macmillan Co. $6 net.

The flowers and the gardens of Japan are already the subject of so many books that every new work on the topic must, in order to secure attention, bring some fresh attraction. The present volume offers us extremely interesting pictures in color, together with a modest and pleasing account of the principal elements which lend to Japanese landscape architecture its peculiar charm. The pictures themselves are excellent "three-color" reproductions of delicate and truthful paintings, which convey a vivid impression of the garden beauty of Japan. Since these pictures supplement in a satisfactory manner the most exhaustive treatise in English that we have on Japanese gardens, namely, that by Josiah Conder, the volume is a slight but real addition to our garden literature. We wonder, indeed, at the temerity shown in undertaking the subject in a small volume like this; but only the most important features are chosen, and they are treated effectively. Passing over certain slight shortcomings in the work, we would indicate briefly the general scheme and method.

The aim of landscape gardening in Japan is to provide a restful place for pleasure in meditation. Therefore, harmony must prevail, with no discordant note in either form or color, and with true proportions in every part, whether the garden be a toy affair covering a few square rods, or bounded by the distant horizon. Every accessory must tell, each in its proper sphere. Many of these accessories are unknown in the landscape architecture of other lands, although some have their foreign equivalents. For us of the Occident it is difficult, for instance, to conceive of effective use of small stones, except in the "rockery," or something of the sort; but the Japanese often select decorative stones with great care and accomplish with them remarkable results. Again, symbolic lanterns and carvings, as the Japanese employ them, are seldom distracting or even disturbing, whereas the obtrusive statuary of some of our formal gardens is sometimes both, or at least bewildering. Japanese management of water and of bridges is generally pleasing, and such structures as pagodas, for example, are in perfect keeping. But above all, Japanese gardeners understand that flowers can create confusion in a landscape; that is, a group of blossoms of different sorts does not compose the mind and conduce to meditation, though a single group, say of cherry trees or of irises in bloom, may promote quiet thought. Sometimes this theory is, of course, carried to an extreme in gardens where tree forms are the prominent feature and where blossoms are wholly wanting. But in most instances flowering trees are arranged so as to impart pleasure, and a few trees are treasured for their brilliant leaves at certain seasons. Aside from a few herbaceous plants, like the iris, the lotus, and the chrysanthemum, woody stems of distinctive form are the favorite element in most Japanese gardens. To all of these plants, as well as to the bamboo and pine, the authors give due space. In fine, matters of practice are lightly touched, but with sufficient fulness to indicate the difficulties of the art.

The two important works by Josiah Conder, to which the author refers, must long remain for the English reader the source of minute knowledge in regard to Japanese gardens. In those treatises and in the hints offered by the DuCanes, one can see to what extent the art is based upon and blended with the various ceremonial observances which are so dear to the Japanese mind. Any examination of this earnest quest for quiet meditation should be helpful to us in hurried and noisy England and America, but it is not probable that we can be weaned from our composite gardens with their medleys of color. It is still less probable that the art of Japanese gardening can be transplanted to our own country with any degree of success. But that is no reason why all who are fond of plants should not derive much pleasure from books so delightful as this.

Georg Reimer of Berlin has just published for the Royal Museum of that city "Altertümer von Pergamon," Band VII, "Die Skulpturen mit Ausnahme des Altarreliefs," by Franz Winter. There are many illustrations.

Among the exhibitions at the dealers' galleries in this city are landscapes by Miss Anna Fisher at Powell's, till January 15; paintings by Willard L. Metcalf, Montross's, January 16.

From London comes the report of the death of Lowes Dickinson at the age of eighty-nine. He was known for his portraits of eminent men, and also for his share in Christian-Socialist movement which in the middle of the last century engaged the interest of Charles Kingsley, Thomas Hughes, and F. D. Maurice. His son is G. Lowes Dickinson, the writer.

Finance.

STOCKS AND PROSPERITY.

On no phase of financial conditions do opinions differ more widely, as the new year begins, than on the question as to how far the stock market is to be accepted as a forecast of coming events in general business. Traditionally, the Stock Exchange performs that office. But the Stock Exchange, like many other institutions—not to mention individuals—has what may be called a dual personality. From one point of view, it is a delicate and sensitive organism, which is affected for better or worse by the same fundamental influences that affect industry in general, and which responds to such influences so much more quickly than outside trade, that its movements give an early warning of what is to happen elsewhere. From another point of view, the Stock Exchange is a huge machine which can be made to move in one direction or another by brute force of accumulated capital; its activities thus depend quite as much on facilities for borrowing upon easy terms as on any actual change of intrinsic values.

Now, any one conversant with the Stock Exchange will admit that, inconsistent as these descriptions seem, both are correct. If asked to present some typical instances in which the stock market accurately foretold the future, one may point to the market of March, August, and October, 1907, wherein the successive stages of the violent industrial reaction were foretold months before the expansion of general trade had stopped; or to that of April, 1903, when the demoralization of the steel trade in

the subsequent autumn was foreshadowed; or to April, 1901, when the Stock Exchange movement, extravagant as it was, gave notice of the immensely prosperous era which followed, and which continued long after the collapse of May 9 in Wall Street; or to September, 1898, when the great rise in stocks predicted a forward movement in trade, of which at that moment few positive signs were visible. This would seem strong enough to silence critics who contend that stock markets are manipulated in defiance of real conditions, or that those whom Europe calls our "magnates" can force prices this way and that, at their own sweet will. But on that side there are also precedents and leading cases. Unless one is to assume that the stock market looks no further ahead than the very near future, what are we to say of 1906, when a positively frenzied rise in prices came but a brief space ahead of the panic of 1907? How are we to explain the sharp advance on the London Stock Exchange in the early months of 1890, on the very eve of the "Baring collapse"? What about the exciting boom in our industrial stocks during January, 1893, when the year's great panic was only six months away? What about the well-grounded tradition that the Stock Exchange invariably indulges in a happy-go-lucky speculation for the rise, a very few months before the great financial crises?

The two sets of instances seem to involve a paradox, and to leave the student of the markets of 1908 completely baffled. The only way in which to reconcile conflicting precedents is to take not a single and temporary movement on the Stock Exchange, but a series of movements from which the general trend may be fairly judged, while also paying close attention to the character of the movement itself. If last year's markets are in review, it will not be enough to show that prices rose 10 or 15 points in this month, 15 or 20 in that, and so on. One must ask what happened in the interval, and where the general level of values was left, when both movements had reached their end. A series of 10-point advances, followed by an equal number of 15-point declines, would, as a whole, represent a falling market, and would presumably foreshadow unfavorable developments in trade. On the other hand, a series of 15-point advances, followed successively by 5 or 10-point declines, fairly measures the fluctuations of 1908. Judged, not by its extreme and hysterical advances, but by its general direction, the stock market of last year was rising and foreshadowed improvement in general industry.

Whether the extravagance with which prices rose and fell ought to be accepted as predicting the method and manner of trade recovery in 1909, is a different question. It certainly cannot be said that the excitement on the Stock Exchange, in the spring of 1901, gave in any respect an indication of the subsequent process of trade expansion, which was orderly and normal. Yet the short-lived and violent "bull movements" of 1908, with the consequent relapses, are curiously like the spasmodic stampedes of buyers into the mercantile markets, to replete their empty shelves on three successive occasions, with the interval of stagnation which followed each of them.

Lillie's Development of the Chick

An Introduction to Embryology

By Frank R. Lillie, Professor in the University of Chicago. xi+472 pp. 8vo. $4.00.

A connected account of the development of the chick to hatching, fully illustrated. It is so arranged that it can be used both as a text-book and a laboratory manual. The development of other vertebrates is considered only incidentally, as the author believes that a fairly complete knowledge of the development of one form is essential to real understanding of the problems of comparative embryology.

E. G. CONKLIN, *Professor in Princeton University:* This is in all regards the most complete and satisfactory work on this subject which has yet appeared, and all teachers and students of Embryology are under a debt of gratitude to the author and publisher for so excellent a work.

THE ARTHUR H. CLARK CO.
CLEVELAND, OHIO

The Nation.

NEW YORK, THURSDAY, JANUARY 14, 1909.

The Week.

The explosive quarrel between the President and Congress must seem mysterious to the average, inattentive citizen. He cannot understand the heat on either side. That Congress had some provocation, he perceives, but excuse for the great excitement and vast indignation, it is not easy for him to find. The bewilderment of the general mind is not unlike that of an American who had just come home after four years in the Arctic regions. He would have left Mr. Roosevelt the hero and idol; he would find him the subject of attack and denunciation. Such an American would know that this strange reversal, this effect defective, comes by cause, and would demand an explanation which should be, as Montaigne says, not more difficult of belief than the thing to be explained. The true account of the controversy and the bitterness goes far back. It was not a single unguarded utterance of the President that created all this animosity against him. His rash language let it loose, but did not cause it. The feeling of hostility had long been gathering in Congress. If the President's message had been all, the affair could easily have been accommodated. So Mr. Roosevelt evidently thought. He expected his explanatory message to be accepted as satisfactory. But the accumulation of dislike and enmity was seeking a vent, and it took this one. It was as if Congress had been waiting for years for the Lord to deliver a Philistine into its hands, and would not let go the opportunity to rise and smite.

Was the attitude of Congress due to jealousy of his popularity? Was it envy of his fame? Was it even resentment at his dictatorial manners? These feelings may have entered into the dispute, but they are not the principal matter. The truth is a delicate thing to state, but no one who has any acquaintance with Congressmen, no one who knows Washington, can have any doubt what that truth is. It is, in a word, that a great many Congressmen do not trust President Roosevelt's sincerity. They think him hypocritical. He has lectured them and the country on truthfulness, yet large numbers of Congressmen believe Mr. Roosevelt himself to be habitually untruthful. He has posed as a champion of fair play, yet Congressmen are persuaded that he fights foul. His talk of the square deal, they scoff at as sheer pretence. They say that he protects favorites, such as Paul Morton and the Steel Corporation, while furiously prosecuting his enemies, or those whom he thinks he can make political capital by attacking. In short, leading members of both houses are convinced that all the superior moral exhortation which it has had from President Roosevelt, has come from a man who allows in himself the thing he condemns in others. We do not say that these Congressmen are right about it. We only state their attitude. On no other theory can we account for their persistence in recording their deliberate conviction that the President has been guilty of assertions "unfounded on fact." It was simply Congress doing collectively what its members have long been doing individually and privately—that is, passing an adverse moral judgment upon Mr. Roosevelt. This is what makes the business so serious for the President. A mere collision of authority, he could afford to dismiss with a smile. Even such a quarrel as would prevent him from getting the measures enacted that he desires, he might now snap his fingers at. His term is nearly over. But the rebuke of Congress strikes deeper. In what it explicitly says, there is an arraignment of Mr. Roosevelt from which he can escape by no diversion, and which he cannot forget or shake off by evoking the old huzzas to attest his undiminished popularity.

Senator Tillman's reply to the President's charges clears up some matters of fact. Granting all that was alleged against the Senator, his action was in violation of no law. It was an impropriety, not a crime. The land he was trying to buy was not government land. There was no question of "dummy entries," or of obtaining more than the law allows to one person. Moreover, in endeavoring to secure an act to compel the land-grant company to sell its holdings at $2.50 an acre, Senator Tillman distinctly notified the agents, at the time, that he was acting solely in the general interest, independent of his own decision, later, to buy or not to buy. In all this, there was doubtless a lack of caution and delicate regard for his public position, on Senator Tillman's part, but no dishonesty. The sole moral question remaining is whether he had sought to deceive the Senate when he asserted that he had not "undertaken" to buy any land in the West. In the ordinary sense of the word, he had; in the technical, legal sense, he had not. Senator Tillman now declares that he meant "undertaken" in the sense of "contracted." But, of course, it is pretty hard for a man who, like Tillman, has sneered at the technicalities of lawyers, and called himself a "cornfield lawyer," to ride off on a technicality himself. He admits that he was somewhat "disingenuous," but denies that he had any intention to deceive. The most favorable view of his case, therefore, is that he does not emerge without blame; though he certainly does not deserve to be pilloried as a criminal.

It is impossible to get excited over the President's recent message to the Senate about the purchase of the Tennessee Coal and Iron Company by the United States Steel Corporation. It raises no new issue, brings out no facts not known before, reveals no Presidential trait with which we were not already fully acquainted. Every one who has studied Mr. Roosevelt knows that he has never shown any grasp of general principles. He deals only with separate cases. Fully aware of this, Messrs. Gary and Frick, very naturally as well as shrewdly, went to the White House and asked whether the Steel Corporation would be prosecuted as the Standard Oil Company and the Tobacco Trust had been. From his *lit de justice*, the President told them that it would not be, which was all they wanted to know. But men will still inquire why, if the proposed undertaking were legal, a permission, or license, from the President was needed. The public, meanwhile, is left in doubt at which to wonder most: the disinterestedness of Gary and Frick in buying stock which "as a mere business transaction" they did not

care to purchase; or the beautiful and child-like innocence of the President in accepting such a view of the matter.

The Senate won 3,500 friends at one roll-call, when it voted that clerks for the next census be chosen by non-competitive examination. Congressional hangers-on to that number are rejoicing because patronage will secure for them the places, however miserable the showing they make before the examiners. As Senator Lodge pointed out, the candidate without "influence" passing with a grade of 100 per cent. will be worsted by the blockhead enjoying a political pull. But has the Senate reckoned with the friends it has lost by this same act? It has placed itself on record as opposed to a wholly reasonable reform of the civil service, a reform in which every intelligent citizen outside of professional politics firmly believes. And we hope that the stir of larger happenings in Washington will not distract public attention from this fact. The next census will be more complex than the last, and those who compile it must be well-trained men. There is no sure way of getting the right persons except through the classified service, and President Roosevelt has been entirely right in insisting that they be so picked. He should veto the bill if Congress passes it.

The meeting of the Presidential electoral colleges in the several States last Monday passed off without incident, and no dispute is to be expected when Congress comes next month to "count the votes." Yet the law relating to the matter is in a most unsatisfactory condition, as J. Hampden Dougherty pointed out in his recent article in the *Forum*. To what perils the country was exposed by the uncertainties of the old statute, the nation discovered with a shudder in 1876. But even the new act of 1887, passed after years of debate, contains too many ambiguities and silences. In an election of which the result was close and contested, the opportunities for framing objections to electoral certificates, before one or other of the houses of Congress, would be, as the late Senator Morgan asserted, "as numerous as it is possible for the ambition, the cupidity, the fraud, and the skill of wicked men to invent." The Constitution omits to provide for the Presidential succession, in case the President-elect should die before inauguration. Such a contingency has never presented itself, and never may, yet the awkwardness and danger would be so great, if it did, that a member of the House has introduced a constitutional amendment, to cure the defect.

Our differences with Colombia, growing out of our seizure of Panama, have at last been settled by a treaty. A money payment of $2,500,000 is to be made, nominally by Panama, really by the United States. Colombia's financial necessities have, at last, induced her to abate her first demand for $10,000,000, and to jump at the chance of getting $500,000 down, with the rest to follow in annual payments of $250,000. The fact that the settlement is peaceful cannot conceal from the future historian the truth that it closes a five years' treatment of a weak nation by "the strong man armed," which the said strong man would never have dreamed of applying to a first-class Power. Nor does the transaction cause Panama to be any the less of a nemesis than before. Nature is more relentless than Colombia. That country we can buy off, but there seems to be no end to the money which we shall be called upon to pour into the canal. The original appropriation is now nearly exhausted, yet the most ardent optimists do not predict the finishing of the work before 1915. And, speak as cheerfully as the officials may about Mr. Taft's trip to the Isthmus, accompanied by a body of engineers, the world knows that it is a confession of deep concern over the canal plans.

Boston's new city charter, over which a commission has long been at work, is awaiting the action of the Legislature. It is a radical revision, largely in the direction of centralization of power, with simplification of machinery. The Mayor, to whom a four-year term is to be given, will have full authority over all heads of departments. The present Common Council is to be replaced by a board of aldermen consisting of nine members, shorn of nearly all legislative powers, except that of passing upon, not originating, city appropriations. This scheme is in line with the best modern ideas concerning municipal government. The new charter has several original features. One of them is a provision for the appointment of an advisory board of five public-spirited citizens, whose duty it shall be to aid the Mayor by advice and suggestions. Again, though the term of the Mayor is four years, in the second year of service the voters shall have submitted to them, at the November election, the question: "Shall there be an election for Mayor at the next municipal election?" In case this is answered in the affirmative, the existing Mayor's name shall be put upon the ballot without renomination. This is a novel way of adopting one principle of the "recall," while avoiding some of its obvious inconvenience. All nominations for elective city offices are to be "direct." Any man can stand for the Mayoralty who files nomination papers signed by 5,000 qualified voters.

If there were any hope that Col. Zavarnitsky would have to serve out his four years of penal servitude, the verdict just brought against this chief of the secret police at Vladivostok would brighten the outlook in Russia. But he will probably go the way of all other high bureaucrats who have been careless enough to leave traces of their misdeeds; there will be a few months in a comfortable guard-house, and then a pardon. Col. Zavarnitsky was convicted of having repeatedly placed bombs and illegal literature in the apartments of suspected persons, in order to secure their conviction. The proofs were so clear that not even a bureaucratic judge could be blind to them. The hideous offence is known to be common throughout the empire, and the trapping of police spies peculiarly difficult. One might suppose, then, that, after having established a clear case against a high official, the courts would be more than ordinarily cautious about convicting alleged political offenders; and not for justice's sake alone, but also that further discontent might not be stirred up by the punishment of innocent men. And yet, on the very day that Col. Za varnitsky was sentenced, it was announced that twenty-two persons had at the same time been condemned to death for "crimes" committed in 1906. And this roll of victims was only a fair day's average. Nothing can discredit the police spy.

Among the first legislative projects to be taken up by the Turkish Parliament will be a series of bills dealing with the

reorganization of the army. The leaders of the Young Turks evidently believe that the liberal régime, established by a bloodless revolution, must be based on something more substantial than luck and the good will of the foreign world. The most important of the proposed reforms deal with the extension of obligatory military service to the non-Mohammedan population, and the establishment of a national militia. The first change is both inevitable and momentous. Under a Constitution that recognizes no differences of race and religion, the army, like the Parliament itself, must represent all the elements of the Ottoman nationality, Christian and Jew as well as Mohammedan. That means the abandonment of the historic policy of Turkish conquest and government, under which the conquered population might accept the Moslem faith and whatever political rights existed under the Sultans, or might remain Christian, pay tribute, and remain, in respect to their rulers, a conquered class, to whom it would evidently be folly to grant the right to bear arms. The future, therefore, may see Christian levies fighting under the standard of the Prophet against fellow-Christians under a hostile flag. Such a situation is hard to conceive, yet Turkey's problems can be solved in no other way than by creating a feeling of patriotism stronger than the centrifugal tendencies of differences in race and religion. Whether Macedonians, Greeks, or Armenians can learn to look upon themselves as Ottoman subjects, the future must decide.

Whether the dismissal of Yuan Shih Kai means his permanent downfall is a point which the Western mind cannot decide without more evidence. Yellow mantles, peacock feathers, and purple buttons are freely given and taken away in China, and even so great a statesman as Li Hung Chang experienced the vicissitudes of Imperial favor. Should the Chinese court find itself in need of Yuan's services, it will call him back from disgrace just as Li Hung Chang was recalled to go to Japan and make the best terms he could for China, after the disastrous war of 1894-95. That the new Regent may have found Yuan Shih Kai too much of a brother near the throne is probable. The reasons that made him popular with the Western Powers may have made him an eyesore to the new régime at Peking. In all the Western talk about a new China, it has always come out that it was Yuan Shih Kai that was the new China—Yuan and his ascendency in the Grand Council, Yuan and his European-drilled army, Yuan and his European friends. It may very well be that the Regent at Peking wishes to demonstrate that it is to the Chinese government as a whole that Europe must look for the long-desired national regeneration.

This attitude on the part of the Manchu rulers of China was well summed up by that acute observer of Far Eastern affairs, B. L. Putnam Weale, in his "Coming Struggle in Eastern Asia," which appeared last year. In describing conditions at Peking in 1907, he says:

> The Manchu dynasty, although now honestly desirous of escaping from the undignified position of complete and undisguised international weakness which it still occupies, is equally anxious . . . that the reforms shall not come from below. . . . Thus there is a dual movement to be noticed in provincial China—a reform of the administration and a tightening of the Manchu hold.

In other words, reform being inevitable, the Manchu rulers would rather get the credit for it themselves than have it fall to any one outside. Mr. Weale touches on the very case of Yuan Shih Kai:

> The Manchu party began to realize that if the new conscript army which was being slowly raised all over the empire became accustomed to the idea that the Tien-Tsin viceroy [Yuan] was the life and soul of the whole movement, and its real leader, it would only require some Peking palace disaster, such as the death of the Empress Dowager or of the Emperor, to reduce the Palace and the Manchus to a position of tutelage.

In 1907, a new scheme of army organization placed the control of the greater part of Yuan's trained army in the hands of a Manchu war minister. So the more recent event seems to have been long preparing.

Feuds between Hindus and Mohammedans in Bengal have been increasingly frequent of late; and they are not unconnected with the anti-British revolutionary movement among the Bengal Hindus. The British press has caught the habit of contrasting the loyalty of the Mohammedan population of northern India with the seditious discontent of the Hindus. The British authorities have, to an appreciable extent, been playing off the leaders of the Mohammedan community against the "agitators" and "demagogues" so plentiful in Hindu ranks. It is not difficult to imagine that among the common people the impression should spread that the British government would back a Mohammedan mob against a Hindu mob; and religious passions, always ready to break out, may thereby be further stirred. It would be wrong, of course, to suppose that the British rulers in India have been adopting the Czar's method of suppressing revolution by setting different races and religions at each other's throats. Such a policy would not only be morally monstrous, but very short-sighted. For what happened in Russia might easily happen in India. The oppressed nationalities might profit by their internecine wars to turn their practised weapons against their rulers.

Fine old English customs in politics are going, one by one. The latest is the pleasing habit of breaking up a political meeting of the other side, by packing it with ruffians on your side, who by shrieking and violence will prevent the speakers from being heard. All these playful ways are now to be abolished. Among the last bills enacted by Parliament was one making it a misdemeanor to "act in a disorderly manner" at a "lawful public meeting." An offender of this sort may now be fined, "not exceeding five pounds"; while any one inciting another person to disorderly acts shall also be held guilty under the new law. Its passage was, of course, contested by some horrified members of Parliament. One of them said that it was a "very grave infringement of the right of public meeting." The real infringers, one would think, are those who prevent the organizers of a public meeting from conducting it in an orderly manner. Another opponent of the new measure declared that it "dealt a heavy blow at the expression of political opinion." It is hard to see why. All that you are really forbidden to do is to interfere with the expression of political opinion by other persons, when they set about making it in an orderly way. To Americans, all this seems elementary. To them, it must appear odd that a special Parliamentary enactment is required in England to do what here ordinary police regulations would cover.

THE GOVERNOR'S NEW FIGHT.

When Gov. Hughes changed his mind about accepting a renomination last year, a friend reported him as giving one strong reason for seeking office again: "I should like to be able to do something to improve party government." In the Governor's message this topic overshadows all the rest. He has important information to give and recommendations to make on other subjects, but the reform of party methods is the battlepiece. This is the part of his message that both the Governor's friends and enemies will read with keenest interest; it is this into which he has put most thought and feeling; about these proposals of his, the chief legislative struggles of the session will take place. And as Gov. Hughes now has a spreading national prestige, his words in behalf of a radical reform in party management will go echoing over the country, so that leaders in other States will get impulse and courage from the Governor of New York.

Those passages which deal with the reform of the primaries and of the nominating system, are written in Gov. Hughes's best style. They reveal his uncommon powers of analysis and firm grasp of the fact; his faculty of lucid exposition, and his absolute frankness in stating the truth; while all is shot through with a clear integrity and moral fervor which make Mr. Hughes the most formidable reformer of the day. Unflinchingly uncovering political evils, he is perfectly fearless in applying the remedy. And his intellectual resources are as unfailing as his moral earnestness; and both are made instruments of his ambition to do some service to the State. It renews one's faith in the vitality of democratic institutions when a man equipped as is Gov. Hughes shows that he can find the way to the heart of the people, and acquire an authority which becomes a living power against low politics.

The truthfulness of the picture which Gov. Hughes draws of the present control of the party machine in this State, cannot be called in question. It is realistic, from the life. As he says, the professed theory of party representation is denied in practice. Delegates to conventions are generally mere pawns; they "might as well be inanimate." Party candidates are, in effect, appointed, not nominated, and they are appointed, the Governor laconically remarks, "by those who have not been invested with any such appointing power." As a rule, primaries are a farce; conventions a form gone through by wire-pulled puppets. Gov. Hughes is within bounds when he describes the existing management of parties as unrepresentative, destructive of belief in government by party, and absolutely hostile to high and unselfish leadership. And he accurately defines the growing demand for improved methods of nominating candidates for office as but a recent "phase of the long struggle against the control of the powers of government by selfish interests." If you doubt it, listen to the anguished outcries of Barnes, Ward, and the other local and microscopic bosses who see their control of the powers of government menaced by Gov. Hughes.

What the Governor aims at is the free expression of the wishes of the majority of a party, instead of manipulation and misrepresentation by skilled and unscrupulous managers. In theory, even the latter are compelled to admit that the Governor's contention is sound. The Republican Convention at Saratoga went on record as believing that "primaries and conventions should truly express the will of the voters," and as favoring "the freest action in the selection of delegates." But by this the party captains of fifties and captains of hundreds did not mean what the Governor does. He is for an absolutely open and thoroughly safeguarded primary, with power directly to nominate all candidates for office. Heretofore, the Governor has contented himself with urging that such primaries be merely permitted; now, as he clearly foreshadowed in his speech of acceptance that he would do, he recommends that the law make them "binding upon all parties." He thus puts himself at the head of the direct nominations movement in this State, and, we may say, the country.

So cool and level-headed a man as Gov. Hughes can never be imagined as offering a political panacea. He does not advocate direct-nominations as a cure-all. As he pointedly remarks, "political mischief will exist under any system." But it is our business to make the system the best possible, to put into the hands of the people weapons which they can most readily use in times of agitation. We shall never attain political salvation by machinery. All new devices, if left to the hands of the politicians, they will soon learn to work to their own advantage. Without an alert and intelligent electorate, no system will guarantee us against misrepresentation or corruption. But this does not alter the fact that some systems are better than others. The one which the Governor urges is the best yet devised to give the people immediate and full control over party management and nominations. If we had had such a system last year, there would not have been the long doubt and agonizing about the renomination of Gov. Hughes. The demand of the people would have come up like the sound of many waters. And it is only to make such expression of the popular will easier and more effective that the Governor presses upon the Legislature the need of party reform. None knows better than he the tremendous odds against him in this new fight; but he goes forth to it serenely, because convinced that right and truth are on his side, and that he is battling for the common weal.

THE DEMAND FOR MORE ARMY OFFICERS.

The House Military Affairs Committee took prompt steps last week towards disposing of the War Department's latest request for increase of the officers of the army. Ever since the war with Spain, the department has been steadily at work enlarging the army. Not content with getting sixteen new regiments in 1901, it has expanded the Engineers and Artillery, the Medical Corps, and the Ordnance; and last year a Porto Rico regiment and the Philippine Scouts were added to the regular army, so that the authorized strength to-day is more than four times as great as in 1898. This year 612 line officers were demanded to take the place of a similar number detached from their regiments for recruiting duty, study at army schools, teaching in private military schools, service with the Philippine Constabulary, the Panama Canal, the General Staff, etc.

Beyond doubt, this practice of stripping regiments of their officers is a bad one. A regiment needs all but six or seven, if its work is to be well done and the proper military spirit maintained. As a matter of record, Gen. C. L. Hodges reports from Iloilo that on June 30 the Fourth and Fourteenth Infantry had

present for duty only 24 and 21 officers, respectively, out of the fifty on each regimental roll. Yet these regiments are, as it were, on the firing line; hostilities, Gen. Hodges reports, ceased only a year ago, and the country is not yet wholly pacified. Absenteeism means more work for fewer men, discontent, and, generally, inefficiency. As there are twelve companies to a regiment, it is obvious that in the Fourth and Fourteenth most companies have only one officer apiece, after allowance is made for colonels, battalion commanders, adjutants, quartermasters, and commissaries. Yet these regiments might be called upon to take the field at any time against warring tribesmen. Naturally, the War Department is alarmed.

But it does not take steps to remedy the evil by utilizing retired officers wherever possible, by cutting out needless details, by refusing to strip regiments in the Philippines. It selects a purely arbitrary figure, 612, and then asks Congress for authority to appoint that number of additional officers. According to Secretary Wright's figures, the number of officers on detached service was 517 in 1905, 627 in 1906, 682 in 1907, and 691 in 1908. With one stroke of his pen Mr. Wright could order nine more officers on detached service, and so make it a round 700. He offers no guarantee that five years from now his successor will not be begging for 200 more officers because of the growth of details. On the contrary, past experience shows that this is precisely what will happen. When Congress added sixteen regiments to the line in 1901, it largely increased the number of officers in each regiment, at the request of the War Department, for the express purpose of providing a surplus of officers for detached service. Every cavalry regiment obtained seven more officers, exclusive of chaplains; every infantry regiment eleven; and there was a corresponding increase in the artillery. These extra officers numbered in all about 526, but the absenteeism has, as is indicated by the figures quoted above, grown worse.

Nobody in the army believes that it is necessary to detail 103 active officers to recruiting duty. Most of them perform no services that cannot be performed by the medical officers and sergeants in charge of recruiting offices. Clearly, retired officers—the retired list has increased over 50 per cent. since the war with Spain, and numbers 983—could discharge every one of these duties. Again, the Panama Canal Commission, the Quartermaster's Department, department headquarters, the military prisons, the militia, and other miscellaneous duties absorb forty officers, all of whose places could be filled by men who have retired. But the worst waste is the detail of no less than sixty-five officers to military schools. In some of these institutions the military education is a farce, and the instructor is asked for merely that the school may secure a teacher free and boast that it is approved by the War Department. Most of those sixty-five officers could be saved to the line; so could half of the twenty-eight aides-de-camp. If some of the seventy-seven officers on duty at West Point were released, the school would profit thereby; for civilian professors would be more freely employed in the non-military departments that teach the languages, science, etc. Now that the twenty-seven officers heretofore on duty in Cuba are to return, the War Department could, if compelled, probably send 300 officers back to their regiments within two months. The House Military Affairs Committee is evidently of the same opinion, for it has obtained the passage of a resolution asking the Secretary of War how far he has carried out the law looking to the detail of retired officers to certain duties, and asking how many more places in the detached service could be filled by them.

We should not burden our readers with these details of army administration were not the matter so perfect an illustration of the spirit of wastefulness and the absence of all desire to economize, which characterize our government.

WATCHING OUR CUSTODIANS.

Reform organizations like our Bureau of Municipal Research or the projected Voters' League, are multiplying everywhere. Illinois has its Legislative League, Minnesota its Citizens' League. Such bodies might be cited by enemies of democracy as evidence of the breakdown of popular government. We send our representatives to watch over our interests at the City Hall or in Albany, and then we hire detectives to watch our representatives. A spasmodic reform movement which makes a clean sweep of misgovernment every now and then may be less effective for political purity than a board of trained watchers permanently encamped around a Legislature, but it is also less of a satire on democracy. Not a piece of machinery has ever been devised that does not clog at times and call for a general overhauling. Yet to be constantly on the look-out for defects argues that your machine is cheap and defective, and that you have lost all faith in it. So, if Russian despotism, to be workable, must be tempered with assassination, representative government, to be endurable, must be supplemented with some form of secret service. We came near to that ideal in the very height of the "uplift" wave a few years ago, when a band of patriotic newspaper men determined to constitute themselves a people's lobby at Washington to let the country know which Congressmen were thieves and which were not. Apparently, the country then was not quite ready to supplant representative government with an oligarchy drawn from the fourth estate.

The case might be made stronger still. Should we put forward the old defence that democracy, like everything else on earth, has its evils, but that the cure therefor lies in still more democracy, we are met with the retort that an organization of a handful of experts, far from being more democracy, is really an admission that right political conduct must be sought through the efforts of a chosen few. This fact brings us face to face with a dilemma. Either such expert surveillance is ineffective, and we have only one more failure to count up, or it is effective, and the real good accomplished by our elective institutions is the work of a non-elective few. Is it greater democracy that is bringing order into the chaos of our municipal administration, or is it certain public-spirited citizens backing up the work of the Bureau of Municipal Research? The Citizens Union, after fifteen years of effort as a political party, is about to reorganize on the basis of a bureau of political information and reform. Here again its work will necessarily fall into the hands of a few expert investigators and publicists.

That is the indictment. But in its severity lies its own refutation. Were democracy in truth so complete and cumbrous a failure, it would have been

impossible for this country to live to be what it is. Our legislatures may be largely venal and our municipalities misgoverned, yet Americans have gone on securing their fair share of health, happiness, and comfort. The most that can be shown is that our imperfect democracy somewhat reduces our possible store of well-being. At least it can hardly be proved that under any other system we should have reached the present level. Our enormous natural riches have not favored democracy. The ideal of good government has had to make its way in the face of our exuberant prosperity. It is easy enough for German cities to be well-governed. There private income and wages are low enough to make the slightest reduction in the tax-rate worth fighting for. With us grafters have flourished because, unfortunately or fortunately, as we choose to look upon it, the merchant and the landowner have felt that the time spent in reducing city expenses by a dollar would, if devoted to one's private affairs, bring in five. If, therefore, the cry for purer government has arisen among us, it is not so much because democracy has been hurt in its pocket as in its moral sense. A nation that can afford bad government yet strives after the good, has not made a failure of ruling itself.

A Bureau of Municipal Research, and a Voters' League, for the purpose of exercising pressure on backsliding legislators, are the steps by which the voter is being led along the road of civic education. Towards that end our political vigilance committees are working. The need for them will never quite disappear. Sterilize as we may the progress of a candidate by direct primary nominations, by campaign criticism, by laws against corrupt electoral practices, and other laws against lobbying, the inherent weakness of human nature will still make it possible for a candidate nominated and elected by honest men to turn out a rascal after he takes the oath of office. To keep the memory of his rascality green is the proper work of special organizations like those we have mentioned. The democracy at large has too much to think about to remember details. But it is still to be shown that it refuses to act on the basis of fuller knowledge when that is supplied it.

POE IN FRANCE.

Poe appeals to the French even more than to Americans, because the essence of his work is logic—logic entirely divorced from reality, and seeming to rise superior to reality. The French of the Parnassian epoch especially, found in him a kindred spirit because of his devotion to art for art's sake. The lesser, or lower, Parnassians and the Decadents loved him for his perversity and his grotesque horrors. The Symbolists found in him their ideal, because his work so often seems to have much greater significance than it really possesses.

I.

Poe's name first became known in France through a lawsuit between two newspapers. One of them had received a story called "Les Crimes de la Rue Morgue," and had published it without knowing that it was not an original work. The second published a similar story, called "L'Orang-Outang," and, in the suit which followed, it was brought out that both stories were independent versions of an English tale by a certain Edgar Poe. This roused interest in him; a translation of several of his tales, by Madame Meunier, was published in 1846; and in 1853 appeared two tales, translated by Borghers.

The accepted literary tradition, that Baudelaire was the first to make Poe known in France, dates back to Gautier's "Rapport sur le progrès de la poésie française depuis 1830," published in 1867, in which he says, speaking of Baudelaire: "Sa familiarité de traducteur avec Edgar Poë, ce bizarre génie d'outre-mer, qu'il a le premier fait connaître en France, a beaucoup influé sur son esprit." In spite of the early translations just mentioned, Gautier is on the whole right. It is entirely due to Baudelaire that Poe has become practically a French author (his works being almost as familiar to all generations of Frenchmen since 1856 as those of any native writer), and that he has come to be counted among the exceedingly rare foreigners who are naturalized citizens of the French republic of letters. Baudelaire devoted the best part of his life to his translation of Poe. He consciously prepared himself for this particular work. From the time when he first became acquainted with some fragments of Poe's work, in 1846, he haunted the English cafés, spent his time by preference with any one who could speak English, from men of letters to coachmen and jockeys, besieged every American whom he could come at, for information about Poe, and, after four years of such preparation, began the translations to which he devoted the following fifteen years. He seems to have believed in a sort of mysterious connection between his own spirit and Poe's. "I could tell you," he wrote to Armand Fraisse, "of something still more strange and almost incredible. In 1846, or '47, I became acquainted with some fragments of Poe's; they moved me in singular fashion. I found among them, believe me or not, as you please, poems and stories which I had conceived myself, though in a vague and confused way, ill thought out; and which Poe had wrought into perfect works." Baudelaire's first translation, of a single story by Poe, was published in 1848. In 1855, a series of tales appeared in the newspaper *Le Pays*, and these were collected in 1856, in a volume, under the title "Histoires extraordinaires." The "Nouvelles Histoires extraordinaires" appeared in 1857, "Les Aventures d'Arthur Gordon Pym" in 1858, "Eureka" in 1864, and "Les Histoires grotesques et sérieuses" in 1865, only two years before Baudelaire's death. These translations have become so identified with Baudelaire that they are regularly republished with the editions of his original work, and they have also appeared in many separate editions.

Many other writers of distinction have attempted to render Poe into French. Besides the translations by Baudelaire, there are as many as twenty-three other versions, each including more or less of Poe's work; and among their authors are such men as the critic Hennequin, the poets Mallarmé and Rabbe, and the novelist J. H. Rosny. As compared with this devotion of the French to Poe, I know of only four different translations in Spanish, three in Italian, and one in modern Greek (mentioned by Lauvrière in his thesis on Poe). Among all these, Baudelaire's version has remained the standard. He has followed Poe with absolute literalness, line by line, and almost word by word (so far as his knowledge of English, which was here and there a little at fault, allowed him), and yet has made of his translation a living work. That it possesses all the qualities of an original is perhaps sufficiently proved by the influence it has exerted. As some one has said, it made Poe a figure in the world's literature.

II.

Not only as translator, but as critic, Baudelaire forced Poe upon the attention of his countrymen, willing or unwilling. The essay, "Edgar Poe, sa vie et ses ouvrages," later used as an introduction in the "Histoires extraordinaires," appeared first in the *Revue de Paris* early in 1852. In this introduction Baudelaire makes American materialism alone responsible for all the misfortunes of Poe. This "great gas-lighted barbarity" (that is, America) crushed, stifled, murdered him. The United States was simply a vast prison to him, in which he rushed back and forth with the feverish agitation of a being created to breathe more aromatic air. "All his inner and spiritual life,

whether drunkard's or poet's, was one constant effort to escape from this antipathetic atmosphere," in which, according to Baudelaire, "the impious love of liberty has given birth to a new tyranny, the tyranny of the beasts, a zoöcracy. Poe, in the midst of "this seething mass of mediocrity and commonplace," cared only for the exceptional, and painted it with faultless and terrifying artistry:

> Like our Eugène Delacroix, who raised his art to the heights of great poetry, Edgar Poe loves to make his figures move on backgrounds of violet and greenish tints, lighted by the phosphorescence of decay and blown upon by the breath of storms. In his work, so-called inanimate nature partakes of the nature of living beings, and like them shudders with a supernatural and galvanic shudder. . . . Poe writes for our nerves.

Poe est l'écrivain des nerfs. The last phrase, be it noted, is meant for praise. One thing more is supremely praiseworthy in Poe, according to Baudelaire: Poe not only has no lesson to teach, but he has no purpose or aim in his art except that art itself.

Many of the later appreciations of Poe in France were modelled directly upon Baudelaire's, and no French writer has departed very much from the conception of Poe as thus first revealed to France. The recognized authorities of French criticism have not dealt with him at all. Saint-Beuve, whom Baudelaire repeatedly besought to devote one of his Monday articles to Poe, promised to do so; but the article was never written. Taine wrote to Baudelaire: "I greatly admire Poe; he is the type of the Germanic-Englishman with deep intuitions and an amazingly overwrought nervous system. . . . He reminds one of Heine." But Taine, like Sainte-Beuve, failed to write the "weighty article" in Poe's favor which Baudelaire had demanded of him. All the critics of a little lower order—especially, of course, the impressionists—have, however, found their account in Poe. Barbey d'Aurevilly wrote four essays on him, and in all of them treated him as "the most beautiful thing which that off-scouring of humanity [meaning, of course, America] has produced." Poe, stranded on this "desert waste," was "trampled to death by the elephantine feet of American materialism." Villiers de l'Isle-Adam took up the same refrain, and Péladan, in his introduction to Mourey's translation of the poems, once more attacked this land "without civilization, without art, without nationality, without a language," as the "murderer of the greatest genius of the nineteenth century."

More worthy treatment was accorded Poe's genius by Emile Hennequin, himself perhaps the greatest intellectual genius among recent critics, whose first literary work was a translation of some of Poe's tales, and whose last essay, written just before his premature death, was devoted to Poe. More than the others, he appreciates Poe's intellectuality, and he is less often than the others a dupe of Poe's pretended hallucinations, realizing that Poe was even greater as a fakir than as a conjurer, and that, compared with Baudelaire, Poe was (in the cruel but true phrase of Henry James), "much the greater charlatan of the two, as well as the greater genius." Other serious critics have treated Poe less analytically and more generously: Teodor de Wyzéwa, in the *Revue des Deux Mondes* and in his volume, "Écrivains étrangers," calls Poe's verse the most magnificent which the English language possesses, and his poems masterpieces of emotion and music. Jules Lemaître, in a curious passage of his "Dialogue des morts," which seems to have been taken with all seriousness by his countrymen, but in which one may suspect at least a touch of malice, makes Poe say:

> You are right [in classing me with Plato and Shakespeare]. . . . I was indeed a sick man and a mad man; I felt more than any one had felt it before me, the terror of the unknown, the dark, the mysterious, the inexplicable. I was the poet of hallucination and of the dizziness of the abyss; I was the poet of Fear. I developed in a cold and exact style the secret logic of madness, and expressed states of soul which the author of "Hamlet" himself barely guessed at twice or thrice. Perhaps it might be right to say that I am less different from Shakespeare than from Plato; but it is certain that we are three specimens of the human race as different as possible from each other.

Of the critics who belong to the Symbolistic school, Camille Mauclair and Charles Morice are the most important. They are naturally both of them devoted to Poe. Morice, in his "Littérature de tout à l'heure," the chief critical manifesto of the school, includes Poe with Chateaubriand, Goethe, Hugo, Balzac, Baudelaire, and Wagner, in the parallelogram of forces that have produced modern literature in France. For him the true greatness of Poe consists in this:

> He is the poet of Love in Fear, of Love in Madness, of Love in Death; . . . the poet who in his divine works first inaugurated the poetic conscience; . . . who painted the grotesque, not like Victor Hugo, to our eyes, but to our souls.

Such is the esteem felt for Poe by various schools in France.

IV.

Poe's direct influence upon creative writing in France was perhaps less than might be expected from the esteem in which he was held. It is, of course, difficult to measure, especially since it is mingled at first with that of Hoffmann, Heine, and De Quincey; and even of Anne Radcliffe and Maturin, whom Gautier mentions in the same breath with him; and later, with that of Wagner and the Pre-Raphaelites, who, with Poe, were the foreign masters of the Symbolists. To join the names of Poe and Wagner seems a little odd to us, but it is constantly done by critics and poets of the Symbolistic school in France. Both, at least, are artists in sound, and to the French mind both seemed vaguely to suggest meanings that might possibly be of infinite significance (which was the ambition of the Symbolists).

Baudelaire himself published his "Fleurs du mal" between the "Histoires extraordinaires" and the "Aventures d'Arthur Gordon Pym." I find in them very little of Poe's influence, and according to the latest verdict of scholarship (see Louis Betz's "Studien zur vergleichenden Litteratur-Geschichte") this is natural, since most of them were probably written by the middle of the decade of the forties, or at any rate before Baudelaire became completely absorbed in Poe. Many of the poems were published in the *Revue des Deux Mondes* of 1855, before the first volume of the "Histoires extraordinaires." Only in one of his later poems have I found any direct borrowing from Poe, and that is probably unconscious. There is a rather close resemblance (suggested by Betz) between the ideas of Baudelaire's sonnet "Le Flambeau vivant," in which we find the lines:

> Ils marchent devant moi, ces yeux pleins de lumières. . . .
> Ils conduisent mes pas dans la route du Beau;
> *Ils sont mes serviteurs et je suis leur eselave.* . . .

and Poe's second "To Helen":

> Only thine eyes remain. . . .
> Lighting my lonely pathway. . . .
> They follow me—they lead me through the years,
> *They are my ministers—yet I their slave.*
> They fill my soul with Beauty. . . .

The complete contrast between Baudelaire's verse and that of Poe may be sufficiently indicated in Baudelaire's own words: "Il n'y a pas dans toute son œuvre un seul passage qui ait trait à la lubricité, ou même aux jouissances sensuelles."

Leconte de Lisle was too great a poet and too strong a personality to be influenced by Poe. But the lesser men of the Parnassian school found in him a brother, and the Decadents, partly on account of his association with Baudelaire, took him for their adopted father. Barbey d'Aurevilly called him rather oddly the Byron of Bohemia. Morice, more than oddly, found a close analogy between Poe and Pascal. Most of the Decadents, and some of the Symbolists, failed to see that Poe was not a victim of delusions, but a creator of illusions. Poe was one of the chief patron saints of the minor hangers-on of the Decadent and Symbolistic schools—of those who gathered at the Chat Noir, undoubtedly named from Poe's story, and of those

still lesser Bohemians who delighted in the cheaply gruesome Cabarets de la Mort, so popular in Paris during the early nineties.

Mallarmé, for a time the chief of the Symbolistic school, saw the greater sides of Poe. Better than any one else in France, he appreciated Poe's one sure claim to immortality, the sheer beauty of his very few great poems. Better than any one else, Mallarmé has rendered these into French. Baudelaire had translated only one of the poems, "The Raven." Mallarmé's first published work was a new translation of "The Raven," superior to Baudelaire's in almost every point. Baudelaire, for instance, renders "Though thy crest be shorn and shaven," by "Bien que ta tête soit sans huppe et sans cimier"; Mallarmé gives us "Quoique ta crête soit chue et rase." Only once does he distinctly fall below Poe in his choice of words, where (like Baudelaire) he renders "bosom's core" by "au fond de mon sein." Only once does he let his own love of the unusual in expression triumph over his faithfulness to Poe, when he changes "By the heaven that bends above us" into "Par les cieux sur nous *épars*." Mallarmé also has the intelligence to know that "Ulalume," "For Annie," and many others of Poe's poems are superior to "The Raven." Unfortunately, his translations are in prose, and so much the larger part of Poe's effect is lost, in spite of the care and even genius which he shows in his choice of words. It was in 1888 that he published, in a beautiful volume illustrated by Manet, twenty of Poe's poems. The only complete translation of the poems into French, so far as I know, is that published in the following year by Mourey, who has also translated Swinburne.

V.

The influence of Poe is somewhat more evident in Baudelaire's prose than in his verse. Yet here, too, the resemblance is slight. Baudelaire even seems to me to owe much more to De Quincey than to Poe. Less intellectual than Poe, and far more sensuous, he could reproduce Poe's creations admirably, but could not imitate them. On the other hand, he could, and did, imitate De Quincey. Only in "Mon Cœur mis à nu" do I find direct echoes of Poe—both in its autobiographic method (more sincere, however, and less creative, than Poe's); and in phrases like this: "Au moral comme au physique, j'ai toujours eu la sensation du gouffre"; or this: "Tout enfant, j'ai senti dans mon cœur deux sentiments contradictoires: l'horreur de la vie et l'extase de la vie." This is true Poe, but rather by detail of technical method than by intellectual creation of substance.

Others have imitated Poe better than Baudelaire, in almost every class of short story, from the pseudo-scientific tale of adventure to the wildest exaggerations of the grotesque and horrible; from Jules Verne's last work, "Le Sphinx des glaces," which is a sequel to Poe's "Arthur Gordon Pym," to the "Contes pour les assassins" of Maurice Beaubourg. And between these extremes are to be found such masters as Richepin (especially, for instance, in his "Morts bizarres"); as Marcel Schwob, in many a collection; and as Maupassant himself, whose briefer tales, like "Une Apparition," descend directly from Poe, and whose story of the dead Schopenhauer's false teeth might well have been written by Poe himself. Instances abound. Chief among them are the "Contes cruels," "Nouveaux Contes cruels," and "Histoires insolites" of Villiers de l'Isle-Adam. Maeterlinck, by the way, was once so unguarded as to say: "I owe all I have done to Villiers." One might mention also, as in the lineage of Poe, the "Contes fantastiques" of such gentle and harmless authors as Erckmann-Chatrian; but these belong rather to a collateral branch, with Hoffmann for their direct ancestor.

The names of Hoffmann and Poe are often linked together as forerunners of the modern tale. But certainly in France, and perhaps everywhere, in the second half of the nineteenth century, Poe's influence has been far greater than Hoffmann's. To my mind, the most remarkable thing about Poe as a mere prose-writer (for I believe his poetry alone can be of great permanent value) is his anticipation of the modern desire culminating in such tales as Kipling's "Wireless," for a pseudo-scientific supernaturalism to replace the mystic, symbolic, or merely romantic supernaturalism which Hoffmann and all his contemporaries give us. Poe even took some of his plots from Hoffmann; but where Hoffmann had made a subject mystical and vague, Poe made it mysterious and intelligible. This does not mean that Poe is superior; but it does mean that he is both more modern and more French. To sum up, he is an inventive, not an imaginative, genius. And he is vastly superior to Hoffmann, and likewise to all his American rivals for fame, as an artist pure and simple, whether in the short story, or in verse. Therefore he is the one American writer who has been accepted and acclaimed by the majority of intelligent Frenchmen. CURTIS HIDDEN PAGE.

New York.

NEWS FOR BIBLIOPHILES.

In 1862 Prof. Francis J. Child wrote a little operetta, "Il Pesceballo," founded (if we may use this word in connection with anything so slight) upon the old college song "The Lay of the One Fishball." His purpose was to have it sung as a public entertainment, the proceeds to be used for helping the loyalists of east Tennessee who had been impoverished by the ravages of the war. Professor Child (according to the late Charles Eliot Norton) submitted his Italian verses to James Russell Lowell for revision. Lowell at once "dashed off" an English version, and the thing was printed as a little pamphlet of thirty-one pages, Child's Italian verses on one side of the leaf, Lowell's English ones on pages facing; and this pamphlet has been much sought after by Lowell collectors. It has no title-page, but has a "dropped head" and Dramatis Personæ on p. 1, the text beginning on p. 2. The late J. Chester Chamberlain discovered that there were three distinct forms, with slight textual and typographical variations. The first edition was printed as an octavo on four sheets, with signature marks 1, 2, 3, and 4 on pages 1, 9, 17, and 25, respectively. The second and third editions were printed on two sheets only, with signature marks 1 and 2 on pages 1 and 17. The first and second editions were issued as a stitched pamphlet, without cover, but the third has a pale green printed cover bearing title and imprint "Cambridge Printed at the Riverside Press 1862." The first edition contains several misprints, which were corrected in the second and third:

P. 8, line 1, "piacier" was corrected to "piacer."
P. 8, line 1, "pocco" was corrected to "poco."
P. 18, line 8, "anchorè" was corrected to "anchorchè."

A fourth misprint, "Salutateto" for "Salutatelo," p. 28, line 7, was never corrected. The word "Saloon" in the last line of page 5 is in Roman type in the first edition, and italic in the second and third; and in line 10, p. 23, "and" is in italic type in the first and second editions, but in Roman in the third. The three editions seem to have been printed in the same office from the same font of type, perhaps set by the same compositor, but differences in measurements, relative positions of lines, broken types, etc., make it improbable that the types were kept standing. A reprint of the third edition (210 copies) was made by the Caxton Club of Chicago in 1899, with an introduction by Charles Eliot Norton. Laid in one of Mr. Chamberlain's copies is a letter from Professor Norton, dated April 4, 1902, in which he says, "'Il Pesceballo' was originally issued in brown covers." This seems to be a mistake. The earlier copies were issued without covers, and no copy of any edition with a brown cover can be traced. W. H. Arnold's copy of the first edition brought $140 in 1901, but it has since sold for less; H. W. Poor's copy went for $60 a few weeks ago.

On January 18 and 19 the Anderson Auction Company of this city will sell a collection, including five of the original issues of the Jesuit Relations; a presentation copy of Neal's "History of New England" (1720), 2 vols.; Dresser's "Historien und Bericht von dem Newlicher Zeit erfundenen Königreich China" (1598), including a German translation of Hariot's "Newfoundland of Virginia," the first book on Virginia; a long series of editions of Mrs. Eddy's "Science and Health," and other books and pamphlets by her; the rare Philadelphia editions (1828) of the first and second series of the "Elia" Essays, including several which were not collected in England until five years later; Andrew Lang's first book, "Ballads and Lyrics of

Old France" (1872); and several first editions of Scott. On January 20 and 21 the same firm will offer the library of Henry A. Smith of Milford, Conn., including Carver's "Travels Through the Interior Parts of North America" (1779), a special copy; Monardes's "Joyful Newes Out of the Newfound World" (1580); Smith's "Historical Account of the Expedition Against the Ohio Indians" (1766), with the two plates by Benjamin West; and Phillis Wheatley's "Poems" (1773).

On January 18-21 the Merwin-Clayton Sales Company of this city will offer the library of the Hon. Hiram C. Day of Buffalo. This collection includes first editions of several of Dickens's novels, small collections of first editions of several prominent American authors, and books on Lincoln and the civil war, one being the first edition of the Lincoln and Douglas Debates (1860).

Correspondence.

THE PRESIDENCY OF HARVARD.

To the Editor of The Nation:

Sir: More than two months have elapsed since President Eliot's resignation was announced, and as yet his successor has not been chosen. At least, if the members of the Corporation have decided on a candidate, they have not allowed anyone to suspect that they have done so; and in conversation the Fellows individually speak as if they were still perplexed. But they are a wonderful group of men for keeping a secret, so that no one outside really knows the situation to-day. Nevertheless, there are certain aspects of the election which it may be well to describe, if only as a matter of record.

In the first place, everybody familiar with Harvard or with Harvard gatherings knows that for twenty years past a favorite topic of discussion has been who shall succeed Mr. Eliot. If he had retired ten years ago, the choice might have fallen on Dean Briggs, who was remarkably popular with the undergraduates and their parents, as well as with his colleagues. A little earlier than that there was talk, especially outside of Cambridge, of looking for a man of affairs, because many graduates doubted whether any person with only academic training could possess the qualities now required to run a great institution like Harvard University. William E. Russell and Roger Wolcott, Governors of Massachusetts, were both talked of, but death removed them too early for either to be seriously considered. Then a man of affairs more conspicuous than they loomed up. Theodore Roosevelt was immensely popular with the younger generation of Harvard men; he was the idol especially of the sporting set, who in those years felt that President Eliot was going to an extreme in opposing athletics; and he was regarded by many as a "great drawing card"—as if a university, like a circus, could really prosper by the advertising that comes from unlimited fanfare. Mr. Roosevelt's more serious advocates urged that he would infuse new blood into education, break down desiccated routine, cut much academic red-tape, and let loose energy which would bear fruit in every department. That he ever regarded himself as a possible successor to Mr. Eliot is more than doubtful. For several years past, that is, since the possibility was first broached, it has been no secret that the present Corporation did not favor him, and Mr. Roosevelt himself has treated the matter as a joke.

In 1901 Jerome D. Greene, a non-graduate of the class of 1896, was appointed secretary to President Eliot, and subsequently secretary to the Corporation. His efficient arrangement of office details relieved the president of much drudgery, and at the same time it made Mr. Greene familiar with all the business and interests of the university. He showed so much capacity as head of a bureau that it began to be whispered about that he was being coached for the presidency. Mr. Greene, be it said, from all testimony that comes from Cambridge, went quietly on his way, displaying joy in his work, and never indicating by speech or manner that he dreamed of being either heir apparent or heir presumptive.

Meanwhile President Eliot celebrated his thirty-fifth anniversary (in 1904) without dropping a hint of retiring. All that one heard was that he would not stay on a day after he became conscious that his powers were in the least impaired. Impairment has been the last thing to be associated with him during the past five years, when he has undertaken long journeys, spoken scores of times each year on many topics besides education, and has come to be generally recognized as the foremost living American. But on November 5, he surprised everybody by resigning. Many persons said at once that he must, of course, have picked out his successor. But it soon became clear that this was not the case. The Corporation individually asked for suggestions—and for two months they have been searching, sifting, eliminating. The first noticeable fact was the appeal to precedent. Mr. Eliot, it was said, was elected at thirty-five; Mr. Eliot had been the greatest university president in history; therefore, in order to get his counterpart, we must elect a young man now. In other words, youth was supposed to outweigh every other consideration, and thirty-five to be the magic number. But the truth was, of course, that Eliot succeeded because he was *Eliot*, and not because he was *young;* for his immediate predecessor, Thomas Hill, also had youth on his side, but it did not avail.

Mr. Greene naturally was now thought of and the various points in his favor were canvassed. Another young man, Theodore Lyman, assistant professor of physics, loomed also into view. He, too, was young and, moreover, a kinsman of President Eliot; but whatever his ability as a physicist, apparently no one could show that he had ever had any experience in executive work, or had expressed an opinion on education. The university public hardly knew him by sight, so unobtrusively had he devoted himself to his classroom and laboratory. One heard from a considerable section of the faculty: "President Eliot has been a man of science; now let us have a régime under which the humanities will flourish." Singularly enough, however, the poor humanities, which cry out so loudly for our sympathies and insist so unintermittently that they alone make all-round men, seem unable in these latter days to produce the goods—if one may be permitted so unhumane an expression. The two middle-aged members of the Faculty of Arts and Sciences who have been most frequently mentioned—Dean Sabine and Prof. A. Lawrence Lowell—could not be credited to the humanities; for the former is the chief authority on acoustics in America, a physicist of original powers, and for the past two years dean of the Harvard Graduate School of Applied Science; while Professor Lowell, having made a reputation as a lawyer in Boston, took up the study of government and produced a work on "Governments and Parties in Continental Europe" (1896) which led to his appointment as professor of the science of government at Harvard in 1900.

Outside of Cambridge, candidates were sought for. In Boston, James J. Storrow, member of the banking house of Lee, Higginson & Co., energetic citizen, indefatigable chairman of the School Board, seems to have been most widely discussed, and with the greatest favor. At a distance, Herbert Putnam, Librarian of Congress, whose friends describe his marked executive ability in managing a complicated and extensive institution, and his tact in dealing with men of all kinds, was recommended. Chancellor David F. Houston, recently transferred from the presidency of the University of Texas to the head of Washington University, in St. Louis, was also discussed. Like Dean Sabine, he is not a graduate of Harvard College, having taken an A.M. only; but this is generally held to qualify him as a "Harvard man." That qualification is regarded as indispensable by everybody; because, it is said, if Harvard, having bred nearly a hundred presidents for other colleges, can't breed one for herself, she had better go out of business.

These have been the chief candidates discussed by the public. Doubtless, the Corporation has investigated many others. For several weeks, the canvass was much restricted because the idea prevailed that no "old man" had any chance. Fifty was the dead line; forty or thirty-five was the age preferred. But the feeling has increased that the advantages of youth are balanced by the uncertainty as to whether youth will make good. The past few weeks the question has been, "Who is the best man?" not, "Who is the best young man?"

This has led to a survey of the actual condition of the university, and of the sort of work which the next president will have specially thrust upon him. This survey has opened many eyes to the fact that the needs which were crying to be satisfied in 1869 no longer exist. The higher education has come. The professional schools are organized. The elective system has been given the broadest experiment. The principle of liberty has been extended to religious exercises and to the general life of the students. What is needed now is not an innovator like President Eliot, but a conserver, a solidifier, a coördinator. The schools are practically autonomous. The subject which most requires attention now is the College itself, the old "academic department," which at Harvard, and at every other university of sufficient development, now leads an anomalous life. The American college is passing through a period of transformation. It is neither a German

gymnasium nor an English college, nor such a college as flourished at Cambridge fifty years ago. The problem is to find a proper sphere for it—to restore its *raison d'être* and validity. This is the problem which awaits the new president of Harvard, and it is far more important that he shall have enlarged and sound ideas upon it, than that he shall be a few years younger or older than an arbitrarily fixed limit.

"A young man will require ten years to learn his job; why not take a mature man, who can begin at once—and so save all that time?" is the commonest argument to-day; and the men who utter it usually add, "Why not take Professor Lowell?" There is no doubt that the current has set strongly toward him. He has proved his ability in every field he has entered—as lawyer, as trustee of the Lowell Institute, as trustee of the Institute of Technology. He is a rare combination of the man of the world, in its best sense, and of the university leader. During his twelve years' service as teacher at Harvard he has thrown himself with characteristic energy into the interests of professors and students alike. He is not only the most popular, but the keenest, lecturer in the College. And so far as concerns the amenities of the president's position, including the proper entertainment of guests and the relations between the head of the university and the undergraduates, he could be counted upon. As author, he has won an international reputation, his recent exhaustive treatise on England having placed him in the small class where Mr. Bryce is the acknowledged master. The chief objection raised against him is his age: he is fifty-two. If he were forty-five he might be chosen. But under ordinary circumstances he has fifteen, if not twenty, years of activity before him; and that is as much as need be provided for. X.

Boston, January 5.

THE DISCIPLINE OF THE HIGHER CRITICISM.

To the Editor of The Nation:

Sir: Your editorial of December 24, "After the Higher Criticism—What?" concludes with the assumption that the advent of the higher criticism has meant for those who accept its methods an end of the ages of faith. Such an assertion is perhaps best met by simply stating that the very reverse is actually the case. The higher criticism has lifted from the Bible the incubus of an impossible theory of its authority, and once more allows its narratives, laws, psalms, prophecies, and evangel to "lie as they befell, alive and warm, part of human life and of the landscape, and of the cheerful day." Does this, think you, make them therefore mere "literature," and undivine?

The transition from the point of view of your editorial to that of one who has passed through the discipline of the higher criticism and still kept the peace that passeth all understanding cannot well be managed in a few paragraphs. But the fact, as a record of experience, is worth something. It at least disposes of your notion that the disciples of the higher criticism are all "confused," and that the churches are simply "drifting," as you so sweepingly affirm, "without chart, compass, or pilot." Your contention, to be accurate, is only that "most" of them are so adrift, for you fail to make the charge specific. In truth be it said, there is drifting enough. But it is among those who, as you justly put it, are "sticking desperately to the old phrases—though in a new sense"—trying to keep hold of an outworn notion of authority and to have done with it at the same time. These, however, are no true disciples of the higher criticism, which is nothing if not intellectually honest.

I believe that I speak for many who have had the same experience with myself. We have simply felt the necessity of facing the facts. The Bible is not, as was once believed, inerrant from cover to cover. This being indubitably so, one has to discriminate, and ask whether any of it is true. Critical science leads the way to such necessary discrimination by exhibiting the various books in their historical origin and relations. Especially it shows that in them all, as human productions, truth and erroneous ways of envisaging truth are everywhere intermixed. But like all science that knows what it is about, criticism moves in the realm of phenomena only—in this case of literary phenomena belonging to the early ages of a certain people. It does not at all raise the ultimate question of source, implied in your reference to Christianity as "of divine or miraculous origin." The higher critic, being human, may go out of his way to pronounce on this deeper question; but as higher critic it does not concern him in the least. It is far more probable that some well-meaning tyro, such as your apocryphal Chicago professor, will rise up to decide these graver issues off-hand and mislead the uninformed by posing as a disciple of the higher criticism. The answer to the question of ultimate origin which you raise can come only in small part from the critical side. It is more properly philosophical; or better, as two of your correspondents in the issue of December 31 suggest, it has to be answered out of life. An utter confusion of mind on this final question is shown in your naïve suggestion that *science* is to offer a substitute for the authority which you declare is lost.

For light on the subject, let us go back to your figure of the "drifting" church. A church that was steering and not drifting would have a compass somewhere aboard, that through all changes in its course would keep true to the pole. Men reading that indicator and studying the eternal stars would know whither they were going and their hearts would be at rest. "Which things are an allegory," the compass being that inner sense which for want of a better name we call the spiritual sense in man; and the stars those unfading spiritual realities called in the Bible righteousness, love, truth—all held in the embracing life of God. These are not valid and eternal *because* they are in the Bible; they are in the Bible because the men who live in its pages saw with growing clearness in the realm of eternal things. Now only that can be authoritative over the spiritual sense which holds it true, as the needle is held to the pole. In the gospel according to Matthew, to which you strikingly allude, that which has appealed even to average minds through eighteen centuries, is surely the luminous personality and utterances of the Prophet of Nazareth, not the embroidery of pious fancy and of material miracle with which the following age quite naturally surrounded him. Men may differ about the miracle of the Gadarene swine, or about the more significant but no more credible miracle of the resurrection, without forfeiting the name of Christian. What constitutes a Christian, one must hope, is the instant inner response to such sayings as the Golden Rule, the commandment of love, the aspiration after the perfect, which lift the Sermon on the Mount above the region of criticism into that of inspiration.

Whether one is to speak of the religion whose human source is to be found in the life thus reflected in Old and New Testaments as "miraculous" or "divine," will depend on his habitual use of words, which in turn will depend on his general philosophy of life. But the question is not one regarding which science, critical or otherwise, has properly anything to say. The higher criticism, having set the Biblical books back into their natural relations to contemporary life and habits of thought, will be discreetly silent as to whether God was more in human life then than He is now. But the spirit in man, if he has kept himself sensitive to the instant touch upon him of the living God, will not hesitate to affirm that He lives, as well as lived.

But here we are in the realm of religion, not of science; the same wherein the author of the "Imitation" found his rest of the heart. Religion has not gone out of life with the advent of the higher criticism. Far from it! Your readers ought to be told, if they do not know, that there are many men in not a few churches over whom the discipline of the higher criticism has passed as a freshening power; who are not confused or drifting, who have not lost the peace that passeth understanding—all because they dare utter the truth that is given momentarily to all faithful souls, not only in words spoken nineteen and twenty-seven centuries ago, but yesterday and to-day by an ever-living God. Richard W. Boynton.

First Unitarian Church, Buffalo, N. Y., January 2.

THE STRENGTH OF THE CHURCH.

To the Editor of The Nation:

Sir: A multiplicity of demands the last fortnight has prevented my going through the *Nation* till to-night, so that I have only just read your editorial of December 24 entitled "After the Higher Criticism—What?" This writer, for one, has not learned that the foundation has gone, nor the superstructure, either. For the foundation never was "certain traditions and documents," nor the "origin of the Bible." That baneful doctrine came in a few hundred years ago, and it seems as if now, when Protestantism is compelled to relinquish it, a Pope of Rome would take it over. Be that as it may, while the Catholic religion never claimed, and never can claim, to be founded on a book, not even on the Book of Books, not in many centuries has there been an age when the Bible has been so precious to her sons, so full of light, of inspiration, of power in their lives. The Church is built upon a Personality. She is built of living personalities; St. Peter and St. Paul both said so. That is no "stumbling, groping church, uncertain whence it

came and whither it goes," whose priests on every Lord's Day give solemn thanks at the altar to Almighty God that "we are very members incorporate in the mystical body of Thy Son, which is the blessed company of all faithful people." Those priests in the pulpit may neither expatiate upon the Higher Criticism nor fulminate against it; they have a better message. In their studies they may welcome whatever the newest learning may bring to them; but keeping in their ministrations to the old Church's profound ethical, spiritual, and very simple principles and precepts which refresh the weary, guide the erring, warn the self-willed, and confirm the faithful, they use sacraments and sermons as earnest (though sometimes erring) physicians of the soul. And they find it a very blessed calling; best exercised, like that of the doctor, in quietness, devotion, and much reliance on common sense.

W. F. Faber.

St. John's Rectory, Detroit, January 4.

ANOTHER OBSTACLE TO CO-OPERATION IN ENGLISH.

To the Editor of The Nation:

Sir: In the very interesting letter from Miss Agnes F. Perkins of Wellesley on "Difficulties in the way of coöperation in English," in your issue of December 17, one serious difficulty was not mentioned. I heartily agree with your correspondent that the English teacher can accomplish little unless teachers of other subjects demand good English from their students. But many teachers of other subjects can never do this, for the simple and excellent reason that they do not know what good English is. I have known heads of departments in reputable colleges who habitually said "He don't" and "Do it like I do."

The trouble is, of course, due to the modern system of training teachers. To quote the New York *Evening Post*, "One must know too much about some one thing, and nothing about everything else; that is true scholarship." Professor James said three or four years ago—I quote from memory—that the most striking thing about the average college professor is his encyclopædic ignorance. Prof. Irving Babbitt, in his recent book on "Literature and the American College," observes that the members of a modern college faculty have almost no training or knowledge in common; they are "a collection of infinitely repellent particles." The definition is painfully apt. The late Professor Shaler, a scholar of the old type, vigorously resented the remark that the pursuit of science unfits a man for literature, and to prove that it does not, he wrote five plays in noble Elizabethan blank verse. Men of Professor Shaler's versatility and power have always been rare in college faculties, as elsewhere; but the typical college teacher of his generation was a man of far broader training and interests than the typical college teacher of to-day. The older men are disappearing rapidly from our faculties, and men trained according to the recipe of scholarship quoted above are taking their places. A man may have made important original contributions to science, and yet be so ignorant of Latin as to suppose that Marius is accented on the second syllable. I have heard an eminent man of science so pronounce the word, and a few minutes later inform his audience—a Phi Beta Kappa society—that "the Romans called men 'vires.'"

This difficulty, I think, lies deeper than any of those which your correspondent discusses. We shall never have intelligent co-operation in teaching English or anything else until we have teachers who are broadly trained. Homer E. Woodbridge.

Colorado Springs, December 24.

THE NIGHT'S THOUSAND EYES.

To the Editor of The Nation:

Sir: Readers who care for such things were doubtless much interested in Mr. H. E. Woodbridge's letter, entitled "A Parallel from Lyly," printed in the *Nation* of December 24. Another parallel quite as interesting, however, is to be found in the third quatrain of Sylvester's sonnet, printed in the "Golden Treasury," under the title, "Love's Omnipresence":

Were you the earth, dear Love, and I the skies,
My love should shine on you like to the sun,
And look upon you with ten thousand eyes
Till heaven waxed blind, and till the world were done.

Still more interesting is it to note the close connection of all these bits with the little epigram of Plato in the Anthology:

Ἀστέρας εἰσαθρεῖς ἀστὴρ ἐμός· εἴθε γενοίμην
οὐρανός, ὡς πολλοῖς ὄμμασιν εἰς σὲ βλέπω

Thou, my star, at the stars art gazing; would I were heaven, that I might behold thee with many eyes.

Gamaliel Bradford, jr.

Wellesley Hills, Mass., December 30.

APROPOS OF THE FAILURE OF "WINTERFEAST."

To the Editor of The Nation:

Sir: In spite of the fact that some of Mr. Kennedy's critics characterized his latest drama "Winterfeast" as an excellent piece of work, it nevertheless failed of success in New York. In view of this fact, I venture to quote a few words from Goethe. In a letter to Sartorius, he says:

At the theatre a fresh and direct appeal is the all-important thing. People do not like to reflect, think, concede; they want to receive and enjoy. It is for this reason that inferior pieces are frequently better received than the superior ones; and, what is more, rightly so.

After all, we have to remember that some dramas are better suited for the study, and others again for the stage; and I do not believe that either merit, therefore, can in any case be consistently construed to be an inherent defect so long as we preserve the proper point of view. The same standard will simply not do service for both categories. Indeed, I know at least one gentleman who prefers even his Shakespeare in the study to his Shakespeare on the stage.

C. H. Ibershoff.

Cornell University, January 4.

APPEAL FOR LETTERS OF F. A. WOLF.

To the Editor of The Nation:

Sir: Prof. Siegfried Reiter of Prague is engaged in preparing an edition of the letters of the noted classical philologist Friedrich August Wolf. If the possessors of any such letters in this country will be so kind as to communicate with me, it will be of great assistance to Professor Reiter, to whom I shall convey any information thus received.

Arthur Stanley Pease.

No. 61 Sparks Street, Cambridge, Mass., January 5.

Notes.

The Macmillan Co. will publish soon a one-volume commentary on the Bible, edited by the Rev. J. R. Dummelow. The work includes not only a commentary on each of the books of the Bible, but also a series of articles dealing with the larger questions suggested by the Bible as a whole. It has been edited, according to the announcement of the publishers, on the principle of incorporating the assured results of modern scholarship, while avoiding extreme or doubtful opinions. Among the contributors are such scholars as Canon Ragg, Principal Adeney, Professor Nairne Dr. Plummer, and Professor Kennett, in England, and in this country, Professor MacFadyen of Toronto, Professor Paton of Hartford Seminary, Professor Robinson of McCormick Theological Seminary, and Professor Ropes of Harvard.

Moffat, Yard & Co. will publish in February "American Verse, 1625-1807," by Dr. William Bradley Otis, instructor in English in the College of the City of New York. Dr. Otis begins with the publication of "Nova Anglia" and ends with "The Columbiad." He discusses his subject under five heads: "Historical Verse," "Religious Verse," "Political and Satirical Verse," "Imaginative Verse," and "Translations."

Lewis Melville is engaged upon a life of William Beckford, author of "Vathek." He will have access to letters and papers now in the possession of Beckford's descendants, but he would be glad to have other letters sent to him, in care of Messrs. Curtis Brown & Massie, 5 Henrietta Street, Covent Garden, London.

Lady Ritchie's "Black Stick Papers" (G. P. Putnam's Sons), is a pleasant volume of reminiscences deriving its title from Thackeray's Fairy Blackstick, who was interested in "old books, young people, schools of practical instruction, rings, roses, sentimental affairs, etc., etc." It is written in the mellow, conversational style of one who revives for friends or records in a private journal serene memories of gracious and generous souls that have slipped into the twilight. From the rather random character of the recollections, the coterie point of view, and the steady amiability of treatment, the papers are somewhat lacking in force and definiteness of impression—a little malice in the heart frequently imparts to pen-portraits a faithful vividness which pure benevolence cannot attain. On the other hand, few writers to-day are as happily qualified by birth and associations as Lady Ritchie to link the living with the dead. Few have seen, even in a box at the opera, the ship-launching face of George Sand. Few have just missed a call from Tourguénieff, or have even had a friend who had seen him returning from a laundry with a basketful of freshly ironed dresses. Who else, one is tempted to ask, has sat listening to rare Mrs. Gaskell telling ghost

stories till Leslie Stephen came up the walk and gave, it may be taken for granted, a more rational turn to the conversation? Such delightful touches should not perish from the earth. Much as one admires Lady Ritchie's fine reserve in speaking of her relations with her father's friends and acquaintances, we could pardon a slightly more confidential vein in one who has been so many great Achilleses in the field of literature, art, and music.

"Andrew Marvells Poetische Werke," by Dr. Robert Poscher, in the series Wiener Beiträge zur Englischen Philologie, is a monograph by a professed admirer of Marvell. He has devoted 110 pages to paraphrases, more or less complete, of each of Marvell's poems and satires, adding brief critical comments, and a short account of the poet's life. To the English reader, acquainted with Marvell, this is valueless except as it shows the deadening influence of much of the so-called "scientific study" of English literature. In these unilluminating analyses, the poetry has disappeared; in his criticisms, Dr. Poscher seems utterly unable to grasp the essential qualities of this too much neglected poet—his close and sympathetic observation of nature infused with a spirit akin to our modern transcendentalism, his graceful, delicate touch, his sudden flashes of imagination. A single example will show Dr. Poscher's critical method:

> The noun most used by Marvell is probably "flower," closely followed by "tear." Some passages in this poem ("Eyes and Tears") remind the reader of the "Drop of Dew" and "The Nymph and the Fawn," where tears are often mentioned; the nymph weeps, the fawn weeps, the trees weep, the heavens weep, and even the stone weeps. When he asserts in "Eyes and Tears" that human eyes have this advantage, that they alone can weep, he contradicts himself. Grosart cites a passage from Shakespeare's "As You Like It," where the brute creation weeps, and deems it necessary to bring forward a proof from his own experience, stating that he had seen a little terrier, at the death of its master, weep bitterly and die. Possibly the dog in "Dame Siriz" might be mentioned in this connection (pp. 47-48).

This last sentence is a fine stroke, but we are sorry to see that Dr. Poscher has forgotten that in certain versions of Lewis Carroll's pathetic ballad of "The Walrus and the Carpenter"—we have been unable to consult the original manuscript—the walrus also weeps! The remainder of the monograph is taken up with a consideration of the writers who influenced Marvell, his style, his meter. Who, asks Dr. Poscher (p. 32), in reading

> I am the mower Damon, known
> Through all the meadows I have mown

does not hear ringing in his ears the lines

> Sum pius Aeneas . . .
> fama super aethera notus.

We would wager that Marvell did not hear it. In regard to meters, Dr. Poscher can count syllables and draw diagrams of Marvell's verse forms, but he cannot catch the charm of "The Garden," and he does not hear the Miltonic ring in those lines that Lowell admired:

> When up the armèd mountains of Dunbar
> He marched, and through deep Severn, ending war.

This monograph is a fair example of the thesis work in English at present produced at the German universities. To misrepresent the debt English studies owe to German scholarship, both past and present, is not the purpose of this review, but we certainly desire to point out to the general reader that the studies for the doctorate in English, published in our own country, dull and formless as many of them are, are more significant in the scholarship they display, and far more fruitful in the results they attain, than the too numerous theses published in Germany to-day.

"The Trowbridge Genealogy," by Francis B. Trowbridge of New Haven, is the third account of this family which has been prepared, but it far surpasses the first issues in thorough treatment and accuracy of investigation. Thomas Trowbridge of Taunton, England, was the first emigrant of the family, and this portly volume deals chiefly with his descendants. Other lines are not neglected, and the records of the Pension Office and the War Department yielded rich returns, proving the wide distribution of the name and the number of remotely connected families. The emigrant, a son of John Trowbridge, came to Dorchester about 1636, but soon removed to New Haven, which has since been the seat of the family. The finding of John's will in the Taunton records, a mere fragment as it is, establishes the English connection. It is strange that so little is known of the causes of emigration to America, and on this point the records are silent in this instance. Religious or political unrest is the usual explanation, but it would be interesting to know the particular pressure brought upon individual families. The author assumes that Thomas emigrated with the intention of making only a temporary stay in the settlement, but he has no proof to offer. The volume, which is published by the author, is clear in arrangement and contains much of value.

Some interesting contributions to the history of Boston are made in the fifth volume of the Bostonian Society Publications. The close connection with Boston, Lincolnshire, in the early days, is shown in the account of a visit to that place by J. F. Hunnewell. Benedict Arnold appears in a new light in a letter written to Miss Mercy Scollay, dated Philadelphia, July 15, 1778, in which he offers to provide for the education of the children of "my late worthy friend Gen'l Warren, . . . who to my great surprise, I find have been entirely neglected by the State. . . . I have sent you by Mr. Hancock five hundred dollars for the present. I wish you to have Richard clothed handsomely and sent to the best school in Boston. Any expense you are at, please draw on me for, which shall be paid with thanks." Among some historic processions described was one on January 23, 1793, "in commemoration of the successes of their French brethren, in their glorious enterprise for the establishment of equal Liberty." A prominent feature was a roasted ox on whose right horn "was displayed the Republican Flag of France, and from the left that of the United States," and "a Hogshead of Punch, drawn by six horses." Among the illustrations are portraits of Capt. Isaac Hull and Lafayette.

After an interval of about six years since the publication of the first volume of the Irish Texts Society edition of Keating's "History of Ireland," the second and third volumes have now been issued. There still remains a fourth, which is to contain the genealogies and synchronisms, together with explanatory notes, indexes, and such apparatus; but the entire body of the history, both text and translation, is now finished, and students of Celtic literature and tradition will rejoice to have it at last accessible in print. David Comyn, who began the work of editing, was obliged to relinquish it on account of ill health and did not live to see the publication of the later parts. The Rev. P. S. Dinneen, his successor, has been one of the most productive contributors, as author, editor, and lexicographer, to the work of the Gaelic League, and is well equipped for the interpretation of a modern Irish text. In our review of the first volume (see the *Nation* of May 14, 1903, p. 399) we expressed some doubt concerning the group of manuscripts which the editor had chosen to follow, and also the hope that a fuller account of the textual tradition would be given later on. Father Dinneen, we are glad to see, has supplied additional information on the subject; and we observe, too, that he has based his text on a different manuscript from that adopted by Mr. Comyn. As a result of this change of plan the edition will not consistently represent either of the two main recensions of the work.

"Old Edinburgh," by Frederick W. Watkeys (Boston: L. C. Page & Co.), is a sort of glorified guide-book, answering much the same purpose as Hare's famous "Walks" in various cities. It has the advantage over Hare's books of being more conveniently got out, in two smallish volumes, profusely illustrated, often from interesting old prints, and including a sufficient historical sketch. On the other hand, the author's style has none of that charm arising from genuine old-school culture which goes so far to atone for Mr. Hare's many curious lapses. Mr. Watkeys, for instance, insists upon calling buildings "Gothic" and, in the same breath, attributing them to Inigo Jones; and of King James I of Scotland he risks the valuable criticism that "his poetry evinces no inferiority to that of his contemporaries." But his main purpose of bringing "before the reader the principal and interesting events in the history of the Old Town" and "some account of the manners and customs of her old-time citizens, together with certain details relating to the ancient life of the city," he has accomplished in a way to afford much pleasure and profit to those who have leisure to study their Edinburgh, close by close, and wynd by wynd, under his expert guidance.

The sub-title of "Things Korean" (F. H. Revell Co.), by Horace N. Allen, M.D., "a collection of sketches and anecdotes, missionary, and diplomatic," gives an accurate description of the book. It recounts the experiences of a residence of twenty-one years in the country, the last four as our minister. Many of the incidents are entertaining and instructive, but many are trivial and hardly worthy of record. A pleasant impression on the whole is left of this quaint people who, our author says in his preface, "are now in desperate straits," from the Japanese domination. In the concluding chapters he endeavors to give some impression of the present conditions, while one of his principal objects, it is evident, is to awaken interest in and sympathy for the Koreans in this country.

Under the title "Outlines of Systematic

Theology," Prof. Augustus H. Strong of the Rochester Theological Seminary, dean of American teachers of doctrinal theology, has issued an abridged edition of his "Systematic Theology," published in three volumes in 1906 (Philadelphia: The Griffith & Rowland Press). It contains all the outline statements of the larger work, omitting the bibliographical and illustrative material. Dr. Strong is one of the few remaining defenders of the Calvinistic faith, and this compend sets forth the doctrines of high orthodoxy as clearly, forcibly, and persuasively as could be desired.

The Rev. R. J. Campbell, the chief protagonist of the "New Theology" controversy, has published some twenty of his week-day sermons, "Thursday Mornings at the City Temple" (The Macmillan Co.). The *rabies theologorum* does not induce a favorable mood for a preacher. It does not allow that "lyric expression of the soul, an utterance of meditation in sorrow, hope, love, and joy, from a representative of the human heart in its divine relations," which Martineau found to be the essence of true preaching. The pulpit, Martineau contended, "should be absolutely surrendered to devout thought and utterance, and the consecration of human life by divine affections." Mr. Campbell's pulpit would appear to be surrendered to exposing the foibles and fallacies of the orthodox, to whom he owes the better elements of his religion. But, whatever one may think of some evangelical dogmas, evangelicalism has been too great a force, and is too great a power for good to-day, to be treated unadvisedly or lightly. The world doubtless has need of iconoclasts, but one does not ordinarily go to church to hear things smash, not even on a Thursday morning in a city temple.

Old Testament students have often expressed the wish that the several documents underlying the present text might be printed consecutively by themselves, not in parallel columns. This hope has been fulfilled in part by "The Historical Bible," by Prof. Charles Foster Kent of the Yale Divinity School (Charles Scribner's Sons). Disregarding in large measure the later traditions of the priestly historians, and in part also the work of the Deuteronomist and the Ephraimitic history, he follows in his first volume, "Heroes and Crises of Early Hebrew History," the Judaean document (J), dividing it into sections and commenting on the more important historical material. He professes to have produced thus, "not a new, but the original Old Testament, which is thus restored and freed from the distracting parallels and scribal additions that through the ages have gathered about it." Similarly the second volume, "The Founders and Rulers of United Israel," brings into relief the very early and graphic narratives concerning Saul and David. These handbooks will be found helpful in the study of the history of the Hebrew nation and the development of its religious beliefs, and are adapted to those for whom Professor Kent's "Student's Old Testament" is too elaborate and involved.

The house of Georg Westermann, Brunswick, has begun to issue in parts a noteworthy work, "Die Bücher der Bibel," edited by F. Rahlwes. The purpose is to interpret the Bible, according to the idea of Goethe and Herder, as a collection of literature, and not as a work of edification or doctrinal instruction. This edition, finely illustrated by E. M. Lilien, and arranged from a literary point of view, is to appear in ten volumes, with brief introductions and historical reviews to aid in the understanding of the different groups. The translation is that of the standard Bibelwerk of the late Prof. Ed. Reuss of Strassburg. The first volume, just out, covering the Hexateuch, is entitled "Ueberlieferung und Gesetz." An edition de luxe is also published in 100 copies.

Dr. Wilhelm Hohoff discusses from the point of view of the Catholic Church, the problems of modern Socialism in a work of 340 pages, "Die Bedeutung der Marx'schen Kapital-Kritik: Eine Apologie des Christentums vom Standpunkte der Volkswirtschaftslehre und Rechtswissenschaft" (Paderborn: Bonifacius-Druckerei).

A number of books have recently appeared on the history of German literature. To the series of monographs edited by Prof. Ernst Elster of Marburg under the title Beiträge zur deutschen Literaturwissenschaft Dr. Albin Franz contributes a volume of 264 pages, "Johann Klaj: Ein Beitrag zur deutschen Literaturgeschichte des 17. Jahrhunderts"; Dr. Wilhelm Siebert, "Heinrich Heines Beziehungen zu E. T. A. Hoffmann"; Dr. Richard Kyrieleis, a treatise on the famous novel of Moritz August von Thümmel: "Reise in die mittäglichen Provinzen von Frankreich." The eleventh volume of the collection is Dr. Hans Eichentopf's "Theodor Storms Erzählungskunst in ihrer Entwicklung." The second volume of Alfred Biese's "Deutsche Literaturgeschichte," a volume of 692 pages, embraces the period from Goethe to Moericke. Among the Breslauer Beiträge zur Literaturgeschichte, edited by Dr. Max Koch and Prof. Gregor Sarrazin, the sixteenth volume is Dr. Fritz Karsen's "Henrik Steffens Romane: Ein Beitrag zur Geschichte des historischen Romans." The ninth volume of the Münster'sche Beiträge zur neueren Literaturgeschichte is a book of 137 pages by Dr. Bernhard Lips, "Oskar von Redwitz als Dichter der Amaranth." All these works are imported by G. E. Stechert & Co.

Some noteworthy Goethe books have been published within a few weeks: "Johann Wolfgang v. Goethe: Die lyrischen Meisterstücke" is an edition in two volumes with an introduction and notes by Prof. Richard M. Meyer; a selection from Goethe's diaries, with an introduction by Hans Gerhard Gräf, under the title "Aus Goethes Tagebüchern"; and "Goethes Briefwechsel mit Marianne von Willemer," edited by Philipp Stein, who also edited the letters of Goethe's mother, Bismarck's speeches, and Rückert's selected works (imported by G. E. Stechert & Co.).

A selection from the works of Hans Sachs has been edited in modern orthography and furnished with an introduction by Dr. Albrecht Keller (Frankfurt: Moritz Diesterweg).

A selection from the works of Otto Erich Hartleben has been published in three volumes, containing respectively poetry, prose, and dramas (Berlin: S. Fischer). It is edited and introduced by Franz Ferdinand Heitmüller, who has written about the dramatists of Hamburg in the eighteenth century, and is one of the collaborators in the Goethe and Schiller Archiv.

Three new anthologies, published in Germany, are worth somewhat more than passing mention. "Hellas und Rom im Spiegel deutscher Dichtung," by Karl Zettel, who died before the first of the two volumes had left the press, is an interesting collection of German poems, relating to classical antiquity, beginning with the mythological period. Practically all the leading poets of Germany are represented (Erlangen: Palm & Enke). Der poetische Cicerone, Städte und Läuder in der Dichtung, edited by Ignaz Jezower, begins with the volume "Venedig," consisting of a set of poetical descriptions of Venice, its history and life, by the leading poets of Europe. The volume begins with Goethe's visit in the autumn of 1786 (Berlin: Behr). A good anthology, especially for the higher classes in the schools, is the book of Dr. M. Consbruch and Prof. Fr. Klincksieck, entitled 'Deutsche Lyrik des 19 Jahrhunderts," the second edition of which has followed directly on the first (Leipzig: C. F. Amelongs Verlag). Practically all the German poets of the past century are represented, and the distribution of space to each is wisely made.

Aside from his "Michael Kohlhaas" so little attention has been paid to the fiction of Heinrich von Kleist that the edition of his stories, "Erzählungen," with an introduction by Erich Schmidt, is bound to be appreciated (Leipzig: Insel-Verlag).

The memory of the gifted woman who was the devoted wife and comrade of the poet Gottfried Kinkel, whom the youthful Carl Schurz aided in escaping from the Spandau prison in 1850, is revived in a little volume by J. F. Schulte, "Johanna Kinkel: Nach ihren Briefen und Erinnerungsblättern" (imported by G. E. Stechert & Co.).

Two interesting studies of French authors have lately been published in Germany: Paul Mahn's "Guy de Maupassant: Sein Leben und seine Werke," a volume of 564 pages (Berlin: Egon Fleischel & Co.); and Prof. Paul Bastier's "Victor Hugo und seine Zeit: Eine Einführung in das Studium des Dichters," a work of 240 pages (Leipzig: Xenien-Verlag).

The Hague Society for the Defence of Christianity asks for competitive discussions of the following themes: (1) An Investigation of the Value of the Empirical Psychology of Religion for the Doctrines of Christianity; (2) A Scientific Discussion of Ethics on the Basis of Modern Religious Principles. The prize for the former is to be bestowed on December 15, 1909, and for the latter on the same day, 1910. The prizes are four hundred gulden and a gold medal. Scholars of all nations may compete.

Max West, a special examiner in the Bureau of Corporations of the Department of Commerce and Labor, died at Washington, January 7. He was born at St. Cloud, Minn., in 1870, was graduated from the University of Minnesota in 1890, and finally took the doctor's degree at Columbia. For a time he was connected with the University of Chicago, and later he was attached to the staff of the Chicago *Herald*, and then of the *Record*. In 1896 he entered the Division of Statistics in the Department of Agriculture, and since then his work has been mainly in Washington. From 1900 to 1902 he was associate professor of economics in Columbian University. Among

his writings are "The Inheritance Tax" (1893), "Principles of Taxation" (1907), and many contributions to periodicals.

The death is reported from Edinburgh of Thomas McKie, in his seventy-eighth year. He was a native of Dumfries, and a friend of Carlyle. He published several books, including "Lyrics and Sonnets" and "Summer Rambles."

Prof. G. Wilhelm Schaefer, whose death is announced from Hanover, taught economics at the technical *Hochschule* in that city. He was born in 1834, in Bremke, near Göttingen, and was graduated from the university of the latter town. From 1855 to 1862 he studied law, after which he was attached for a time to the customs service and to several insurance companies. In 1872 he became *Privatdozent* at the Hanover *Hochschule*. His chief works are: "Hypothekenversicherung als Mittel zur Hebung des Grundbesitzes," "Unvereinbarkeit des sozialistischen Zukunftsstaates mit der menschlichen Natur," "Der gewerbliche Credit," "Der Handel in der Volkswirthschaft," "Die Nationalökonomie und die neuere Gesetzgebung," "Aus einem anarchischen Idealstaat," and "Erinnerungen eines Globetrotters."

Prof. Richard Pischel of the University of Berlin has just died at Madras. He left home about the 1st of November to spend a winter of study and travel in India and to give to Hindu students in Calcutta instruction in their ancient Prakrits, in which languages he was the first living authority. His wide attainments exemplify the mighty change in the scope of Indian philology which the last thirty years have wrought. Deeply versed in the Brahmanical literature, Vedic and classical, he was not merely an old-time Sanskritist; he was also eminent as a student of the sacred books of the Jainas (in Prakrit) and in those of the Buddhists (in Pali). Besides all this, he had been an efficient helper in the deciphering of the wonderful finds brought back by Le Coq from East Turkestan. He would have been sixty on the 18th of this month, and had every reason to hope for years of fruitful activity. His works include: "De Kâlidâsae Çâkuntali recensionibus" (1870), "De grammaticis prâciticis" (1874), "Kâlidâsa's Çakuntalâ," the Bengali recension, with critical notes (1877), "Hemacandras Grammatik der Prâkritsprachen" (2 vols., 1877-1880), "The Deçînâmamâlâ of Hemacandra" (1880), "The Therî-Gâthâ" (1883), "Rudrata's Crngâratilaka and Ruyaka's Sahrdayalilâ, with an introduction and notes (1886), "Vedische Studien" (3 vols., 1889-1901, partly in collaboration with Geldner); "Beiträge zur Kenntnis der deutschen Zigeuner" (1894), "Grammatik der Prâkritsprachen im Grundriss der indoaranischen Philologie" (1900), "Leben und Lehre des Buddha" (1906), "Der Hofdichter der Laks manasena" (1893), "Die Heimat der Puppenspiele" (1900), "Materialien zur Kenntnis der Apabhramsa" (1902).

From Calcutta comes news of the death of Syed Mahomed Abdul Ghafur, more familiarly known as Professor Shahbaz. He was editor of the first Urdu journal, *Darul-Sultanut*, and at one time he was director of public instruction in Bhopal. At the time of his death he was engaged on a biography of the poet-philosopher, Amir Khusro.

RECENT VERSE.

Golden Rod and Lilies. By R. W. Gilbert. Boston: Richard G. Badger.

Some Wander Songs and Other Verse. By Horatio Winslow. Madison, Wis.: W. Mayer.

A Modern Judas and Other Rhymes. By E. Vincent. London: Kegan Paul, Trench, Trübner & Co.

Apollo and the Seaman, The Queen of Gothland, Stanzas to Tolstoy, and Other Lyrics. By Herbert Trench. New York: Henry Holt & Co.

Nature Poems and Others. By William H. Davies. London: A. C. Fifield.

An Earth Poem and Other Poems. By Gerda Dalliba. New York: G. P. Putnam's Sons.

Looms of Life. By Herman Scheffauer. New York: Neale Publishing Co. $1.25.

Narrative Lyrics. By Edward Lucas White. New York: G. P. Putnam's Sons.

Idylls of Greece. By Horace V. Sutherland. Boston: Sherman, French & Co. $1 net.

Ariadne Diainomene and Other Poems. By E. W. Sutton Pickhardt. London: Elkin Matthews.

That most of our current verse is the expression of a refined and elegant egotism, is probably true. To write verse at all in these bustling and distracted days, much more to publish it, is pretty good evidence of a certain kind of vanity. It is nothing less than a tacit assumption of personal superiority, of the possession of gifts or accomplishments sufficiently remarkable to justify an extraordinary demand upon public attention. And yet there is another side to the matter. In a slightly different interpretation all this multitudinous verse, which its makers will insist upon publishing in contempt of modesty and utility, becomes a natural and excusable revolt against the tyranny of means and averages and masses. In protest against a life of humdrum mediocrity and commonplace, it reasserts the claims of charm and distinction, of the unexpected and the incalculable. But, unfortunately, as it has fallen upon evil days, it is either intimidated by the levelling influences about it or else defiant of them; it is apt to be either weak or violent.

It is seldom, however, that self-assertion grows quite so bold, even in the latter extreme, as it does in Mr. Gilbert's "Golden Rod and Lilies." Mr. Gilbert represents himself as a disciple of Walt Whitman. He has the same unpleasant insistence upon sex; the same comfortable faith in the virtues of *laissez-aller*, which he dignifies with the convenient title of Providence; the same streakiness of expression, now colloquial and slangy, anon "literary" and bookish. In his versification, however, he is more conventional; he even practises the sonnet—and what a sonnet!—a kind of stanzaic woodpile, rusticity laid in lengths. Withal he is very energetic—often ridiculous, to be sure, and not infrequently prosaic—but occasionally satiric with point (indeed, satire is his best vein), admirably lyric now and then, always high-spirited and amusing even when he fails to be interesting. In short, for all his indiscipline, vulgarity, and vociferousness, he is one of the most remarkable of those occasional poetic meteors whose brilliancy seldom survives a single flight—though so fitful and unsteady that hardly more than an uncertain glimpse can be caught of him in quotation:

I rest in God, and patiently abide,
Like the young willows by the waterside;
My roots reach out for Him, my leaves expand
To catch His sun and dew on every hand.
. . . . . .
I rest in God, and loaf beneath the trees
Acquiring certain subtle masteries;
If I made haste would I sooner arrive?
And if I wait, will he then cease to strive?
. . . . . .
I rest in God, like my good master, Walt,
And let the wincing world go by default;
Like him, a poet of democracy
I love it well, but it must come to me.

Though Mr. Gilbert may have forced the note a little, yet as a matter of fact assurance—it will hardly do to call it cock-sureness as yet—seems to be gradually prevailing over the humbler mood and the minor key. It was not so very long ago that all the great questions were unanswerable, all the great issues closed, all the great poems written. The season was adverse. Nothing remained save a gentle reminiscent regret or an advised and knowing resignation. The most the poet could hope for was to be no one's dupe but his own. To be sure, the old key recurs occasionally. Mr. Winslow drops into it, for instance, in his "Wander Songs," with their clear, poetic trickle, thin but musical:

Came to the Workmen one who said,
"The works we do are done in vain:
There is no man shall live again
Or hear God's praise when he is dead.

"Yea, what shall be the good of us
When Time has crept a little space
And, leering from his later place,
Has seen us one with Daedalus:

"Our cunning caverns blocked with drift;
Our engines rusted into earth
Our strange devices nothing worth—
Forgotten every trick and shift?"

Yet even here it is but a survival, a mood into which the poet sinks and from which he as promptly rises. On the whole, the spell is broken. With no less characteristic confidence than Mr. Gilbert, though in a contrary sense, Mr. Vincent, too, voices the new spirit in his "Modern Judas":

Warring, war; and wooing,
Woo;

Do not talk of doing,
Do.

Heart is in the winning
Won
Deed in the beginning
Done.

Wind for wanderer blowing
Blow!
Let the bent on going,
Go.

With admirable consistency he proceeds, in the letter of his own recommendations, to undertake a new poetic dialectic, something like Browning's dramatic soliloquy, with interpolations by the party of the second part in italics—a sort of typographical poetics. Now, Mr. Vincent is no contemptible versifier: his poems have a kind of immediate relevancy, the tang of familiar things, the pungency of freshly broken soil. But if they are racy, it must be added they are only half-cured, too. His treatment of the iambic couplet—it can be called heroic only in an unflattering sense—is something atrocious. His matter, too, is often correspondingly crude:

Janet, pick up the needle you let fall
And go, for young DeVyne has come to call.

There is something too much of this undistilled "actuality" about the volume. What poetry most needs nowadays, all of us are probably ready to admit, is the kind of renewal that comes from fresh vision—a surrender of threadbare "literary" situations and motives for more capacious and significant symbols. But it is absurd to suppose that poetry, whose word is order, can be manufactured of a huddle of raw material whether of language or experience.

Nor on this score is Mr. Trench's "Apollo and the Seaman" wholly irreproachable. The volume contains at least two poems of unusual size and pretensions, the titular piece itself and "The Queen of Gothland." In both the attempt is the same, to transmute a common reality. But the result is not altogether happy. The fusion is incomplete; the solution, cloudy and unsettled. The former in particular consists of a decidedly unwieldy allegory, which requires a good deal of pinching and stretching to fit the circumstances:

I heard them calling in the streets
Tbat the ship I sail upon—
The great ship Immortality—
Was gone down with the sun.

Nothing can wholly redeem such lack of plasticity in the fundamental conception. But during the course of the twenty-nine pages over which this doubtful figure is distended there are several short passages which produce a much more favorable impression of the poet's powers—like the following from the mouth of Apollo:

I have seen Jason and his men
Into bows of Argo piece
Oak of Dodona, ere she slid
To find the golden fleece;
Ay, and triremes of the marble isles
Pursue from Salamis.

I have seen master-galleys rise
Dipping in mass the oar,
And centaur-carven caravels,
And galleons big with ore,
Dromonds, and mountain'd argosies
That sack the globe no more:

Great sails, like yellow weeping clouds,
Heap'd thunder, roaring squall—
And their fadings, like the fleet of stars
That floateth over all.

In connection with a poem like this which harks back to an earlier and more elementary conception of art, it may not be uninteresting to notice a curious little volume by Mr. Davies, called "Nature Poems," which seems, improbably enough, to have drawn its inspiration from John Donne and the Elizabethan decadence. In such a poem as the "Wind" the resemblance is very striking, not only in the technique, but also in the way in which matters naturally homely and irreducible are taken up, and, as it were, suspended in the verse, making a kind of imperfect poetic emulsion:

Sometimes he roars among the leafy trees
Such sounds as in a narrow cove, when Seas
Rush in between high rocks; or grandly roll'd
Like music heard in churches very old.
. . . . . .
Sometimes he whineth like a dog in sleep,
Bit by the merciless small fleas; then deep
And hollow sounds come from him, as starved men
Oft hear rise from their empty parts; and then
He'll hum a hollow groan, like one sick lain,
Who fears a move will but increase his pain.
And now he makes an awful wail, as when
From dark coal-pits are brought up crushed, dead men
To frantic wives.

In one sense this is pretty nearly the negation of poetry. And yet it would probably be going too far to call the characteristic common to all these writers a fondness for deformity, or even formlessness. But, at all events, they show comparatively little susceptibility to the charms of regularity and harmony. What stirs them most is something large, diffuse, indefinable, and uneasy. Gerda Dalliba apparently feels little compunction in writing "An Earth Poem" of 165 pages "to express in words man's needs, capabilities, and progress" —as little as Edwin Markham has in prefacing it with an enthusiastic appreciation. With such a subject, the wonder is, not that the poem is so long, but that it is so good—by fits and starts. The figures in particular are arresting —large and inchoate, like something emerging from stone, a half-erected statue or bas-relief:

Children of Sod look up,
Here is your Earth!
Here is your Air!
And here your World
Squat like a mammoth Urchin of the Sea.
A monstrel of a hybrid breed,
Red, bleared,
Contagious, omnipresent, sightless, torn.
. . . . . .
Long vampire contagions sting the rose of morn,
Its petals heave and weld,
Now amid flames the ghost of fire stalks.
Earth's breasts are built upon by steel and mail,
Her mouth is gullied with the Spit of Life.

Such, too, is the kind of theme which inspires Mr. Scheffauer's "Looms of Life" at its best—this sense of intricacy and unrest. Thus his "Man and the Mountains":

The winds of worlds upon the brow of Man,
Valleys and gorges dark,—
Twilight, and purple banners in the van
Of Night's encroaching arc.
. . . . . .
Peak leaned to solemn peak. The master stirred
Their granite lips to speech;
Each in that sinister vast awe unheard,
Darkly communed with each.

What plots profound, what fathomless designs,
Throbbed through the palsied air?
What subtle secrecies oppressed the pines
Or the cold moon-disc bare?

Through their deep, runic syllables there ran
Tides of tremendous doom,
And when their council closed, the realms of Man
Lay dust on Time's gray loom.

Parallel to some extent with Mr. Vincent's attempts at a new *genre* are Mr. White's "Narrative Lyrics," as he calls them, though the research of novelty is not allowed in this case to encroach so far upon the form. In reality they are most of them old stories, unravelled and deftly rewoven in metrical patterns. Among others there is a "Benaiah," a "Rhampsinitos," a "Shamgar." Their likeness to the lyric consists mainly in the air of personal concern with which they are related. They are surrounded by a kind of emotional atmosphere which refracts the light in a manner quite different from epic. Indeed, it is in the creation of this sort of transparent shadow that Mr. White's skill is principally displayed. The "Deioces" is a pretty good illustration:

He entered as had been agreed.
The moon was high among the quiet stars.
Its light was stencilled on the silent floors
A hand's-breadth wide below the lattices;
. . . . . .
The King's slow breathing guided him along.
. . . . . .
I heard a stir and movement from the bed,
The planting of two firm unhurried feet.
I looked again. The King was there, erect,
His right hand held Harbanus by the throat;
His left hand gripped him by the armed right wrist.

He did not sway. I could not hear him
breathe.
Harbanus writhed and presently let drop
The dagger and it fell upon the bed
And made no noise. The King moved inch
by inch,
And yet without an effort, as it seemed,
Took up the dagger, drove it firm and deep,
And then, as gently as a father might
Lay in its cot to rest his sleeping child,
Lowered the body slowly to the floor.
I was afraid to run or slink away,
And saw him climb again into the bed,
Cover himself, and soon I heard him breathe
As evenly as early in the night.
. . . . . .
When he arose, Phraortes, white and tense,
Asked why he had not called the palace
guards.
. . . . . .
"There might have been another," said his
son.
"Well," said the King, "and had there been
a score
Which do you fancy they would have pre-
ferred,
To enter as he did or stay without?"

This is a change. But even here the air is still sultry and surcharged; and it is something of a relief to emerge into Mr. Sutherland's "Idylls," with their reworking of transparent old Greek story, whose purpose is admirably expressed by the introduction to "Prokris and Kephalos"—in spite of these jolting k's:

A little love makes life endurable;
Much love would make us gods. And know-
ing this
I bide within the shadow with my harp
And sing of love, and lovers who beheld
Long years ago the beauties ye ignore
The while ye seek, with strain'd and tired
eyes,
The Stairs of Silence, winding ever down.
And though no more my notes may reach
the skies
Like his of old who charm'd the surging
seas
And made the thrushes listen, yet perhaps
Men's hearts may gain some comfort from
the strain
And bless the singer though the stars be
mute.

It is harder, somehow, to accept Mr. Pickhardt's "Ariadne Diainomene." There is something about the form of Greek tragedy which seems incompatible, even in reading, with the idea of contemporary verse; it has at best the air of a *tour de force*, of an academic experiment. And yet Mr. Pickhardt has done his work well; he has attained the kind of success of which his attempt is capable; though, for the reason just mentioned, the recitations, meditative and narrative, seem the most satisfactory portions of the piece, just because they appear in themselves less of an anachronism. As an example may be cited a speech of Ariadne's:

Each year I saw the victims in pale file
Land from their ships at Cnossos; every
spring
The Labyrinth wherein the Minotaur
Was hidden that the sun be not defiled,
Received their inward footstep; but no mark
Of issuing foot therefrom was ever seen.
And each year as I waxed to maidenhood
My pity waxed within me: they that came
They that were offered up in sacrifice
And with their flesh did help perpetuate
The monstrous thing that bellowed deep
within
The bowels of the irremeable maze,
Half-man, half-bull, and wholly horrible,
. . . . . .
How often have I wept beholding them!

CURRENT FICTION.

The Fair Mississippian. By Charles Egbert Craddock. Boston: Houghton Mifflin Co.

An old mansion on a Mississippi plantation, a lovely widow with three boys, a forceful tutor, a lost and found codicil, and almost a ghost—these materials hold small promise of originality in plot. Nevertheless, they are presented in novel combinations, and are so interwoven with wonderful pictures of life on the Mississippi River as to prove absorbingly interesting. There are the steamboats coming and going like living actors, and the desperado on his flatboat contributing the melodramatic shadows of the scene. There are plantation hospitalities and bear-hunting and yet more serious deeds of daring; and around all flows and overflows the great river, shaping the days and ways of the dwellers on its banks, making or breaking their fortunes, feeding them, killing them, winning their bread, hiding their crimes, a mighty presence and power. This is not to say that there is not a real and well-contrived story involving love, money, and some interesting characters, but to emphasize the reflection that in the highest sense it is a novel of place. The fly in the amber is a habit of bow-wow in the language which sits with curious artificiality on a story absolutely clear-cut in device—as when a steamboat's electric searchlight makes "a rayonnant halo in the dim glooms of the riparian midnight."

The Gentle Grafter. By O. Henry. New York: The McClure Co.

O. Henry's latest specimen of American humor exhibits less variety of plot and character than his "Voice of the City"—indeed, a few of the stories are undeniably trite. In compensation, however, the harsh ugliness of treatment which characterized the sketches of New York life has given way to a sunnier, more genial cynicism. The work conforms to the Aristotelian comic canon in displaying the follies and vices of mankind in such a way as to excite mirth without pain. The heroes of the "Gentle Grafter" are not harsh, unlovely metropolitans; they are affable, expansive types of the migrant all-around American swindler. They find the criminal welter of Babylon a bit oppressive. In particular, they feel a lofty superiority to the ethics of Wall Street; when they consider their modest transactions in patent-medicines, matrimonial humbugs, and goldbricks, under the shadow of New York financial operations. they glow with the conscious virtue of Sunday School superintendents. As Jeff Peters says:

> Myself, I never believed in taking any man's dollars unless I gave him something to show for it—lumbago lotion, stock certificates, stove polish, or a crack on the head to show for his money.

Jeff, the chief narrator, is an opulent personality. His style, which will doubtless play its part in corrupting the English of his contemporaries, is as full and fruity as plum-cake. It is studded with puns, good and bad. It is larded with Pickwickian paraphrase and grotesque examples of *le mot précis*. It is rich "beyond the dreams of average—rich as Greasers," with malaproprisms and allusions, open and covert, to Walt Whittier, Albert Tennyson, and other celebrities of far less durable reputation. In order adequately to relish its flavor, one should first digest the headlines of the New York and Chicago newspapers for the current year. Ten years hence it will require a commentary as copious as that of the "Dunciad" to elucidate Jeff's "sensations of thought and perspicacity." But what a solidarity of interests on the part of the American public such a book implies—what a hearty appetite for the picturesque vulgarities and rascalities of the hour! As for Jeff himself, he approaches the universal—there is probably no city, town, or village in the Union unvisited by his pilgrim feet.

Sappho in Boston. New York: Moffat, Yard & Co.

This story, according to the publisher's announcement, "is written delightfully by a man of letters, who, for personal reasons, preserves his incognito." To fix the responsibility of authorship would be a task not unlike the analysis of a pinwheel in action. For this is a story which does not stand still long enough to be criticised. It whizzes and fizzes its way through conversational smartnesses, hypertrophy of wealth, coruscations of epigram, and yet, reaching its end, reveals a solidity that one hardly suspected. It is as if a comet tore by, tail first, all glitter and haze, but at last arrived in order, bringing its head behind it. To tell the truth, the earlier aspects of the story are not wholly attractive; there is something uncanny in the glare and dazzle and something antagonizing in the wilful and, as it proves, motiveless hovering upon the brink of ill taste. The plot is a distant and semi-lunatic relative of the motive in "The Loan of a Lover." The gentleman who plays with precious stones as large as ducks'

eggs might be a child of Ouida, if he were not situated on Boston Common. Ouidaesque, too, is the man who telegraphs to an "Eminence" for proof that a silver service in a Boston jeweller's is not the only copy of a Windsor Castle original. Now will come a sentence stickily sweet with the archaic sugar of Hewlett; then one slangily terse like Richard Harding Davis. It is superfluous to add that the book is nothing if not brisk, even breathless reading, and its unconventional dénouement invests it with positive charm.

Perdita. By Stanley V. Makower. New York: D. Appleton & Co.

A desire to present something a little truer than the truth was the motive which led Mr. Makower to throw his materials for the life of the actress Mary Robinson, more celebrated as an early mistress of George IV, into the form of fiction. The book before us is of greater interest and value than most specimens of this ambiguous species, because the sound biographical element is unusually large. Indeed, the author adheres pretty strictly to the known facts of the heroine's career, and steps into the realm of fiction mainly for the purpose of interpreting his data. That the reader may have the means to distinguish the *Wahrheit* from the *Dichtung* Mr. Makower has supplied an index, a list of the characters impersonated by Mrs. Robinson with dates, and a fairly lengthy bibliography. The volume is further enriched by seventeen illustrations, including, besides several famous portraits of the actress, likenesses of her royal lover, the young rake of genius, Lord Lyttleton, Col. Tarleton, Sheridan, and Charles James Fox—all of whom were closely associated with Perdita's affairs.

There is something legitimately tempting to the imagination in the life-history of a woman who was trained by Garrick, sat to Reynolds, dined with Burke, infatuated a prince, wrote bad poetry, and died in wretchedness and poverty. It cannot be said, however, that Mr. Makower, with all his freedom of method, has made his interpretation of his heroine very coherent or very credible. He has been somewhat too profound and much too romantic. Under the spell of bewitching portraits, he has read into the spirit of Mrs. Robinson qualities which she never possessed, and which are quite incompatible with the facts of her life which he himself supplies. The real Mrs. Robinson appears to have been, like many other actresses, much more interesting in her public than in her private character. Shallow and commonplace in mind and heart, she possessed uncommon beauty, a considerable taste for coquetry and intrigue, and a quite extraordinary vanity. Mr. Makower's attempt to represent her as a harmony of middle-class domestic virtue with an intense vein of romanticism is disastrous. It becomes intolerable when it blends Mrs. Robinson's maternal solicitude over her infant at home in its cradle with the "loveliness of her impressions" as the larks carol over her in "jubilant sweetness" after an assignation with the Prince. Certain cold records of bonds, certain vague hints of blackmail, suggest that for Perdita there was rather more money than romance in this affair. At any rate, the veil of divine illusion was excessively thin.

Illinois Historical Collections. Vol. III. (Lincoln Series, Vol. I.): The Lincoln-Douglas Debates, 1858. Edited by Edwin Erle Sparks. Springfield: Illinois Historical Library.

Premonitions of the near-at-hand centenary of the birth of Abraham Lincoln are already abundant, among them an activity in the press as regards this almost the greatest of American personalities. The material relating to Lincoln is comprised already within more than a thousand volumes, its bibliography equalling in compass those of the most distinguished figures of history. Witness the vast list of Daniel Fish in the most recent edition of Lincoln's works. These volumes are the latest additions to the collection. In the first named, President Sparks, now of the Pennsylvania State College but recently of Chicago University, publishes what we may hold to be the definitive edition of the great Lincoln-Douglas debate of 1858. In the history of American politics there are few things more creditable than this forensic struggle and its attending circumstances. The champions were of the ablest, and discussed side by side in good-tempered, manly fashion, with all their power, momentous issues. The population of the State hung upon their words, appreciating and enjoying keenly every thrust and parry, and the whole development of the argument, basing upon what was thus so intelligently obtained, its memorable action just after at the ballot-box, which sent Douglas at once to the Federal Senate and Lincoln two years later to the White House. In the long story of Anglo-Saxon freedom perhaps the democratic way has never more fully justified itself than in the conduct, alert, dignified, restrained, of the American masses at this time. Mr. Sparks has taken all possible pains to make accurate the text of the speeches, comparing the best, the Columbus, edition with the contemporary newspaper reports. At the same time, he supplies ample color and character of time and place by quoting letters, reminiscences, press gossip, and comment of the hour. Helps to vividness are photographs of localities and personages concerned—among these the reporters, youths of twenty-four or twenty-five, who rendered the immense service of taking down *verbatim et literatim* not only the extempore utterance of the principals, but the questions and ejaculations of the listening multitudes.

To speak of a minor matter, as one looks at the pictures of Lincoln and Douglas, here reproduced, the oddly picturesque contrast physically between the two men comes home. Lincoln, gaunt, six feet four inches tall, was relatively short-bodied, his height resulting from an abnormal length of limb. Douglas, stocky, only five feet four inches tall, was yet relatively long bodied, his low stature resulting from short legs. When the "little giant" had on a coat which fitted his large trunk, "the coat-tails were very near the ground."

Country Walks about Florence. By Edward Hutton; with 32 drawings by Adelaide Marchi and 20 other illustrations. Pp. xv+323. New York: Charles Scribner's Sons. $1.50 net.

Florence is the one city in Italy which seems to have lost character and to be at various seasons almost English, or American, or German, and, save in the dog days, never really Italian at all. No one except the professional art critic, or the student who desires to consult the priceless archives of Florence will, if he love Italy, stop there any longer than he must. Yet, once outside the gates, we are again in Italy; and it is possible to live in Florence and to buy one's native comestibles at the Anglo-American stores, and, at the same time, to see Italy and Italian life almost at its best, if one uses Florence simply as the centre of one's excursions. This Mr. Hutton has clearly perceived, and his "Country Walks about Florence" is the result. It is, in fact, a new departure in guide-books, a companion for one's daily strolls through the fields and byways of the Florentine *contado.* And it would be difficult to imagine a better companion. In Florence itself, a perfectly sane man may hesitate between his Ruskin and his Baedeker; for we do not all of us care to read a dozen or so of pages, however illuminating, when "To R. a Holy Family attributed to Cimabue. L. a Resurrection. Author unknown. Sacristan expects a gratuity of 1 franc" will get us out of a cold and draughty church, our duty done, into the warm sunshine again. But in the country it is different. There, we are glad of something to read, when, tired with our walk, we lie among the corn and listen to the voices of the reapers, or sip our Chianti beneath the vine-draped trellis of some wayside *trattoria;* and so long as the book chosen tells us what we want to know about the places we are visiting,

we can have no quarrel with its author if he is gracious enough to write beautifully about beautiful things. Mr. Hutton is withal a competent cicerone. He has read widely, and his book is crammed with valuable information which it is hard to find elsewhere about every bridge and ford and village and *castello* and *rôcca*. It is a wise and learned book as well as a beautiful one, and no sojourner in Florence who is wearied with the continual round of picture galleries and churches should fail to buy it.

Indeed our only possible ground of complaint is to be found on the fact that Mr. Hutton is silent upon matters with regard to which we should have been glad to hear from him. How delicately could he have written on the ancient and never-forgotten custom of *cantare il Maggio*, and of all the superstitions of the Tuscan peasantry he knows so well! And why does he tell us nothing of *Le Signorie o Potenze festeggianti* of the Florentine *contado?* Surely, when he has brought us to Campi, we have almost a right to hear something of *La Cesarea e sempre Augusta Maestà dell' Imperatore di Campi* and of his long contest with his brother Emperor *del Prato*, decided, be it noted, in favor of the former in 1559. The few extra pages which some account of these things would have occupied would hardly have increased the weight of the book or made it fit the pocket less conveniently. It only remains to add that there is a serviceable index, and that the topographical directions leave nothing to be desired.

Fighting the Turk in the Balkans. By Arthur D. Howden Smith. New York: G. P. Putnam's Sons. $1.75 net.

Servia and the Servians. By Chedo Mijatovitch. Boston: L. C. Page and Co.

When an American citizen, in cold blood, sets out for Bulgaria, enlists in a *cheta*, or guerrilla band, and, in revenge for Turkish atrocities perpetrated on somewhat distantly related Macedonian peasants, goes to ambushing Turkish patrols in the Rhodopian foothills, he comes pretty close to brigandage. Mr. Smith's excuse is that he has made a very readable book out of his adventures, and has done so without venturing too far into heroics or calling to his aid the dazzling vocabulary of the modern war correspondent. Mr. Smith and his fellow guerrillas seem to have put in a great part of the time falling into ditches and hiding in garrets. Yet it is recorded that on one occasion they roasted half-a-dozen *bashi-bazouks* in their own guardhouse; on another occasion surprised a Turkish patrol of twenty and killed eleven of them; and on still another occasion made a fine stand in what was almost a pitched battle. Without striving unduly, the writer has caught very well the reality of guerrilla warfare,—the long marches in the dark, the scamperings and evasions across hill and stream, the excitement, the fatigue, and the chill of the mountain nights. For nearly five years after 1903 Macedonia was given over to a relentless warfare in which Turks, Bulgarians, Servians, and Greeks slaughtered each other and the Macedonian peasantry besides. The new order in Turkey has brought peace to the distracted country. Should such a state continue Mr. Smith will have recorded an interesting phase of Balkan history. Should trouble come again, his book will be all the more timely. One reservation we would make is that the Bulgarians cannot quite be the utterly angelic folk our author makes them. Had his fortunes been cast with a Servian fighting band, he probably would have liked them as well. But that is a minor matter.

Mr. Mijatovitch, who used to be Servian minister at London, writes with equal charm and authority. There is only one chapter on Servia and that is historical; the rest of the volume is on the Servians, their customs, beliefs, literature, and folk-lore. Most books that are nowadays written on primitive peoples and their ways are thin dilutions of very sparse fact. The present volume is a veritable little encyclopedia of national life and psychology. There is one chapter on Servian Anecdotes or traditional folk tales, which is as entertaining as a whole bound volume of many a humorous periodical. The story of the *chodja*, or *hodja*, Nasradin and his pupils demands quotation:

> Nasradin Chodja took some trouble to teach his pupils how to behave politely. Among other things he told them to clap their hands and shout, "Hayir Allah! (May God grant that it is to your good!)" whenever they heard an older person sneeze. Once the Chodja, mending something on the open pit in his garden, slipped and fell in. . . . The dutiful school boys soon found a rope and threw it down to their master, and with united forces began to drag him out. Yet a few feet more and he would have been out of the pit, when unfortunately, thoroughly wet as he was, he sneezed. In a moment all his pupils dropped the rope to clap their hands and to shout "Hayir Allah, Chodja!" The poor Chodja fell back down to the bottom of the pit. "Ah," he said to himself, "it serves me right! I ought to have taught these boys common sense first, and then politeness!"

Interesting also is the summary, with bits of translation, of the national songs of the Servians. There are even four pages of musical notation illustrative of the popular melodies of the country.

Science.

THE FIRST RACE OF FOSSIL MAN.

PARIS, December 24.

A possibly epoch-making report has been presented to the Académie des Sciences by Marcellin Boule, professor of palæontology at the Muséum d'Histoire Naturelle, Paris. It is the first scientific account of remains complete enough to characterize definitely what Quatrefages and Hamy classify as the first race of fossil man—that of Canstadt, more commonly known as Neanderthaloid. The skeleton of a young man of the same race found in August by Hauser has been taken to Germany and the scientific description of it is not yet published. What is known of it agrees with this report of Professor Boule on remains recently discovered at La-Chapelle-aux-Saints in the department of La Corrèze by the Abbés J. and A. Bouyssonie and L. Bardon. The importance of the find is not due merely to the connection of this earliest human race with a definite geologic and palæolithic period. So far these remains mark the lowest round in the descending scale of man toward the long-sought missing link.

The chief anatomical pieces discovered are the skull, with lower jaw; by dint of patience nearly all the parts have been put in place. There are also several vertebrae and ribs, with parts of the pelvis and limbs. They were found several metres deep in a grot, in groundsoil which was in place and sterile, that is, unmixed with other remains. The skeleton lay on its side, with the knees bent toward the body, in a cavity dug to fit it in the groundsoil. Stones were placed beneath the head and there was every sign of intentional burial. The grave is three metres from the entrance of the grot; it is shallow, and, at the head, there was found the hind hoof of one of the great bovidae, placed as if by design. Above this groundsoil there is an alluvial layer rich in animal remains —rhinoceros, tichorhinus, reindeer, cave hyena, marmot, and wolf. There are no signs of habitation in the grot; but flint instruments discovered with the skeleton are of the best Moustérien period; and this agrees with the animal remains which belong to the temperate, almost cold, middle (not lower) pleistocene, following the last glacial extension in France. Low in the order of humanity as these remains are, they still date far from the tertiary period.

To situate this skull of La Chapelle, M. Boule compares it with similar human remains already known, with that of a surviving inferior race, and with pithecanthropus and the anthropoid apes. It is nearly superposable on the skulls of Neanderthal and on that of the pithecanthropus, having the same low,

receding forehead and depressed arch; it is dolicocephalic, with an index of 75, with thick bone and enormous development of the penthouse projections above the eye orbits. The latter, which are so striking in the Neanderthal skull, are found almost as strong in the late skull of the Irish saint, Mansuy, preserved as a relic. The depressed occiput projects strongly; the torus is more accented than in the Australian, but less than in the pithecanthropus, which, in turn, has it less than the anthropoid apes. The occipital hole has the inward position ordinary in animals lower than man; and the nape of the neck must obviously have been furnished with powerful muscles to secure horizontal vision. The skull is also extraordinarily large for the scant height—about five feet four inches—of its owner; the cranial sutures and dentition show that it belonged to an old man, and, by the way, there are pathognomic signs of rheumatism.

Most extraordinary of all is the face. Apart from the projecting eye-roof, the nose is separated from the forehead by a deep depression and is short and very large. Between nose and cheeks, there are no canine fossæ, such as exist in all present human races; but the upper jaw forms with the straight-out prolongation of the molar bones a kind of muzzle. The lateral edges of the palatine arch, which is very long, are almost parallel as in the anthropoid apes; and all this excessive prognathism is set off by a lower jaw retreating without any chin. The lower jawbone is thick, with enormous condyles; it resembles the similar bones of this earliest human race found elsewhere, at Naulette, Spy, and particularly that of the still undescribed Hauser skeleton of a young man, which was also found in La Corrèze. Few teeth remain; the canines are strongly developed. Yet, strange to say, the temporal fossæ furnish no indication of an exceptionally strong masticating apparatus.

The other parts of the skeleton show that the man was not only short in stature, but thickset. The femur has a forward incurvation, as if its owner did not regularly hold himself upright on his legs. The tibia shows the platycnemia (flat instead of triangular section) already known in prehistoric and inferior human races and found by Quatrefages in four atavistic examples in Paris hospitals.

In sum, these discoveries in La Corrèze may be said to do away once for all with Virchow's opinion that the Neanderthaloid type is pathological. It has now to be considered normal and characteristic of a great part of Europe during the Middle Pleistocene; and the Moustèrien art epoch goes along with it. It is inferior to any living human type and is relatively much nearer to the anthropoid apes than any other yet found. Between must be placed the pithecanthropus anatomically. Above this Corrèzien, far above both anatomically and in industry and art, is Quatrefages's second fossil human race—that of Cro-Magnon, and inferior types still existing. Morphologically, its place is between the pithecanthropus of Java and the existing Australian, which, as M. Boule takes pains to explain, implies no direct generic connection; and it is not a man-monkey. S. D.

THE NEBRASKA LOESS MAN.

LINCOLN, Nebraska, December 31.

For more than two years various persons interested have been investigating carefully all the details connected with the discovery of early human remains, designated as the Nebraska Loess Man (see the *Nation* of November 1, 1906, p. 380). Within this time numerous criticisms have appeared. It is indeed remarkable how completely some students have thought to discredit the finds by a casual visit to the spot or a mere examination of the remains. A much greater area has been dug over and much additional evidence collected. This serves to confirm the view that the theory of burial is inadequate to account for all the facts. The view of the finder, R. F. Gilder, that the superficial layer of remains was deposited above an area of clay hardened by fire, has been thoroughly demonstrated, and the extent and form of the fire-baked area determined. The view that the human remains beneath this level were part of the same mound and were carried down by the work of gophers becomes increasingly improbable. Thus the discovery of a skull and some associated bones seven feet below the surface at some distance from the baked-clay area can hardly be explained as the work of a gopher. Another group of bones manifesting anatomical association, yet found at a depth of six feet and at some distance from the first, is still more incapable of explanation on the gopher theory.

Two classes of implements have also been discovered. Fine flint flake weapons, barely touched with a fine incrustation, come from the burial mound. On the other hand, a few rough, unflaked flint pieces of a different rock, heavily accreted with lime, have been found at about the same depth with the fragmentary remains regarded by the Nebraska investigators as belonging to the older type. All the evidence points to the burial of the bones in the upper strata; no evidence has yet been secured which points to burial in the case of the other remains.

That the region is remarkably rich is indicated by the discovery of another skeleton associated with mortuary articles, consisting of large sea-shells carefully placed about and beneath the cranium; arrow points of *flint not native*, and of the well-known Mound Builder type and finish; potsherds the binder of which differs from local pottery, in that the former is sand while the latter is disintegrated granite rock; the large black, and *not native* flint gouge; and lastly the disposition of bones in sepulchre with head to north. The forehead of the cranium is gone, but the skull differs materially from any other found. The archæological evidence points towards some Mound-Building Wisconsin Indian that had strayed over into the Missouri River country. This skeleton was unearthed in a low tumulus on the same ridge some distance further north, and is in no wise related to anything in the Gilder mound, intrusive or otherwise.

Dr. Charles Denison, a specialist in the treatment of tuberculosis and a leader in the crusade against that disease, died at Denver January 10. He was born at Royalton, Vt., in 1845, and after graduation from Williams College and the medical department of the University of Vermont, he began the practice of medicine. In 1873 he went to Denver, where for fourteen years he served as professor of diseases of the chest and climatology in the medical department of the University of Denver. In 1890 he was president of the American Climatological Association; in 1901, honorary vice-president of the British Congress on Tuberculosis; and he was a member of various scientific societies. The list of his writings includes "Rocky Mountain Health Resorts" (1876), "The Annual and Seasonal Climatic Maps" (1885), "Exercise and Food for Pulmonary Invalids" (1895), and numerous articles and reports on subjects connected with climate and tuberculosis.

The death of Prof. Harry Govier Seeley, geologist and mineralogist, was reported from London, January 8. He was born in that city in 1839, and educated at Sidney Sussex College, Cambridge. He held various important positions: he was at one time in charge of the Woodwardian Museum, Cambridge; from 1860 to 1870 he was assistant to Prof. Adam Sedgwick; in 1876 he was appointed professor of geography at King's College; from 1880 to 1890 he served as a university extension lecturer; since 1885 he had been lecturer for the Gilchrist Educational Trust, and director of the London Geological Field class; from 1890 to 1905 he was lecturer on geology at the Royal Indian Engineering College, Cooper's Hill. He was also a member of many scientific societies, English and Continental; he discovered the skeletons of pareiasaurus, cynognathus, and other fossil reptiles in the Karroo, and presented them to the British Museum. Among his publications are: "Index to Fossil Remains of Aves, Ornithosauria, Reptilia" (1869), "Ornithosauria: an Elementary Study" (1870), "The Fresh-Water Fishes of Europe" (1886), "Factors in Life" (1887), "Story of the Earth in Past Ages" (1895), "Dragons of the Air" (1901), and some 170 memoirs, chiefly on geological subjects and fossil reptiles, in the Transactions of the Royal Society and other learned bodies.

Drama.

The announcement is made that the rival promoters of a National and of a Shakespearean Memorial Theatre in London have joined hands and will now work together for a common object. In name the institution is to be National, and Shakespearean plays are to be produced at regular intervals, as well as the works of other dramatists, living and dead, while foreign companies are to be invited to perform upon occasion. The theatre is to be controlled by a board of trustees—representative of literature, drama, music, and education—and it is hoped that the educational and municipal authorities of the country will associate themselves with the enterprise.

A bill has been introduced into the House of Commons which proposes to do away with the present stage censorship of the Lord Chamberlain's office. An introductory memorandum says:

The object of this bill is to abolish the censorship of plays exercised in Great Britain under the authority of the Lord Chamberlain, and to transfer to the London County Council as the local authority the power of licensing and controlling theatres exercised by the Lord Chamberlain in the central parts of the metropolis. As to the censorship of plays, it is proposed to make theatrical performances subject to the same control as performances in music halls. In the case of music halls no censorship exists, but any impropriety can be dealt with by the police or by a refusal of the license by the licensing authority, which in London is the London County Council. The censorship of plays does not exist in Ireland. As to the licensing of theatres, this power is now exercised by or under the control of the local authority in practically the whole of Great Britain, where theatres are found, except the central districts of London, the university cities of Oxford and Cambridge, and places where his Majesty resides. Further, even in the central district of London, the London County Council as the local authority, has already extensive powers over the structure of theatres under the Metropolis Management Act, 1878.

At the latest meeting of the committee of the Comédie Française in Paris Mlle. Berthe Cerny and Charles Siblot were elected *sociétaires*. Mlle. Cerny has been a public favorite ever since her first appearance at the Française, in "Paraître." M. Siblot has long been prominent at the Odéon.

Word comes from Florence that the *Mask*, a monthly magazine on the theatre, is to be enlarged. Beginning with the February number, the *Mask* will appear both in English and French, the French part to be under the direction of Jean Jacques Olivier. Each number will contain a bibliography on subjects connected with the art, history, and literature of the theatre; and every alternate month a book review will appear in English.

A complete edition in six volumes of the works of Christian D. Grabbe, including the correspondence, will interest the admirers of that much discussed dramatic genius. They are edited, with introduction and notes, by Otto Nieten (Leipzig: Max Hesse.)

Moderne Bübne is the name of a new collection of contemporary German dramas, edited by Emil Reiss. (Berlin: Concordia Deutsche Verlagsanstalt.) Among recent volumes are Eduard Stucken's tragic comedy, in one act, "Die Gesellschaft des Abbé Chateauneuf"; his four-act drama, "Myrrha"; a comedy by Otto Hinnerk, "Närrische Welt"; and a translation of Swinburne's "Chastelard," by Walter Unus.

Carl Frederick William Ahrendt, who will be remembered as an intelligent and trustworthy actor, who gave capable support to Edwin Booth and other stars in the legitimate drama, died at Greenville, Mississippi, January 11. He was born in Lauterborg, Germany, in 1842, and came to this country fifteen years later. He was at various times in the companies of F. W. Lander, Thomas W. Keene, Frank Mayo, Lawrence Barrett, Edwin Booth, Tommaso Salvini, E. H. Sothern, Richard Mansfield, and J. K. Hackett. During the first administration of President Cleveland he was vice-consul at Berlin.

Music.

Edward MacDowell. By Lawrence Gilman. New York: John Lane Co. $1.50.

Three years ago the John Lane Company published a book on America's greatest composer by Mr. Gilman which was somewhat disappointing, not so much because of what it said as for what it left unsaid. For this, the author was only partly responsible; his book was one in a series called Living Masters of Music, in which each master was to be discussed in less than a hundred pages. MacDowell's death, a year ago, made it necessary to take this volume out of that series, and this change afforded a good opportunity to expand the volume to the dimensions called for by so interesting a subject—an opportunity of which Mr. Gilman has made excellent use. The new volume has 190 pages, and is in every way a great improvement on its predecessor; it is not only readable, but uncommonly stimulating; it will help to enhance MacDowell's fame as an artist and a man, and it will make more vivid the premature loss of the one musician America could least spare.

It is commonly assumed that the famous Venezuelan pianist, Teresa Carreño, was MacDowell's first teacher, but she was preceded by another South American, Juan Buitrago of Bogota, who gave the child his first lessons, and who is still living with his pupil's parents. Albert Spalding, the violinist who recently won so much success, is another of his pupils. Buitrago laid a good foundation on which others built, at the Paris Conservatory (where Debussy was one of the American's fellow-pupils), and in Germany, where MacDowell began his career as teacher and composer, and where he had the great advantage of knowing a bandmaster who was willing to try over his early efforts at orchestral composition. When he returned to America the musical critics for once belied their reputation of being hostile to budding genius by welcoming him as one of the elect, a leading authority going so far as to express his preference for the second MacDowell piano concerto over Tchaikovsky's fifth symphony, which was played at the same concert (March 5, 1889). In 1896 the professorship of music at Columbia University was offered to him, as to "the greatest musical genius America has produced." Of the eight years at Columbia Mr. Gilman gives the first connected account, describing his courses, his ideals, and dwelling briefly on the causes that led to his resignation. The charge that he shirked his work (as a less conscientious man of genius might have done and been forgiven for it) is refuted. As a matter of fact, MacDowell worked too hard, giving to the university and its students an amount of vitality and time that might have been much better expended in composing new music. It was during these eight years that he wrote his masterworks. Had he followed his first inclination of refusing the professorship, we might now have twice that amount of best work, and he would not have been compelled to do most of his creating in summer, when he ought to have rested. It was thus that, through sheer overwork as composer, professor, and private teacher, he wore out his brain prematurely.

The lectures prepared for Columbia are to be printed some day. Mr. Gilman has enjoyed the privilege of making some extracts from them, and from notes taken by pupils; and they certainly make the mouth water for more. Had MacDowell been a musical critic, he would have been as felicitous in style, as keen, as witty, as Hanslick, and much more just. Nothing could be better than his remarks, here cited, on the great composers, and on form, on nationalism in music, and other topics. Though as well-read as a German professor, he never paraded his erudition. "Bach," he said in one of his lectures, "differed in almost everything from Handel, except that he was born the same year and was killed by the same doctor." In a serious vein: "Bach was one of the world's mightiest tone-poets, but not by means of the contrapuntal methods of his day, but in spite of them." Every musical history tells us that Mozart's piano sonatas are sublime, but MacDowell looks the thing straight in the face:

> Mozart's sonatas are compositions entirely unworthy of the author of "The Magic Flute" and "Don Giovanni," or of any composer with pretensions to more than mediocre talent. They are written in a style of flashy harpsichord virtuosity such as Liszt in his most despised moments never descended to.

Mr. Gilman notes that "MacDowell wrote surprisingly few letters," but he does not give the reason therefor. It was that his wife relieved him of the burden of correspondence almost en-

tirely, writing sometimes as many as a hundred letters a week for him. This was doubtless a blessing to him, but it had the unfortunate result just stated. What the world thus lost may be inferred from the following lines from one of his letters to an admirer who had told him that some of the verse he had written for his songs recalled at times the phrasing of Whitman and Shakespeare:

I will confide in you that if, in the next world, I should happen upon the wraiths of Shakespeare, Whitman, and Co., I would light out without delay. Good heavens! I blush at the thought of it! A header through a cloud would be the only thing. Seriously, I was deeply touched by your praise, and wish I were more worthy of it.

That "header through a cloud" is like many flights of fancy in his compositions. Of these Mr. Gilman gives a sympathetic, yet discriminating, account, in a style often characterized by great felicity. One thing, alas! is missing: an index.

"The Opera-Goers' Complete Guide," by Leo Melitz (Dodd, Mead & Co.) has a reason for existence, because it is constructed on a plan differing from those of the many other operatic guide books in the market. Instead of telling the story first and following it up with a reference to the principal airs, the author of this volume, who is director of the Stadt-Theater in Basle, always begins by giving the "Who's Who" of each opera, and then tells the story step by step, as it is enacted on the stage, mentioning the airs as they occur. This plan has its undoubted advantages, as it makes it easier for the reader to tell what is doing on the stage every moment, and it is well carried out. The stories are made intelligible wherever such a thing is possible. The number of operas described is 209, but of these at least 95 might as well have been omitted, as they will never be performed in this country or England. It is, however, better to have too many than too few; and the translator, Richard Salinger, has done his part of the work well.

Arturo Toscanini is a musical missionary as well as a great operatic conductor. He became convinced, some years ago, that justice had not been done to his countryman, Alfredo Catalani, who died at Milan in 1893 after composing half a dozen unsuccessful operas; so he brought out his last opera, "La Wally," at Buenos Ayres, infusing so much enthusiasm into his reading of the score that the opera proved a brilliant success, as also later in Milan and other Italian cities. Its production at our Metropolitan Opera House last week indicated that it is an opera of much greater worth than was the first novelty of the Gatti-Casazza-Toscanini régime, Puccini's juvenile "Le Villi." There is no great abundance of new melody, yet there are some stirring solos, ensembles, and orchestral numbers, which indicate that had Catalani enjoyed the stimulus of public encouragement he might have written a masterwork—provided he could have secured a better libretto than that on which "La Wally" (a dramatization of Wilhelmine von Hillern's Tyrolean story "Geyer-Wally") is based.

The present opera season in Milan began with Spontini's "La Vestale," which had not been heard there since 1825. The repertory of the Scala also contains Richard Strauss's "Elektra," which will be given, for the first time in Italy, on March 1; "Theodora," by Xavier Leroux; and the Russian national opera, "Boris Goudonoff," by Moussorgsky, which was performed in Paris a few months ago. Madame Marentié, the French prima donna, will undertake the title rôle in "Théodora," while that of the Russian work is assigned to M. Chaliapine. Among other works announced for performance are Verdi's "Vespri Siciliani," Puccini's "Manon Lescaut," Mascagni's "Iris," and a revial of Manzotti's ballet.

In addition to the bequests of a Stradivarius, dated 1724, to the Paris Conservatoire, with $4,000 for the foundation of an annual prize for the violin and $2,000 to the Aged Musicians' Society of Paris, the late Sarasate left $20,000 to the Conservatory of Music of Madrid, to be applied in awarding a prize annually to the pupil who completes his violin courses with exceptional merit, or, in default of one such pupil, to several; to the School of Music at Pamplona, Spain, his musical library and a sum of $5,000 for a yearly prize for "the most interesting pupil from an artistic point of view"; and $5,000 to the House of Mercy at Pamplona (Casa de Misericorde). By his will he had left his Stradivarius violin, dated 1713, to the trustees of the South Kensington Museum, London, with the mention "that this gift is made by me as a remembrance of the welcome and successes which I obtained in England," but by a codicil dated June 12, 1894, he revoked this bequest, and left the violin to the Conservatory of Music of Madrid. He bequeathed to the Town Council of Pamplona his piano from Biarritz, his violin by Guillaume, and his Gand violin which was given to him as a first prize at the Conservatoire of Paris, all his watches, pins, rings, jewels, decorations—he was a knight of numerous foreign orders—wreaths, palms, diplomas, letters patent, bronzes, pictures, busts, and souvenirs, his effects at his Paris house, except his musical library, his violin bows, all of which are to be exhibited in glass cases in a special room bearing his name.

Art.

MODERN GERMAN PAINTING AT THE METROPOLITAN MUSEUM.

The intellectual sympathy between this country and Germany, which has been strengthened by the exchange of university professors, has led to a corresponding interchange of current art. Thus it is that an exhibition of German painting is now being held at the Metropolitan Museum.

The art of painting, largely through the influence of the French, has undergone such a revolution during the past thirty years, a revolution which has deeply affected the practice of the sensitive painter of other nations, that it is with peculiar curiosity that we examine the effect upon Germany, that land of sentiment and emotion, of this changed point of view. The methods of modern painting and the results of modern "seeing" have spread far and wide; the Scottish, the English, the Norwegian, the American schools have been receptive of the ideas which urged the French to break with tradition. But if one is expecting to see in these German paintings this legitimate and logical advance, one is likely to be disappointed. This exhibition, however, is not, for this reason, to be taken lightly; and one should divest one's self of prejudice in favor of any one form of present practice, and be prepared, rather, to regard the collection as an expression of the Teutonic race of today.

These paintings purport to represent the "new movement," and in some instances, which we shall be glad to note later, the artists are showing a disposition to deliver themselves legitimately through the medium of paint; but for the most part they still seem to be enmeshed in the net of literary and philosophical habits which have characterized the German mind, and, to express these sentiments, are making use of a mistaken medium. To read some passages in the laudatory introduction to the catalogue, which was prepared, translated, and printed in Germany, one might believe that these painters were the earliest "plein-airists," with that versatile and prodigiously skilful painter, Adolf von Menzel, for progenitor. If so, German art has been slow to evolve on that side, for Von Menzel was an accomplished painter sixty years ago; he died at ninety in 1905. In truth, Von Menzel and most of his German disciples were realists in the sense of conveying the sentiment of intimate, everyday themes, of the amusements, industries, and general activities of life, through an illustrative art possessing character and color. This art was more or less didactic, appealing to the emotions, but not to our latest sense, revealing in radiant color the vibrating opalescent charm of the natural world of sight. Nothing could be farther removed from this modern spirit of "seeing" than the contributions of Franz von Stück, one of the younger men. The trouble with this painter appears to be that he has mistaken his medium, which should be verbal. In his Infernal Regions one cannot see power in thinly painted, enamel-like, unluminous flesh of careless construction, violent contrasts, and no great distinction of composition or of line. A mood of thought which it is the work of literature legitimately to express, is attempted here through pigment. It may be, also, that in the portrait of himself he intended to suggest some sentimental elation of mind; but to the connoisseur who re-

gards the human face and figure as a beautiful subject on which an artist reveals his mastery of significant planes and sensitive modelling, in conjunction with fine qualities of color and of tone, this spectral vision of muddy color and indifferent form is a disappointing example of the painter's art, however satisfying such a statement might have been in literature. Another man, Arnold Böcklin, earlier in time, is of this same misapprehension concerning the appeal that the beautiful in the world of nature makes through the painter's means of expression. His subjects are not only literary in theme, but colorless through his use of pigment. On this aspect of German painting it may be said in summary that Von Menzel touched almost every subject with great technical skill; but he was the pictorial illustrator of his time, rather than a temperament of sensitive artistic impulse. He turned with apparently equal relish from one subject to another: he would paint you a blazing ballroom filled with notabilities whose personalities you could identify, or he would place before you a palace garden with swaying trees and scudding clouds, with consummate reality and address. This is illustrative art of a high order; but if one looks for more, the loving differentiation of retreating planes in the crowded room, or in the diminishing landscape, with intervening air or interposing atmosphere, one must examine the work of some of the newer men.

One of the first to depart radically from the older ways was Fritz von Uhde, whose Suffer Little Children to Come unto Me is one of those departures where Biblical story is given a modern setting. In this case not only is the setting modern, but the whole sentiment of light and air is of the new sense of seeing. We have advanced since Von Uhde did this, but the picture is a valuable contribution to the subtle charm of the outside world which it has been the privilege of modern painting to discover. A still later disciple of this new sight is Richard Kaiser, who, in Field Loneliness has attempted, in landscape and sky, a breadth of treatment and a feeling of light distinctly modern and, except for a lack of simplicity in the construction of his foreground of weeds and grasses, a successful effort. Rudolf Schramm-Zittau, younger still in point of years, has given us some fresh, competent work in the progressive spirit, in his two little pictures of Ducks, and in the large one Feeding Hens. These are quite in the new mood, technically, and with years, doubtless, this painter will find more subtlety in the effects he is now so well equipped to express. One must also applaud the admirable little Polo-Players by Max Liebermann, who is indeed of the modern school. Movement, light, air, and a breadth of vision which is the very essence of modernity characterize this treasure of fine "seeing" and accomplished painting. An older painter, one more mature in method, and possessed of a fine and distinguished vision is Eugen Bracht, who in Sea Calm and Mid-day Pause in Steel Works has sent two works of rare quality.

In portraiture it is proper to mention first two men whose accomplished work for many years added lustre to German art. The fine characterization and dignified restraint of Franz Von Lenbach are always interesting, particularly in his portraits of men. That of Moltke does not appear up to his usual standard, but the Bismarck, despite a certain uncertainty in execution, is a rich and handsome piece of color. Wilhelm Leibl's Portrait of a Man is also fine in color, although, to our sense, almost too loosely constructed, the hands particularly of a character too suggestive of feebleness of grip. One of the younger men who is working in a wholesome, truly modern, and competent way is Arthur Kampf, who sends a Portrait of Emperor William II, which, although workmanlike in painting, lacks a certain spaciousness of composition that might have been more fitting to the subject; but The Two Sisters, by the same artist, is worthy of all praise in tonal quality and disposition of spaces.

There is more in this collection that it would be interesting to note, works of real merit and completeness, and much also that is tentative, experimental, and that does not contribute to the strength of the show. We are left, however, with the impression that the school is emerging, with effort, from the shadow of tradition, that it is evidently freeing itself, and seeking a truer form of artistic expression. This exhibition should, moreover, tend to give the public more sympathy with the earnest painters of our own country, who, though in an experimental stage like the Germans, are still well in the van of this progressive movement; who have indeed, in many instances, a greater maturity of accomplishment than we note in this collection.

FRANK FOWLER.

F. Mason Perkins, in the *Rassegna d'Arte* for December, throws much light upon the early development of the painter Matteo da Siena. We cannot follow the changes of attribution in detail. Lorenzo Fiocca concludes an interesting study of mediæval buildings in Sicily. Diego Sant' Ambrogio reports from Bonacardo, Province of Oristano, Sardinia, a beautiful Madonna and child in colored terra-cotta, the type of which, to judge by the illustration, is strongly Donatellesque. Minor discoveries chronicled in this number are several paintings by Matto da Gualdo in mountain sanctuaries near Nocera, Umbria. Of more importance is the uncovering in the Templars' Church, Perugia, of frescoes representing knights of the order and dating from the thirteenth century. This church is now used as a warehouse. It is hoped that the government will reclaim it as a public monument.

In the serles Künstlermonographien (Leipzig: Velhagen & Klassing), Vol. XCI, just issued, is "Lukas Kranach," by E. Heyck, with 103 illustrations. The work is more than a brochure, for it contains a comparatively complete biography.

Vol. XIII of the Klassiker der Kunst, edited by Emil Schaeffer (Leipzig: Deutsche Verlagsanstalt) brings the story of Van Dyck, with the explanatory subtitle "Des Meisters Gemälde in 537 Abbildungen." The illustrations are good, and the account of the painter's life critically written. Indeed, Schaeffer, at times, ridicules Van Dyck's attention to externals and failure to catch the soul of the subject.

An interesting discovery of early Christian remains has recently been made at Wad-el-Hadad, on the Blue Nile, a few miles north of Sennar. A number of graves were uncovered containing skeletons and a quantity of pottery in an excellent state of preservation. The latter consists chiefly of bowls and jars. The bowls are, for the most part, of dark clay, decorated with what are known as Nublan patterns. On one of them is a Coptic processional cross, which also occurs scratched inside the lips of the jars, where it is associated with two other Christian emblems—the fish and the palm branch. A comparison of this pottery with that found on Nubian sites between the first and second cataracts, makes it probable that it should be dated in the seventh or eighth century, A. D. The pottery has been sent to the Khartum Museum. The chief interest of the discovery lies in the fact that this is the first time that Christian remains have come to light so far south. At present very little is known of the history of Christianity in these regions, and it is to be hoped that excavations will lead to the discovery of other early Christian remains in that neighborhood, which may throw light upon this question.

Among the exhibitions at the dealers' gallerles in this city are portraits by Wilhelm Funk and drawings by James Montgomery Flagg, at Knoedler's, till January 16; forty selected paintings by living American artists, Macbeth's, January 21; water colors, F. Hopkinson Smith, Noé's, January 23; etchings and dry-points, Whistler, Frederick Keppel & Co.'s, February 3.

Gustave Émile Doudemont, a member of the Société des Artistes Français, and for many years an exhibitor at the Salon, has died, at the age of seventy-four.

Finance.

A "JANUARY BREAK."

There had been numerous and conflicting theories as to what sort of stock market would usher in 1909; but nobody predicted exactly what happened—namely, that a single stock, not one of the "leaders," would fall 42 points in two days, and that this spectacular decline would undermine all the rest of the market, leading to such losses, be-

tween January 4 and January 11, as 8¼ points in Union Pacific, 4⅝ in St. Paul, 7⅛ in Reading, 5⅜ in Erie, and 9¾ in New York Central. Yet when the episode was concluded, and people had a chance to consider it as a whole, many observant Wall Street men admitted that the course of events had been perfectly logical, in the light of conditions with which the year 1908 had ended.

It is true that the immediate cause of the *débâcle* was an incident which could not have been predicted with assurance. The decision of the Supreme Court against the Consolidated Gas Company, in the company's suit to prevent the compulsory lowering of the price of its product in New York city from $1 to 80 cents per 1,000 cubic feet, was clearly what started the ball rolling. Possibly, therefore, it will be contended that the fall of stocks was, as a whole, something out of the ordinary run of financial events, since Supreme Court decisions cannot be "discounted," like harvests, earnings, and dividends. But as a matter of fact, "discounting" the Supreme Court's verdict was exactly what the stock market had been doing. It is six months since Consolidated Gas stock sold at as low a price as it touched last week Wednesday, and the 44-point rise between then and November 28, and especially the 28-point advance between the last week of October and the last week of November, were openly grounded on confident assertions that the court would find for the company, that there had been a "leak," that 8 per cent. dividends on the basis of "dollar gas" would be resumed, and that the $9,000,000, held in trust, to allow for the disputed 20 cents per 1,000 feet on each consumer's bills since April, 1906, would be disbursed in extra dividends. In other words, the Stock Exchange had been hoisting values extravagantly in this stock, because the buyers accepted as certainty something which was altogether doubtful. Experiments of that sort invite just such retribution as has come; but the larger moral of the affair is, that Stock Exchange speculators had been doing exactly the same thing, on exactly the same sort of "rumor," to a score of other stocks, and to the stock market as a whole. This is one logical aspect of the general break in prices, which was by no means wholly a result of forced selling of other stocks, caused by "impairment of margins" in Consolidated Gas.

The episode was, however, logical in another way. Much was said last month, as is always the case in December, of the "January disbursements" and the "reinvestment demand," which were to drive up prices. But because a great sum of money will be available for reinvestment January 2, it does not follow that people will wait until after New Year's Day to buy the stocks. The arrival of the "coupon money" is one of the surest events in finance. One could not, therefore, fairly expect a market which "discounts" and "overdiscounts" Supreme Court decisions not yet rendered, to neglect the "discounting" of such a coming event as the January dividends. The market discounts in two ways. Professional speculators buy and bid up stocks which they expect to sell to the January coupon-holder; the banks lend them money for the purpose. But the banks also make similar advances to the coupon-holder, who, in many cases, buys on borrowed money, in December, the securities which he intends to take up with his own new funds in January. This double process will, of course, be much encouraged and facilitated by such very low rates for Wall Street loans as prevailed throughout last month. The outcome of this buying in advance, when carried to extremes, is easy to predict. The speculators will have brought the supply of stocks, for sale on the January market, up to the full proportions of the new demand; and meantime the January reinvestment demand itself is reduced in volume because the investors had themselves anticipated requirements by their December purchases on margin. This done, it would be no illogical result for January—the "reinvestment month" itself—to be marked, not by a rising, but by a falling stock market.

Experience, as a rule, bears out the theory. January, 1908, did not; it saw a rapidly rising market; but then, for reasons familiar to everybody, neither speculator nor investor had been able to indulge in the "discounting process" in the preceding December. January, 1907, witnessed a break of 10 to 20 points in stocks. January, 1906, began with a vigorous rise, followed, however, by a sensational collapse. January, 1905, was a month of great irregularity and weakness. January, 1904, began with three weeks of intermittent declines. It is needless to multiply precedents. The question of real interest is, whether or not this recent break in prices was all that was required to bring January, 1909, in line with rule and practice.

Henry Chapman Watson, editor of *Dun's Review*, and a well-known writer in commercial and financial topics, died at Englewood, N. J., January 6, at the age of thirty-eight. He was born in Port Chester, N. Y., and early in life entered journalism. He was the compiler of Dun's Index Number and Dun's Commercial Failures; he prepared statistical reports for the government and wrote for various periodicals.

BOOKS OF THE WEEK.

Adeney, Walter F. The Greek and Eastern Churches. Scribner. $2.50 net.

Barber, Edwin Atlee. The Maiolica of Mexico. Philadelphia: Pennsylvania Museum and School of Industrial Art.

Barnes, Everett. Short American History, by Grades. Parts I and II. Boston: D. C. Heath & Co. $1.

Baumgarten, Paul Maria. Henry Charles Lea's Historical Writings. Joseph F. Wagner. 90 cents.

Thoroughly Revised and Enlarged Edition of

GANONG'S PLANT PHYSIOLOGY

By WM. F. GANONG, Professor in Smith College

265 pp. 8vo. $1.75

The second edition, although retaining the title and the general aim of the first, has been wholly rewritten and extended to form a general handbook of experimental plant physiology. The treatment is comprehensive. While all known methods and appliances of any educational value are discussed, emphasis is laid on the methods and apparatus which are most practicable for student use and best inculcate the true scientific spirit. Some of the methods described are now made accessible for the first time.

The Nation.

NEW YORK, THURSDAY, JANUARY 21, 1909.

The Week.

President Roosevelt is at his best in his veto of a bill granting monopolistic rights in a river in Missouri, and in his exposition of the sound policy of the government in dealing with the preservation and use of water power. It is possible that he a little exaggerates the danger of a combination to control all the hydro-electric resources of the country. Still, the possibility of abuse which he dwells upon is very real, and the need of adopting some such general and far-reaching plan as he proposes is urgent. Franchises in perpetuity for public-service corporations should now be thought as obsolete as the dinosaurus. The limited term, the vigilant oversight, the regulation, the revocation on breach of conditions—these are the new ideas about corporations dealing in public utilities, and they have come to stay. President Roosevelt is quite right in contending that the mistakes of the past in giving away rights in the country's natural resources should not be repeated in the immensely important matter of generation of electricity from water-power.

That the President, for all his love of the military and his championship of the fighting spirit, leaves office without regrets from the army, is the assertion of the *Army and Navy Register* in its current issue:

> His successor cannot do more to injure military discipline and create discontent in the personnel than has been accomplished by the present head of the nation.

As evidence of the kind of action that has brought about Mr. Roosevelt's unpopularity in the army, the *Register* cites the assignment to active duty of Lieut.-Col. Edgar A. Mearns of the retired list during his trip to Africa with the President. As to that, the *Register* says:

> Mr. Roosevelt has no more right to have this retired officer assigned to such duty with him after March 4 than he has to assign any other retired army or navy officer to accompany a private citizen who chooses to travel for his health or excitement, at home or abroad.

It might have added that this course is wholly in keeping with Mr. Roosevelt's use of United States war vessels as private yachts, not only for himself, but for members of his family. The *Register* is also excited over the assignment to the fine new army billet, that of paymaster at Honolulu, of Major Beecher B. Ray, the "political paymaster," who was given leave of absence to work for Mr. Taft's nomination and election during the greater part of 1908. The extent and usefulness of Major Ray's "pull" are hardly surpassed in the army to-day—and this under the administration of an ardent believer in the merit system.

Under the prodding of the House Committee on Military Affairs, the War Department, which has been asking for 612 additional army officers, has suddenly discovered that there is another way out of the dilemma, and has drafted a bill permitting it to place in active service 250 retired officers. This is precisely what the *Nation* has been suggesting. The War Department feels, however, that it must have the right peremptorily to order these 250 men to active duty; hence its appeal for legislation. The War Department ought certainly to have complete authority over its retired officers. They should in time of peace or war be at the disposition of the Secretary for such light duty as they may be capable of performing. Probably 400 retired officers are too old or physically too disabled to perform any duty; but many of the others would be grateful for active work, and the difference between active and retired pay would mean a good deal to them. The navy has found it desirable to keep on active duty a number of retired officers; surely, of the nine army officers ordered up for retirement on Friday last because they could not ride ninety miles, there must at least be eight capable of serving as recruiting officers, of teaching in schools, and doing other useful work for which active officers are now employed. From the point of view of economy there will be a great saving to the government if the new bill passes. But what Congress ought to insist on is that, besides using retired officers, unnecessary service away from regiments should be abolished. Why should there be infantry and cavalry officers in addition to engineers and medical officers, on duty with the Panama Canal? Why should there be thirteen active officers guarding Indian prisoners and running army prisons?

Mr. Taft's Atlanta speech last week was in excellent taste, and in spirit thoroughly in consonance with the occasion. Southern hospitality, ever generous, was at its best, and no one can doubt that it was actuated only by genuine good-will for the next President. Mr. Taft took the opportunity to dwell upon the desirability of a strong opposition party in local and State governments, "a substantial and intelligent minority which may become a successful majority," when abuses must be rectified. Not one of his listeners could dispute that truth. With the negro disfranchised, the South suffers gravely from the dominance of one party, for that carries with it the danger of control by cliques, the loss of public interest in public affairs, widespread indifference to the value of the ballot, and, thus, the opportunity of the demagogue to play upon prejudice and passion in default of a real issue. While it is true that the South is more tolerant than it used to be of those who differ with its pet opinions, Mr. Taft went too far in saying that the expression of any political view in the South no longer exposes him who voices it to possible ostracism; but Mr. Taft is quite correct in believing that his stay in the South will make for the growing independence of speech and political tolerance. So, too, beyond all doubt, will his administration.

> The negro voters of Atlanta are entitled to the appreciation of the public for the high sense of citizenship they exhibited yesterday in supporting Mr. Maddox and the cause of good morals.

This high praise of the colored voter, from Hoke Smith's newspaper, the Atlanta, Ga., *Journal*, appeared immediately after the recent mayoralty election in that city. This *Journal* is the same newspaper which, under the malign influence of Gov. Smith, had been dwelling on the evils resulting, not from negro domination, but from negro attendance at the polls. It brought out all the

familiar arguments as to the necessary dominance of the white race, the untrustworthiness, ignorance, and general unworthiness of the black man. Yet when the negro came to cast his last vote before being disfranchised, he allied himself squarely with the reform elements and aided in defeating for reelection the drunkard who had been Mayor for some time past. If they were all that the *Journal* has painted them, the colored citizens of that city would have voted overwhelmingly for the defeated candidate. If the Georgia negro is disfranchised now, he has, at least, had another chance to give the lie to the white politicians who, for their own base ends, have so often maligned him.

Mr. Root's election to the Senate is accompanied by no signs of enthusiasm. This is partly because it has so long been certain. We get excited only over what is doubtful. New York is, of course, very glad to get, instead of Platt, a man of the new Senator's ability. For sheer intellectual quality, he has impressed himself upon good judges in Washington, both Americans and foreigners, beyond any man in public life. That he has a sort of austere pride of bearing, which the politicians resent as "coldness," does no injury to Mr. Root with the judicious. Yet the fact that he is not a slap-you-on-the-back statesman undoubtedly accounts, in part, for the lack of popular acclaim over his new honor. In addition, there is the fact that his choice was imposed upon the Republican party of the State from without. Roosevelt and Taft had far more to do with it than Assembly or Senate at Albany. Finally, to be entirely frank, there has been an uneasy feeling in this city and State that Mr. Root might have sat for the portrait which the President drew in his speech at Harvard, when he spoke of eminent lawyers who put their great abilities at the service of unprincipled speculators desiring to violate the law. This disquiet alone would have been enough to prevent Mr. Root's election, had there been a direct primary for the Senatorship.

Mr. Burton's election as Senator from Ohio is passing with little comment. Americans take their blessings quietly. Mr. Burton, be it said, owes his success to neither machine nor millions. His promotion is in line with the older and better tradition about the Senatorship, which made it the due reward of faithful service as Representative or as Governor. There is nothing showy about Mr. Burton. He has long been a student, a hard-working member of the House, in which he has come to have great authority, and has established a reputation for poise, good judgment, and independence. The accession of such a man to the Senate is cause for congratulation, not to Ohio alone, but to the whole country.

The liquor dealers who announced, at a recent convention, that the agitation against their trade was rapidly subsiding, were trying mental science for their woes. Anti-saloon crusades seem to be still gathering force. State-wide prohibition was decreed last week by the Tennessee Legislature, and may perhaps be upheld over the veto just filed by the Governor. Texas politicians, including Senator Bailey, are seeking to avoid the issue by having the question referred to the people. In several States, brewers have besought the courts to declare liquor legislation confiscatory, but the request has been denied. The Alabama law has just been declared constitutional, and Georgia is construing hers so strictly that even newspaper advertisements of strong drink will, as the view runs, be impossible. If all this is not enough to wake the dealers from their self-imposed hallucination, we may add the prospect of a lively campaign for local option at Albany.

The acquittal of T. J. Hains brings up anew the question whether the morals of New York are any better than those of a frontier mining camp. Here was a man who once before had taken human life. Beyond all doubt, while his brother committed one of the coldest-blooded murders ever known in this city, he stood by and prevented any attempt to stop the shooting. If he was not *particeps criminis* in the first degree, then there is no such thing as being an accomplice. But apparently the jury disagreed; two of its members were sick, and finally, in order to obtain release from confinement, they, or some others, weakly yielded and agreed on a verdict of not guilty. This result is another evidence of the weakness of our jury system under the strain of popular hysteria in regard to certain crimes, and the long-drawn-out terrors of a "famous" trial. It is only fair to say, however, that the whole fault in this instance does not rest with the jury. The District Attorney so handled his case as to demonstrate unfitness. If Capt. Hains shall now escape on the ground of insanity, New York may well hang out a sign: "Murderers Welcomed and Encouraged." The evidence in the Hains trial ought to open many people's eyes to the folly of asserting that in a case of this kind the sole blame rests upon the man who, to use the current cant, "ruthlessly breaks up the home." Behind the "unwritten law" is this unexorcised belief of the middle ages, that, before the wrongdoer, the woman in the case is as helpless as a rabbit in a snake's cage. We have no defence to offer, Heaven knows, for the home-wrecker; we simply assert that the disposition to hold him solely responsible is a relic of the days when woman was an economic slave, who had no mind or moral standards of her own. But in this day and generation society cannot excuse her as if she were without free will or responsibility. If, therefore, we are going to adopt "the unwritten law" in this city, it ought to apply to both the guilty parties, and to be frankly put on the statute books. As matters now stand, any New Yorker who lifts his voice against lawlessness, South or West or East, must face the immediate *tu-quoque* of the Hains trial.

The placing on the European markets, this week, of a Russian government loan for $275,000,000 has an interesting bearing both on politics and on finance. The mere fact of these enormous loans to the Russian Treasury is an important factor in Russian politics. From the time the first Duma was convoked, it has been recognized at St. Petersburg, both by crown and parliament, that so long as the Czar and his Ministers retained the right to raise money on the public credit, just so long would the hands of the Duma be tied. To realize the significance of this authority, one has only to imagine Charles the First, for instance in control of the machinery for pledging England's credit to secure funds from foreign markets, and with those markets ready and anxious to make the loan. Re-convocation of a hostile Parliament might eas-

ily have been unnecessary; "ship money" would have been superfluous; and a series of bond issues, say, at Paris, might conceivably have bridged over 1640 and left the members of the Long Parliament to idle away their time and energy at home. It is through this power over the public credit, jealously guarded against attacks from the Duma, that autocracy has intrenched itself, even after the grant of Parliamentary discussion.

In the present case politics and finance have in turn conspired to influence the fortunes of the undertaking. The loan was apparently contemplated, with a view to meeting the constant and heavy deficits of Imperial finances, as long ago as the autumn of 1906. The strain which then existed on the whole world's capital resources, which forced the London bank rate up to 6 per cent., and which drove our own great corporations out of the bond market and into the market for short-term loans at high rates on their notes-of-hand, blocked the plans of Russia also. Then, too, nothing whatever could be done in the world-wide disorder of credit in the markets of 1907. With credit repaired and money easy after the liquidation of that period, plans for the Russian loan were laid again last summer; but the trouble in the Balkans, and the threat of open war among European states, again caused the bankers to withdraw. The announcement of the loan, the oversubscription of the part allotted to London, and the practically assured success of the Paris allotment, are evidence that both financial and political misgivings have largely passed away. But the fact of so enormous a requisition on its credit facilities leaves open the question how long this Russian borrowing can continue. Germany, a state in far higher standing on the money markets, has taken warning from the heaping-up of debt whereby future generations shall be charged with payment for the extravagances of the hour, and is maturing plans for laying the burden on the shoulders of present-day taxpayers. Sooner or later, the Russian government must do the same, and it is possible that then, as was the case in the Reichstag of a month ago, the Duma will find voice again.

Admiral Rozhestvensky, who died in St. Petersburg last week, deserved something more than the sympathy he won as the defeated commander in the world's greatest naval battle since Trafalgar. The thoroughness of his defeat was not necessarily an index of his skill. The circumstances of naval warfare are such, especially in modern times, that there may be no alternative between victory and annihilation. It was different with the Russian forces on land, where Kuropatkin could survive such enormous disasters as Liao-Yang, Sha-ho, and Mukden, and even turn them to advantage in schooling and hardening his troops. To Rozhestvensky no trials of strength were open, and he was compelled to meet Togo's seasoned forces with a hastily gathered fleet, manned by untrained land levies, badly officered and equipped. The celebrated episode with the North Sea trawlers shows in what a state of nerves this last despairing Armada of Russia's left the Baltic. The published journal of the chief engineer of the fleet, Politovsky's "From Libau to Tsushima," shows the state of apprehension in which men and officers alike went forward to meet their fate. To have brought such a conglomeration of fighting ships some eighteen thousand miles safe to the scene of battle was no slight achievement.

Affairs in the Balkans enter on a distinctly brighter phase with the conclusion of an agreement between Austria-Hungary and Turkey regarding the annexation of Bosnia-Herzegovina. Elements of unrest still remain. Monetary arrangements between Turkey and Bulgaria are still to be concluded, though there is little doubt of a final settlement. The people of Servia and Montenegro continue to chafe, but at present they have only Russia's somewhat obscure sympathy to count upon. Whatever support they may find among the other Powers will surely not go to the extent of tolerating action that may threaten war. After all, it was Turkey that was the injured party in the whole affair, and with Turkey now definitely for peace, such chances of an outbreak as may have existed are greatly reduced. The meeting of a conference is now more probable than ever. It is true that the conference will find little to do except to ratify what the interested parties have already decided upon among themselves. But if it is only the fear of what a conference might force her to do that has made Austria willing to come to terms, the calling of one has already been justified.

From England it is reported that public taste has been turning strongly to Dickens, Thackeray, George Eliot, and other writers who are believed to have done some meritorious work during the first half of the Victorian era. For such a revival, which, we trust, actually exists outside the imagination of some enterprising journalist, there would be ample justification. As against the modern realists who, largely recruited from among the women, have gone in strongly for highly-seasoned compounds of passion, politics, and sociology, we should be going back to the comprehensive sweep and masterful handling which makes of the great Victorian novel a little world, and not a "problem"—a world that cries and laughs, instead of whimpering and cackling, over large things like life, death, love, hunger, duty, pity, anger, and not the nerves of a young girl who was not brought up well or the "claims" of a woman who does not know what she wants. On the ground of economy the elder writers should be favored. Publishers unblushingly call upon us to pay $1.50 for a novel that will help us wile away half an hour on a rainy day, or for just the story that goes with a hammock under the trees. Even though the original volumes of "Our Mutual Friend" or "Vanity Fair" or "Middlemarch" cost three or four times the fixed price of the present-day novel, there can be no comparison between the actual amount of protein, fat, carbohydrates supplied by one of Dickens's volumes and one of our modern tales. "Our Mutual Friend" has a better plot and mystery than most contemporary detective stories; more dramatic action than the great mass of cowboy, railway-accident, and sea fiction; more humor —that goes without saying—than any living author, with one possible exception, can now supply; more political satire than our novels of "uplift" about honest district attorneys and dishonest Congressmen; more truth about the slums than our ordinary novel of low life. When you balance accounts, it is Dickens that will turn out the lower-priced fare.

FREAKS OF RACE PREJUDICE.

There has been considerable stir over the anti-Japanese bills laid before the California Legislature; and in an address in Washington on Monday, as well as in his telegram to Gov. Gillette, President Roosevelt has made a fresh demand for a "square deal" for the Japanese. Apparently, the matter is now to be threshed over again in the terrifying headlines of the sensational press. But a recent investigation by the Federal Bureau of Labor shows how little basis there is for the demagogue's frequent assertion that his opposition to the Japanese is neither blind nor selfish, but can stand the test of facts and logic. Two non-Aryan races are "invading" the Pacific Slope; from the West the Japanese, and from the South the Mexican Indians. Here is an ideal opportunity to show that race prejudice is rational.

The man from Nippon is of inferior stock, the Californian says, just as bad as "the dirty Chink." His personal habits, his morals, and his general view of life are so far below the American that they menace our society. But we hear no such charge brought against the "cholos," who have been pouring into the State. They are the lowest Mexican Indians, one degree removed from savagery. The Federal Bureau of Labor describes them as "Indians in physique, temperament, character, and mentality; unambitious, physically weak, irregular, and indolent." Their mode of life is evidently no better than that of the Chinese. "They are prejudiced against water, believing that washing causes fever." In the large filthy Mexican quarter of Los Angeles twenty-four men were found inhabiting one small, dark room. Surely, the Japanese could fall no farther below our standards.

But the yellow man has another fault; not only is he inferior, but, declares the Californian, he cannot and will not become Americanized. Supremely content with his own ways, he herds with his kind, lives in the old way, sends his earnings to Japan, and eventually follows them thither. But in this respect the yellow men is like the red man. Our government investigators find that the Mexican immigrant is a tramp laborer who comes north to pick up a few dollars, and, that done, returns to spend it in his cheap fatherland. He is "nomadic and outside of American civilization." He does not mingle socially with others:

> Intermarriage is rare, and when it occurs it seems to be a subject of apology. . . . The Mexican does not put himself forward or seek white society. He observes his own canons of reserve and dignity, which are never offensive.

The favorite objection to the Japanese is, however, that he underbids the American. In this respect he and the "cholo" are again brothers. Indeed, the Mexican plays the game even more sharply. In Texas he is displacing the negro on farm and cottonfield. In California, railway managers, ranchmen, and city contractors are giving him preference over Italians, Russians, Greeks, and Japanese, because he asks less, and is more easily controlled. He is particularly welcomed in some quarters, because he does not join labor unions and is always ready to turn strike-breaker. The Southern Pacific Railway is said to pay its Greek section hands $1.60 a day, the Japanese $1.45, and the "cholos" only $1.25. The two former nationalities hang together, an offence against one being taken as against all; but a Mexican will not leave his job for anybody else's grievance.

If, under these circumstances, the 7,000 Japanese who entered this country in 1908 are a national menace, what can be said of an annual influx of from 80,000 to 100,000 Mexicans? It is perfectly clear that the rational Japanophobe should hate the "cholo" with burning fury. But the Bureau of Labor says:

> The race sentiment of Americans toward Mexicans is . . . peculiar and illogical. . . . Organized labor, and white workers in general, do not appear to be opposed to Mexicans in the same way that they are to Orientals. . . . The American negro considers himself above the Mexican, and yet the latter receives more social recognition from the white man. . . . Mexican immigrants ride in white cars in Texas, and might eat at the same table with Americans.

In Los Angeles, Mexican children, to the number of 1,000, sit in the same school classes with American pupils and without discrimination. Their parents may do whatever Boston-born persons might, if they have the money. And as in Los Angeles, so everywhere between Galveston and Seattle.

Is half a continent, then, naïvely inconsistent or disingenuous? Some frank confessions force the latter answer upon us. An editor of a labor paper says: "The Mexicans don't trouble us much. They can't do a white man's work." And railroad bosses without number point out two differences between Mexican and Japanese redounding greatly to the former's popularity. The Mexican, they say, is unskilled and remains so, while the "Jap" swiftly masters a trade or business. Again, the "cholo" can be led about like a lamb, but the miserable Oriental always has an eye open toward his rights and opportunities. And there the cat is out of the bag. The Japanese is feared for his virtues, without which he could scarcely be distinguished from the Mexican.

THE GERMAN TAX FIGHT.

"We must be inspired by the categorical imperative of a burning, I might say, a passionate love of country," declared Herr Sydow, the German Imperial Minister of Finance, in concluding the first day's debate on the government's new tax proposals. It was a sign of the doubts he himself entertained as to the success of his campaign in the Reichstag, that he should thus early resort to the familiar trick of asking blind patriotism to take the place of calm reason and financial sagacity. But the Reichstag, though yet unable to follow up its success in bringing Kaiser and Chancellor to book in relation to foreign affairs, has not been willing to vote offhand as Sydow wished. It reassembled last week for the second stage of the financial discussion which bids fair to stretch throughout the whole winter; for during the recess the Finance Committee has accomplished nothing—*Ulk* pictures its members in night-gowns sleeping soundly—and the general parliamentary outlook is far from reassuring.

Not that the country is asleep. It has aroused itself against the new and radical taxes with a vigor that had hardly been expected. "Protests spring up everywhere like weeds," says the Munich *Neueste Nachrichten*, in commenting on the discouraging delay in dealing with the issue. Under the severe criticism of the important Commercial Diet, which met in Berlin early in December, hardly a proposal of Sydow's remained unscathed, and chambers of commerce throughout the Empire, taking their cue from that body, have assailed this or that tax. Societies, city governments, and local legis-

latures are deluging the members of the Reichstag with protests, and popular mass meetings in all sections are voicing anew the old prayer to St. Florian: "Spare my house, set fire to other people's homes!" Before this popular uprising the proposed taxes on gas and electricity and that on newspaper advertisements have already gone by the board. The Commercial Diet opposed the advertising tax because the yield would be too small to outweigh the disadvantages, and because the inevitable result would be the printing of advertisements as reading matter. The proposals regarding gas and electricity were shown to be unworkable; they would, it is believed, not only impede industrial development, but cause the poorer classes to return to petroleum for reading. Both taxes were declared to be unscientific and unworthy of a far-sighted statesmanship. As for the new death-duties, which radically interfered with the right of inheritance, they are believed to have perished in the Reichstag itself, the Conservative and Centre parties having together provided coffin and headstone. Becker, the Centre leader, positively asserted, in Cologne recently, that these sections of the bill would be promptly interred "if the Centre and the Conservatives only stood firm," and there is every reason to believe that they will. Yet Herr Sydow had counted on an income of no less than $43,750,000 from this source, and from the levies on electricity, gas, and advertising. As if this setback were not sufficiently serious, well-informed men believe that the Minister of Finance will also lose his proposed monopoly on spirits, to which he now looks for $25,000,000. Not a voice is raised in its behalf; apparently, each member of a beer-drinking nation sees in the plan an attempt to infringe upon his natural and inalienable right to get his beer where he chooses and at the lowest possible price.

How is Herr Sydow to recover this lost ground? He obstinately persists in his refusal to draft any scheme of direct Imperial taxation, on the ground that this would be poaching on preserves especially reserved for the tax-gatherers of the individual States. This is the answer of his spokesmen every time an Imperial income or capital-tax is suggested. Hence there is in sight no direct and elastic tax which, like the English income tax, may be readily raised or lowered as circumstances require. In brief, the Sydow scheme nowhere places the new burdens upon those best fitted to bear them.

How Herr Sydow is to fare from now on depends, of course, on the stability of Von Bülow's "bloc," composed of Liberals, Radicals, and Conservatives. If the Liberals should coalesce with the still sulky Centre and the Social Democrats, they would control the Reichstag and be in a position to dictate to Von Bülow. Politics have made stranger bedfellows; and in this case the shocking condition of the Treasury affords sufficient excuse for the coalition. Then too, the Prussian treasury is in straits. Herr von Rheinbaben, the Minister of Finance, reported to the Prussian Diet last week that the deficit of $17,750,000 in 1907, had leaped to $41,250,000 in 1908, and would go to $44,000,000 in 1909. Unless there is a radical financial reform of the whole business of the Empire, the condition of the separate States will soon, said Herr von Rheinbaben, become absolutely intolerable. Meanwhile, the nation is throwing away money on army and navy with greater prodigality than ever, and the financial genius so sorely needed is nowhere in sight.

THE POPULARITY OF POE.

If a magazine editor were to find on his desk to-day two short stories by unknown writers, one signed Nathaniel Hawthorne and one Edgar Allan Poe, it is easy to guess which would be returned with thanks, and which would be snapped up on the spot. And the editor's choice would be dictated not solely by the fact that his myriad subscribers would prefer a tale of breathless horror or fascinating mystery to a simple study in conduct or conscience, but by the further fact that the successful story had the essential quality of "go" in which this young man Hawthorne seems rather deficient. It is true that Hawthorne's failure to impress a magazine editor might be cited as proof that he wrote real literature, but the question here is not of genuine merit, only of popularity. For a writer who was born one hundred years ago and died sixty years ago, Poe has, to a remarkable degree, the swiftness, the spare vigor of style which is the great requirement to-day. He is as careful to create interest in his first paragraph as any modern writer who has learned the secret of hitting the reader squarely between the eyes. He is eager to make his point. His language is less archaic than that of many men who have written since. By these qualities of technique preëminently, he stands nearer to us of the year 1909 than any of his contemporaries. Again the question is not whether his technique is of the highest kind, and whether it is expended on the best material, but whether he has power to attract readers.

Yet to make Poe merely a popular writer would be unfair, and would contradict too sharply the established belief that he is much more than that. The point is that there is popularity and popularity. Hall Caine is popular, Conan Doyle is popular, and Dumas the elder is popular. The popularity of the crowd and the day supplies, of course, no standard of merit. But when popularity meets the test of widely separated times and places, and of taste other than that of the crowd, it becomes in itself an important factor in the determination of literary values. In the able and extremely severe appraisal of Poe which he has written for *Scribner's Magazine*, W. C. Brownell denies Poe a place in literature, because his work lacks substance and sincerity; because he is quite indifferent to truth, reality, life; because he was only an artist, and "literature is more than an art." Poe was intent merely on producing his desired effects—to rasp our nerves, chill our marrow, and mystify our understanding. To do this he set himself deliberately to dress the false with the semblance of truth, and to make the truth incredible. He succeeded in getting his effect, but not in producing literature. So runs the judgment. But, after all, of the making of definitions of literature there is no end, and more than one great literary name, as the world sees it, is based on no more philosophical definition than that literature is managing words with notable or supreme dexterity. For words often seem able to transmute rather cheap material into a fuel for strong and universal emotion. The story of easy gallantry and sword-play becomes with Dumas "The Three Musketeers." The ordinary fairy-tale takes on, with Hans Christian Andersen, wisdom, tragedy, pathos, humor. So the grotesque, the horrible, and the outlawed, while

ethically inferior to the elements that form the current of healthy, sane, normal life, may nevertheless be uplifted by sheer artistry to the level of literature.

Fear of the dark, the hidden, the unknown is still a part of our nature. The curiosity of primitive man is still strong within us. The question becomes, then, whether Poe's tales of horror or mystery depend for their effect altogether on surprise, on the first shock, or suddenly awakened sensations of disgust, or whether their effect can be reproduced on a second and third reading. In other words, is their appeal temporary and meretricious, or is it based more permanently on those surviving fears, uncertainties, and cravings after light which we share with our cave ancestors? Do Poe's stories evaporate? To mark his superiority, we need only compare his tales of ratiocination and mystery with those of his successors in a genre that he is said to have founded. No one would care to read a story of Gaboriau's twice. The historian of Sherlock Holmes gets his effects partly from his literary manner, yet we doubt whether even Sherlock Holmes will bear rereading. But one can turn again and again to "The Gold Bug" and "The Murders in the Rue Morgue." The horror of "The Fall of the House of Usher" is not exhausted at one reading. Compact as it is, "The Cask of Amontillado" contains refreshment for many hours. Poe's technique, then, produces permanency, as well as strength of appeal; and fiction that is strong, permanent, and general in interest can hardly be put low in the literary scale.

Somewhat the same reasons that have made Poe popular with a generation more high-strung, more restless, less philosophic than his own, will account in large measure for his popularity in Europe, and especially in France. Mr. Brownell puts it the other way. The high esteem in which Poe is held abroad has reacted upon as, though it ought not to do so:

> To put the matter crudely, the appreciative foreigner has admirable writers of his own; what he most appreciates in our literature is the queer, the odd, the qualities from whose associated defects he feels an entire detachment.

But that is not quite the whole truth. If Europe looks to us for the odd and the queer, it is because she thinks it natural that youth should indulge in freakishness and excess. And the idea of youth is what Europe always associates with America, to her own disappointment. It is so with our politics as well as our literature. You are a new world and a new race, Europe argues. You are free from the ancient traditions that bind us of the Old World. You should be ardent innovators, pioneers of progress, radicals by nature, by definition almost. And when Europe finds us conservative instead of radical, inimical to what is revolutionary in politics, manners, morals, literature, she is puzzled. Sometimes, she calls it Puritanism, sometimes commercialism, sometimes hypocrisy. Europe, unable to understand why our literature should be dominated by New England moralizing, is, therefore, not insincere when she believes that in the wild note of a Poe or a Whitman, she has caught the true voice of the young world beyond the seas.

HEALTH IN THE PUBLIC SCHOOLS.

Opponents of "fad and fancy" in modern education are prone to lump the new hygiene with scroll-work, plain sewing, and other objects of their dislike. Old-fashioned people who believe that the teacher should confine himself to reading, spelling, and arithmetic, are also inclined to hold that the child's mother is the only proper person to call the doctor in. Medical inspection which has for its object the discovery and extirpation of contagious disease, the fogy can, of course, understand; but he shakes his head when school physicians begin to test eyesight and hearing with a view to improved scholarship, and his doubts strengthen when such mysterious matters as hypertrophied tonsils, adenoids, and defective dentition are brought within the scope of the same inquiry. The fogy, of course, will always assume just this attitude towards any form of progress. But there are people, not precisely doddering reactionaries, who nevertheless entertain suspicions regarding what we have called the new hygiene. And that is because the science, like most ambitious young sciences, sometimes tries to prove too much. If medical inspection were to show that 10 per cent. of all school children are physically defective, the figures would be credible; but when it is maintained that in certain districts of Cleveland nearly 75 per cent. of the children are physically abnormal, the plain man is staggered.

For this reason, we welcome a volume entitled "Medical Inspection of Schools," by Dr. Luther H. Gulick and Leonard P. Ayres, recently issued under the auspices of the Russell Sage Foundation. The value of the book lies in its sanity of tone as much as in the positive contributions it makes to an interesting subject. The authors do not ride their specialty hard. The common impression has gone forth that the connection between physical health and progress in scholarship has been absolutely established. According to the enthusiast, the surgeon's knife is the longed-for royal road to learning. Cut out a child's tonsils, clear him of adenoids, fit him with a pair of eyeglasses, and the school term will be cut in half, and the city will save millions of dollars. But our authors warn us to go slow. The case is by no means so clear as all that. The value of medical inspection they firmly believe in, without attempting to exaggerate that value.

First, then, it is reassuring to discover that the ordinary figures for disease among school children must be received with caution. In so relatively definite a test as that for sight or hearing, we find that the ratio of abnormality ranges from 7.7 per cent. for Bayonne, N. J., to 71.7 per cent. in the slums of Cleveland. Where the correct mean for large cities lies may be indicated by the fact that New York and Boston show a ratio of about 31 per cent. Hence, our authors declare:

> Such variations as this at once suggest, what is undoubtedly the case, that the results are largely influenced by the methods employed by the examiners, and variations from this cause are apt to be even more important than those caused by the actual differences in existing conditions.

Again, a detailed comparison between New York and Minneapolis gives, under "Bad Nutrition," a percentage of 6.3 and 23.3 for the respective cities; under "Pulmonary Disease," .9 and 4.2 per cent.; under "Defective Hearing," 1.1 and 7.7 per cent. So here, too, we find "a different standard, rather than any great difference in conditions." But the question which standard is nearer to the truth is a vital one. Against such alarmist reports as 80 per cent. defective for the school children of Sioux

City, we are warned that, after all, the perfect human animal is rare. In Chicopee, Mass., out of 500 pupils examined, only one was reported as having perfect teeth, and he had spinal trouble. Our schools, then, are not "filled with physical wrecks." The facts are indubitably important; but there must be "moderation of statement in making public the results."

The most interesting point made by Dr. Gulick and his collaborator has to do with the connection between physical defects and retardation, or poor scholarship. When a child falls behind in his work, when he is, in a grade for which he may be a year or more too old, the presumption is that here, if anywhere, the element of physical disability comes in. Not necessarily, say our authors. Over 7,000 New York school children were examined, and among the children of normal age the percentage of defectiveness is actually higher than among the children of abnormal age. In other words, the dunce of the class is likely to be in sounder health than the boy at the head of his class. In the very preface, we are impressed with this powerful fact: that prevailing opinion, general and professional, is wrong when it holds "that children behind their grades were so because of the handicap imposed on them by physical defects." No, there are other and more old-fashioned reasons for poor scholarship that still hold; and, in the order of their importance, they are: (1) age upon starting to school; (2) absence; (3) slowness; (4) dulness; (5) health; (6) physical defects other than sight and hearing; (7) mental weakness. In other words, the good old virtues of industry and punctuality are still more effective at school than an operation for adenoids.

THE NEW PRESIDENT OF HARVARD.

BOSTON, January 16.

On January 13 the Harvard Corporation elected Prof. Abbott Lawrence Lowell president, and sent his name to the Board of Overseers. Under the rules, it must be held for at least a week before confirmation. Professor Lowell's election comes after ten weeks of scrutiny and sifting, since the resignation of President Eliot was announced on November 5. The choosing of a Harvard president has always been a responsible business, and this time the fact that the man was to succeed Mr. Eliot, the greatest personal force that has ever been active in American education, and the leader of Harvard for two-score years—made the task tenfold harder.

The Corporation, be it said at once, listened eagerly to suggestions, examined all claims, weighed every interest, and looked with an open mind at the qualifications of each candidate. In selecting Mr. Lowell they have laid the fallacy that the "young man" must necessarily be the best man, and they have dispelled the geographical fallacy. The latter is the more insidious. It rests on the assumption that, since Harvard is now a national university, with graduates dwelling in all parts of the world, she ought to take a president bred in the great, growing Centre or West, one who has been stimulated by the hustle of new conditions, and has not breathed too long the effete atmosphere of the Atlantic, especially of the New England, seaboard. Harvard College, it has been sometimes hinted, has been too much in the hands of "the Boston clique"; it is the turn for the graduates who are captains of industry and finance in New York or in Chicago to have a president who represents them. The application of the geographical limit in the choice of Congressmen, of candidates for the Presidency of the United States, and of Cabinet officers has been so obviously a mistake, that one would regret to see this notion prevail in the selection of the head of a university. Fortunately, the Harvard Corporation dared to run counter to this delusion. In Mr. Lowell they chose a genuine New Englander, a Bostonian through and through—simply because he was the best man; and when it is remembered that the principles which came out of Boston were built into the fabric of the nation; that the New England spirit has been carried in successive waves of migration to western New York, to Ohio, and so on across the prairies; that more recently Massachusetts enterprise and capital and Massachusetts brains have helped to develop the resources of the Centre and West—it need not be feared that the candidate who to-day best combines the ideals, culture, and enterprise of New England will be provincial or local in his attitude towards education. It is not where a man lives, but his state of mind, that gives him a national outlook.

We talk of all-round men, and they are rare; still rarer are all-round families. The Lowells are probably the best specimens of this rare product that we have in America. Their original immigrant, Percival Lowell (or Lowle) came in 1639 from Bristol, England, to Newbury, where he and his descendants lived the stern life of the seventeenth century. Early in the eighteenth century the first Lowell was graduated at Harvard. He was, I believe, the first minister of Newburyport. His son, John Lowell, who was graduated at Harvard in 1760, became a lawyer, stood high at the bar, was a member of the Massachusetts Constitutional Convention and of the Continental Congress, and was appointed by President Washington a United States judge. He it was who not only introduced into the Massachusetts Constitution the declaration that all men are created free and equal, but also advertised in the newspapers that he would defend any person held as a slave who desired to establish a right to freedom under that clause. His action abolished slavery in the Commonwealth. His son, Francis Cabot Lowell, introduced cotton manufacture into the United States, setting up mills in 1816 on the Merrimack at the spot which was named Lowell in his honor. From that day to this the family has been represented in every generation by judges, by men of great business enterprise and success, by soldiers, or by scholars. In the last generation James Russell Lowell, poet, patriot, professor, man of letters, and diplomat—made the name familiar on both sides of the Atlantic. Thus as a family the Lowells have been developed in many directions. They have set an example most important to our American society of men of wealth and position who would neither be idle, nor would regard their wealth as merely a means to selfish gratification. They have given themselves in service of all kinds. In 1864 one Lowell died leading a cavalry charge at Cedar Creek; in 1865 another Lowell poured forth the "Harvard Commemoration Ode." Viewed properly, it is such a collective experience as this—an experience which embraces all the larger concerns of life—that should breed the national spirit. Mere residence in New York or Chicago or Denver cannot give it.

One other point in regard to Mr. Lowell's background should not be overlooked: since 1720 Lowells in every generation have been educated at Harvard, and since 1784 members of the family have served, collectively, eighty-five years on the Harvard Corporation. Mr. Lowell's grandfather, John Amory Lowell, was a Fellow for forty years. This Harvard inheritance is indispensable in a Harvard president. Older graduates were astonished at the suggestion that a non-Harvard man should be even thought of as a candidate. As if the president of Harvard were in the same category as a railroad or Trust president, or as a star baseball player, to be engaged anywhere, if you can pay him his price! As if college loyalty, college associations, the subtle working of college ideals, could be bought and sold, or the allegiance transferred from institution to institution, as a lawyer transfers his allegiance from client to client! The election of Mr. Lowell doubt-

BERL... PUBLIC LIB...

less disposes of this fallacy for a long time to come.

Mr. Lowell was born in Boston, December 13, 1856, his father being Augustus, and his mother Katherine Bigelow Lawrence Lowell. His maternal grandfather, Abbott Lawrence, was one of the founders of the manufacturing city of Lawrence and United States Minister to England. As a child, Lawrence Lowell spent some time in France; then he was fitted for college at schools in Boston; entered Harvard in 1873, and was graduated in 1877, with Phi Beta Kappa rank, having taken highest honors in mathematics. He received his degree at the Harvard Law School in 1880, was admitted to the bar, and from that year until 1897 he practised law in Boston, in partnership with his cousin, Francis C. Lowell, now United States District judge; and later, Frederic J. Stimson joined the firm. In conjunction with his cousin, he published in 1884, a work on "Transfer of Stock in Corporations," but his attention was more and more turned to the science of government, and, in 1889, he collected a volume of "Essays on Government." In 1896, he printed "Governments and Parties in Continental Europe," a work in two volumes, which brought to American readers a mass of information not before accessible in English. The following year he gave up the practice of law to become lecturer on government at Harvard; in 1900, his position was made permanent by his promotion to be professor of the science of government. In 1908, he published "The Government of England," a treatise in which he attempts as an American to do for England what Mr. Bryce has done for the United States; and the general verdict, both here and in Britain, is that he has succeeded. A little book on "Colonial Civil Service," of which Prof. H. Morse Stephens was joint-author, and a discussion of "The Influence of Party upon Legislation in England and America," complete the list of his publications. Since the death of his father in 1900, Mr. Lowell has been trustee of the Lowell Institute; he has been a guiding member of the executive committee of the Massachusetts Institute of Technology; and for several years he worked energetically on the Boston school committee. He has thus enjoyed a very varied experience. As educator, he has seen from the inside the working of the public school system, of a great technical institution, and of Harvard University. As lawyer, he was brought into relation with the so-called practical world, while his studies led him to examine into the principles on which legislation is based. As trustee, he showed the remarkable foresight and prudence which have characterized so many of his family. As head of the Lowell Institute, he has not only sought out the intellectual leaders of Europe and America, but he has extended the work of the institute, by establishing regular courses, which large numbers of persons unable to go to college have availed themselves of. In social contacts, which play so large a part in determining the success or failure of the president of a great institution, he has had few equals in Boston.

Quickness, alertness, agility, are the intellectual qualities which first strike one in Mr. Lowell. He is the wittiest of talkers, with an apparently insatiate interest in all sorts of subjects. In his books he is solid, judicial, patient—the work on England represents the labor of many years—indulging rarely in generalization, leaving on the reader the final impression of a complete exposition of his subject. But if you watch him as he lectures, pacing nervously up and down the platform of the New Lecture Hall (his own gift to the university), stating his case with absolute clearness, stopping from time to time to emphasize an important point by a gesture, illustrating his argument by the most direct, concrete example or by flashes of wit, quick to reprove inattention, and able at every moment to carry the allegiance of his four or five hundred undergraduate hearers along with him—in all this you get the best indication of his various talents in action. Of medium height, he is lithe and wiry in body, as in mind, and apparently indefatigable in both. At a time when the dream of a large part of his countrymen is either to do as little work as possible, or to get rich and do no work at all, it is refreshing to know that the next president of Harvard, though what is considered a rich man, has from choice worked twelve or fifteen hours a day ever since he grew up. He takes a system of government apart, as a mechanician takes a machine, and shows how every piece is made, how it functions, and how far the system accomplishes what it is intended for. If not a pioneer in America in this important study, Professor Lowell has been the most successful and the ablest master of it: and his course at Harvard, which already three or four thousand students have chosen, has been the most popular in the last decade. He knows, therefore, from actual achievement how to stimulate students in their classroom work. He believes also that they can and should work more than they do at Harvard or at any other of our universities to-day. He has been the most efficient member of a committee which has considered the best way to improve the average scholarship of the undergraduates; and he urged the recent plans to establish the degree with distinction and to have the leading scholars more generally recognized by the students themselves.

What special theories Professor Lowell may intend to bring forward he has not stated, but, if his past record can be relied upon to foreshadow his future, we may expect that he will pay particular attention to the social life of the undergraduates. He understands the value of mixing with one's fellows in college. He realizes that, through the extension of the elective system on one hand and the great increase of members on the other, it has become proportionally harder for many undergraduates to develop on their social side. He has even been heard to favor setting apart one hall as the special habitation of freshmen. He is supposed to wish to foster athletics to a reasonable extent—but "reasonable" is a term which varies according to each person's standard. We may be sure, however, that Professor Lowell will not be an extremist. In college, he won the intercollegiate championship for the mile and two-mile runs, and he has ever since been an exerciser, which is very different from being an athletic specialist. Whatever course he may adopt, he has thus far shown himself so fully in sympathy with the undergraduates that they have regarded him as solicitous for their best interests. This harmony, if maintained, will be of immense help to him in carrying through any measures he may propose.

So far as I am aware, Professor Lowell has never declared himself against the elective system. All his efforts during the past ten years have been in the direction of improving and not of abolishing or greatly curtailing the system. Just what the final remedy may be, nobody can predict. But it is evident that Mr. Lowell's chief task must lie in the reorganization of Harvard College. President Eliot's magnificent achievement has been to create the American university. Until this was done, it was impossible to remodel the American college so that it should be in healthy relation with the preparatory schools below and the university above it. In other words, the standard must be fixed at the top, and not in the middle or at the bottom. During the process of creating the university, the college (not only at Harvard, but at every other institution sufficiently developed) has fallen out of adjustment. So serious was this dislocation that only a few years ago President Butler of Columbia advocated the squeezing of the college course into two years, while other educators asserted that it must be thrown over altogether. It was to save the college that President Eliot reluctantly consented to the three-years' course for students properly qualified.

Mr. Eliot himself has been accused of sacrificing Harvard College for the sake of the graduate schools. As we get far enough away from him, we shall perceive that by raising the schools to the

highest grade, he was securing a field to which first-rate teachers—on whom the fame and usefulness of a university finally depend—would be attracted. Having secured them, the standard of teaching in the lower departments is practically guaranteed. Experience has taught that the college, too, whose existence seemed lately uncertain, is indispensable: first, in order to give to a large number of prospective American citizens the rudiments, at least, of culture; and, next, in order to prepare the smaller number of youths who desire to go into the professional schools. This new college will not be like the old; it will be neither English nor German, but thoroughly American, an outcome, just as the old was, of American needs and ideals. That it will be possible to create this institution without retaining the largest amount of liberty compatible with efficiency, is not believed by any one familiar with the American and the Harvard spirit. *Hoc opus, hic labor;* and, we may add, *facilis descensus Averno.*

If President Lowell shall succeed in this, he will confer an immense benefit on American intellectual life, for it is not by a few preëminent scholars, but by the high cultivation of a large section of the people that a nation's capacity is judged. Thanks to President Eliot, he will inherit the tradition of publicity, of truth-speaking, of freedom in teaching, not less than the prestige of primacy which have distinguished Harvard since 1869. He finds Harvard international in the provenance of her students and teachers, national in her ideals. He himself has vital contacts with the dominant ideas of to-day and foresight of the principles which shall rule to-morrow. None of his predecessors entered upon the presidency of Harvard with brighter hopes, or with a more general approval.

SOME FRENCH BOOKS OF VERSE.

PARIS, January 1.

"France, where poet never grew," was Emerson's summary dismissal of French verse. Taine, after laboring through English literature, avowed: "To Alfred Tennyson I prefer Alfred de Musset." The numerous verse-books which crowd each year from the Paris press will never settle for English readers this difference in national emotions and emotional rhythms. But those who can read French aloud well enough to get the swing and cadence of it, and who understand when perhaps elementary thoughts are put in fresh, colored, vivid words, will find a good deal of poetic enjoyment among the fifty-three recent poets, from whom extracts are given with biographical and bibliographical notices in the two volumes of the new revision of "Poètes d'aujourd'hui" by Ad. van Bever and Paul Léautaud (Mercure de France). One word of caution is needed—the reader should strip his mind of all the technical slang about poetic schools, Symbolists, Decadents, and the rest, although Catulle Mendès, who named more than forty years ago the oldest of all, Parnassians, is still vigorous. Somehow these lyric coteries have evanished amid the storm of present strenuous strife. They were never much more than decorative introductions for young men making a noise to apologize for their poetic existence.

It was last century in more than the mathematical sense when Jean Moréas, the Greek who wrote French verses in a fascinatingly curious language which demanded a dictionary of the Pléiades for its interpretation, strode with his band of neophytes into a café, and halted before his reflection in the glass to proclaim his self-enthusiasm: "Je suis beau!" The play of youthful spirits gave way in Moréas to work for which his native language prepared him—"Iphigénie" and living reanimations of great Greek tragics. His new volume, "Esquisses et souvenirs" (Mercure de France), cannot but be interesting, though he is past fifty and his youthful following has disappeared—automobiling or playing at politics to-day in all likelihood. Many of those who gave promise have dropped out as poets. Henri de Regnier had for a time a new and noble march to his verse and thought. Henry Bataille had lines touching deep as Cowper to his Mother's Picture; but his ability has gone into unpleasant plays. In these versified plays, with Rostand and André Rivoire and others, most of the effective recent French poetry has to be sought. And yet there are solitary voices like Francis Jammes, piping woodnotes wild or lays of peaceful hamlets where church-bells are still ringing, which should please our English religiosity of higher emotion.

Another volume with edited texts and bio-bibliographical notices by Ad. van Bever, is "Les Poètes du terroir" (Delagrave)—French patois and province poets from the fifteenth century to our own day. It takes in order the old division of regions, which was founded in the common character of the inhabitants—Alsace, Anjou, Auvergne, Béarn, Berry, Bournonnais, Bourgogne, Bretagne, and so on—giving not only formal poetry, but also the often far more valuable popular songs. With the patois the French text is given a new utility for philologers, as well as for common readers.

"Nos Femmes de lettres" (Perrin), by Paul Flat, editor of the *Revue Bleue*, has three who are poetesses out of five—Comtesse de Noailles, who was born a Rumanian princess, but whose books of French verse have had perhaps more vogue than any other poetry books of late years; Lucie Delarue-Mardrus, wife of the Egyptian doctor who has published the immense and astonishingly literal translation of the Cairo Arabian Nights; and Renée Vivien, a name which, I believe, conceals an *américaine* of Paris. Another, Madame Henri de Regnier, is a daughter of Heredia. She is perhaps best known for her prose novels, though her occasional verse is worth collecting. In general, these women poets have not yet, like the latest generation of men, enlarged their muse's outlook beyond Love-Love-Love. A book of woman's poetic invention of other days, though not in verse, should be noted here. "Bonnes Fées d'antan" (Calmann-Lévy), by Edmond Pilon, is a choice of the fairy tales of Mesdames d'Aulnoy, de Murat, de La Force, de Beaumont, L'Héritier, and others who wrote for hearts not born cynical—of which there must still be many.

Correspondence.

THE REPEAL OF THE DUTY ON BOOKS.

TO THE EDITOR OF THE NATION:

SIR: At the meetings of a number of the societies of scholars held during the Christmas vacation resolutions were adopted favoring the repeal of the duty on books printed in English. In some cases, I fear, the matter ended there; secretaries have thought that a strong expression of opinion on a question on which all scholars agree was quite enough. I venture to suggest, however, that all such resolutions should be sent to the House Committee on Ways and Means at Washington, addressed to the chairman, the Hon. Sereno E. Payne. The Archæological Institute of America requested the secretaries of the local societies in all parts of the country to present the matter to their own Congressmen and Senators. It would be well if all interested in the subject should write to those having a hand in shaping the new tariff. Strong proposals have already been made to increase and widen the scope of the present illiberal duty.

By the copyright law both printers and publishers in this country are well protected; no book may be copyrighted here which has not been manufactured in the United States. Any English publisher of a book likely to have a large sale in this country has it reproduced here in order to secure copyright and generally sells it at the price charged in England. If a book is not likely to secure large enough sale in this country to justify getting out an American edition, it is imported; such imported copies may not be copyrighted, and pay 25 per cent. duty. Unfortunately, it is this class of books which the scholar needs, not the reprints of popular stories and the like. The income to the government from the duty is small, but the burden to the individual scholar is a great one if he has occasion to use many books printed in England.

W. F. HARRIS.

Cambridge, Mass., January 12.

JUSTICE FOR THE EARTHQUAKE SUFFERERS.

To the Editor of The Nation:

Sir: Messina and Reggio, centres of a large district whose chief products are oranges and lemons, found their best markets in our Eastern cities until the tariff of 1897 added to a duty of one cent per pound on oranges, lemons, and similar fruit the following provision:

Boxes, barrels, or other articles containing oranges, lemons, limes, grapefruit, shaddocks, or pomelos, 30 per centum ad valorem: *Provided,* that the thin wood, so-called, comprising the sides, tops, and bottoms of orange and lemon boxes of the growth and manufacture of the United States, exported as orange and lemon box shooks, may be reimported in completed form, filled with oranges and lemons by the payment of a duty at one-half the rate imposed on similar boxes of entirely foreign growth and manufacture.

This paragraph in the tariff proved prohibitive. It fell disastrously upon the Sicilian and Calabrian peasants, and deprived the consumers of a good quality of fruit, differing in flavor from that raised in Florida and California.

It would be an act of social justice for our tariff reformers to remove this provision whose benefit to Americans is doubtful or insignificant, and it would encourage an afflicted people now forced to accept our alms. It would also tend to decrease the number of Sicilian and Calabrian peasants forced to emigrate.

A. Hayes.

Rome, Italy, December 31.

POE ECLIPSED.

To the Editor of The Nation:

Sir: The enclosed item from a Cleveland paper you have perhaps already seen. It is hard to tell whether it is humorous or pathetic. The University of Virginia, which seems to depend upon a sprinter for its reputation, is entitled to sympathy.

Edward Dickinson.

Oberlin, O., January 11.

Charlottesville, Va., January 8.—Although President Roosevelt has written a personal letter to "Jim" Rector, urging him to another race with Walker, the man from South Africa, Rector cannot take part in such a contest without endangering his life. Rector, who is taking law here, and has done more to bring the University of Virginia into popular notice than any man since the days of Thomas Jefferson, founder of the college, has been warned that he cannot live two years if he continues in training.

THE HETCH HETCHY VALLEY.

To the Editor of The Nation:

Sir: Your issue of January 7, 1909, has an appeal from George Edwards to the *Nation* and its readers to assist in blocking the city of San Francisco and the other cities about San Francisco Bay in their efforts to obtain the use of Hetch Hetchy Valley as a great reservoir for water to supply those cities. We are familiar here with the arguments with which Mr. Edwards supports his appeal. They have been urged by John Muir and some others who are genuine lovers of nature and undoubtedly believe the scenic beauty of Hetch Hetchy Valley will be diminished by turning it into a mountain lake. But the fight against San Francisco and the other bay cities is made principally by the Spring Valley Water Works, a private corporation that has heretofore had a monopoly of the water supply for the city of San Francisco. Some of us who are sincere lovers of the mountains and of mountain scenery, and have given much time and labor to securing forest reservations in the Sierras, have been amazed at the arguments of persons who apparently have no connection with the Spring Valley Water Works. A fair sample of those arguments appears in Mr. Edwards's letter.

San Francisco now has a population well on towards 500,000, and other cities about the Bay of San Francisco aggregate nearly as much more. The sources of supply of water in the neighborhood are not sufficient for a great population, and those sources of supply are held in private ownership. These facts are sufficient to show any reasonable person how serious the situation is for our people. The Spring Valley Water Works owns the principal local sources of supply. There is only one other corporation now engaged in the water supply business, viz., the company that furnishes water to the cities of Oakland, Berkeley, Alameda, etc. We are willing to pay a fair value for the plants of these companies. Recently I served a term as Mayor of the city of Oakland, and my experience has convinced me that the water companies furnishing water to the cities around the bay have been heretofore (not now, however) the most baneful sources of municipal corruption with which we have had to contend. Lovers of civic righteousness should give us their sympathy and assistance to free ourselves from this burden that may at any time under different corporate management be imposed upon us.

Mr. Edwards probably refers, when he mentions other sources of supply, to other streams than the Tuolumne flowing from the Sierras into the great San Joaquin and Sacramento valleys, but unfortunately for his argument the waters from all those streams have been appropriated by different corporations for power, mining, and irrigation purposes, and any man versed in practical affairs knows that it will be impossible to utilize the waters of any of these other streams without condemnation and paying immense sums of money. But as to the Tuolumne River, while it is the largest one of all that can be utilized for our purposes, there are probably no valid claimants to the use of its waters, except two irrigation districts in the San Joaquin Valley. These districts are provided for to their satisfaction in the agreement exacted by the Secretary of the Interior when he granted the privilege to the city of San Francisco to impound waters in the Hetch Hetchy Valley.

The Tuolumne furnishes, and is the only stream that does furnish, a sufficient supply of water to meet the needs of the cities around the Bay of San Francisco for all time to come, and also meet the needs of farmers whose lands can be irrigated therefrom. I believe all disinterested engineers agree in the proposition that the waters of the Tuolumne River are the most available source of supply for the bay cities. One reason they are the most available is because none of them has a natural site for reservoir purposes equalling the Hetch Hetchy in excellence. These mountain streams run down deep cañons, with now and then a little valley of a high gradient, and not one of them, I believe, and my knowledge is reasonably full, has a really good reservoir site large enough to meet the requirements of the situation, excepting only the Tuolumne River. This river, heading on Mts. Lyall, Dana, etc., flows through extensive tracts of comparatively level land, known as the Tuolumne Meadows, at an elevation of about nine thousand feet, and then pitches into a gorge which is about twenty miles long. At the lower end of this gorge the walls of the cañon expand and include Hetch Hetchy Valley, with a floor almost level. At the lower end of the valley these walls come together again, and you can easily pitch a stone across the stream where the dam will be located, with perpendicular granite walls rising on each side. A high dam can therefore be made at comparatively small expense; and, as the floor of the valley is level, the amount of water that a dam 250 feet high will retain is enormous. I venture to say there is not on this earth so fine a site for a reservoir. The conditions are ideal, and nature was kind to the millions who will inhabit the cities around San Francisco Bay by providing such a place for them to get water from.

This brings us to the second ground of objection, viz.: that the valley is now a beautiful meadow, and to change it into a mountain lake will destroy its beauty. It will undoubtedly destroy the meadow, but the lake that will be created will be a much greater natural attraction than the valley is in its present condition. The lower end is wet, and the mosquitoes are a frightful pest. In ordinary seasons it is not until late in July that people can camp in the valley, with any degree of comfort. Very few people visit the valley. It can be reached only by a trail. I spent eight days in the valley last summer, after the mosquito season had passed, and I do not believe more than twenty-five persons visited the valley during the time I was there. If the recommendation of Mr. Pinchot, who has done so much for forest scenery and for preserving the forests, and the recommendation of Secretary Garfield and President Roosevelt are adopted, San Francisco will turn this beautiful but mosquito-breeding meadow into a beautiful mountain lake, whose attractions will be unique in character, and probably as great as that of any lake of its size in the mountains of any country. It will be necessary for San Francisco to build good roads to the lake, and this will enable lovers of natural scenery to get to it. The charms of Hetch Hetchy Valley have been known for more than forty years, but it is rare to find any person in California who has taken the trouble to ride over the mountain trails in order to see it. If good roads are built into the valley, this mountain lake will then become accessible, and will be visited by thousands who will never see it if left in its present condition.

The only other objection of Mr. Edwards and those who agree with him, worth considering, is that when the watershed above Hetch Hetchy is made accessible by good roads, then there will be such a crowd of people desiring to go there that the city of San Francisco will attempt to restrain them, on the ground that they are polluting the waters of the river. How can San Francisco keep people from going into the mountains above Hetch Hetchy? The head-

waters of the Tuolumne cannot be reached by way of Hetch Hetchy. Another route must be taken. At present only the strongest and most enthusiastic mountain-lovers ever get to Hetch Hetchy or the watershed above. If a grant to the city is made of the valley it will necessitate good roads, and give better opportunities to the lovers of wild mountain scenery. Not enough people can go there to foul the waters of the river to the slightest degree. It is only in the late summer that the river above Hetch Hetchy is accessible at all. The watershed of the Tuloumne River includes hundreds of square miles of high mountains, with innumerable streams, all converging to the Meadows. After the most of them have reached the Tuolumne then that stream plunges into a twenty-mile cañyon before reaching Hetch Hetchy. It is absurd to say that the people who will visit these headwaters of the river, which are only accessible for three months in the year, and then only to people who are willing to camp out, will foul the river.

The readers of the *Nation* should not hesitate to decide in favor of the people living around San Francisco Bay in a matter so vital to them. If the grant is made to San Francisco, Oakland (where I live), and all the east shore cities will have a chance to unite with San Francisco in bringing the absolutely pure water from the Sierras to our doors. WARREN OLNEY.

San Francisco, January 13.

SCOPE OF A PUBLIC SERVICE COMMISSION.

TO THE EDITOR OF THE NATION:

SIR: A reader of the *Nation* for many years, I wish to express a doubt as to the ultimate wisdom of confiding to the Public Service Commission authority to control the creation of indebtedness in business which you discuss in the Delaware and Hudson case (December 24, pp. 16 and 17). The company, it seems, made a purchase of coal lands to supply coal for its engines, or some other equally legitimate purpose, for the cost of which it issued short-time notes. Now that financial conditions have improved, it proposes to retire these notes (probably bearing a high interest rate) with other notes on longer time, secured by mortgage of the railroad. The commission refuses to approve the mortgage, and this decision you cordially endorse. No suggestion of fraud or bad faith or illegality is made; if the expenditure was for a lawful object, the right to include this debt in a general mortgage is clear. It is apparently a question of business policy or expediency only. Those responsible for the company's affairs find that they can secure better rates and terms by using bonds secured by mortgage on the railroad, but the commission holds that they can only mortgage the coal lands for this debt. It may be that the creditor will not accept a coal land mortgage; presumably this plan for securing the indebtedness is to the company's interest in the opinion of the parties interested.

It strikes me as doubtful policy to empower a commission or State bureau, whose members are politically appointed, and have no personal responsibility in the matter, with authority to arbitrarily annul business contracts and agreements of this character. You speak of the "helplessness of shareholders and creditors" in some other instances as ground for conceding this wide-reaching power to the commission, and I do not understand that you have creditors of railways only in mind. The creditors and stockholders of the United States Steel Corporation, for instance, are numerous and widely scattered and are "helpless" in the same sense and to a far greater degree than those of the Delaware and Hudson Company, which must make public detailed reports of all its receipts and expenditures. What good reason can be given for State interference to protect creditors of the Delaware and Hudson from the mistakes of its managers that will not apply to creditors of the United States Steel Corporation, and all other steel companies, and the creditors of all corporations and individuals likewise who conduct their business on borrowed capital?

You may be right that "supervision of this nature has come into our legislation to stay," but, if so, the State should certainly provide for adequate compensation to those who suffer from the mistakes of the commission, who are not infallible. This is a very different situation from that presented where parties in interest ask the intervention of a court to restrain illegal diversion of funds or other irregularities. The commission is not a court, and no party interested is complaining.

W. W. BALDWIN.

Burlington, Ia., January 6.

[The intervention of a Public Service Commission, in the cases referred to, was designed to prevent what is somewhat loosely called "overcapitalization," meaning particularly the unwarranted piling on the back of a corporation, of liabilities which may make trouble with its finances afterward. This practice has been the curse of American railway finance, and the fruitful source of railway insolvencies, from the very beginning of our railway history. All experience has taught that the small shareholder is practically helpless in the matter. Injunctions and lawsuits are always expensive and often doubtful, because of technicalities; the individual suitor has the immense resources, financial and legal, of his own corporation massed against him. The Public Service Corporations are a substitute, and a very desirable one, for hit-or-miss State legislation, which may be enacted either in the heat of passion or under the pressure of railway lobbyists. Our correspondent cites the shareholders of the United States Steel Corporation. The brief history of that company presents a very pointed argument in favor of the commission theory. The indefensible undertaking of 1902, proposed by the corporation's directors, to convert $200,000,000 preferred stock into bonds without acquiring a dollar of new property, would unquestionably have been found repugnant to any properly drawn law for Public Service Commission supervision. Yet the Steel management was able to override protests of shareholders at annual meetings and injunction suits brought by shareholders against the conversion plan, and the scheme was brought to a halt only when, in a Stock Exchange panic, financial interests as powerful as those already seated in control bought into the property and served notice that the creation of mortgages to buy nothing but the company's own shares must stop. We may add that public service corporations, by reason of their natural monopoly of traffic or commodity, have the public at their mercy; and in such cases it is therefore peculiarly desirable that the rights of the public in the management of the company shall be conserved either by strict legislation or some such device as a commission.—ED. NATION.]

PURITY OF THE PRESS.

TO THE EDITOR OF THE NATION:

SIR: Having read your editorial paragraph of December 17 anent purity of the press, and having noted your allusion to a movement in New York city to secure omission of prurient details of evidence in criminal cases, I should like to call your attention to a movement started in this city in 1907, by the writer, with the same object in view. The circular letter sent out by the Philadelphia Section of the Council of Jewish Women received a large number of endorsements from societies and individuals. An appeal to editors was issued at the time of the second Thaw trial. Believing, also, as you do, that this work for reform in the press must be continuous, our National Council at its triennial convention in December last appointed a standing committee on purity of the press, with the object of forming a public opinion which shall demand elimination of objectionable matter from publication. Special request was made through the Associated Press for a conservative dealing with the present murder trials in order to safeguard our homes and our children from the demoralizing influence of prurient details of evidence.

I enclose a copy of the resolution adopted by our executive board, in November, 1907. CORNELIA KAHN, M.D.

Philadelphia, January 8.

Be it resolved, That we vigorously deprecate the publication of such details of trials as are a menace to public morals, and also that we ask all public-spirited persons to refuse support to those journals that in the daily publishing of this and other most objectionable and sensational material, do ignore their high privileges; and,

That we oppose this evil in practical ways, and especially in the line of developing public opinion to appreciate its danger. We earnestly appeal to editors to aid us in this effort

THE SURVIVAL OF THE MORALLY FIT.

TO THE EDITOR OF THE NATION:

SIR: It seems to me that in the conclusion of your "Fifty Years of Darwinism" (January 7, p. 6), you have overlooked a more important factor determining human progress than the conscious use of the "power of environment" "in bettering the conditions of the poor, the defective, and the prone to crime."

There has been until lately a serious misinterpretation of the meaning of "the struggle for existence," and "the survival of the fittest," as applied to human society. This struggle has generally been regarded as a brutal contest for supremacy,

in which the fittest who survived were those who were the strongest physically and mentally, and who were either unmoral or immoral, at least so far as the combatants were concerned. Even so great an authority as Huxley lent the weight of his influence, in his Romanes Lecture, to the above interpretation. Two of the most important chapters in Darwin's "Descent of Man," the third and fifth, on the moral and intellectual development of man, seem to have been overlooked or forgotten. In these chapters, Mr. Darwin distinctly states that the social instincts, being the more enduring and persistent, conquer the less persistent, and that these social instincts depend for their growth upon the development of the moral sense; that this moral sense is itself the product of social contact, which is increased by the growth of society, and which must go on increasing as societies enlarge and pass from clans to tribes and finally into nations; and, furthermore, that this moral sense is preserved and increased by the action of natural selection:

> At all times throughout the world tribes have supplanted other tribes, and as morality is one element of their success, the standard of morality and the number of well-endowed men will thus everywhere tend to rise and increase (Chap. v, p. 160).

It may be further affirmed that with the growth of civilized society, morality becomes of more and more importance in determining the survival of the fittest, for by that term we mean the survival of the individual or race that is best adapted to the *essential* conditions of the environment. Human nature is what it is because of centuries of antagonism as well as of association. It is probable that in the earliest times when men were nomads, and society had not consolidated, the predatory instincts were the strongest and that conflict was predominant. While even then certain moral traits, such as courage and fidelity to leaders, were very useful, yet intellectual qualities were of more importance, and hence we should expect to find, what is generally admitted, that a high intelligence was developed earlier than a high morality. But as society was brought into closer and closer contact through inventions and discoveries which are the outcome of the scientific method until now the whole civilized world is in touch, by means of telegraphs, railroads, steamships, the post office, and the newspaper, the sense of solidarity has been so intensified that moral relations have become the most important, because on them will depend that "peace on earth and good will to men," towards which we all look, but which is yet so distant. We can comfort ourselves, however, with the thought that the processes of natural selection are yet going on, preserving and increasing the growth of those qualities in mankind which best fit him to live harmoniously with his fellows.

ROBERT MATHEWS.

Rochester, N. Y., January 12.

THE HIGHER CRITICISM.

TO THE EDITOR OF THE NATION:

SIR: If the gospel "according to Matthew Arnold" be taught by zealous disciples for the next eighteen centuries, may not much more that is desirable be accomplished, even for the "rank and file." After all, must not the educated "inward judge" be the practical court? Does not the "inward judge" lead to individual responsibility to a much greater degree than either fear on the one hand, or the supernatural upon the other? May not obedience to the "inward judge" rightly and naturally follow any doubts that may arise about the supernatural? Are not most of the deplorable conditions which confront us more the result of disregard of the "inward judge" than any lost faith in the doctrine according to Matthew? It seems to me that instruction in "the gospel according to Matthew Arnold" is demanded by present conditions. EDWARD M. HYZER.

Milwaukee, Wis., January 8.

INDIAN STATISTICS.

TO THE EDITOR OF THE NATION:

SIR: By way of comment on the letter "Indian Statistics," from your English correspondent, T. Morison, in your issue of January 7, it may be said that as to a useful comparison of such data Lord Curzon declared in his address to the Viceregal Council, March 29, 1901:

> I do not say that these data are incontrovertible. There is an element of conjecture in them [the estimates of 1898], but so was there in the figures of 1880. If one set of figures is to be used in argument, equally may the other.

Permit me further, without going into the causes of poverty and discontent in India, to express the firm conviction that no unprejudiced reader ever saw in the late William Digby's writings merely "the conjectures" or the work of "an industrious statistician poring over blue books." Further, that no one, worthy of his steel, ever couched a lance with Mr. Digby, and retired without a high sense of his courage, honor, and address; or ever, thereafter, spoke of him with condescension—and finally, that whoever was favored with knowledge of Mr. Digby's labors and character must have felt the inspiration that supported him in voluntary sacrifice of office, friendships, health, and means, and which won for him after death, a public and enduring monument to his devotion and his unrequited services.

CHAS. B. SOUTTER.

Aiken, S. C., January 11.

Notes.

Houghton Mifflin Co. is bringing out a new edition of Woodberry's "Life of Poe" in connection with the celebration of the poet's centenary. The book has been largely rewritten since it first appeared more than twenty years ago, and much new matter is added. It now appears in two volumes, with many illustrations.

Houghton Mifflin Co. announces for publication this year "The German Element in the United States," in two volumes, by Prof. Albert Bernhardt Faust of Cornell University. The first draft of the manuscript won the prize of $3,000 offered by Conrad Seipp of Chicago for the best essay on the subject. The book will be lavishly illustrated and will probably appear in the early autumn.

In five volumes of the Cambridge English Classics (G. P. Putnam's Sons) we are to have a reprint of the King James Bible from a copy of the folio of 1611 in the possession of Aldis Wright.

G. P. Putnam's Sons announce that the fourth, and concluding, volume of Hanotaux's "History of Contemporary France," in the English version, is now in press.

Prof. W. D. Lyman of Whitman College, Walla Walla, Wash., is engaged in the preparation of a book on the Columbia River for a series published by G. P. Putnam's Sons, known as Historic Rivers of America. It is the intention of the author to give some special prominence to Nelson and the magnificent lake district by which it is surrounded.

A new book by the Rev. G. Campbell Morgan of London, "Mountains and Valleys in the Ministry of Jesus," will soon be published by the Fleming H. Revell Co.

A life of Abraham Lincoln, by Brand Whitlock, Mayor of Toledo and author of several novels dealing with sociological problems, is announced by Small, Maynard & Co., publishers of the Beacon Series of Biographies.

The proprietors of the *Morning Chronicle* of Halifax, N. S., of which paper Joseph Howe was for many years the editor, will soon issue a new and complete edition of the speeches and public letters of Mr. Howe. This edition will include the material contained in that published by the Hon. Mr. Annand in 1858, and also all the important speeches and letters delivered and written by Joseph Howe between 1858 and the time of his death in 1873. The editor of the new edition is Joseph A. Chisholm.

In honor of the hundredth anniversary of the birth of John Stuart Blackie, his nephew, Stodart Walker, is preparing a volume of correspondence, and requests that letters bearing on the subject be sent to him at No. 30 Walker Street, Edinburgh.

Another example of the curious and rather factitious revival of interest in the Stuart family is shown by the announcement of W. G. Blaikie Murdoch's new book, "The Royal Stuarts in Their Connection with Art and Letters," to be issued by J. & J. Gray & Co. of Edinburgh. Mr. Murdoch, who begins his record with James I of Scotland, is apparently a thoroughgoing partisan.

The third and fourth volumes of the Works of James Buchanan (J. B. Lippincott Co.) bring the series to the middle of 1841, and thus cover his career into the Administration of Harrison. The range of subjects on which he spoke was wide, and he does not appear to have left unexpressed his opinion upon any of the leading measures coming before Congress, whether of internal or foreign policy. Stiff and formal as are his speeches, they show the attitude of the Jackson party, and the way in which that attitude was adapted to the needs of Pennsylvania and to the political aims of Buchanan. For he represented his State rather than the nation, and resented whatever seemed to belittle him in the eyes of the Democratic voters of Pennsylvania. The continuance of the agitation of the bank question, of the disposition of public deposits and surplus national revenue, and

of specie payments were the leading measures on which his influence in State politics rested. It cannot be said that his treatment of them ever rises above the level of a good stump speech, addressed more to the feelings than to the intelligence of his audience. His speech at the Pennsylvania convention of 1840 marks his limitations as a politician as well as a statesman. It was competent, but that is all. He was not an admirer of Van Buren, of whose ability to succeed Jackson he had strong doubts. These doubts were deepened when, after offering Buchanan the place of attorney-general and receiving a declination, Van Buren formed a Cabinet in which Pennsylvania was not represented. The personal relations between the two men were altered, though Buchanan does not yet figure among the Presidential possibilities. When Van Buren was defeated in 1840, the chances of Buchanan brightened, and he became the candidate of his State. It is needless to say that in the matters of office-seeking and the partisan use of office Buchanan was not at all squeamish, demanding many appointments and openly avowing his want of sympathy in any restrictions on the activities of Federal officeholders in elections. To him the Senate was more of a political arena than a place for legislating, and his rambling speeches, crowded with personalities, were better fitted to catch the popular favor than to accomplish much in the making of laws. Since he was without a particle of humor, his efforts to lighten his address are heavy reading; and nowhere does he give the impression of superficiality more strongly than in dealing with a question where a high moral issue is involved, as in slavery in the District. There is much on the rising problems over Texas and the Northeastern boundaries, and he made two speeches on the McLeod case. On foreign questions he should have been an authority. The volumes are still sparing in his correspondence, the greater part of which was accidentally destroyed; but the few letters that are given do not alter the impression gained from the speeches. Buchanan was evidently writing with the possibility of publication before him. The editing of the volumes, by John Bassett Moore, leaves nothing to be desired.

The Bibliographical Society of America has sent to its members the second volume of its Proceedings and Papers, covering the two meetings in Asheville, N. C., in May, 1907, and in Chicago on January 1, 1908. The book contains A. G. Salley's paper, "The First Presses of South Carolina," accompanied by a detailed bibliographical description of 73 imprints between the years 1736 and 1771, and mention of a few more. G. S. Godard discusses the "History and Progress of Collecting Material for a Bibliography of Connecticut," a work carried on by the Connecticut Library Association. There are reports by the committees on Incunabula and on Colonial Laws. The fourth number of the Society's Bulletin continues the record of bibliographies issued and in course of preparation. Among the latter we find "a general evaluated bibliography of social science," edited by W. D. P. Bliss, and to be published by the Social Science Library Bureau of Bibliographical Information. Miss Ethel D. Roberts, a student in the New York State Library School, has prepared an American Dante Bibliography for 1896-1908, in continuation of that of T. W. Koch.

When a book is dedicated "To the Great American Voter . . . before whose dread opinion the mighty of the earth stand in awe," one is prepared for the worst. It is not the worst that follows, in the two volumes of "American Supremacy," by George W. Crichfield (Brentano's), but it is pretty bad. The author has accumulated a good deal of material about laws, customs, and concessions in certain South American states, but his tone is embittered and violent, his conclusions wild. His one thesis is that South Americans are a set of liars and cut-throats, and his sole inference is that "the United States should establish civilized governments in those countries, which would make pillage by revolutionary bands impossible." Such an extreme of passion and unreason defeats itself.

Arthur Preuss of the *Catholic Fortnightly Review* is the author of a severe polemic against Freemasonry, entitled "A Study in American Freemasonry" (St. Louis: B. Herder). Deriving his information concerning the order from the authoritative works of Mackey and Pike, he seeks to show that Freemasonry is by no means the harmless social and benevolent organization it appears to be, but rather an insidious and dangerous enemy of true faith and upright morals. Mr. Preuss takes his antagonist somewhat too seriously. There is unquestionably a large element of deistic philosophy in the teachings of the Masonic ritual, derived from the speculations current when it attained its most rapid development toward its present form, but, as the order now exists in America, it is a fraternal order, pure and simple, of more or less benevolence and influence, and to try to prove it something more is to stimulate the curiosity by which it flourishes.

"The Jungle Folk of Africa" (F. H. Revell Co.), by Robert H. Milligan, is a remarkable series of pictures, as it were, of the life, customs, folk-lore, and religion of the West Coast native, based on the incidents of a seven years' experience in the German Kamerun and French Congo as a missionary of our Presbyterian Church. It awakens, as no other book within our knowledge has done, an interest in and sympathy for the people of this region. There is no attempt at concealment of the dark side of their character, their immorality, their untrustworthiness, their murderous proclivities, illustrated by the fact that in a year in one town where he was stationed, he did "not remember that there was one natural death," though he "never ceased to hear their mourning for the dead." But there is a bright side, of which perhaps the best illustration is the statement that "his love for his mother . . . is the strongest sentiment and the deepest emotion in the mind and heart of the African." Especially interesting are the accounts of the witchcraft practised and the fetishes, the power of which is gradually diminishing as civilization increases. In a chapter entitled "White and Black" Mr. Milligan confirms with his testimony that of the other American missionaries as to the brutality with which the natives are treated by the Belgian and Portuguese officials, and to a certain extent, we regret to add, by the French. He has much entertaining matter about the amusements of the natives, especially their dancing and singing. Very little comparatively is told about his missionary work, only one chapter being wholly devoted to it; the aim of the book is simply to "exhibit the human nature of the African." There are seventeen illustrations, the most interesting of which are portraits of native friends. We regret the lack of an index, which would have added much to the value of the work.

"A rag-tag journal" is the apt description given by W. G. Burn Murdoch of his latest work "From Edinburgh to India and Burmah" (E. P. Dutton & Co.). It is, in fact, the daily record of impressions of scenery and native life during a journey in 1905-06, taken simply in the interest of his profession as artist, and it reads as if it were written for a circle of intimate friends, rather than for the general public. The closing sentences of a description of women at a tank will give an idea of the style and humor of the book:

> The color from the red soil reflects under their raised arms and under their cheeks, and into the classic folds of their draperies, strong blue, and deep red, in their shadows and throws up rich reflections to the undersides of the wet earthenware bowls; the water laps over their brims, and the sky reflects like sapphire on their upper surfaces. Who will say that color is not the most beautiful thing in the world—the very flower of love and light and fire; the sign of preponderant katabolism or anabolism as the naturalist might possibly put it, to be perfectly explicit!

Still, if the reader can overcome the feeling of weariness at the constant repetition of color effects, he will find much entertainment, though not much useful information. There are, for instance, vividly picturesque accounts of the reception of the Prince and Princess of Wales at Bombay and Rangoon. Burmah impressed the author not only as a far more fascinating country than India from its beauty, but as in a far better condition as regards the state of its people. There is nothing in Burmah, for example, to compare with "the most nauseating place in the world," the Ghats at Benares. Commercial progress is indicated by the fact that the Irrawaddy Flotilla Company, which began business in 1863, with four steamers, has now a fleet of 360 vessels. Mr. Murdoch's account of his voyage up the river to Bhamo in one of these steamers, an excursion which he characterizes as many times more interesting than a trip up the Nile, should attract travellers to this region. It should be added that Mr. Murdoch's pastime was hunting, and occasionally he varies his narrative as artist in search of subjects for his canvas by accounts of hunting trips in the jungle. The book is attractively made, but its excellence is marred by numerous typographical errors. There are twenty-four full-page illustrations in color—one of a fakir at Benares is very striking—and numerous reproductions of sketches taken on the spot of interesting scenes and incidents.

The most recent issue in the South American Series, edited by Martin Hume, is "Peru," by C. Reginald Enock (imported by Charles Scribner's Sons). Written in a less vivacious style than the "Chile," in the same series, by G. F. Scott Elliot, it betrays a wider knowledge of present

conditions, and is especially full on Peruvian mineral resources and agricultural development. Both volumes deal with the early history in an uncritical manner, hut serve the purpose of a handhook reasonahly well. Both are freely illustrated.

In "The Other Americans," by Arthur Ruhl (Charles Scrihner's Sons), we get as neat and favorable an application of journalistic methods to travel as one could wish. The writer always had a "story" in mind, and fell upon the picturesque and eccentric in Carácas, Bogotá, Lima, Santiago, Buenos Ayres, and Rio de Janeiro, with a sure and overmastering instinct. Rapid and superficial, he yet has a faculty for seizing characteristic traits; and the net result is a very readahle hook, though one that hy no stretch could he called thoroughly informed.

Vols. XXI and XXII in the Publications of the Hakluyt Society, Series 2, are translations of Alonso de Espinosa's "Del Orígen y Milagros de la Santa Imágen de nuestra Señora de Candelaria que apareció en la Isla de Tenerife, con la Descripción de esta Isla," and the much more precious "History of the Incas," hy Pedro Sarmiento de Gamboa, together with Ocampo's account of "The Execution of the Inca Tupac Amaru." The recent puhlication of the text of the Sarmiento manuscript, in the library of Göttingen, was the immediate occasion of this edition, to which Sir Clements Markham furnishes the introduction. He does not fail to point out the inevitable hias in a narrative designed to prove that the Incas were usurpers and tyrants, and thus justly rohhed and put to death hy the unselfish Spaniards. Still, Sarmiento remains the chief authority on the Inca civilization.

"The Nun Ensign" (London: T. Fisher Unwin) is James Fitzmaurice-Kelly's latest demonstration of his Spanish scholarship. It is a translation into English of "La Monja Alférez," with a learned introduction and copious notes. At the end is printed, in Spanish, the play hy Juan Pérez de Montalhán, also entitled "La Monja Alférez." The editor makes it prohahle that one scene from this play turned up as a spurious chapter in the book. Mr. Fitzmaurice-Kelly's tracing of the actual history of the actual nun ensign, Catalina de Erauso, and of the origin and fate of the account which she was supposed to have written of her extraordinary adventures, disguised as a man, shows an exhaustive sifting of all the material. Incidentally, it convicts De Quincey, in his essay on this work, of either ignorance or imposition, or hoth. An attractive feature of this edition is the inclusion of twenty-seven illustrations by Viérge. They are on glazed paper, pasted over blue-tinted pages, as a kind of framing. In his well-known style, they lose something here hy their uniformly small scale.

The Comte de Ramhuteau is not a hero of romance. To the Parisian of to-day he is remembered merely by a street that hears his name and hy certain modest but useful improvements which he introduced in Paris during the fifteen years of his administration as Prefect of the Seine. He died in 1869. His Memoirs, written during his retirement, under the Second Empire, were released by his grandson in 1904 and edited by a professor of a French lycée. They are now translated into English (G. P. Putnam's Sons). The reader, who is looking for spicy anecdotes or malicious portraits need not open this volume, which contains only the recital of a busy life spent in the service of the state. This aristocrat was, in fact, a hourgeois with qualities more solid than brilliant. Instead of wasting his youth in sterile opposition to the new order of things, he entered the court of Napoleon as Chamberlain and afterwards served the Emperor as Prefect. Having retired to private life during the Restoration, he reappeared just in time to reap the benefit of the Revolution of 1830, which gave him the important function of Prefect of the Seine that he kept until 1848. His last years he spent on his family estate of Ramhuteau, in Burgundy, quietly awaiting death, which he had eluded through five or six coups d'état, riots, and revolutions. These long and somewhat ponderous Memoirs will give the historians some firsthand information on at least three different suhjects; first, the provincial administration during the last months of the declining empire, when sedition and conspiracies were rife on every side; second, the revolutions of 1830 and 1848 as seen by a man who was in the thick of the fight; last and most important of all, the municipal administration of Paris by one of its most efficient and hardworking Prefects, who started out to give the Parisians "water, air, and shade," and won hy his far-reaching reforms the gratitude of all classes and hy his puhlic works paved the way for Haussmann and Alphand. If this volume of figures and facts contains few portraits, it is not devoid, however, of interesting sidelights on some of the makers of history whom Rambuteau had occasion to approach. He confirms what we knew of Napoleon's temper which more than once was displayed at the sittings of the Council of State; he gives some interesting instances of the hlind optimism of Louis Philippe a few days hefore the outbreak of the revolution; finally, the reception he received from the Duchesse d'Angoulême confirms M. Lenôtre's statement ahout her character, showing that everybody is agreed in lamenting in the daughter of Louis XVI the absence of all that is "tender and womanly." The translation is edited with the usual care of American and English publishers and has a sufficient index. Few mistakes can he charged to the translator, who, however, ought to know that the so-called "reformers" of Montauhan are the Calvinists, known in French as "réformés."

"The Character of Jesus," by the Rev. Dr. Charles Edward Jefferson, contains twenty-six Sunday evening discourses delivered by their author in the Broadway Tahernacle of this city during the last two winters (Thomas Y. Crowell & Co.). The volume is popular in character. While Dr. Jefferson professes to have studied the New Testament criticism of the last thirty years, he shows no evidence of serious wrestling with its prohlems. The narratives of the Fourth Gospel are employed indiscriminately with those of the Synoptics. Nevertheless Dr. Jefferson has a vigorous facility in expressing useful truths. His chapters on "The Strength of Jesus," "His Poise," "His Firmness," "His Candor," and other like topics, may be read by men of all casts of mind with profit and gratitude. A volume composed in this manner is necessarily somewhat discursive and repetitious.

The Catholic priest, Heinrich Hansjakoh, who as a story-teller has long been popular among Protestants and his own church people, has lately added to his long list of publications "Verlassene Wege: Tagebuchblätter" (Stuttgart: A. Bonz & Co.). The collection consists of narratives of his journeys in recent years, particularly in South Germany.

The Studien zur Geschichte des neueren Protestantismus, edited hy Dr. Heinrich Hoffmann and Leopold Zscharnack (Giessen: Alfred Töpelmann), will puhlish new or rare sources of information for the study of early Protestantism. The first *Quellenheft* contains Spalding's "Bestimmung des Menschen" (1748) and "Wert der Andacht" (1755), with an introduction by Horst Stephan; and Heft iii gives a translation of John Toland's "Christianity Not Mysterious" (1696), rendered hy W. Lunde, to which are added Leihnitz's "Annotatiunculae" of 1701.

One of the most striking figures among the Danish men of letters to-day is Johannes V. Jensen, who has made his reputation within two years. The curious mixture of grotesque fancy and acute observation in his early fiction set him apart from the rest of his countrymen, and, indeed, his contemporaries, and drew upon him the attention of German puhlishers, who at once secured him for their market. He is now a frequent contributor to *März. Morgen,* and other magazines, and his books appear almost simultaneously in Danish and German. Close upon his interesting novel, "Das Rad," the scene of which was laid in Chicago, comes a volume of essays, "Die neue Welt" (Berlin: S. Fischer & Co.), discussing the new aspects of life embodied in America and appearing also in certain personalities of the old world. He finds in the "peasant culture," of which Björnson is such a splendid specimen, in the modern humanism of Darwin and Grundtvig, in the work of Schillings and others, symptoms of that return to nature and that rejuvenation which is the true renaissance. The hook is full of suggestive ideas, and is conceived in a spirit of optimism which is quite different from the tone of most European "moderns." Unlike so many visitors to this country, Jensen does not condemn the essentially American features and manifestations of life that he became familiar with during his sojourn in the United States, hut attempts an interpretation of them in connection with phenomena which he has observed elsewhere, and which he traces to a common source. In the introductory chapter on machines, he says that iron construction, the modern Gothic, is the natural style of the present time:

> The houses in America are truly heathenish; their purpose, their utility, was considered hefore architecture was thought of; it will he seen in some later time that there is beauty in this style. For beauty follows truth as it does strength. The present time is pagan, and pagan is the renaissance which triumphantly comes to all nations.

In Jensen's opinion nothing could have been more fit to celebrate the anniversary of the arrival of the first colonists from

Europe than the naval reunion in New York. For "the wanderer's heart of Columbus has made of the mortal man an immortal myth, which still unites all migratory natures on both sides of the ocean in the one truth, that all reality begins with a dream." The originality of Jensen's point of view and the freshness of his style make the book unusually enjoyable reading.

A new selection from the works of E. T. A. Hoffmann, who, owing to his spiritual kinship with Edgar Allan Poe, is frequently mentioned at this time, is being published by Max Hesse, Leipzig. There are to be eight volumes, with an introduction by Richard Schaukal.

The Germans have a new, compact, and scholarly Latin dictionary in the "Lateinisches Wörterbuch," prepared by Prof. E. Kraetsch and Prof. A. Mittag (Berlin: Neufeld & Henius). In a volume of one thousand pages the authors have endeavored to cover the ground completely, regarding the style of Cæsar and Cicero as classical, and designating that of others as non-classical, old Latin, vulgar Latin, later Latin, and modern Latin. A list of proper names covering 89 pages completes the book, which shows much independent scholarship and is well adapted to the use of students.

Charles Enschedé, of the firm of Joh. Enschedé en Zonen, printers and typefounders in Haarlem, Holland, has prepared a work on the typefounders of the Netherlands from the fifteenth to the eighteenth century, which will be published soon by De Erven F. Bohn in Haarlem, with Otto Harrassowitz in Leipzig as agent for the international trade. The illustrations, with one exception, will be from types made with the original matrices in the possession of the firm, representing 6 forms from the fifteenth century, 9 from the sixteenth, 52 from the seventeenth, and 305 from the eighteenth. Among the contents of the volume we notice a study of the various Elzevir presses.

Among this year's issues of the Society for Publishing Old Northern Literature (Samfund til Udgivelse af Gammel Nordisk Litteratur), Copenhagen, is to be noted an edition of the old Icelandic vellum manuscript of encyclopædic nature, listed as No. 194 in the Arnamagnæan Collection of Manuscripts, published under the title of "Alfroedi Islenzk," by Dr. Kr. Kaalund, the librarian of the collection. This is the first edition of the manuscript in question, which is very interesting as showing the range of the knowledge possessed by Icelandic ecclesiastic and monastic scholars at the beginning of the fourteenth century.

That indefatigable Icelandic scholar and interpreter of Icelandic Scaldic poetry, Prof. Finnur Jónsson of Copenhagen University, has recently issued two works of importance to the student of Germanic philology. One is a "History of the Icelandic and Old Norwegian Literature (Copenhagen: G. E. C. Gad), a one-volume abbreviation, for the use of students, of the same author's great three-volume work on the same subject (previously noticed in these columns). The other is a text edition, with interpretation, of the "Old Norwegian and Icelandic Scaldic Poetry," published by the Commission for the Arnamagnæan Fund, through the Gyldendal Publishing House, Copenhagen and Chicago. In the field of Scandinavian philology an authoritative and critical and at the same time conservative edition of the existing monuments of Scaldic poetry is a matter of prime importance; and it is well therefore that the work has been undertaken by a master hand.

A young Scandinavian author who has lately obtained considerable European renown, as attested by the fact that his latest book is simultaneously published in Christiania, Paris, Milan, and Utrecht, is the Norwegian, Johan Bojer, whose novel "Vort Rige" (Our Kingdom) has just been brought out by the Gyldendal Publishing House (Copenhagen and Chicago). The book, which has for hero a rather sympathetic young man who seems to be undeservedly persecuted by an unsympathetic fate, deserves to be read by those who would follow literary developments in Scandinavia.

The year-end at Paris has been fruitful of what was once called polite literature. Pierre Brun issues a limited edition (twelve francs) of "Savinien de Cyrano Bergerac" (Daragon), unravelling the history and legend of this *gentilhomme parisien* from Lebret to Edmond Rostand. "Études de la littérature française" (sixth series, Perrin), by the proximately *académisable* René Doumic, extends from St. Francis de Sales to Jules Lemaître's "Racine." While not startling or revolutionary, such criticism is full of cultivated amenity. We tread a more combative field with the veteran Edmond Lepelletier in "Émile Zola," his life and work (Mercure de France). M. Lepelletier was one of the earliest fanatics of the Naturalist school, and, though he later differed with its founder in politics, he still sees by the day that is dead. It is, perhaps, the most complete book yet published on the man who for a few years overshadowed grimly all the other writers of France.

Polite literature would be little without polished language; and recent disquieting agitations have drawn out a number of useful books on French itself. Albert Dauzat's "La Langue française d'aujourd'hui" (Armand Colin) treats of the evolution and present problems of the speech of France. Even as radical a Deputy as Charles Maurice Couyba (the school poet Maurice Boukay) stood up in Parliament in the debate on the university budget, to say that the glory of France, its language, was deteriorating under the modern system of education. André Beaunier begins at the beginning, "Contre la Réforme de l'orthographie" (Plon-Nourrit), a spirited piece of writing *pour la défence française*. Gustave Lanson of the Sorbonne, in a sort of university extension series, publishes "L'Art de la prose" (Annales politiques et littéraires); and even Emerson, though he did not care for it nearly so much as for Montaigne, would have agreed with Matthew Arnold that no modern language has prose like that of the French classics.

Perhaps not so important, and certainly not at all of the university, but equally and superlatively French, is the Comtesse de Gencé's "Le Code mondain de la jeune fille," a handbook of proper doing and acting for the entire life of the young person, from her entrance into the *monde* until safely arrived at her *fiançailles*, within sight of her goal—marriage (Bibliothèque d'ouvrages practiques). Dr. Cabanès, who is constantly peering into the most intimate corners of other days, publishes a contrasting "Mœurs intimes du passé" (A. Michel), which is not always for the young person's reading, although he expounds things as innocent as how our grandmothers blew their noses.

Antonio Fogazzaro's novels, especially "The Saint," which called out a Papal bull and a syllabus, have almost obscured his poems. Yet it was as a poet that he first won recognition, and now he has collected in a single volume "Le Poesie," which comprises what he desires to have stand as his poetic product. The book has for frontispiece a recent portrait of Senator Fogazzaro (Milan: Baldini, Castoldi & Co.).

The sixth general convention of the Religious Education Association will be held at Chicago, February 10-12. The special programme of the Department of Universities and Colleges, just issued, announces a symposium on "The Problem of Religious Instruction and Religious Influence in State Universities." The following are the contributions to it: "Statement of the Problem," President Henry S. Pritchett of the Carnegie Foundation; "The State University and the Religious Denominations," the Rev. Joseph W. Cochran, secretary of the Presbyterian Board of Education, Philadelphia; "The State University and the School of Theology," Dean Shailer Mathews, University of Chicago; "Religious Instruction in State Universities from the Legal Standpoint," Chancellor Frank Strong, University of Kansas; "What Can Be Done and What Cannot Be Done," President Cyrus Northrop, University of Minnesota; "The State University of Iowa Plan for Religious Education," Chancellor George E. MacLean, University of Iowa. To a symposium on "Moral and Religious Influences as Related to Environment of Student Life" there will be the following contributions: "Dormitory Life for College Men," President Charles F. Thwing, Western Reserve; "Dormitory Life for College Women," Dean Marion Talbot, University of Chicago; "Factors in the Dormitory Problem," President Richard Cecil Hughes, Ripon College; "The Private Dormitory," President Charles W. Eliot, Harvard; "The Private Boarding-house for College Women," Mrs. Mary Bidwell Breed, adviser of women, University of Missouri; "The College Sorority as a Substitute for the Woman's Dormitory," Mrs. Cora Stranahan Woodward, adviser of women, University of Wisconsin; general discussion, introduced by Prof. Charles F. Kent, Yale. "The College Fraternity as a Factor in the Religious and Moral Life of Students" will be treated as follows: "History and Early Ideals of the Greek Letter Societies," Albert P. Jacobs, Detroit; "The Fraternity of To-day," Clarence F. Birdseye, New York; "The College Fraternity in the State University," President Edmund J. James and Dean Thomas A. Clark, University of Illinois; "The College Fraternity as an Ally in Maintaining Institutional Standards," President Guy Potter Benton, Miami University; discussion, Prof. Ernest H. Lindley, Indiana University, Prof. William A. Scott, University of Wisconsin, and Prof. Henry M. Bates, University of Michigan. "The Higher Education as a Preparation for Life on the Moral and Religious Side" will be discussed as follows: "Preparation of the College Student for Social Service,"

Prof. John M. Gillette, University of North Dakota; "Agencies for Deepening the Spiritual Life of the College," Prof. Edwin F. Starbuck, University of Iowa.

The Baltimore Association for the Promotion of the University Education of Women offers a fellowship of $500 for the year 1909-1910 available for study at an American or European University. As a rule this fellowship is awarded to candidates who have done one or two years of graduate work, preference being given to women from Maryland and the South. All applications must be sent before March 20, 1909, to the chairman of the Committee on Award, Dr. Mary Sherwood, The Arundel, Baltimore.

Arthur William A'Beckett, novelist and dramatist, for many years one of the chief writers for *Punch*, died in London, January 14. He was born in Fulham in 1844, son of the Gilbert Abbott A'Beckett, who wrote the "Comic History of England." At an early age the young A'Beckett entered journalism as editor of the *Glowworm*. Later he was connected with the *Britannia Magazine*, was a special correspondent in the Franco-German war, and was editor of the *Sunday Times*, of the *Naval and Military Magazine*, and of *John Bull*. Some of these undertakings were an outlet for the energy which was not consumed by his labors on the staff of *Punch*, from 1874 to 1902. He was also the author of several three-act comedies, and was active in the Society of Authors. His publications are: "Comic Guide to the Royal Academy" (with his brother Gilbert, 1863-64), "Fallen Among Thieves" (1869), "Our Holiday in the Highlands" (1874), "The Shadow Witness," and "The Doom of St. Quirec" (with Sir F. C. Burnand, 1875-76), "The Ghost of Grimstone Grange" (1877), "The Mystery of Mostyn Manor" (1878), "Tracked Out," "Hard Luck," "Stone Broke" (1879-81), "Papers from Pumphandle Court" (1884), "Modern Arabian Nights" (1885), "The Member for Wrottenborough" (1895), "Greenroom Recollections" (1896), "The Modern Adam" (1899), "The A'Becketts of *Punch*" (1903), "The Tunnel Mystery" (1905), "Recollections of a Humorist" (1907).

Fernand Bournon, a member of the staff of the *Journal des Débats*, has died in his fifty-second year. Besides his newspaper work, he wrote many books on the antiquities of Paris, and published seventy-seven volumes of a collection of "Monographies des communes du département de la Seine."

Hermann Jahnke, teacher, novelist, and playwright, has died, at the age of sixty-three. Much of his writing is in Niederdeutsch, his best-known book being "Nahwer Bismarck," published in 1875.

CARL SCHURZ'S REMINISCENCES.

The Reminiscences of Carl Schurz. Vol. III, 1863-1869; with a Sketch of His Life and Public Services from 1869 to 1896, by Frederic Bancroft and William A. Dunning, Pp. x+486. New York: Doubleday, Page & Co.

There is but one serious disappointment in this third and last volume of Schurz's "Reminiscences": the Reminiscences proper break off almost at the beginning of Grant's Administration and of Schurz's own service in the Senate. This is a period which the careful, formal historians have now invaded, and it is a pity they cannot have the benefit of Schurz's intimate knowledge of its men and causes. His judgments, made always from a point of view peculiarly elevated and detached, yet strengthened always by a human and sympathetic intuition and by a rich experience, would probably have been more valuable than those of any one of his contemporaries. The loss to the general reader is hardly less; for the autobiography keeps its engaging quality to the end.

Schurz's children have done well to entrust Mr. Bancroft and Professor Dunning with the task of continuing the story; better, in fact, than they could well have expected. For ordinarily, when two writers collaborate, the result is disappointing in point of form; yet this sketch strikes us as rather better written than either Mr. Bancroft's "Seward" or Professor Dunning's "Reconstruction." The main facts of Schurz's later career are set forth carefully, with good judgment, with sympathy. The only general criticism which suggests itself is that we do not find in this biographic part what the autographic part, of course, could not give—a Boswellian account of the man himself, with ample anecdotal illustration. Schurz had a most interesting and engaging personality. He was extremely good company. We wish that we might be oftener introduced into his home, and the circle of his friends. But perhaps, with the modesty that characterizes the sketch, its authors have meant to leave this opportunity to whoever, notwithstanding the "Reminiscences," shall attempt a complete Life.

Schurz's own story of the years 1863-1869 takes up considerably more than half the volume. Gettysburg comes first, and the chapter will no doubt rank as one of the best of the many accounts of the great fight by eye-witnesses. Gettysburg and Chattanooga, however, close the list of important battles in which Schurz had a part. In 1864, he found the call to service on the hustings, in defence of Lincoln's administration, more compelling than the rather tame military duties assigned to him for the time being; and when he went back to the front the end was close at hand. But he had proved himself no mere holiday soldier, and his experience of American warfare had been stern enough to make him combat vigorously, a few years later, in his native country, and in no less a presence than Bismarck's, the assumption of superiority for the more elaborately disciplined soldiers of Europe over those he had led and faced on this side of the Atlantic.

It was but a single step from the fighting to the still more prominent rôle he played in Reconstruction. This last is no doubt the part of his public service which present-day historians are most disposed to criticise. His motives they will hardly assail. But his well-known report on conditions in the South immediately after the war, in which he advocated giving the ballot to the blacks at once, supplied arguments for the Congressional leaders who overthrew the Presidential plan of reconstruction and substituted a plan of their own which is now, by many students of the period, condemned as partisan, if not vindictive, in motive, and which all know to have produced, in actual operation, detestable results. Not much is here added to the mass of fact and observation in the "Report," but we learn a good deal about the circumstances under which it was written, and also—for the first time—the precise character of Schurz's break with Andrew Johnson. To that unlucky President Schurz shows little leniency; but Johnson, exasperating as he remains for his tactlessness, for the matchless untimeliness of his alternate displays of stubbornness and weakness, nevertheless emerges from this particular arraignment, as from others, with some measure of the reader's sympathy. That is a feeling which finds its way into the histories, along with a more and more unfavorable feeling towards Sumner and Stevens. Schurz firmly denies that the grant of suffrage to the freedmen was meant as a punishment for their former masters; yet he admits that Stevens was not without hatred for the slave-owners. He himself continues to justify the act by the only reasoning which appeals to the hindsight of a later generation—that it was necessary, in order to keep the whites from reducing the blacks to some form of slavery or semi-slavery. Against this view one is now bound to set the contrary view of J. F. Rhodes and Professor Dunning. We are persuaded also that Schurz makes too little of the purely partisan motive of the Republican majority in Congress. Perhaps, in this, he was misled by his own freedom from such a spirit.

We turn with pleasure from this most painful chapter in American history back to the earliest scenes of Schurz's life. His account of his visit to Germany in 1867 is entirely fascinating. For an American reader, there is a curious pride in the reception he got, and particularly in the extraordinary interview with Bismarck. Probably no other passage in the entire three volumes will be read so often. Doubtless Schurz himself was by this time a good enough American to relish such recognition more keenly than if he had remained a merely European republican.

But he had lost no whit of devotion to his old ideals when he came back and threw himself once more into American politics. Of that devotion there

is no more creditable instance than his leadership of the Liberal Republican movement of 1870-1872, unsuccessful as the movement was. Because of its failure, historians incline to neglect it. Perhaps they are right. But the Republican party stood then at the parting of the ways. It had not yet entered fully upon the course which in a few years cost it so many of its purest members. It was not yet irrevocably committed to high protection, or completely in the control of the interests which profited by that policy; and, on the other hand, there was in its own ranks a decided reaction against its severity with the South. In fine, there was still so much virtue in it that we cannot set Schurz down as a visionary because he hoped to purify it from within. Mere mischance had much to do with the unfortunate outcome of his enterprise.

Meanwhile, he himself had entered the Senate; and there we must leave him, on the eve of some of the finest triumphs of his career. How he himself felt when he took his seat as a Senator he has told us, and there is hardly a paragraph in the book which better deserves to be quoted:

> I remember vividly the feelings which almost oppressed me as I first sat down in my chair in the Senate chamber. Now I had actually reached the most exalted public position to which my boldest dreams of ambition had hardly dared to aspire. I was still a young man, just forty. Little more than sixteen years had elapsed since I had landed on these shores, a homeless waif saved from the wreck of a revolutionary movement in Europe. Then I was enfolded in the generous hospitality of the American people opening to me, as freely as to its own children, the great opportunities of the new world. And here I was now, a member of the highest law-making body of the greatest of republics. Should I ever be able fully to pay my debt of gratitude to this country, and to justify the honors that had been heaped upon me? To accomplish this, my conception of duty could not be pitched too high. I recorded a vow in my own heart that I would at least honestly endeavor to fulfil that duty; that I would conscientiously adhere to the principle *salus populi suprema lex;* that I would never be a sycophant of power nor a flatterer of the multitude; that, if need be, I would stand up alone for my conviction of truth and right; and that there would be no personal sacrifice too great for my devotion to the Republic.

To this we may well add these sentences from a letter written by Schurz some years later, while he was Secretary of the Interior, to a Missouri correspondent who urged him to use appointments to office as a means of strengthening his own Liberal Republican following:

> As you do not expect a reply in detail, I would only say that in the management of what is called the patronage in Missouri, I shall feel in duty bound, as far as I exercise an influence, to act upon those principles with regard to the civil service which I have always advocated. This will preclude anything and everything like a personal policy looking to ulterior ends. Ever since I have been in official life I have adhered to the rule of regarding the official position occupied by me at the time, as the last one ever to be held by me, and as decisive of my reputation as a public man.

The proof-reading, as in the earlier volumes, has evidently not been particularly good. A portrait of Charles Francis Adams appears on page 344, where one would expect to find, instead, that of his father. There is an index.

CURRENT FICTION.

An Immortal Soul. By W. H. Mallock. New York: Harper & Bros.

The problem of multiple personality has been repeatedly set forth in fiction, but never so painstakingly as here, and never from precisely the same point of view. Mr. Mallock puts it as a theological poser: if a person is several persons, what about his soul? An imaginary case is worked out with much ingenuity, the case of a young girl introduced upon the scene first as one person, then as another. With the aid of a simple machinery devised by her parents and physician, a shift of name and costume accompanies each shift of personality, and she readily passes as her own half-sister. This might easily have been made the occasion of amusing complications on the "Vice-Versa" order; but Mr. Mallock's purpose is a serious one, and he does not permit himself to be led astray by the Comic Spirit. Much of the time we might fancy ourselves in a laboratory rather than a studio. Yet the story is not without a leisurely, whimsical, well-nigh Peacockian flavor. The discourse of Mr. Barton the ritualistic parson, Dr. Thistlewood the materialist physician, and Lord Cotswold the dilettante, sensualist, and mystic, remind one of some of those immortal communings at Gryll Grange or Crochet Castle. But how Peacock would have rumbled at the tendency of these discourses!

The story begins in an orthodox way with Miss Nest Vivian falling in love with the middle-aged baronet who has done distinguished things in the Far East. However, he amounts to very little in the end; the real hero is the high-church parson, Mr. Barton. He falls in love with her, and fancies himself engaged to her (she fancying herself engaged to the baronet) when a thunderstorm converts her into her other self, Miss Enid Wynn. If Miss Vivian is a nice English girl of yielding sensibilities and churchly leanings, Miss Wynn is a brusque, mannish, sporting young person. She comports herself rather outrageously, and in turn, under the shock of a slight accident, gives place to Miss Vivian. Neither of these persons has knowledge of the other: the question is to which the body legitimately belongs? Which is the real self or soul? The book is rather unnecessarily encumbered with scientific terminology.

Felice. By John Luther Long. New York: Moffat, Yard & Co.

This is one of Mr. Long's characteristically pretty and sentimental and pathetic tales. The smile and the tear are present in distracting juxtaposition, as advertised. The method is rather under suspicion in these days in coldly critical circles; but it still has its public utility. The Christmas stories over which Dickens and his audience were wont to weep together, are not yet actually out of date; among us Bret Harte took up the strain, and after him who more eloquently than the author of "Madame Butterfly"? We make a little less obvious use of the machinery, the Christmas bells, the yule-log, and so on; but we retain the spirit of it perfectly—that dear old "God bless-us-every-one" spirit which Boz popularized rather than invented. We do not recall that the word Christmas is employed in the story of "Felice," but the atmosphere of that blessed and somewhat emotional season is about it. The hero is a more amiable Scrooge, whose pride leads him to an act for which his susceptibility causes him voluptuously to atone. The flamboyant barber, who is represented as king of the Italian colony in New York, is an amusing figure, worthy, perhaps, to be included in that edifying compilation sure to be made some time under the title, "The Barber in Fiction."

The Cradle of the Rose. By the author of "The Martyrdom of an Empress." New York: Harper & Bros.

The story is laid in Brittany, and deals with a recent Royalist plot organized by the Lady Clanvowe, wife of an English diplomat. This unusual heroine is of aristocratic Breton birth, possesses fabulous wealth, perfect physique, silver hair, and a ravishing skill on the violin. It is merely an accident, however, that she fascinates the rather colorless young Breton officer who figures in a neutral way as the hero. The Royalist plot comes to nothing, nor does the young man's love: lover, lady, and plot sink silently together into the sea. The romantically tragic futility of it all is rightly conceived, and the author has spared no pains to work out the conception. The scene is illustrated with water-color drawings by the author; each chapter is introduced with a poem by "M.M." (also, the author?); local color is laboriously worked in; in short, an earnest effort is made to interpret poetically the spirit of old Bri-

tany—its gray skies and stormy, sea-smitten coast, its sturdy peasantry, its loyalty, its sullen piety, and dark superstitions. The setting is admirable. One waits with increasing irritation for some one to do something; but, as a certain historian said of the French Constitution, the story "will not march." The author refuses to release the hands of his creatures and let them go about their business. The lavish descriptive impulse is allowed to run riot and overpower the narrative. In the end, one feels that the work is too heavy for an idyll and too static for a novel.

The Forbidden Boundary and Other Stories. By B. L. Putnam Weale. New York: The Macmillan Co.

Mr. Weale as an interpreter of Asia is possibly unrivalled. He is at once geographer, historian, ethnologist, and dramatist. Particularly in defining the "forbidden boundary" between white races and yellow and brown, and the penalties for overstepping it, is he an expert. The Chinaman is shown in many poses, both familiar and new. He may be a gentleman and scholar, or he may be all the less desirable things that popular writing has shown him to be. Says one of the white characters:

> In the whole world, there are no gamblers like the Chinese—nowhere. . . . But when they lose, they do not blow out their brains like our fools; they merely begin again, and with the aid of an enlarged experience, hope for better luck. It is the nation of the future, this China; they are the world's marvels; they are good business men and desperate gamblers combined."

Not alone the Chinese, but Japanese, Asiatic islanders, city crowds, and weird water-people—all are as daily mates to this deeply-versed observer. Vast is his material, immense his mastery of detail, pungent his generalizations.

And yet he is not an unqualified success as a story-teller. There is a surfeit of the dreadful, and what from an artistic point of view is worse, a profuseness, relevant and irrelevant, that makes of several of the stories in this volume sheer rigmaroles. The best told one is also one of the most barbarous, "The Cult of Sparta." Here every paragraph tells. "The Enemy," a tale of a wonderful swimmer, is another that ranks among the less top-heavy; and moreover, though shuddery, it is not unspeakable.

But profound convictions as to the unknowableness of Asia, and the destruction that awaits the too-close investigator, an eye for the cryptic and an ear for the creepy, do not establish proof of the story-telling genius. Mr. Weale's is powerful but intermittent. And gore and bore never yet went well together.

The Making of the English Constitution: 449-1485. By Albert Beebe White. New York: G. P. Putnam's Sons. $2.00 net.

This work illustrates the truth that to write an historical work that is neither chronological nor topical is dangerous, unless the author is able to organize and interpret his period in such a way that the evolution of political ideas and institutions is made clear and definite. That Professor White does not possess such ability in marked degree must be apparent to any reader who attempts to follow his interpretation of the formative period of English constitutional history. Although interesting in parts as an exposition of the ideas of the late Prof. F. W. Maitland and of Prof. G. B. Adams, the result of Prof. White's labors can hardly be regarded as a successful textbook, and it adds nothing to our knowledge.

The first part contains a brief survey of Anglo-Saxon institutions in which controverted questions are carefully avoided and loose generalizations, such as those on the shires, hundreds, and boroughs, are given prominence. The author does not seem well acquainted with the problems of the pre-conquest period, and, in fact, the whole treatment of Anglo-Saxon local government is unnecessarily vague and confusing. The account of the central organs of government which follows is somewhat clearer, as is also the concluding chapter of Part i, dealing with the Anglo-Saxon Church. The author should know, however, that the old city of Lichfield in Staffordshire is not "Litchfield" (p. 65), whatever may be the Connecticut usage. In Part ii, the Norman Conquest and its immediate results are dealt with in a fairly satisfactory manner and the influence of Norman institutions on English government is well brought out, even if a little over-emphasized. This, on the whole, is the strongest part of Prof. White's treatise and shows careful study. In Part iii, the making of the judiciary, the executive, and the making of Parliament are discussed along general lines in the order named. While this arrangement may be both criticised and defended, the amount of space and attention devoted to a set of courts that are now obsolete and to the history of law seems excessive in a work on the making of the Constitution. In fact, it can only be accounted for by recognizing that the author is under the spell of Maitland. The treatment of the executive is comparatively brief, but enough is said to indicate that regarding the Council the author adopts a theory that few students would endorse—namely of practically absolute continuity between the Norman and early Plantagenet *curia regis* and the later Council. In the final chapters, considerably less space is allotted to the making of Parliament than to the judiciary, although the Parliamentary system is undoubtedly the most important part of English government. The development of the two houses is not definitely explained, and the question of borough representation is obscure. It is quite certain, for example, that in the early fourteenth century there were some boroughs that wished representation in order that they might claim to be royal towns, rather than mesne towns under the jurisdiction of some lord.

Prefaced to the text is a well-selected and annotated bibliography of standard treatises and monographs. We note, however, the omission of a number of the older standard works that are still valuable and also of some recent contributions, such as Ballard's study of the Domesday boroughs and of the Great Inquest. Following the bibliography is a list of topical readings in connection with the text which will be of value to both teachers and students. It is to be regretted that the author did not include more bibliography and footnote references in the work itself, even at the cost of omitting some of the rather long verbatim extracts from well-known works. In spite of a few printer's errors, the typography and general appearance of the book are excellent.

The Catholic Encyclopedia: An International Work of Reference on the Constitution, Doctrine, Discipline, and History of the Catholic Church. Edited by Charles G. Herbermann and others. Vol. IV: Cland-Diocesan. New York: Robert Appleton Co.

The successive volumes of the great "Catholic Encyclopedia" appear with unfailing regularity and amply sustain the reputation of the work. The fourth volume contains a number of important articles, more or less popular, which exhibit in general the same spirit of fairness that characterizes the earlier volumes. Only a few can be mentioned here.

The long article on the Congo Free State, from the pen of a Belgian writer, presents the common Belgian point of view, but its defence of the government is commendably free from passion. The Concordat of 1801 gives occasion for a Catholic, but not unfair, review of the present ecclesiastical situation in France. Collectivism and Communism are discussed in a temperate and judicious way; and the subject of Coeducation is handled with admirable good sense. The sacrament of Confirmation receives careful and discriminating treatment, and its history is given with conspicuous candor. Rather out of line with the scholarly character of the article as a whole is the popular and un-

technical definition with which it opens:

A sacrament in which the Holy Ghost is given to those already baptized in order to make them strong and perfect Christians and soldiers of Jesus Christ.

The freedom from prejudice in the use of terms of Protestant origin, remarked upon in the notice of an earlier volume, appears in the title Counter-Reformation, under which is given an account of the movement commonly known among Protestants by that name. It is written from the Catholic point of view, to be sure, but under the circumstances with remarkable fairness and moderation. The long article on the Crusades is scholarly and up to date, and in the articles on Biblical Criticism and on various Biblical books the critical view is frankly given, though the authors themselves declare in most cases for the traditional position. This is particularly noticeable in connection with the Book of Daniel. In a long and instructive archæological article on Cross and Crucifix, the Catholic attitude toward the use of images in worship is clearly stated and defended at some length. Deism is discussed in a fair enough spirit, but, unfortunately, the treatment proceeds wholly along traditional lines and reveals no special insight or independent knowledge.

As usual, there are a number of papal biographies. In this case all the Clements come in for notice, including the apostolic father, Clement of Rome, who appears, in accordance with ancient tradition, long ago discredited by historical scholarship, as the fourth Pope! The elaborate article on Councils contains a careful discussion of the relation between conciliar and papal infallibility, which is summed up as follows:

Conciliar decrees approved by the Pope have a double guarantee of infallibility: their own and that of the infallible pope. . . . It should, however, be borne in mind that the council without the Pope has no guarantee of infallibility, therefore the conciliar and the papal infallibilities are not two separate and addible units, but one unit with single or double excellence.

The Imperial Gazetteer of India. Vols. XV-XXIV, Karāchi—Zīra. New edition, published under the authority of His Majesty's Secretary of State for India in Council. New York: Henry Frowde. $2 net each.

In 1869 the late Sir W. W. Hunter was directed by the Viceroy, Lord Mayo, to organize a comprehensive survey of the Indian Empire, a work which involved the compilation of local gazetteers and their consolidation in a condensed form. This immense task was accomplished in twelve years, during which he visited every corner of the peninsula. The results were published in 128 volumes, the condensation in nine volumes, the first edition of the "Imperial Gazetteer." A second edition of fourteen volumes appeared in 1885-7, and now we have to chronicle the completion of the third edition in twenty-four volumes. To the student of India and the life and thought of the people, it is absolutely invaluable; the information contained in it is far more extensive than in similar works on other countries. The general plan is well indicated by the article, filling 144 pages, on the United Provinces. The physical aspects are described first and, after a sketch of the history, there follow accounts of the people, their races, languages, customs, agriculture, arts and manufactures, trade, famine, administration, finance, public works, army, education, and medical facts.

A careful examination of these concluding volumes greatly strengthens the impression made by the earlier ones of their being a wonderful treasury of interesting and encouraging facts. The mental awakening of the Indian is manifest everywhere. The existence of public libraries is often noted. In one small native State, Kolhāpur, there are fifteen, and eight local newspapers. In the Madras Presidency there are 125 newspapers and periodicals; while in 1904 there were 1,125 books published, of which only twenty-nine were translations; a considerable number were native poems, novels, and plays. In the city of Madras there is a Literary Society with a library of over 45,000 volumes, a Fine Art Society, an Agri-Horticultural Society, a Musical Association, and an Amateur Dramatic Society. Another illustration of the civilizing influence of British rule is the fact that, while the population of the United Provinces is over four millions greater than in 1881, the police force is 5,000 less.

The only error noticed is that the height of Mt. Godwin Austen, as given in the article on Kashmir, differs from that on the map to be found in each of the volumes, as well as the special map of Kashmir. It is difficult also to account for the omission of any reference under the respective words to the Mustagh or Karakoram Range, and especially to the famous Karakoram Pass.

The Privileged Classes. By Barrett Wendell. New York: Charles Scribner's Sons. $1.25 net.

Electing to ride in street-cars at the afternoon rush hours, Professor Wendell has found himself compelled, along with other passengers apparently educated and solvent, to stand while certain sturdy and begrimed representatives of labor, with dinner-pails beneath their widely-separated knees, calmly occupied two sittings apiece. Instead of losing his temper—at least for publication—Professor Wendell, as a philosophical man of letters, fell to musing about the situation, pondering seriously, though with a saving touch of ironical humor, the strange transition by which the privileged class of the old régime, with its admitted right to space, and exemption, and support had given place in our day to the privileged class of wage-earners. What shocked him most was the fact that many of his friends, when consulted about the matter, expressed no surprise, and even thought the new arrangement entirely natural and proper. The essay which resulted from these experiences and meditations, given first as an address before the Twentieth Century Club of Chicago in January last, had the fortune to be garbled by the press and somewhat sharply criticised; whereupon the author wrote it out for the Boston *Transcript*, and now gives it, very properly, the place of honor in his latest book.

One cannot but wish that Professor Wendell would get on with fewer words and less involved and repetitious phrasing; for the readers whom it would be most worth while for him to reach are, as a class, pretty busy. Questions of form aside, however, we are frankly of those who hold his criticism to be timely and, on the whole, much to the point. Professor Wendell is not, of course, the first to show how tyrannous is a majority once the majority has come to power, or how full of grave possibilities is a social order in which the wage-earner may successfully demand such startling privileges as a vested right to work, immunity from discharge save for weighty cause, and support in sickness and old age. It is rather the deft and cultured way in which he pricks the bubbles of our conceit and complacency that makes his writing interesting. Persons of socialistic bent will not relish being told that the real American Revolution is not the war that separated us from Great Britain, but the social change which has led large sections of society to view with equanimity socialistic schemes for the expropriation of private property, that so we may be rid of the embarrassments of great private fortunes; though this is, after all, only what the keenest students of social progress have been warning us of for years. College professors and officials, entangled in the meshes of curricula and administration, yet anxious for recognition and influence, will very likely not thank a mere man of letters, as Professor Wendell is fond of calling himself, for telling them that college education to-day is chiefly notable for its ineffectiveness; yet the fact remains that the college is the least satisfactory part of our educational system, and has urgent need to justify itself. We commend "The Privileged Classes," therefore, as a useful and palatable antidote for national pride and self-satisfaction. To the

weary and hungry it will not, indeed, suffice for a full meal, but its stimulating phrases and flashes of social insight may at least afford the refreshment of afternoon tea.

Science.

The Coming Science. By Hereward Carrington. Pp. 389. Boston: Small, Maynard & Co. $1.50 net.

In the growth of language, a word often gains connotations which cling to it even when it comes to be employed in a sense wholly unrelated to the original meaning. Of this process we have a notable example in the current use of the word "spirit" and its cognate terms. "Spirit" was originally employed to refer to a hypothetical entity inhabiting the body during life and leaving it at death. The derivation shows that it was identified with the breath of life, which for those who first used it thus must have seemed as far as possible removed from the hard, and ponderable, and measurable matter with which their daily activities mado them familiar. When we consider that, as matter is now defined, this very breath is material, we perceive that for us it would be the crassest materialism to identify what we mean by spirit with something merely gaseous; and we are too likely to assume, as some authorities have done, that those who first conceived of the distinction between matter and spirit were thinking in what we know as materialistic terms. However that may be, it seems fairly clear that men who were led to make this distinction between matter and spirit, must, on introspection, have found themselves moved by diverse and often opposed impulses. Some of these impulses were due to the man's surroundings, and these, while powerful, were in the main ephemeral. Others must have been determined by no external influences, and hence must have appeared to arise in an indefinite way from within the man; and these were in the main less powerful than those of the first type, but were on the whole more persistent, less ephemeral. What wonder then that these latter came to be attributed to that elusive breath-like spirit which was already conceived of as maintaining a mysterious existence within the man's body, yet in a measure detached or detachable from it.

Apart from their connection with the hypothetical spirit, these inner promptings came naturally to receive careful consideration; for they were found to guide to a more effective life, and to be thus of the most profound importance. On the one hand, their significance was from the earliest times bound up with religious aspirations and conceptions, and was proclaimed by priest and prophet. On the other hand, their analysis and correlation as practical forces have given to us the science of ethics with all its philosophical and political implications. It is thus, probably, that the word "spirit," which in the beginning referred to what seem to us quite materialistic conceptions, has come to have an ethical and even religious connotation. We speak of our spiritual life when we have in mind the realm of our higher ideals. The spiritually minded man, as we use the phrase, is one who declines to limit his life by the considerations of opportunism, who aims to foster those of his inner impulses which have for him an essential nobility. Thus the word spirit and its cognate terms have gained fixed connotations of an ethical, but more especially of a religious nature. This higher meaning has become so firmly attached to the word "spirit" and its derivatives that we find it difficult to use them without assuming that we are dealing with what is noble or even sacred; and thus it happens that when we turn to what should be a coldly intellectual inquiry as to the significance of the conception of a human spirit, when we ask what its nature is, and what its form of existence, we all feel that we are moving on an ideally high plane, even if we do not assume that we are actually treading upon holy ground.

Only thus are we able to account for the attitude of the average man toward the hypotheses of the so-called "spiritualists"; an attitude held even among those modern students who, wishing professedly to free themselves from all emotional entanglements, now ask to be called "spiritists." The world is nowadays fairly flooded with books proclaiming this position. The writers, like our author, announce themselves as exponents of a "coming science," and endeavor to confine themselves almost frigidly to the intellectual task of sifting scientific evidence. Nevertheless, the communications which are allowed to appear in such journals as the Proceedings of the Society for Psychical Research indicate clearly much warmth of emotionalism in the wide body of those interested in the phenomena; and beyond this the same sense of the dignity of the research in question pervades the writings of those more or less learned and logical authors who accept the position of judges as to the trustworthiness and significance of the experiences above referred to. These experiences, we may add, are recorded by persons wholly given up to the view that they deal with something that is not only occult, but also sacred.

This attitude is well represented by Mr. Carrington. His work is highly commended in an introduction by Dr. J. H. Hyslop, formerly a professor of logic and ethics, who has written an excellent small logic, and has made certain really keen contributions to details of ethical theory; and Mr. Carrington in his preface pictures himself to us as a cool, intellectual student. When, however, we turn to the substance of the book itself we find ourselves at once in a totally different mental atmosphere. In the very first chapter we are told (p. 2) that "the world has passed through various stages of evolution. First of all, there was the purely animal state" in which "brute force was the ruling power":

> Then the era of *mind* began to dawn. (p. 3.) . . . Mind was first of all devoted, probably, to the furtherance of the desires of the individual organism; but later . . . pure abstract thinking became possible, and altruism . . . began to show itself through the darkness. . . . And with this higher (sic) knowledge began to develop that spiritual (sic) self and consciousness of which we are just beginning to catch the first signs. . . . This spiritual side of man that is just becoming manifest may possess powers and potencies. . . . as relatively great when compared to the purely mental world, as that was above the physical and animal world.

This might pass without dissent as a gentle homiletic; but as the writer asks us to look upon him as a logical scientist, we must note the unwarranted and totally erroneous assumption that the "spiritual consciousness" is apart from mere mind; that it is anything other than that special impulsive part of mental experience that satisfies our ideals, which latter, be it noted, are also mental.

Our author then reminds us (p. 5) "that there are few of us who do not admire, not to say envy, any man or woman in whom this spiritual side is highly developed"; there being "a spiritual side latent in all of us, awaiting its development." He thus clearly attaches religio-ethical attributes to his concept of the spiritual; and later goes still further in this direction (p. 14):

> Good health does not mean only . . . a healthy animal, but also a more highly educated and advanced, a more *moral* and *spiritual* individual, since the bodily health . . . does, without any doubt affect both the mental and moral nature of man.

Having given these noble connotations to what he thus describes as the spiritual life, he at once turns to the question (p. 17) "whether we consider ourselves the resultant of mere physical forces, or as a spiritual essence or entity having persistence"; and then without more ado he lapses once for all into a discussion of the phenomena presented to us by the defenders of spiritism, and of the arguments against and in favor of the theories they advance.

It is needless to say that so long as a man allows himself to study the subject with the religious or ethical bias implied in such a mode of approach, he will almost certainly fail to discriminate the true from the false, and will

be unable to advance our comprehension of the deeply significant problems relating to the nature of human personality, and to the limits of its existence. Naturally, therefore, we discover in Mr. Carrington's work nothing new which is of special value, and small justification for proclaiming the birth of "the coming science." Beyond this proclamation the book does not differ in its main characteristics from many others of a type for which our publishers find a profitable market among the many men and women who look upon spiritistic inquiries as quasi-religious, and who, enjoying mysteries as such, delight in re-reading the records of the same alleged facts, and the same theoretical explanations of them. For our author does not pretend to give more than "a very rapid survey of the field of psychic research, and of the chief theories that might be advanced by way of explanation of the facts"; nor does he attempt "to cite any large number of cases, or make any great showing of proof, for the reason that this field has been covered in many volumes on this subject" (p. 389).

When the American battleship fleet found cholera in Manila on its first stop in that port, and the sailors were consequently forbidden to land, and so to spend their money, the Manila merchants raged, and the press, which as advertisers they control, inaugurated a new campaign of criticism of the Health Bureau. This has elicited a valuable and interesting pamphlet of 131 pages, entitled "A History of Asiatic Cholera in the Philippine Islands," dated at Manila, November 5, 1908, and written by Dean C. Worcester, Secretary of the Interior, in the Philippine government, and therefore executive superior of the Bureau of Health. He brings out many hitherto unnoted facts and figures regarding cholera under the Spanish régime, showing that it appeared at least as far back as 1819; that the mortality in the epidemics, and notably that beginning in 1882, was far higher than published figures go to show, and very much greater than under American rule; that officially the Spanish government endeavored to suppress knowledge of it, and to combat it by methods of secrecy; and that it is more than a presumption that cholera has been endemic in the islands at least since 1882. Mr. Worcester then enters into very frank discussion of the present sanitary organization of the islands, the harm done to public health by petty politics, by a press inspired by political motives, by lack of cooperation on the part of the municipal government of Manila, and by the incompetency of Filipino district health officers. In short, for outspokenness, this document is unique among Philippine official documents to date. Of the 202,172 cases and 134,102 deaths from cholera that had occurred in the Philippines since the American occupation to the date of the foregoing document, only 248 cases and 124 deaths have been among Americans, "and this in spite of the fact that during much of this time there have been a large number of American soldiers in the islands." Along the same line, as minimizing the terrors of the Philippine climate for whites, is a note in the Philippine *Journal of Science* (Section B, Medical Sciences, Vol. III, No. 4, pp. 349-352), which cites figures to show "the passing of abscess of the liver among Americans in the Philippines." It remarks on the terror inspired by amœbic dysentery up to 1903, and credits the researches of the Manila scientists with the removal of this terror, and the discovery of methods of prophylaxis whereby "nowadays few amœbic patients lose any time from their duties," and whereby "an intelligent person can learn in a few lessons how to take the necessary colonic injections." In the same number is a paper on "Health Conditions in the Philippines," by W. S. Washburn, chairman of the Philippine Civil Service Board, and himself a physician, which is also highly optimistic in tone.

We have had frequent occasion to refer to Miss Gertrude Jekyll's sound knowledge of garden-craft. Her acquaintance with cultivated plants is wide, and her good taste in turning decorative plants to the best account is everywhere recognized. Therefore a book on gardens, written by her for children ("Children and Gardens," Charles Scribner's Sons), must receive a hearty welcome. The pretty volume before us is a strange medley of odds and ends, put together in rather a whimsical but attractive fashion, with a single end in view, namely, to interest very young children in garden-plants and their surroundings. It has a good deal of sound elementary botany, for the most part so completely sugar-coated as to make the disguise perfect. A child who should appropriate the botanical truths here presented in the most familiar form, would know far more about the structure and the work of vegetation than many amateur horticulturists. If Miss Jekyll had not brought into the book quite so much about cats and cooking, one could recommend the pages to grown-up garden enthusiasts. But, as it is a volume for children, we will let it go at that, and say that adults who read it aloud to children will learn much themselves, especially if the interested listeners do their whole duty in asking questions.

The very title of Otto Lipmann's new volume, viz: "Grundriss der Psychologie für Juristen" (Leipzig: Barth), indicates its modern character. It does not profess to cover the whole subject of psychology, but only some of its leading problems, where the science comes into practical contact with law and its applications.

Brig.-Gen. William Price Craighill died at Charlestown, W. Va., January 18. He was born in the same town in 1833, graduated at West Point, served through the civil war in the Union army, and then and later took part in many engineering enterprises. During the days of the civil war he compiled the "Army Officer's Pocket Companion," which proved of much assistance in the volunteer army, and translated Jomini's "Précis de l'art de la guerre," and Dufour's "Cours de tactique," the late Col. Mendell assisting in the latter translation. In 1894 he was chosen president of the American Society of Civil Engineers.

News comes from India of the death of Major Percy B. Molesworth, at the age of forty-one. He was stationed at Trinkomali, Ceylon, where he made a number of valuable observations of Jupiter and the other planets.

Drama.

"The Barber of New Orleans," the new romantic American play by Edward Childs Carpenter, which William Faversham has just produced in Daly's Theatre, is evidently the work of a beginner, but in some respects it contains more of promise than many recent pieces of superior literary quality and more skilful construction. It shows, for instance, originality and discernment in the choice of a subject, imagination in the invention of details, an appreciation of local color, and an instinctive sense of effective theatrical situation. Moreover, it is really an American play. On the other hand, it is dilatory in action, confused in plot—owing to the employment of two distinct motives—amateurish in arbitrary use of coincidence, and entirely conventional in its development. In selecting 1804 for the date of his play, the author has broken comparatively fresh dramatic ground; and, manifestly, the notion of a Spanish plot against the newly established authority of the United States, to be foiled by a patriotic American, is rich in theatrical possibilities, of which ample indications are offered in the opening scenes; but political and national interests are unwisely subordinated to the transparent problem of the heroine's color and the creation of passionate entanglements which create no suspense or illusion, because their solution is perfectly obvious. Such incidents as the improvised sale of the lady (without documents or proof of any kind), her purchase by the hero by means of a convenient lottery prize, and her ultimate identification are not only patent and futile theatrical tricks, but, by diverting the course of the play from its original channel, affect it disastrously in more ways than one. If Mr. Carpenter had not imposed his ancient and clumsily handled Octoroon motive upon the conspiracy, he might have produced a much more valuable play. But, even as it stands, the piece possesses many qualities which rarely fail to please the general public, and, as it is beautifully mounted and fairly well acted—though with but little of the true romantic glow—by Mr. Faversham, Miss Julie Opp, and their associates, it is likely to prosper. On the whole, the production is creditable, though a long way below the level of "The World and His Wife."

It would not be a very difficult matter to ridicule "The Vampire"—the joint composition of Edgar Allan Woolf and George Sylvester Viereck, produced in the Hackett Theatre on Monday—and laugh it out of court, as pretentious and futile rubbish. but, for all its absurdity, it shows dramatic imagination as well as literary ability. Assuming to be scientific and intellectual drama, it is conspicuously lacking in scientific knowledge and common sense. All the phenomena of telepathy, mesmerism, clairvoyance, Egyptian occultism, and mediæval necromancy are controlled by this modern vampire, who feeds his own imagination by robbing other brains of their ideas. A great literary genius himself, he cultivates the friendship of the finest minds only to prey

upon and destroy them, and then, having appropriated their riches, throw them aside like squeezed oranges. There is the germ of a dramatic idea in this, but Messrs. Woolf and Viereck have sterilized it by subjecting it to preposterous melodramatic treatment and involving it in obvious absurdities which make their pseudo-science altogether childish. Parts of the story are well, even eloquently, told, and some of the scenes have a certain theatrical effectiveness, but the piece will seem dull to the ordinary playgoer, while the more thoughtful will find it pretentious and shallow.

"The Easiest Way," the latest play of Eugene Walter, which was produced in the Stuyvesant Theatre on Tuesday evening, needs only a few lines by way of record. Under pretence of enforcing a moral, which is too trite to be of any particular value, it makes a bid for popularity by dealing in bluntly realistic fashion—unrelieved by any touch of literary fancy or dramatic invention—with those coarser phases of city life which have a special attraction for the vulgar, but in thoughtful and decent minds can awaken only sentiments of pity and disgust. Briefly, it is a study of successive steps in the degradation of a fallen woman, with incidental glimpses at some of the darker features of the lower theatrical life. It is not unveracious in detail. On the contrary, regarded as a bit of reporting, it is not badly done. But it is cheap, common, unwholesome stuff, of no artistic, dramatic, or didactic value, which will not add to the reputation of the playwright or reflect any credit upon the management of Mr. Belasco, even if, as a bit of raw sensationalism, it should prove profitable as a commercial speculation. It is a play that would have been impossible in a respectable theatre before the demoralization of the public taste by a shameless press.

John Luther Long's new play, "Kassa," will be presented in the Liberty Theatre Saturday evening, with Mrs. Leslie Carter as the heroine. From the advance notices the piece appears to be a romance full of lurid passion and sensational incident.

Yet another independent dramatic society has been organized in London, the Fortune Playhouse Society, which has begun work with a presentation of the Chester mystery plays. "Pippa Passes," "Comus," and "As You Like It" are next to be undertaken.

Rudolf Besier has written a play of modern life which is soon to be produced at the London Vaudeville Theatre, with Mrs. Patrick Campbell as the heroine and Lynn Harding in the chief male part. It is called "Olive Latimer's Husband." The originality of the play consists partly in the fact that the husband, who is its mainspring, so to speak, is only heard of, never seen.

Levin Ludwig Schücking, editor of the letters of Levin Schücking and Annette von Droste-Hülshof, has written "Shakespeare im literarischen Urteil seiner Zeit" (Heidelberg: Carl Winter).

Friedrich Gundolf has evidently stepped on dangerous ground in undertaking to furnish a new German translation of Shakespeare, "Shakespeare in deutscher Sprache," intended to be an improvement even upon Schlegel. The first volume contains "Coriolanus," "Julius Cæsar," and "Antony and Cleopatra" (Berlin: Bondi). The author draws freely upon the versions of his predecessors; his chief changes consist in making the rendering more literal and more modern.

John E. Ince, the veteran comedian, who had appeared with Edwin Booth, Barrett, McCullough, Adelaide Neilson, Clara Morris, and Mrs. John Drew, died January 18 at Sheepshead Bay. He was born sixty-eight years ago at Wigan, England. He had taken parts in the important plays by Shakespeare and in "The School for Scandal," "Wild Oats," "London Assurance," "Michael Strogoff," "Trial by Jury," and such comic operas as "Pinafore," "Pirates of Penzance," and "Mikado." Recently he appeared as Major Swan in "Pudd'nhead Wilson," and his last appearance was in 1907 in "The Unexpected Happened." For the last ten years he had conducted a dramatic school in this city.

Ernst von Wildenbruch, the best known of Germany's elder dramatists and a poet of high national reputation, died in Berlin January 15. He was born at Beirut, in Syria, where his father was Prussian consul, studied in the University of Berlin, and after a brief military career took up the profession of law. He fought in the war of 1866 against Austria and in the campaigns of 1870-71 in France. Fruit of his war experience were the *Heldenlieder* "Vionville" (1874) and "Sedan" (1875). After experimentation with foreign historical drama, "Die Karolinger," "Christoph Marlow," "Der Mennonit," he began with "Die Quitzows" (1888), a series of plays drawn from Prussian and German history, on which his popularity is mainly based. Among these are "Der Generalfeldoberst" (1889), "Der neue Herr" (1891), "Der Junge von Hennersdorf" (1896), "Heinrich und Heinrichs Geschlecht" (1896), and "Die Tochter des Erasmus" (1900). From his prolific pen have also come several volumes of fiction (the last, "Semiramis," 1904), lyrics, and humor. That swelling patriotism which Germans admire in their *kulturgeschichtliche* imaginative literature, and a mastery of stage technique, are his most striking qualities.

From Berlin the death is announced of Georg Kruse in his seventy-ninth year. He was for many years director of the Berlin National Theatre, and was the author of "Sie Weint," "Sie ist Stumm," "Kriegsgefangen," and "Roland von Berlin."

Music.

The Evolution of Modern Orchestration. By Louis Adolphe Coerne. New York: The Macmillan Co. $3 net.

Instrumentation. By Ebenezer Prout. Boston: Oliver Ditson Co. 75 cents.

Orchestration is the youngest branch of music, being not much over a century old, in the modern sense of the term; but so fascinating is it to the public and so easily is a working knowledge of it acquired, compared with a mastery of the other branches of music, that most modern composers, in the words of Tchaikovsky, "strive to atone for their extraordinary poverty of invention by exaggerated coloring." History shows that in all arts a decay of creativeness is likely to coincide with a craze for technical skill and complexity, such as we find in the works of Richard Strauss, Max Reger, and their imitators. This craze manifests itself in the coloring as well as in the structure of the music, and it has degenerated into a sport—a race to see who can be the most extravagant and sensational.

While deploring this latest phase of composition, one cannot but feel that music owes to the newly acquired art of coloring much of its increased popularity, its power over the masses, its effectiveness in depicting moods and intensifying dramatic emotions. Each original composer has, moreover, his own method of orchestrating; as Professor Prout remarks:

> It would be no more possible to an experienced musician to mistake a score of Mozart for one of Wagner than it would for an art connoisseur to mistake a painting by Titian for one by J. W. M. Turner.

Strange to say, Dr. Coerne is the first musical scholar who has undertaken to explain these differences by writing a comprehensive history of orchestration. Lavoix's "Histoire de l'instrumentation" is a comprehensive work, but it appeared before "Parsifal" had been produced, and before some of the best colorists of the nineteenth century—Saint-Saëns, Tchaikovsky, Dvorák, Grieg—had won their full meed of recognition. The nineteenth century therefore seemed to Dr. Coerne a fertile field for research, and to this, after giving a bird's-eye-view of what had been done by preceding generations, he devotes most of his space. An appendix of ninety pages includes illustrative extracts from the works of the thirteen composers who, in the author's opinion, have done most to advance the art of instrumental coloring—Monteverdi, Scarlatti, Haydn, Mozart, Beethoven, Weber, Berlioz, Mendelssohn, Wagner, Saint-Saëns, Tchaikovsky, Dvorák, Richard Strauss.

Like most writers on this subject, Dr. Coerne overrates Berlioz as an innovator and fails to do full justice to Weber and Schubert. Berlioz is responsible for the modern tendency to make extravagant orchestral demands, and he invented many ingenious combinations of instruments; but it is not true that he "discovered the richness of pianissimo brass effects"; Schubert did that before Berlioz, as, for instance, in the "Fierrabras" overture, written in 1823, when Berlioz was only twenty years old. Berlioz could not have known Schubert's orchestral works; but he did know and worship the operas of Weber, and from those he learned many of the things for which he has received credit. It was Weber who inaugurated the orchestral use of characteristic sounds, as

distinguished from beautiful sounds (though the germs of such a procedure may be traced back to Méhul and Gluck), and Weber also made a subtle dramatic use of leading motives long before Berlioz, who usually is lauded as the originator of this device. Dr. Coerne gives an eloquent account of Wagner's orchestral glories and the novel means by which they are obtained. He points out the shortcomings of Brahms as a colorist, and, on the other hand, he notes that Grieg's orchestration is "tender, fervent, weird, brilliant, stormy, popular, effective." To Richard Strauss, as representing the latest phase in orchestration, much space is devoted in which the author ingeniously defends this composer against the charge that he forces the instruments into unnatural registers, making the piccolos play trombone parts, as one lampoonist has maintained, and *vice-versa*. In the Strauss music each violinist finds before him difficulties such as formerly only the solo violin was expected to cope with. To the wood-wind are assigned passages that Wagner would have hesitated to write. The players may grumble, but did they not also grumble at Schubert and Mendelssohn for writing passages that now seem child's play?

America is not forgotten in this volume; indeed, Dr. Coerne accords it more honor than it deserves. In addition to Paine, Buck, Foote, Chadwick, MacDowell, and Parker, who have been so fortunate as to have had opportunity to show what they can do, "many another American could be pointed to who, even now, is worthy of being classed in the first rank and who would undoubtedly rise to epoch-making greatness were the opportunity but granted him." We doubt this; our country has produced some good orchestral writers, but none of them has done anything distinctively national or individual in the line of instrumental coloring.

Perhaps it is fortunate that orchestral din and complexity have reached such a climax in Strauss and his imitators, for a reaction is in sight, which will restore color to its normal place as a means and not an end in itself. For this reason one must welcome the issue of a new edition of Professor Prout's primer on instrumentation. It was written while Brahms, Raff, and Wagner were still living, but is particularly timely now, because students can learn from its pages how the older masters were able to obtain with smaller orchestras effects as ravishing, and almost as varied, as those of our day. Young composers, in particular, will do well to heed his hint that they should not write too difficult passages. Such passages, if by Brahms or Wagner, the players will take the trouble to learn; not so, if they are by Smith or Jones.

There has just been published at Paris the frank, natural, intimate "Lettres de Georges Bizet" (Calmann-Lévy), with all their touching details of life in the French school at Rome (1857 to 1860), and then during the tragic Commune of 1871. Bizet is known to the world at large by the music of his "Carmen"; it has been the pleasure of many besides Nietzsche, who will be glad to make acquaintance with the man.

The revival of Mozart's "Marriage of Figaro" at the Metropolitan Opera House has proved one of the surprises of the season. This opera has never been really popular here; the recitatives usually dragged, the arias seemed too numerous, and the action was often unintelligible. Thanks to Gustav Mahler, the Mozart specialist, all this has been changed. He omitted some of the arias, lashed the singers in the recitatives, and brought about an acting ensemble that allowed none of the significant details of the plot to escape the attention of the audience. He was aided by a cast that could not be duplicated anywhere—Mme. Sembrich as Susanna, Mme. Eames as the countess, Miss Farrar as Cherubino, and Mr. Scotti as the count, who, together, completely demolished the legend that present-day artists cannot sing Mozart's music.

"Die Meistersinger" will be sung on Friday evening at the Metropolitan Opera House. On this occasion Carl Jörn of the Royal Opera House in Berlin will make his first appearance here as Walther von Stolzing, and Emmy Destinn will be heard for the first time as Eva.

Walter Damrosch and the New York Symphony Orchestra will give another Beethoven cycle at Carnegie Hall, at which will be performed the great master's nine symphonies grouped with other important works in chronological order. The dates are February 4, 11, 18, 25, March 4, 11.

The second series of regular subscription concerts of the New York Symphony Society will include a Tchaikovsky cycle, consisting of five concerts, February 21 and 28, March 7, 14, and 21.

Louis Étienne Ernest Rey, who, under the name of Ernest Reyer became one of the most famous of modern French opera composers, died January 5 in Toulon. He was born at Marseilles in 1823. Though he took music lessons as a child, he had no thought of a musical career. At sixteen, he went to Algiers as a government official, but continued to play the piano, and soon discovered that he could compose songs which the public liked. In 1848, he went to Paris and continued his musical education. Among his friends was Théophile Gautier, who provided him with the texts for several works, including the ballet "Sacountala." His first opera, "Maître Wolfram," was staged in 1854. Others followed, but his first great success was "Sigurd" (1884). His last grand opera, "Salammbo," was produced in 1892, and soon became popular. Reyer was also one of the leading French writers on musical topics. He followed Berlioz as critic of the *Journal des Débats*, and in 1875 issued a volume entitled "Notes de musique." For a time he was librarian of the Grand Opéra.

Art.

THE ROYAL ACADEMY'S NEW DEPARTURE.

LONDON, January 2.

A new departure by the Royal Academy is an event to be chronicled. For some years past now, Academicians have questioned the possibility or advisability of continuing the Winter Exhibition of Old Masters. For one thing, the supply of old masters in England is not inexhaustible. One year, there was a show of Leightons; another, a show of Watts. This winter, the problem has been solved by devoting the Winter Exhibition entirely to the collection of modern work, mostly British, made by the late George McCullough. It is really little more than another version of the Summer Exhibition, the pictures better hung, but no better in themselves, representative of nothing in particular, except the taste of one collector. Mr. McCullough was a rich Scotch-Australian, who began to collect, towards the end of the eighties, just at the waning of that happy period for the British artist when the Academician could not paint his pictures fast enough for his patrons, when he built palaces in Kensington and St. John's Wood. With the nineties, there was a marked change. The influence of outsiders, of Whistler above all, began to be felt, and there were disastrous sales of the great collections made by City men during the Academy's "boom." Millionaires decided that it was safer to buy old masters. Everybody knows upon what pitiful days, financially, British art has been steadily falling. But, through all the evil times, McCullough was one of the few who remained faithful and kept on conscientiously buying the pictures of the year at Burlington House.

Certainly, honesty compels one to confess that one's taste in these matters differs radically from Mr. McCullough's. The whole exhibition seemed like some monstrous ghost of the last twenty years of press views at the Academy. Here are the old favorites in the old centres: Leighton, with his models twisted into those impossible poses of The Garden of Hesperides, and arranged in that lifeless procession of The Daphnephoria, which his admirers of old always praised as so learned; Tadema, with the painstaking archæological elaboration of The Sculpture Gallery; Millais, with his Lingering Autumn, fatally facile and faithful to nature. And here were the old Academical favorites, Cooper, Goodall; here the old Academical anecdote in a Marcus Stone or an Andrew Gow; the old Academical landscape in a MacWhirter or a David Murray; here, the reminder

of the ascendancy of the Venetian subject, when De Blaas and Van Haanen, Luke Fildes and Henry Woods, were its prophets; here the realistic flights of the Newlyn School, and the "painted photographs," as the severe called them —the whole a record of dead fashions.

My impression was only strengthened when, among this array of pictures of the year, I found here and there paintings of great distinction or genuine interest. Of these, the most striking are two Whistlers, beautiful Whistlers that would be striking anywhere—the early portrait of himself in a white painting coat, holding his brushes, and the upright Valparaiso, Blue and Gold. The dignity of the portrait, with the subtle modelling, the animation, the character of the face, the harmony of the quiet color scheme, asserts itself in the midst of Academical banalities; and not even the strident hues of the Academical masterpiece can rob night of its beauty and mystery in the Valparaiso, with the boats drifting out of the blue shadows, the ships standing like vague phantoms against the dusky hills, and the pale lights trailing their gold through the misty waters. You cannot look at this nocturne again without again wondering at the painter's power to work anew on his canvas the miracle of night. Fortunately, there are other pictures in the collection to keep the Whistlers in countenance. In the same room with them hangs Master Baby, that large portrait group of mother and child, which is one of the best pictures ever painted by Sir W. Q. Orchardson. Another of the exceptions is a fine landscape, Marshlands, golden with sunlight, decorative in arrangement, by Cecil Lawson, who lived too short a time to carry to its full accomplishment the promise he gave. There are two interesting examples of William McTaggart, a Scotch artist, who is only beginning to be known outside of his own country, but to whom members of the Glasgow School look up as one of the chief influences in their development. His seas and coasts are full of light and air, and though he may not succeed, sometimes, in keeping his figures enveloped in the atmosphere —an example is Love's Whispers, now exhibited—it seems to be the excess of his interest in them that has forced them out of the picture. McCullough also patronized some of the younger Academicians, who prefer the study of nature to the repetition of old formulas, men like Clausen, Edward Stott, La Thangue, whose pictures I have already discussed in my recent notices of the Academy. There are also several Sargents, though none of his most distinguished; two typical canvases by J. J. Shannon; two of Edwin A. Abbey's large decorative historical arrangements; and one Watts, the Fata Morgana, which represents him but indifferently. There is an early Millais, Sir Isumbras at the Ford, the Pre-Raphaelite influence still strong in it. McCullough could sometimes stray from the Academical fold. He bought Burne-Jones: Love Among the Ruins, and the more anæmic Sleeping Princess and Psyche's Wedding. He bought landscapes by Mark Fisher and occasional paintings of the Glasgow School. And the collection is brought down to today with a small picture by Orpen, and a drawing by Rackham.

In the choice of foreign work, the collector's preference likewise ran to the Academic. Dagnan-Bouveret, who painted portraits of both Mr. and Mrs. McCullough, and Bouguereau are prominent. But here, too, there are exceptions. The present generation may not accept Bastien-Lepage as the genius he seemed to his contemporaries, but only by a long stretch of imagination could he be called Academic, while there is no denying that his work seemed revolutionary at the time, and that his influence was widespread. The more modern ideals of realism are very different, but in The Potato Gatherers, Pauvre Fauvette, and Pas Mèche, there is a sincerity in the very brutality with which nature is copied, that gives a certain dignity. It is a surprise to come upon one or two Dutch pictures, like the fairly good Dutch Landscape by James Maris, and the exquisite little At the Well, by Matthew Maris, as full of detail as a Pre-Raphaelite canvas. painted with a delicacy and refinement no Pre-Raphaelite ever rivalled, even approached. With one fine Harpignies, and two or three Thaulows, the list of good work from abroad is fairly complete.

The collection includes sculpture, and it is almost as great a surprise to find Rodin among the sculptors as Whistler among the painters. His Kiss, in marble, is set in the centre of the hall. The large bronze of the Orpheus and several others by John M. Swan reappear from Academies so recent that I need only mention their presence, and there are two small statuettes of St. George and Comedy and Tragedy, by Alfred Gilbert.

Popular Academicians are hardly a welcome exchange for Rembrandt and Velasquez, Holbein and Franz Hals, Reynolds and Gainsborough. It is to be hoped, therefore, that this year's new departure will not establish a precedent.

N. N.

Count Domenico Gnoli, librarian of the National Library at Rome, and one of the chief authorities on the actual monuments of the Holy City, has compiled under the title "Have Roma" (Rome: Walter Modes) a compendium of its arts and buildings. He takes up each topic chronologically, and illustrates it by views from the earliest to the latest examples. Thus, in the section "Churches," he begins with the Basilica, and comes down to the Torlonia Chapel in St. John Lateran. His narrative enables us to follow with unusual clearness the evolution of architectural styles, of designs, and of special parts. The same is true of the chapters devoted respectively to sepulchral monuments, to piazzas and fountains, and to gardens and villas. In a brief epilogue, Count Gnoli mentions the changes and constructions since 1870. Not least interesting are three reproductions of plans of the city in 1490, 1600, and 1870. The hundreds of half-tones admirably illustrate the text, and the book, octavo in size, is easily carried. The author has penetrating ideas not less than a firm grasp of facts. As a sample, we quote this pregnant sentence:

> The law which forbade burial in churches has almost broken asunder the bonds between the church and life, and has quenched the pious affections for which it was the sanctuary of the family and of the community, isolating it in the cold solemnity of worship.

Albrecht Dürer has recently been made the theme of two interesting publications, both of which regard him as a man rather than as an artist. One, by E. Heidrich, is entitled "Albrecht Dürer's schriftlicher Nachlass, Familienchronik, Gedenkbuch, Tagebuch der niederländischen Reisen, Briefe, Reime, etc." An introduction is furnished by H. W. Wölfflin (Berlin: J. Bard). The other is a smaller work, by M. Zucker, "Albrecht Dürer in seinen Briefen" (Leipzig and Berlin: B. G. Teubner). This work, which is illustrated, constitutes the second volume of the series Deutsche Charakterköpfe.

A recent discovery made by the Italian excavators at Phæstos, in Crete, is of peculiar interest. At the northeastern corner of the site were found a number of tablets, consisting of round discs about six inches in diameter, covered on both sides with symbols which are not drawn or engraved after the usual style, but each printed from a special type. We have thus an example of typography going back about 4,000 years ago—fresh evidence of the extraordinary inventiveness of the early Cretans. The signs used on these tablets are heads, human forms, figures of animals, birds and fish, trees and plants, as well as pictures of utensils. They are arranged between lines drawn in the form of spirals from the centre to the periphery of the discs.

Fresh discoveries have been made at Prinia, a Greek site near Gortyna, in Crete. The excavators explored the remains of the archaic Greek temple, previously discovered. Remains of a second temple were brought to light, differing from the first in having a back chamber, or *opisthodomos*, evidently used as a storehouse, as in it were found large storing vessels decorated with reliefs. Below the hill to the southwest appears to have been a cemetery. Here was unearthed a *stele* with a relief of the figure of a woman working the distaff. Further discoveries on this site are expected.

The National Academy of Design will hold its spring exhibition in the galleries of the Fine Arts Society in this city from March 13, to April 17. The jury of selection consists of J. W. Alexander, Hugo Ballin, William Verplanck Birney,

Carlton T. Chapman, Walter Clark, B. West Clinedinst, E. Irving Couse, Elliott Daingerfield, Louis Paul Dessar, Paul Dougherty, Frank Vincent Dumond, C. Warren Eaton, Ben Foster, Albert L. Groll, William H. Howe, Francis C. Jones, William Sergeant Kendall, J. Francis Murphy, Leonard Ochtman, Walter L. Palmer, Edward W. Redfield, William Thorne, R. W. Van Boskerck, Douglas Volk, H. W. Watrous, J. Alden Weir, and William J. Whittemore. Samuel Isham, Frederick W. Kost, and Herbert Adams will form the hanging committee.

An international exhibition of pictorial photography will be held at the National Arts Club, beginning February 2. This will be the most comprehensive and representative exhibition of the kind ever held in this country, comprising work by the leading pictorial photographers, both at home and abroad.

Among the exhibitions at the dealers' galleries in this city are sculptures by Henry Clews, jr., at Knoedler's, till January 23; works by D'Espagnat and Zandomeneghi, Durand-Ruel's, January 30; paintings, J. H. Jurres, Kraushaar's, January 30; portraits and other works by Howard Gardiner Cushing, Montross's, January 30; watercolors, Henry Plymton Spaulding, Klackner's January 31; early Spanish art, Ehrich's, February 1.

In place of Achille Jacquet, deceased, the French Académie des Beaux-Arts, has elected the engraver Charles-Albert Waltner, a native of Paris, who won the Prix de Rome in 1868. He is best known for his renderings of Rembrandt, and also of Gainsborough, Lawrence, and Hoppner.

Finance.

A YEAR OF REFORMED BANKING.

Many evils and abuses which the panic of 1907 brought into strong light have been left untouched by the reforms which that episode indicated as desirable or perhaps necessary. The inelastic currency has not been remodelled; few people take seriously the so-called emergency device enacted by Congress last spring. Nothing has been done to safeguard national banks against the results of an excessive "redeposit" of their own reserves in banks of a distant city—perhaps the chief cause of the general blockade of depositors' funds which occurs in every great American panic. But in one direction there has been quick and thorough reform, which will probably prevent recurrence of the worst phase of the New York panic of fifteen months ago. Looking back at the years of misgiving over the restrictions upon trust companies, and over the exploits in "chain banking" by unscrupulous promoters, and recalling the attitude of helplessness in the face of the recognized danger, which was taken by the most experienced financiers, one finds it difficult to realize that in the twelve past months the laws governing these institutions have been so completely reconstructed as to make them a model for both State and national legislation. If, under the strain of 1907, New York showed points of weakness, such as were exhibited by no other financial market, at all events it is New York which has promptly taken the lead in salutary reform.

The credit for this achievement belongs largely to the patient and persistent labors of the Superintendent of Banking, Clark Williams, who came into office on the very eve of the crisis of 1907. In his report of a year ago, Mr. Williams reviewed the catastrophe and set forth his proposals of reform. In his second annual report, submitted to the Legislature last week, he reviews the achievements of the after-panic year. After referring to the excellent work of the bankers' commission named by Gov. Hughes, Superintendent Williams says:

> Twenty bills which were drawn in the department and introduced as committee measures, became law. Not less than one hundred and fifty measures affecting banking institutions were scrutinized by the superintendent or his deputies. To the credit of our legislative system it may be noted that of this vast volume of proposed statutes, no measure which might appropriately be termed "panic legislation" received the approval of the banking committees.

The important changes summarized by Mr. Williams apply a conservative cash reserve requirement to the trust companies; prohibit the ownership by one banking institution of more than 10 per cent. of the stock of another; restrict the opportunities of the "dummy director" by stipulating ownership of at least ten shares as a qualification for the position of director; require, as a preliminary to the opening of branches by trust companies and the organization of new banks, the formal assent of the banking superintendent; reduce the maximum loan to be made to a single borrower from 40 per cent. of the lending institution's capital and surplus to 25 per cent.; regulate with great precision the "syndicate loan"; empower a savings bank, with the department's consent, to raise money in an emergency through pledge of its securities; and place in the hands of the Banking Department, instead of in the hands of private individuals with a "pull," the duties of liquidation and receivership of insolvent concerns.

This mere enumeration gives a fair notion of the extent to which the evils exposed in the stress of panic have been remedied. To take only two instances: The receivership of the Home Bank of Brooklyn, the first under the auspices of the Banking Department, was completed in forty-two days, with counsel and receivers' fees of $666, whereas the Knickerbocker Trust receivership, under the old law, lasted five months and involved fees of $80,000; and that of eight other insolvent banks and trust companies in Greater New York lasted on the average six months, with fees ranging from a minimum of $20,500 to a maximum of $67,000. Moreover, the prompt return of patronage and prosperity to the trust companies which were subjected to so severe a trial in 1907 has been in great part a result of public knowledge that the old order had passed away, that conservative safeguards had been devised, and that the State was really protecting the depositor's interests.

With so comprehensive a programme already enacted, the Superintendent naturally has only a few specific recommendations to make, but they are important. First, he urges, as he did last year, that each kind of financial institution be kept within its own proper field. He notes such encroachments as the operation of interest or "savings bank" departments by commercial banks and department stores, and especially the payment of high interest on small deposits, with a view to drawing patronage away from the savings banks. The second suggestion, addressed particularly to the banking institutions themselves more than to the Legislature, is that New York city trust companies and "non-member" State banks be formally admitted into the Clearing House. This is sound policy; and if, for reasons of tradition or from desire to retain unchanged the present machinery of clearing-house supervision, the existing Clearing-House Association is unwilling to admit the trust companies on an equal footing, then the trust companies ought to organize a clearing house for themselves. Mr. Williams justly remarks:

> Had such an association of trust companies existed last year, whether or not within the present Clearing House, the action finally taken by the then newly organized trust companies' committee would have lessened to a great extent the general financial distress.

Taken in connection with the events of the past twelve months, the gratifying record of the Banking Department abundantly warrants the Superintendent's closing words:

> The panic, the suspension, the resumptions, the general house-cleaning, the remedial legislation, the material increase in reserves, the increasing appreciation of trusteeship, the growing conservatism, and the complete return of public confidence—these factors, together with the reorganization of the department, have contributed to place the general banking system of the State of New York upon a basis of which your honorable body may be justly proud.

The Office Clerk is instructed to cut out the advertising columns of THE NATION as a guide for the Purchasing Committee.
To many libraries and to many individuals, books advertised in THE NATION are at once recommended as desirable.

The Nation.

NEW YORK, THURSDAY, JANUARY 28, 1909.

The Week.

There was a cutting edge to the Governor's speech Friday night before the Hughes Alliance in this city. His main theme was direct nominations, which he urged as the best available means of making party government freer, purer, and stronger, and so capable of rendering the State better service. But Gov. Hughes's free handling of the bosses and the interests that are opposing his reforms was the thing that fills them with alarm as well as rage. It showed that he is out to fight them again on this issue, if need be, with all of his moral earnestness and formidable intellectual batteries. His speech was but a foretaste of the facts and arguments which he will lay before the people, if he has to make another campaign in order to apply a popular *vis a tergo* to a reluctant Legislature. His opponents will discover that he has not spoken without first taking thought. He has scrutinized the actual conditions. Last Friday night he let it be seen that he had looked into the political history of each Assembly District, for twenty years past. For the moment he contented himself with affirming, what everybody knows to be true, that whatever the present theory of party control, in reality the system of making nominations by delegates is nothing but a sham.

The hit boss flutters; and the gyrations of Raines and Barnes at Albany show where the Governor's shot struck. To get his opponents to speak out, is exactly what Mr. Hughes desires. He has nothing to dread from discussion. In a fair and free debate before the people, there is no doubt that he will be sustained. The real thing he and his friends have to dread is, not the outspoken anger and antagonism of the bosses, but their secret machinations to defeat him while professing to favor his plans. We do not class Speaker Wadsworth with the selfish manipulators who think their power endangered by direct nominations. He seems to feel that the Governor's speech was somehow a reflection on the Assembly, and has come to its defence. They are, he says, a fine set of legislators, who have done excellent work for reform. Granted, but that has nothing to do with the question. All the objections that have been raised since the Governor's speech were really met in it by anticipation.

Winston Churchill is another of the militant political reformers who is strongly for the direct primary. Like ex-Senator Colby of New Jersey, he has fought the bosses, and occasionally been beaten by them, but is convinced that the readiest weapon against them is the open, the legalized, the direct and mandatory primary. Mr. Churchill writes to the Boston *Herald* of his recent investigation of the direct primary in several Western States. Defects and maladjustments are reported here and there, of course. The new law is nowhere an infallible plan of political salvation. But it has found great popular favor wherever it has been introduced, and no State that has tried the system now thinks of abandoning it. Mr. Churchill's survey of the field coincides with that which William Allen White made in a letter to Gov. Hughes, and confirms the latter's opinion that the movement for the direct primary is only the latest phase of the fight to wrest the control of government from selfish interests.

The loss of the Republic, after the gallant efforts to save her, came as a sharp disappointment. For the wonder of the wireless telegraph's achievement is not merely the summoning of aid from all directions, but the instantaneous reporting of this life and death struggle off Nantucket. The electric waves penetrated the mystery of both sea and fog and made the whole world witnesses of what, had there been a gale blowing, must have become one of the worst of the ocean's tragedies. It may, of course, be true that there would have been no additional loss of life had the Republic been without a wireless equipment. The Florida might have groped her way into port carrying her double load of passengers even with her bows smashed, as did the old Guion liner Alaska after ramming an iceberg in midocean, in the early eighties. But had the Florida herself gone down at once, the only recourse for the Republic's passengers would have been the boats. Then the wireless would have proved of the greatest value. Surely the fortunate conditions of sea and wind on Saturday will not blind any one to the necessity hereafter of equipping every passenger-carrying steamer with the wireless system. It should be made compulsory, like the carrying of side lights and the blowing of the whistle in fog.

The Senate adopted last week a resolution appropriating $50,000 for a preliminary survey of the proposed Lincoln highway from Washington to Gettysburg. The plan as urged by Senator Carter of Montana is to have a road 150 or 200 feet wide, all the way from the White House door to the battlefield at Gettysburg. Spaces along it would be set aside, here and there, so that "the States of this Union one after another would erect groups of statuary or monuments, which would make it one of the most historic drives on the globe." "Historic," however, is scarcely the word to characterize the resulting horror, should the States do over again what they have done in the Hall of Statuary in the Capitol. The terrible collection there has caused many an ardent patriot to despair of the republic. If any such grandiose project as the fifty-mile highway from Washington to Gettysburg be adopted, the argument for a unified artistic control, like that provided in the Council of Fine Arts just appointed by the President, is redoubled in force. If the scheme were left entirely to Congressional committees, the result would be certain to make foreign visitors echo Mérimée's wonder at what could be done with twenty millions and no taste. The Senators talked learnedly about making an Appian Way in the New World, though one of them, Mr. Gallinger of New Hampshire, confessed that he had only "a vague knowledge of the Appian Way." But none of them denied that there ought to be a suitable memorial to Lincoln in Washington itself. Such an one was provided for in the so-called Burnham plans for the beautification of

Washington. But as that was worked out by competent artists, it naturally does not commend itself to Congress.

The House Committee on Military Affairs is not content with giving the War Department the right to employ 250 retired officers, and thus providing it with that portion of the 612 additional officers it asks for. By a passage in the Military Appropriation bill, it proposes to cut down the General Staff from forty-five to twenty officers by lopping off all the captains and half of the majors. The General Staff would then consist of four generals, four colonels, six lieutenant-colonels, and six majors, while twenty-five captains and majors would be returned to their regiments. This plan illustrates afresh the correctness of the committee's contention that the evils caused by absenteeism may be cured in various ways. At the same time, though, we believe with the committee that the General Staff will not be irrevocably injured by a reduction in numbers. A few of the captains may well be retained, with corresponding reductions elsewhere; for among the captains are to be found many able young officers whose minds are still flexible enough to profit greatly by their General Staff studies. That body has, however, been a disappointment to the army and to the public. To the latter, its chief function too often appears to be solely the demanding of more guns, men, and forts.

Intelligent peace talk was heard in the House last week, and the peace men stood up to be counted on more than one amendment to the naval bill. They were defeated, and the passage of the bill as reported is hailed as a triumph for the big-navy idea. The President can scarcely think so, after twice seeing Congress reject his impassioned plea for four battleships. Two "monsters" were voted by the House, and doubtless contractors are chuckling to each other: "Well, that was a good enough war with Japan to get the ships voted." One of the uses of adversity should be to make men reasonable. Tokio reduces the naval budget by 9,000,000 yen and the war budget in the same cool fashion, because economy is unavoidable. But Congress votes two more battleships, undisturbed by Mr. Tawney's prophecy of a deficit of $143,000,000 for next year. The convincing argument seems to have been that of Representative Hepburn of Iowa, who says that every generation of Americans has had its war; hence, it is reasonable to suppose that the next will, too, and so we must keep the shipyards busy.

In the general salary-raising proposed by Congress in the Legislative Appropriation Bill, the Federal judges are not forgotten. As reported by the Senate committee, the bill would make the salary of a district judge $8,000 a year, circuit judges $10,000, while the associate justices of the Supreme Court would receive $17,500 and the Chief Justice $18,000. These increases may seem large—40 per cent., roughly—but the resulting salaries would still be below those paid to judges in England. There the Lord Chancellor has about $50,000, the Master of the Rolls $30,000, justices of the King's Bench and Admiralty judges $25,000, and so on. This enables one to understand Bagehot's account of the ineffable satisfaction with which an English judge takes his appointment, remarking to himself: "Thank Heaven, I cannot be removed from this position except by an address from both houses of Parliament!" It will not do, however, to press the English comparison too closely. The Chancellorship is a great office of state, as well as a judgeship and the blue ribbon of the legal profession, so that the salary is not purely for judicial purposes. Moreover, the rewards of successful lawyers, together with the costs of litigation, are greater in England, on the average, than they are here. A fairer analogy is that between our highest Federal judges and those of the Supreme Court of New York, in this city. The latter have a salary of $17,500. It is made higher than that of other judges of the Supreme Court of this State, because of the obviously greater cost of living here. But, plainly, the same argument would apply to many Federal judges, notably to those of the Supreme Court. The expense of living in Washington must be nearly, if not quite, as great as in New York; and if the thing is to be argued on that basis, it would certainly seem that associate justices of our highest national court should be paid as much as a State judge in New York. It will be noticed that the Senate committee proposed to make the salaries of the two exactly equal.

Gov. Magoon's urgent recommendation that the wreck of the Maine be raised and removed from Havana, ought to be acted on at once. It is not only a detriment to the harbor, but argues indifference on the part of the United States towards what is still the tomb of many of her sailors. No matter what the cost, the wreck should be raised and destroyed, or sunk in deep water outside. It is a ghastly sight, and serves only to stir up animosity and preserve memories that ought to be forgotten. Were it in an American harbor, it would long ago have been blown up as a menace to navigation. The Cuban Government itself has never tried to dispose of the wreck, both because of the cost and the danger of having its motives misinterpreted. If Congress should vote the sum needed as a matter of good-will to the new Republic, such an act would be heartily welcomed in Havana as another proof of our friendship.

Cardinal Gibbons has rendered another valuable service to Maryland and the country at large by coming out squarely against the disfranchising of the negro by means of the amendment to be submitted to the voters next fall. "I have no hesitancy," declares the Cardinal, "in saying that I believe it to be both unjust and impolitic." Unjust he finds it because it is designed to deprive a certain class of his fellow-citizens of rights duly conferred upon them by the highest law in the land; and impolitic because it is in the end certain to injure the Democratic party, which favors it. The Cardinal naturally does not believe in any restriction of the suffrage which does not bear on whites and blacks alike. That the proposed law does discriminate against the illiterate negro voter is the open confession of B. B. Shreeves, chairman of the Democratic City Committee, who thus illuminates the Cardinal's declaration:

> Perhaps the Cardinal's opposition is based on the Christian principle of the brotherhood of man, which is beautiful in theory, but which surely must be limited in its political and social application.

Obviously, a mere Cardinal who tries to apply the doctrines of Christianity to our political conditions is much out of place in the eyes of the politicians—particularly when he points out with truth that if the negroes on the Eastern Shore sell their votes in droves, the same charges can be made against large

numbers of whites in Baltimore and elsewhere. Finally, Cardinal Gibbons gives this admirable advice as to the treatment of the negro:

> If he is, indeed, ignorant, educate him; if he be corrupt and venal, punish him for his corrupt practices and his venality; but, above all things, let us not condemn the righteous for the sins of the unrighteous. Let us not be guilty of the great crime of a wholesale violation of the written laws of our country in order to punish individuals who break those laws in isolated instances.

Samuel Gompers must now be surer than ever that he is living under a monstrous despotism. Where else could a Department of Commerce and Labor trample upon the workingman's right as savagely as ours did last week? Eight Belgian diamond cutters were permitted to enter this country against the wishes of the 325 members of the Diamond Workers' Protective Union of America. In this immigration there was no violation of our contract labor law, but there was a gross infringement upon the privileges of a labor union. Our 325 diamond workers, most of them from Antwerp and Amsterdam, earn four or five times as much as they did on the other side, and they want to keep a good thing to themselves. What more natural and proper, then, than to league together and pass a rule limiting the number of apprentices that can be taken into the trade to 10 per cent. of the union's membership? And if a miserable foreigner comes seeking employment, to set the immigration officials on him?

It is commonly urged that a uniform divorce law would put an end to "the disgraceful migration of thousands" to South Dakota and other States whose lax laws invite the easy snapping of marriage bonds. If divorce reform, however, has no better argument, we shall never get it; for the Census Bureau shows that, as a matter of fact, few discontented couples seize the opportunity. South Dakota, the favorite scapegoat, granted in 1900 only 95 divorces per 100,000 of population, while twenty-one other States were exceeding that number. In the twenty years before 1906, Sioux Falls granted 1,124 divorces; but the same period saw no less than 945,625 allowed in the country at large. For all the free advertising this famous resort has received in our comic papers, not one unhappy couple in 900 has visited it. And probably because the cure is very expensive. Even in the old days, when three months' residence sufficed, only a fat purse would see one through the mill; and now six months discourage all save those who prefer divorce to automobiling as an extravagant and exhilarating sport. Uniformity of law can, after all, accomplish little. It will not check materially the stream of divorces, for no legislation can plug the spring whence it flows. When we learn that since 1900 divorce has increased thrice as rapidly as our population, we see that the causes lie far deeper than provisions of the law. We must look to the profound changes in woman's status, in her view of life, and in wider social and economic conditions. The old writer who called divorce "a medicine for the disease of marriage" saw clearly; and the first step toward reform is to search out the flaws in modern family life which break up one-seventh of our homes.

The possibility of such a thing as a convention of Jewish farmers will be no more of a surprise to most people than the fact that such a convention should represent more than 2,000 Jewish farmers in the four States only of New York, Connecticut, Massachusetts, and New Jersey. Experiments in bringing back the Jews to the land have been prolonged, costly, and often disastrous. But it is a law that failure is widely trumpeted, while success is generally silent and unnoticed. Through individual initiative more than through organized assistance, the agricultural idea has been making its way steadily, in this country, among a people in whom the habit of two thousand years has by no means stifled the natural human inclination to labor on the soil. It is not to be expected that the Jew should pass at once from the confines of the Ghetto to the Western cornfields or cattle ranges. The Jewish farmers have concentrated, as a rule, on the small-scale agriculture that goes on in the neighborhood of large cities—truck-farming, dairying, poultry-raising, and, in southern New Jersey, vine-growing. One important class is the tobacco raisers of Connecticut. This industry, in its combination of skilled agriculture with business acumen, appeals peculiarly to the Jewish farmer. There can be little doubt, however, that these successes in tilling the soil may yet produce Jewish pioneers of the prairie and the Canadian wheat fields.

A generation ago the teacher, the textbook, and a few benches sufficed for instruction in all departments of most American colleges. With the introduction of scientific courses, however, material equipment began to commend itself, and scores even of the smaller colleges are to-day provided with costly scientific laboratories. But other departments have been comparatively neglected. The time is not yet in sight when we can abandon that culture which comes from contact with Greece and Rome, and no college professing to offer a liberal education should put itself in the attitude of discriminating against them. Yet the failure to provide suitable facilities for classical discipline is having the effect, to-day, of such discrimination. There is a widespread belief among teachers that the narrower textual and linguistic phases of classical study should yield to methods which would awaken a broader and deeper human interest, but to do this successfully requires a more elaborate equipment than trustees or donors have so far seen fit to provide, except in a mere dozen of the more richly endowed institutions. The archæological explorations of the past fifty years have thrown a wonderful light upon ancient life, but few colleges and universities can offer students more than a small fraction of the printed reports, casts, models, photographs, lantern slides, etc. The ancient manuscripts of the leading classical authors have been reproduced by photographic processes and published in large folios; but only a handful of American colleges have been liberal enough to provide that stimulus. The scientific instructor usually has a good lantern right at hand; the classical instructor usually has nothing of the kind. The scientific departments almost invariably have their special appropriations for equipment, aside from their allowance from library funds; the Latin and Greek departments almost never. It may be a great compliment to the classical teacher to assume that he can make bricks with so little straw; but the effect on the average student is to convince him that the authorities are not concerned whether that particular brand of brick is made at their kilns.

"PINCHOTISM."

President Roosevelt has so overdone the writing of messages that he no longer gets a hearing. This is unfortunate when, as in his message of last Friday, submitting to Congress the report of the National Conservation Commission, he has something really important to say. That particular document was "buried" in the morning papers of Saturday. It fell into the Congressional pond without making a ripple. It has scarcely been discussed in the public prints.

But in nothing has Mr. Roosevelt shown better knowledge or sounder principle than in his stand against the reckless waste and the careless exploitation of our national resources. To preserve the forests, guard coal and mineral deposits, and to conserve water power—this is a large national policy to which no one can openly object. It did not need the report, or inventory, of the commission which was appointed as a result of the meeting of State Governors at Washington last spring, to show how vast is the national property which is in danger of devastation or exhaustion. All this is conceded. Yet in several Western States—notably Colorado, Idaho, and Montana—there is a bitter and growing resentment of the policy of government regulation. People out there are ready to fling up their hats and shout for Roosevelt when it is a question of regulating the unpopular railways or getting after the oppressive Trusts, but have only savage words for government interference to prevent timber-thieving and the loose or lawless preëmption of water rights or mining property. That they call in the West "Pinchotism," by which term they mean a fussy meddling with the inalienable right of the West to burn its candle at both ends. It is really an honor to Gifford Pinchot thus to have his name turned into a reproach. And it is also an honor to President Roosevelt that he has stood firm for the far-sighted policy, notwithstanding the fact that his course is displeasing to his more delirious supporters beyond the Mississippi.

Unmistakable evidence of this hostility was given in the speech of acceptance made before the Legislature of Colorado by the new United States Senator, Mr. Hughes. He took occasion, partly as a Democrat, but more as spokesman for Colorado, to declare squarely against Mr. Roosevelt's plan of conserving the natural resources of that State. It had been represented as a duty to our posterity, but Senator Hughes affirmed, not without humor, that we "should not make mollycoddles of our descendants by smoothing out of their pathway all the rough places and removing all difficulties and storing up unearned treasures for their spendthrift enjoyment and dissipation." On the main issue, the new Colorado Senator was very explicit. The West was being hampered. What it wanted was an influx of capital, to take up and exploit the great stretches of forest and coal lands and the immense water power now not utilized. Fettering restrictions would only delay the return of boom days. Senator Hughes spoke of the just "complaints" which the Western people had against a government which sought to inhibit their putting the axe to the tree as freely as their fathers did. The result was before them all:

> A check has been placed upon the kindling enthusiasm of enterprise, upon the wise hut adventurous investment of capital, upon the onward march of a sturdy army of explorers and winners from the wilderness to civilization in this magnificent field of human hope and toil.

In commenting upon this speech the Denver *Republican* admits that it states the popular view in Colorado. It was an appeal to selfish interests and to State pride, which had often been made, and which had met with a general response. "The few whose corns have been trampled upon have had the floor." Yet the *Republican* thinks that very soon, if not immediately, Colorado, on a square test, would support the policy of conservation. It shrewdly points out:

> In common with the rest of the nation Colorado has undergone an economic transformation. The coal corporations and the railroads, most directly interested, are no longer State institutions. They are interstate corporations with headquarters at New York. Their profits are not distributed in Colorado. When the coal lands have been exhausted, when the forests have been denuded, these corporations will order their machinery, labor, and capital elsewhere. It is a case of diamond cut diamond. Centralization of capital means centralization of authority. When Colorado and other Western corporations took to Wall Street, the Federal government at Washington took added responsibilities. But abolition of State lines began with the corporations.

But persons, East and West, who take a broad view of conditions, must perceive that within and without the lines of State activity, the new policy must be sustained and enforced. The idea is making its way into the heads of the people, and will prevail. There will be grumbling from individuals, and no doubt some hardships. But the nation is coming to see that it cannot waste without coming to want. We have boasted of our limitless resources, but the end of many of them, if lavish use is permitted, is already in sight. Hand in hand with the effort to preserve the woods and fields and waters, as the patrimony of our children, must go endeavors to prevent rights, inconsiderately granted, from vexing the next generation as they have vexed this. President Roosevelt's warning against allowing the corporations of to-morrow to acquire a vested interest in the country's natural wealth ought to be heard and heeded.

PROGRESS OF THE PROBATION SYSTEM.

The annual report of the New York State Superintendent of Prisons, like the Governor's message, calls attention to the remarkable growth of the probation system. During the year ending September 30, 1908, more than twice as many juvenile offenders were placed on probation as were committed to the State Reformatory; more than twice as many men as were placed in Elmira; while six times as many women were put on probation as were sent to the two reformatories for women. This is a great step forward.

But it is not in New York alone that this plan is spreading. Throughout the country there is an increasing recognition of the necessity of preventive measures to lessen the number of habitual law-breakers. Just as the reformatory movement resulted from the calm conviction that the State could not afford to make a confirmed criminal of a youth by confining him with adult offenders, so the fundamental theory of probation is to limit the prison and reformatory population by providing for a first or second offender guidance in place of punishment. What Judge B. B. Lindsey has done in Denver is well-known. But there is a judge in Chicago, McKenzie Cleland, whose work deserves wider attention than it has received. Like Judge Lindsey, Judge Cleland does not believe that the sole duty of courts consists in sending peo-

ple to prison. He and the other officers of the National Probation League, with headquarters in Chicago, have added another to the flood of magazines—*The Newer Justice*, devoted exclusively to the discussion of probation. Judge Cleland's court has probably paroled more men and women than any other—1,200 in a comparatively short time. Of the large number brought before him charged with misdemeanors and even felonies, it is said:

> Most of them were guilty; indeed, under his system most of them pleaded guilty and saved the time and expense of a jury trial. Then the judge, instead of fining the offender or sending him to the workhouse, imposed the maximum legal sentence, but immediately entered a motion to vacate the sentence. This motion he held over on a continuance of the case, releasing the offender on whatever bond he could give, sometimes on his own recognizance. But in every case the men were required to abstain from liquor or bad company and promise to go to work and support their families

Thus thousands of dollars are saved in costs of trials, and in board of prisoners, and charitable organizations are not compelled to support the destitute families of convicts. The judge holds his court at night, makes the married male prisoners report there with their wives, and in cases of wilful backsliding his punishments can be severe. His experience brings him fresh courage and great hopes for the future.

But the success of the system depends, after all, upon those who administer it. The best of laws, in the wrong hands, may become a force for evil. Men like Judge Lindsey and Judge Cleland may save much money, and, what is infinitely better, reclaim thousands of men, but what harm may not a Battery Dan Finn or some other low politician, elevated to the bench, effect? Therein lies the weakness of the plan in this city. The judges do not always choose competent probation officers; sometimes the appointees do not know their duties, and sometimes, knowing, devote their best energies to politics. Nevertheless, in spite of drawbacks and failures, the work extends and improves and commends itself to the favor of thoughtful observers.

Before probation stands, of course, the question of arrests. In Cleveland, the earnest and able chief of police, Fred Kohler, inaugurated on January 1, 1908, a so-called "Golden Rule policy" of letting his policemen exercise greater judgment in making arrests, and also in taking the offenders into court. The results for the first years are extraordinary: there were only 10,085 arrests, as compared with 30,418 in 1907, a decrease of 66.8 per cent. Of the 10,085 persons arrested, no less than 4,155 were allowed by the police to go free, and 2,512 were released on waivers by officers in charge of precincts, without appearance in court. Only 3,418 cases were taken before a magistrate. Of course, it is too early to judge of the success of this scheme, which easily lends itself to bribery. Obviously, it presupposes a police force of a character we may hardly hope for in this city. But the experiment in Cleveland indicates that here is another field offering opportunity for a newer and better justice, after the probation system shall have been carried to its utmost limits.

"NO REFUGE BUT IN TRUTH."

"No Refuge but in Truth" is the title of a little volume into which Goldwin Smith has just gathered some of his recent letters and articles on religious questions. Discussing the destruction of old creeds by modern science, he says:

> We are confronted with the vital question what the world would be without religion, without trust in Providence, without hope or fear of a hereafter. Social order is threatened. Classes which have hitherto acquiesced in their lot, believing that it was a divine ordinance, and that there would be redress and recompense in a future state, are now demanding that conditions shall be levelled here.

But Mr. Smith would not, for the sake of avoiding such difficulties, shut his eyes:

> Whatever trouble, moral, social, or political, a great change of belief may bring there is surely nothing for it but to seek and embrace the truth. . . . Superstition can be of no use morally; even politically it can be of little use, and not for long.

He further justifies his position, as a mere practical expedient:

> We have still the Christian ideal of character, which has not yet been seriously challenged, does not depend upon miracle or dogma for its claim to acceptance, and may continue to unite Christendom.

The findings of natural science, and, more broadly, the movement to apply scientific method to criticism of the history of Christianity and its doctrines, have been, roughly speaking, received in three different ways. The stoutest conservatives, of whom Pius X is now the leader, have flatly refused to accept the new ideas. Twenty-five years ago religionists of this school were denouncing and deriding Darwin and his disciples. To-day they are still proclaiming the inerrancy of the Scriptures or of the official utterances of the Church. They are busy heretic-hunting among the Protestant sects as well as within the pale of Catholicism. But their number seems to be diminishing, their confidence weakening; and no man who has watched the course of theological discussion since the publication of "The Origin of Species" can entertain doubts as to the ultimate extinction of these conservatives. The complete acceptance of the doctrine of evolution—if not of Darwinism in the narrow, technical sense—by all scientists of standing, has shattered that old cosmogony on which so much of ancient Christian dogma rested. Each year is throwing new light on the source and structure of the Four Gospels and rendering more and more untenable the old theory of inspiration.

Already in the more progressive and better educated sects of Protestantism, the second way, a middle way—that is, an attempt to hold to the old and at the same time to grasp the new—has become the more popular. Any one who raises doubts about the Bible stories is told that these things are an allegory; and that the essential point is the "spiritual value" or the "moral significance." In like manner the creeds are rationalized, attenuated, or actually explained away. But this method is not satisfactory, chiefly because, in many instances, it is not frank. The clergyman who utters an ancient formula to which he attaches one meaning while his less learned or more simple-minded auditors attach another, can never command respect as a great moral leader. The first requisite of such leadership is absolute sincerity and courage. Then, too, "hollow profession," as Mr. Smith notes, "cannot fail to impair mental integrity." It is inconceivable that any church or any ecclesiastical order that indulges in sophistry or word-juggling can, in this era of universal education, long retain its hold on the minds and hearts of men. The estimate of human nature that is the underlying assumption of our modern *via media* is too cynical and contemptuous.

We believe, then, that the only sound

and tenable position is the third, that pointed out by Mr. Smith. Every day that passes makes it harder for men to continue in this middle way, which is virtually a denial of the conclusions that follow inevitably from their premises. To say one thing while your real thought should be expressed in words far different is to try to eat your cake and have it too. It is encouraging to observe that we have entered upon an era of bolder speaking. The Bishop of Tasmania, for example, declares flatly in the last *Hibbert Journal* that the Old Testament is not a suitable basis for moral instruction. He is not with those who bathe the difficulties of this part of the Bible in "the glow of religious fervor, or dissolve them in the *aqua fortis* of an unquestioning faith." "How can we," he asks, "worship such a God" as is depicted in parts of the Old Testament? Time was when such an utterance from such a source would have provoked a furious outburst from the defenders of orthodoxy. Indeed, some of the arguments which the Bishop of Tasmania urges are substantially those which made the name of Robert G. Ingersoll anathema twenty-five years ago. But in 1909 the Bishop of Tasmania will not be pilloried as an heresiarch. The only accusation that is likely to lie against him is that he is indulging in commonplaces. And since it is evident that, willy-nilly, the truth must out, the church authorities will soon have no alternative but to make a virtue of necessity.

We understand what a tremendous undertaking it is to make the change and shift the emphasis. In a thoughtful and penetrating little book, "Religion: A Criticism and a Forecast," published three or four years ago, G. Lowes Dickinson maintains that our creeds are "increasingly deriving a great deal of support from the conviction," not that they are true, but that they are "necessary." Churchmen think, with Goldwin Smith, that the bonds of society will be loosened; that men will not fear God for naught, but will give rein to their wildest passions. The question is asked, How can men be turned from worship of an anthropomorphic God, a concrete personality, a loving Father who watches over his children and daily interferes with their affairs—turned from this concept to that of a cold impersonal force that, at best, makes for righteousness? How can men be taught to live with an eye, not to an eternity of fiery torment, or of endless bliss in a crassly materialistic and inconceivable heaven, but to the highest usefulness in this life, here and now? How shall we still make overwhelmingly attractive what Goldwin Smith calls "the Christian ideal of character"? How bring high moral fervor to the support of a code of ethics? These are the perplexities which confront our latter-day prophets of righteousness; and they are perplexities which cannot be evaded; for the most intelligent and serious persons of the rising generation are pressing for an answer. The shuffling of the church is already a cause of alienation. That is why we urge our spiritual guides to face the truth boldly and to attack with more energy than they have yet displayed the imperative undertaking of religious reconstruction.

TENNYSON.

I.

Whatever changes may occur in the fame of Tennyson—and undoubtedly at the present hour he is passing into a kind of obscuration—he can never be deprived of the honor of representing, more almost than any other single poet of England, unless it be Dryden, a whole period of national life: Tennyson is the Victorian age. He was beloved by the Queen and the Prince Consort. Men of science like Huxley were "impressed with the Doric beauty" of his dialect poems, or, like Herschel, Owen, and Tyndall, admired him "for the eagerness with which he welcomed all the latest scientific discoveries, and for his trust in truth." Serious judges cited him on the bench, as did Lord Bowen when, being compelled to preside over an admiralty case, he ended an apology to counsel for his inexperience with the punning quotation:

> And may there be no moaning at the Bar,
> When I put out to sea.

Now it is observable in all accounts of him that the personality of the man with his contempt for little conventions impresses those who lived with him as if he possessed some extraordinary dæmonic power. And his conversation was like his manner. It is agreeable, when we consider certain finical overnice qualities of his verse, to know that his talk was racy with strong downright Saxon words, that, like our Lincoln, he could give and take deep draughts of Pantagruelian mirth. I confess that it does not displease me to touch this vein of earthy coarseness in the man. But I like also to hear that his mind rose more habitually from the soil to the finer regions of poetry and religion. In a hundred recorded conversations you will find him at close grips with the great giants of doubt and materialism which then, as in the caverns and fastnesses of old fable, were lurking in every scientific workshop and stalking thence over the land. How often you will find him, when these questions are discussed, facing them calmly and then ending all with an expression of unalterable faith in the spirit forces that blow like one of his mystic winds about the solid earth, speaking words which sound commonplace enough in print, but which, with his manner and tone, seem to have affected his hearers as if they had been surprised by a voice of revelation.

II.

But in this chorus of acceptance there is one strange discord. Edward FitzGerald was among the poet's warmest friends; of all the great men of his acquaintance, and he knew the greatest, Tennyson alone overawed him. "I must, however, say, further," he once writes after visiting with Tennyson, "that I felt what Charles Lamb describes, a sense of depression at times from the overshadowing of a so much more lofty intellect than my own: this (though it may seem vain to say it) I never experienced before, though I have often been with much greater intellects: but I could not be mistaken in the universality of his mind." FitzGerald was one of those who first recognized Tennyson's poetic genius; but, after a while, there comes a change in the tone of his comment. "In Memoriam," which he read in manuscript before it was published, he cannot away with; it has to him the "air of being evolved by a Poetical Machine of the highest order"; and from that time, his letters contain frequent hints of dissatisfaction. Somehow he seems to have felt, as we to-day are likely to feel, a disparity between the imposing genius of the man himself and these rather nerveless elegies and rather vapid tales like "The Princess." He cries out once upon "the cursed inactivity" of the nineteenth century for spoiling his poet, coming close to, but not quite touching, the real reason of his discontent. FitzGerald, if any one, was the philosopher of the age as Tennyson was its poet. That determined recluse of Little Grange, who loved in the silent night hours to walk about the flat Suffolk lanes, among the shadows of the windmills that reminded him of his cherished Don Quixote, who, as the years passed, could scarcely be got to visit his friends at all, but wrote to them letters of quaint and wistful tenderness—he alone among the busy anxious Victorians, so far as I know them, stood entirely aloof from the currents of the hour, judging men and things from the larger circles of time; he alone was

completely emancipated from the illusions of the present, and this is the secret of the grave pathetic wisdom that so fascinates us in his correspondence. And so the very fact that Tennyson was the mouthpiece of his generation, with the limitations that such a character implies, cooled the praise of our disillusioned philosopher just as it warmed the enthusiasm of more engaged minds.

One is impressed by this quality of Tennyson's talent as one goes through his works anew in the Eversley edition* that has just been published, with notes by the poet and by the poet's son. It is useless to deny that to a later taste much, very much, of this writing seems an insubstantial fabric; that it has many of the qualities that stamp the distinctly Victorian creations as provincial and ephemeral. There is upon it, first of all, the mark of prettiness, that prettiness which has been, and still is, the bane of British art. Look through a collection of the work of Landseer, and Birket Foster, and Sir John Everett Millais, and others of that group, and observe its quality of "guileless beauty," as Holman Hunt calls it, or innocuous sentimentality as it seems to us. These scenes of maiden love, of tender home partings and reconciliations, of children floating down a stream in their cradle with perhaps a kitten peering into the water—it is not their morality that offends us, far from that, but their deliberate blinking of what makes life austere and, in the better sense of the word, beautiful. And this same prettiness you will find in many of Tennyson's poems. It is notably, and perhaps excusably, conspicuous in such early poems as "The May Queen" and "Dora," but it does not stop there. In its own kind "Launcelot and Elaine" is a nobly planned work, yet somehow to all its charm there still clings that taint, shall we say, of prettiness, which is a different thing altogether. I read the words of Gawain to the lily maid of Astolat:

> "Nay, by mine head," said he,
> "I lose it, as we lose the lark in heaven,
> O damsel, in the light of your blue eyes."

'Tis a sweet compliment, but I remember the same metaphor in an old play:

> Once a young lark
> Sat on thy hand, and gazing on thine eyes
> Mounted and sung, thinking them moving skies,—

and by comparison I seem again to note in Tennyson's lines the something thin we designate as Victorian. There is in the same poem another scene, one of the most picturesque in all the "Idylls," where Launcelot and Elaine's brother ride away from the ancient castle and the lily maid to join the tournament:

> She stay'd a minute,
> Then made a sudden step to the gate, and there—
> Her bright hair blown about the serious face
> Yet rosy-kindled with her brother's kiss—
> Paused by the gateway, standing near the shield
> In silence, while she watch'd their arms far off
> Sparkle, until they dipt below the downs.

You see it all—the sentimental maiden at the arch, gazing with shaded eyes after the two departing knights, while some flowering vine of an English summer droops from the stones about her slender form; you see it, but again it is a painting on the walls of Burlington House rather than the reality of a more virile art.

III.

But however much the prettiness of "In Memoriam" caught the ears of the sentimental, it was another quality which won the applause of the greater Victorians. There is an interesting letter given among the editor's notes, showing how the men who were leading English thought in those days felt toward the new poem. "These lines," writes Prof. Henry Sidgwick of one of the stanzas that express Tennyson's trust in the fatherhood of God through all the questionings of science—"these lines I can never read without tears. I feel in them the indestructible and inalienable minimum of faith which humanity cannot give up, because it is necessary for life; and which I know that I, at least, so far as the man in me is deeper than the methodical thinker, cannot give up." Now Sidgwick was no ordinary man. He was, in fact, one of the keenest and hardest-headed thinkers of those days; and these tears of his were no cheap contribution of sentiment, but rose from the deepest wells of trouble. Many men still living can remember the dismay and the sense of homelessness that came upon the trusting mind of England when it became aware of a growing hostility between the new school of science and the established creed. When Arthur Hallam died in 1833, Darwin was making his memorable voyage of investigation on the Beagle, and while Tennyson was elaborating his grief in long-linked sweetness, Darwin was writing that "first note-book on Transmutation of Species," which was developed in the "Origin of Species" of 1859. The alarm of the church over this assimilation of man and monkey, the bitter fight between Huxley and Wilberforce, and between Huxley and Gladstone—all this is well known, though the tumult of the fray begins to sound in our ears as distant as the battles about Troy.

To these currents of thought Tennyson was quickly responsive. Without hesitation, he accepted the new point of view for his "In Memoriam," and those who were leading the revolution felt this and accepted enthusiastically a recruit from the writers of the imagination, who were commonly arrayed against them. It is unnecessary to point out the many passages of the poem in which the law of evolution, the survival of the fittest, and man's kinship to the ape were clearly hinted before Darwin had definitely formulated them in his epoch-making book. What more impressed men like Sidgwick was the fact that Tennyson felt with them the terrifying doubts awakened by this conception of man as part of a vast mechanism, but still clung to the creed "which humanity cannot give up, because it is necessary for life." And Tennyson, and this is the point to be emphasized, found this minimum of faith, not outside of the new science, but at its very heart. He does, indeed, cry out at times against the harsher hypothesis, declaring that we are not "magnetic mockeries" or "only cunning casts in clay"; but the gist of his confidence, and what made him the spokesman of the age, was in a bold completion of evolution by the theory of indefinite progress and by a vision of some magnificent consummation wherein the sacrifices of the present were to be compensated somehow, somewhere, somewhen—who shall say? This reconciliation of dogma and science, this discovery of a father near at hand within the inexorable law of evolution, this vision of an eternal state to be reached in the progress of time—

> That God, which ever lives and loves,
> One God, one law, one element,
> And one far-off divine event,
> To which the whole creation moves,—

all this, like the prettiness which characterized the painting of the age and Tennyson's non-religious verse, is what we have come to call the Victorian compromise.

IV.

Undoubtedly, the fame of Tennyson in his own day was due largely to his expression of what may be called the official philosophy, but it is a question whether this very trait has not weakened his hold upon a later generation, whether, for instance, the stoic resolve and self-determination of Matthew Arnold, whom Professor Sidgwick in one of the most scathing essays of the century denounced as a trifling "prophet of culture," have not really more meaning for us to-day—though not the highest meaning of all—than any official and comfortable middle way. I read the stanza of "In Memoriam" which describes the reception of the poet's friend into the heavenly host:

> The great Intelligences fair
> That range above our mortal state,
> In circle round the blessed gate,
> Received and gave him welcome there;—

*The Works of Alfred Lord Tennyson. In six volumes. The Eversley Edition. Annotated by Alfred Lord Tennyson, edited by Hallam Lord Tennyson. New York: The Macmillan Co.

and then I turn back to the note which gives the similar lines of Milton's "Lycidas":

There entertain him all the Saints above
In solemn troops, and sweet societies,
That sing, and singing in their glory move,
And wipe the tears forever from his eyes.

Why is it that Tennyson here leaves us so cold, whereas at the sound of Milton's words the heart still leaps as at a bugle call? Why are these "fair Intelligences" so meaningless and so frigid? Is it not just the spirit of compromise between religion and science that has entered into Tennyson's image, leaving it neither the simple objective faith of Milton nor the honest questioning of Matthew Arnold?

It may seem that I have dwelt overmuch on the weakness of an admired writer, but it was these compromises of Tennyson that gave him his historic position, and, also, it is only by bringing out clearly this aspect of his work that we are enabled to discern the full force of another and contrasted phase which was not of the age, but the unfettered voice of the poet himself. As we read of the impression made by the man Tennyson upon his contemporaries and then consider the sleeker qualities of his verse, we find it difficult to associate the two together. There was no prettiness or convention in his character, but an elusive wildness of beauty and a noble, almost defiant, independence. Now, if we examine the spirit of compromise which made the official poet in Tennyson, we shall see that it rests finally on a denial of religious dualism, of the consciousness, that is, which no reasoning of philosophy and no noise of the world can ever quite obliterate, of two opposite principles within us, one bespeaking unity and peace and infinite life, the other calling us to endless division and change and death. Just this cleft within our nature the Victorians attempted to conceal. Because they could not discover a rational bond between the world of time and of evolution and the idea of eternity and changelessness, they would deny that these two can exist side by side as totally distinct spheres, and by raising the former and lowering the latter would seek the truth in some reconciliation of the two. Thus, instead of finding the real tyrant of the soul, as did William Drummond, in the dominion of "time, under the fatal shadow of whose wings all things decay and wither," they place the faith of religion in some far-off event of time, as if infinity were a kind of enchantment lent by distance.

V.

Such was the official message of Tennyson; but by its side there comes up here and there through his works an utterly different vein of mysticism which is scarcely English, and certainly not Victorian—a sense of utter estrangement from time and personality. In the notes of the Eversley volumes the editor gives an unpublished juvenile poem, "The Mystic," in which this feeling is expressed, if not so clearly as in the better-known prose confession of his later years, at least with a self-knowledge every way remarkable for a boy:

Ye could not read the marvel in his eye,
The still serene abstraction; he hath felt
The vanities of after and before.

. . . . . .

He often lying broad awake, and yet
Remaining from the body, and apart
In intellect and power and will, hath heard
Time flowing in the middle of the night,
And all things creeping to a day of doom.

The point to note is how Tennyson in such passages feels himself an entity set apart from the flowing of time, whereas in the religious stanzas of "In Memoriam" he—not he only, but God himself—is one with the sum of things in some vague temporal progress. In that difference, if rightly understood, lies, I think, the distinction between faith and rationalism.

This sense of himself as a being set apart from change strengthened, if anything, as he grew old. Its most philosophic expression is in "The Ancient Sage," which was first published in 1885 and was regarded by him as one of his best later poems; it is rebellious in "Vastness," lyrical in "Break, Break, Break," purely melodic in "Far—Far—Away," dramatic in "Ulysses," autobiographical in "The Gleam." Always it is the man himself speaking his own innermost religious experience, and no mere "minimum of faith" needed for the preservation of society.

VI.

For the fullest and most artistic utterance of this mysticism, we must go to the "Idylls of the King." I will confess to be no unreserved lover of that mangled epic as a whole; it seems to me that in most of its parts the Victorian prettiness is made doubly, and at times offensively, conspicuous by the contrast between Tennyson's limpid sentimentality and the sturdier fibre of Mallory's "Morte Darthur," from which he drew his subject. But it is true that here and there, in a line or a musically haunting passage, he has in the Idylls spoken from the depth of his heart, as he has spoken nowhere else, and that one of them, "The Holy Grail," has an insight into things spiritual and a precision it would be hard to match in any other English poem. The holy cup, so the story runs, which had been brought to England by Joseph of Arimathea and had vanished away for the sinfulness of the people, was seen first in vision by a holy sister of Sir Percivale, and by her Galahad was incited to go on the sacred quest. Meanwhile, one day when the knights were gathered at the round table, in the absence of the King, Galahad sits in Merlin's magic seat, which, as Tennyson explains, is a symbol of the spiritual imagination, the siege perilous, wherein "no man could sit but he should lose himself":

And all at once, as there we sat, we heard
A cracking and a riving of the roofs,
And rending, and a blast, and overhead
Thunder, and in the thunder was a cry.
And in the blast there smote along the hall
A beam of light seven times more clear than day:
And down the long beam stole the Holy Grail,
All over cover'd with a luminous cloud,
And none might see who bore it, and it past.
But every knight beheld his fellow's face
As in a glory, and all the knights arose,
And, staring each at other like dumb men,
Stood, till I found a voice and sware a vow.

The vision, in other words, is nothing else but a sudden and blinding sense of that dualism of the world and of the human soul beneath which the solid-seeming earth reels and dissolves away, overwhelming with terror and uncomprehended impulses all but those purely spiritual to whom the earth is already an unreal thing. Then enters the King, and perceives the perturbation among his knights. It is characteristic of England and of the age, although it has, too, its universal significance, that Tennyson's Arthur should deplore the search for the Grail as a wild aberration, which is to bring impossible hopes and desolate disappointments to those whose business was to do battle among very material forces.

Only Sir Galahad, in whom was no attachment to the earth, and who was bold to find himself by losing himself, had beheld clearly the vision of the cup as it smote across the hall. I do not know how it may be with others, but to me the answer of Galahad to the King has a mystical throb and exultation almost beyond any other words of English:

But I, Sir Arthur, saw the Holy Grail.
I saw the Holy Grail and heard a cry—
"O Galahad, and O Galahad, follow me."

That is the cry and the voice, now poetry and not philosophy, which Tennyson had in mind when he wrote of hearing "the word that is the symbol of myself." He who has once heard it and heard also the answering echo within his own breast, can never again close his ears to its sound. To Galahad it meant the vanishing of the world altogether, and there is nothing more magnificent in Tennyson, scarcely in English verse, I think, than Sir Percivale's last sight of Galahad fleeing over the bridges out into the far horizon, and disappearing into the splendors of the sky, while—

. . . thrice above him all the heavens
Open'd and blazed with thunder such as seem'd
Shoutings of all the sons of God; and first
At once I saw him far on the great Sea,

In silver-shining armor starry-clear;
And o'er his head the Holy Vessel hung
Clothed in white samite or a luminous cloud.

There, in the inspiration from Tennyson's own visionary faith and from no secular compromise, we find the lift and the joy and the assurance that Milton knew and sang in "Lycidas" and that was so sadly missed in the "great Intelligences fair" of "In Memoriam."

But to Sir Percivale himself the vision brought no such divine transfiguration. He is the one who sees, indeed, and understands, yet cannot lose himself. Because the Holy Grail signifies a dualism which sets the eternal world not at the end of the temporal, but utterly apart from it, he who knows the higher while lacking the courage to renounce the lower, wanders comfortless with neither the ecstatic joy of the one nor the homely satisfactions of the other. So the world and all that it contains turns into dust at his touch, leaving him alone and wearying, in a land of sand and thorns. Another, Sir Bors, the simple, trustful gentleman, who goes out on the word of others, following duty only and trusting in the honor of the act as it comes to him, sees in adversity the holy cup shining through a rift in his prison, and abides content that the will of God should reserve these high things as a reward for whomsoever it chooses. Still another, Sir Gawain, finding the vision is not for him, and having turned his eyes from the simple rule of duty, sinks into sensual pleasures, and declares his twelvemonth and a day a merry jaunt. Most fatal of all is the experience of Launcelot, he, the greatest of all, who brought the sin into the court, who cannot disentangle the warring impulses of good and evil within himself. He, too, rides out of Camelot on the Quest, and then:

My madness came upon me as of old,
And whipt me into waste fields far away. . . .
But such a blast, my King, began to blow,
So loud a blast along the shore and sea,
Ye could not hear the waters for the blast,
Tho' heapt in mounds and ridges all the sea
Drove like a cataract, and all the sand
Swept like a river, and the clouded heavens
Were shaken with the motion and the sound.

This is an application to the smaller field of wind and earth and water of that dizzy tempestuous motion which in Tennyson's earlier poem of "Lucretius" surged through the Epicurean's atomic universe. To the eye of the spirit, Tennyson would seem to say, the material world is a flux and endless, purposeless mutation—leaving the self-possessed soul to its own inviolable peace, or, upon one that perceives yet is still enmeshed in evil desires, thronging in visions and terrors of madness. One need not be a confessed mystic to feel the power of these passages, any more than one need be a Puritan (standing, that is, at the opposite pole of religion from the mystic) to appreciate Milton. To the genuine conviction of these poets our human nature responds as it can never respond to the insincerity of the world's "minimum of faith." With Tennyson, unfortunately, the task is always to separate the poet of insight from the poet of compromise.

P. E. M.

RECENT GERMAN FICTION.

Detlev von Liliencron's popularity as a poet is due to his expression of the sane and simple joy of living. As a dramatist and novelist, however, he has been less successful. Loose-jointed and badly proportioned, his plays and his stories seem more like a framework for exquisite lyrical episodes. His "Knut der Herr" had to sleep many years between the covers of the book before it saw the footlights, and then was not popular. His early novel, "Breide Hummelsbüttel," never reached the larger world of German readers of fiction. Liliencron's latest prose work is likely by its title, "Leben und Lüge: Ein biographischer Roman" (imported by G. E. Stechert & Co.), to attract wider attention. The word biographical suggests an element of autobiography; both those who expect to find in the novel an authentic record of a life which has shunned rather than sought publicity, and those who are familiar with the meagre facts which the poet himself made known when he first came into prominence, will be disappointed. For it is difficult to trace the thread of truth in this fanciful fabric. The wisest course is to regard the book merely as the author's spiritual confession, a veiled statement of his dreams and his longings. It is evident that Liliencron has drawn somewhat upon the memories of his own early years in his story of the boyhood and youth of Kai von Vorbrügge. It is probable, too, that the leaves from Kai's campaign diary are based upon notes taken by the author while he fought against France in the war of 1870-71. Beyond that it would be dangerous to hazard inferences. The second half of the book must be regarded as pure fiction, though it may be difficult to reconcile the uneven course and abrupt end of the narrative with the accepted form of the novel. In this respect Liliencron is of those who create their own forms and make their own laws; and notwithstanding all the technical weaknesses of the work, one is captivated by the spontaneity of the personality of Kai von Vorbrügge.

Foremost among the women writers who struck a new note in German fiction ten or twelve years ago is Gabriele Reuter, whose "Aus guter Familie" still retains its hold upon German readers as a faithful picture of the cramped and narrow life to which the daughters of the better middle class in her country were doomed before modern, and especially English, ideals of education opened to them fresh interests and wider fields of activity. Since the appearance of that work the author has written a number of stories, but only in her latest book has she attained the strength and the sincerity of the first. In the centre of the group of unfortunate women who have sought "Das Thränenhaus" (Berlin: S. Fischer), Frau Reuter has placed Cornelie Reimann, a writer whose works have made her name dear to the women of her country. Towering far above them by her intellect and her culture, this woman becomes the champion of her less favored sisters; and the reader is made to feel that it is due to her influence if they leave the place chastened by suffering and the sanctity of motherhood. There is nothing sensational in Frau Reuter's method; she has a message, but she delivers it with a rare artistic discretion. The experiences of her heroine are recorded with dignity, and the pathos is relieved by touches of humor, which add to the convincing quality of this picture of real life. There are a few incidents which would grate on Anglo-Saxon nerves, but they are justified by the atmosphere of the Bavarian village which is the setting of the unusual book.

Hermann Bahr's "Die Rahl" (Berlin: S. Fischer) is a fair specimen of the tact and the delicacy with which a difficult problem can be treated by a genuine artist. It is the story of a schoolboy who, enamored of a famous actress, follows her daily when she drives home from the theatre. One day, touched by his devotion, she invites him into her carriage and rewards him with a kiss. In a delirium of joy he becomes oblivious of the vast gulf between them and indulges in a wild self-delusion. He forces his way into her villa, and is confronted by the husband, a man of sagacity and experience, who has sympathy with the youthful victim of his wife's attraction and talks to him as man to man. At the end of the interview he gives the boy her latest photograph with an inscription by her own hand—a gift which she holds in readiness for her numerous admirers. When the lad returns to his widowed mother, all his pent-up conflicting emotions burst forth in a torrent of cynicism. Her tactful understanding and gentle indulgence succeed in restoring his balance. The author holds attention by his vivid and natural narrative.

E. von Keyserling's skill in conveying to the reader the tension of a spiritual conflict or of an emotional crisis is remarkable. The very first pages of

his new book, "Dumala" (Berlin: S. Fischer), when the village parsonage is ringing with the pastor's dramatic rendering of Schubert's "Am Meer," give one the key. Equally strong is the chapter describing a Sunday evening at the castle of Baron Werland. The characters stand out from their background with striking vitality: the parson with the artistic temperament; the Frau Pastorin, with nothing but her domestic virtue and her boundless admiration for her husband; the infidel nobleman, to whose invalid chair is bound the young and fascinating wife; the pale and poetical secretary languishing with unrequited love for his mistress; and the robust and unscrupulous neighbor, Baron Rast, who carries off the prize. The story closes with a note that is solemn and impressive.

Hermann Hesse, whose "Peter Camenzind" has reached the fiftieth edition since 1904, has written a volume of short stories appropriately called "Nachbarn" (Berlin: S. Fischer); for, although the tales are not interrelated, the scene is a little provincial town which, with all due differences of character and incident, has given them a common stamp. The personages are quaint figures; "der kleine Ohngelt," with his pathetic attempts to distinguish himself as a singer; Karl Eugen Eiselein, who cherishes the illusion of being a poetical genius and is saved from making a failure of his life by the drastic intervention of his robust and practical mother; the quiet and respectable merchant, Walter Kömpff, who in his later years fell into religious mania and shocked his neighbors by his suicide; and finally the inmates of the poorhouse, who had been installed in the old inn "Zur Sonne." There is pathos and tragedy in the lives of some of these provincials; but there is humor, too, expressed in a style of rare strength and purity.

The title of the volume of short stories by Felix Salten, "Die Geliebte Friedrichs des Schönen" (Berlin: Marquardt & Co.), is derived from the first story, which is an indirect plea against the removal of inconvenient relatives to poorhouses and old people's homes. The gradual awakening of the heroine to the realization of her environment and the strange delusions to which she becomes a victim in her unaccustomed idleness are depicted with great force. A curious problem of criminal psychology is the subject of "Der Ernst des Lebens." A man who has killed his friend in a fit of rage, because he could not bear to hear this friend preach suavely about the seriousness of life, pleads his case before the warden of the prison to which he had been committed. "Feiertag" is a little sketch giving a charming glimpse of the ordinary holiday life on a Vienna street; but against this background is outlined a love affair which an incident of this day brings to an untimely end. "Ein Tag" is a novelette in dialogue, recalling in the even and natural tone of the conversation and the strong dramatic climax the little masterpieces by which Jeanne Marni won for herself a place in contemporary French letters. "Die Wege des Herrn" is the pathetic story of an abandoned dog. Into the last stories in the book there enters a marked element of satire. The singer who gives the best of his art and fails to be rewarded by the sympathy and the understanding of his royal listener philosophically accepts his fate. His companion in a later story is a young gladiator who believes in imperial magnanimity and has his throat pierced by the imperial sword. The humor of "Die Erhebungen über Barbara Liebhardt" is irresistible. The last novelette, "Vicomte Termilly," compares in conciseness and facile grace with works of the French masters in this kind.

A. von Ende.

Correspondence.

THE FIRST PLAY IN AMERICA.

To the Editor of The Nation:

Sir: The question as to the date of the first play-house in America, the production of the first play, and the writing of the first play, has attracted attention for a good many years. As long ago as 1832 William Dunlap gave September 5, 1752, as the first authentic date, the Hallam company from Goodman's Field as the players, the "Merchant of Venice" as the play, and Williamsburg, then the capital of Virginia, as the place. Clapp in 1853 recorded the 1750 performance in a Boston coffee house of Otway's "Orphan." Ireland in 1866 gave a circumstantial account of a company of actors that reached New York during the month of February, 1750, under the management of a certain Kean and Murray. Charles P. Daly about the same time published a paper in the New York *Evening Post*, in which was given the following reference from the New York *Gazette* for October 15, 1733:

> To be Sold at reasonable Rates, All Sorts of Household Goods, viz.: Beds, Chairs, Tables, Chests of Drawers, . . . a Negro Girl about 16 years of age, has had the Smollpox and is fit for Town or Country. Enquire of George Talbot, next Door to the Play-House.

Since then many important facts regarding the early American stage have been brought to light by the research of various persons, among others G. O. Seilhamer, Judge Daly himself, and Paul Leicester Ford, to mention only three who have entered the field with monographs or books. The Philadelphia records, for instance, of the Murray and Kean company have been brought to light. An entry in John Smith's "Journal" gives the name of what was probably the first play acted by them:

> Sixth Month (August) 22d, 1749. Joseph Morris and I happened in at Peacock Bigger's, and drunk tea there, and his daughter, being one of the company who were going to hear the tragedy of *Cato* acted, it occasioned some conversation, in which I expressed my sorrow that anything of the kind was encouraged.

This company must have acted plays in Philadelphia during the rest of the year, for early in 1750 the Recorder, William Allen, afterwards Chief Justice of the Province, reported to the Common Council that certain persons had lately taken upon them to act plays in the city and he feared the mischievous effects thereof. The board thereupon unanimously requested the magistrates to take the most effectual means for suppressing the "disorder," by sending for the actors and binding them to their good behavior. The company went to New York, and in 1751 to Virginia. As an illustration of the difficulties they overcame, the following prospectus from the *Virginia Gazette* of August 29, 1751, may be quoted:

> By Permission of His Honour the President. Whereas the Company of Comedians that are in New York intend performing in this City [Williamsburg]; but there being no Room suitable for a Play House, 'tis proposed that a Theatre shall be built by Way of Subscription: Each Subscriber, advancing a Pistole, to be entitled to a Box Ticket, for the first Nights Diversion.

The theatre was completed and the first play produced within six weeks; but the following May the company left Williamsburg for Hobbs' Hole and Fredericksburg, not to return. It is of some interest to us to know that young George Washington enters in his ledger, under June 2, 1752, a record of money loaned his younger brother Samuel to see a play by this company in Fredericksburg: "By Cash at the play House 1-3,"—the price of a ticket in the gallery. The later Hallam company gave what Dunlap thought to be the pioneer performance in America, on September 15 (not 5), 1752, in this subscription theatre erected in Williamsburg by these New York comedians, and abandoned by them.

We have records of dramatic performances in Charleston, Williamsburg, and New York before the existence of the Kean and Murray company. The Quakeress Sophie Hume, in an exhortation to the inhabitants of South Carolina, written in 1748, implies the existence of occasional theatrical entertainments: "You have no masquerades nor music gardens to entertain you, neither are theatrical entertainments frequent among you." The *South Carolina Gazette* (Charleston) of October 3, 1748, contains an advertisement of a school "over against the Play House." In 1747, and also in 1743, the same paper contains an advertisement of a ball to take place "at the theatre in Queen street." A map of Charleston, dated 1738, marks the site of this theatre as on the south side of Queen Street, a little west of Church. These Charleston records date back to 1735, before the erection of the theatre. On January 18, 1735, the *South Carolina Gazette* contained the following advertisement:

> On Friday, the 24th inst., in the Court Room, will be attempted a tragedy called *The Orphan* or *The Unhappy Marriage*. Tickets will be delivered on Tuesday next, at Mr. Shepheard's, at 40s. each.

During the next three months at least seven performances are recorded by the *Gazette* in detail, the last being a benefit for Monimia (a character in the "Orphan"). The plays were probably produced by local talent. An advertisement on May 3, at the

end of the season, tells us something of the method of production:

Any gentlemen that are disposed to encourage the exhibition of plays next Winter, may have the sight of the proposals for a subscription at Mr. Shepheard's in Broad Street. And any persons that are desirous of having a share in the performance thereof, upon application to Mr. Shepheard shall receive a satisfactory answer.

Between that date and the date of the next theatrical reference in the *Gazette*, the Charleston theatre was financed and built. An advertisement of January 24, 1736, announces:

On Thursday, the 12th of February, will be opened the new theatre in Dock Street, in which will be performed the comedy called *The Recruiting Officer*. . . . Boxes, 30s.; pitt, 20s.; and tickets for the gallery, 15s.

The season lasted only six weeks, and then for some reason the plays were discontinued. The *Gazette* of May 29 contains an epigram "On the Sale of the Theatre." The building, however, continued to be used for the occasional production of plays until 1755 and after.

The Williamsburg records are not so continuous. Between 1751 and 1736 we have no references to the theatre; but on September 10, 1736, the *Virginia Gazette* advertised the production of certain plays by the students of William and Mary College, and others:

This evening will be performed at the Theatre, by the young gentlemen of the College, The Tragedy of *Cato*, And, on Monday, Wednesday and Friday next, will be acted the following Comedies, by the gentlemen and ladies of this Country, viz., *The Busy-Body, The Recruiting Officer*, and the *Beaux-Stratagem*.

Daly, in his 1896 monograph, insists, though without giving the full text of the above advertisement, that the three comedies mentioned were produced by "an organized theatrical company, who were then performing at Williamsburg, where a theatre had been built." And he continues:

It would be out of the ordinary course of things that a play-house like this, close to the market-place, should have been erected for occasional performances by amateurs. . . . It is more probable that it was an ordinary theatre, where plays were performed by professional actors.

This view, however, is hardly tenable in the light of the exact language of the advertisement. The theatre referred to is first mentioned by Hugh Jones, in his work, "The Present State of Virginia," published in London in 1724, two years after Jones left Virginia. Jones speaks of "a large area for a Market Place, near which is a Play House and good Bowling Green." This must have been in 1722, and is the earliest reference to a play-house in America. A still earlier reference, however, to a dramatic production in Williamsburg is found in a letter of Gov. Spotswood, dated June 24, 1718. Eight members of the House of Assemhly had refused him honor:

Nay, when, in Order to the Solemnizing his Maj'ty's Birthday, I gave a publick Entertainment at my House, all Gent'n that would come were Admitted; These Eight Counsellors would neither come to my House nor go to the Play w'ch was Acted on tbat occasion.

This is all that is known of this play; but it may have been acted by the college boys of William and Mary.

In New York, the records of play-actlng prior to 1750 are scant but suggestive. A manuscript volume of poems by Archibald Home, "late Secretary and One of His Majesties Council for the Province of New Jersey, North America," owned by William Nelson, of Paterson, contains a "Prologue, intended for the second opening of the theatre at New York, anno 1739." A "second opening" implies a first opening; and in a news item in the *New England and Boston Gazette* for January 1, 1733, under the head of New York News of December 11, we have an account of the first opening of this theatre:

On the 6th instant, the New Theatre in the building of the Hon. Rip Van Dam, Esq., was opened with the comedy of the *Recruiting Officer*, the part of Worthy acted by the ingenious Mr. Thos. Heady, Barber and Peruque maker to his Honor.

"His Honor" refers to Rip Van Dam, acting governor of New York up to a few months before the opening of the theatre.

There are two other references to early productions of plays in America. On Marcb 2, 1714, Samuel Sewall, Chief Justice of Massachusetts, protested in a letter against the acting of a play in the Council Chamber at Boston. Even the Romans, he said, were not "so far set upon them as to turn their Senate House into a Play-House." This play was probably not acted. The other reference is found in a small volume, now rare, by Anthony Aston, who had been an actor in the West Indies, and afterwards came to Virginia and New York, and who, according to his statement, acted in the city of New York in 1702. Although he does not say so, it is doubtless upon the authority of this book that Ford, in his monograph, "Washington and the Theatre," makes the assertion:

That there was play-acting in New York, and in Charleston, South Carolina, before 1702, are unquestioned facts, giving to these two places, so far as can be discovered, priority of claim in the first patronage of the mimic art.

Daly merely speaks of the Aston document as affording a possible date:

The comedy with which the New Theatre [in New York] was opened, in 1732. *The Recruiting Officer*, is the earliest play known to have been acted in North America, for though . . . there was a play-house in Williamsburg ten years before, it is not known what plays were acted there until 1736, when four are referred to.

However that may be, these are the principal references so far adduced to performances of plays in what is now English-speaking North America.

As to dramatic authorship, "The Prince of Parthia," hy Thomas Godfrey, of Philadelphia, is generally mentioned in American literary history as the first play to be written in America. The play was written in 1759 for the stage, but was not accepted. In 1765, two years after the death of its author, it was published by subscription, Franklin alone subscribing for twelve copies, and with the same William Allen who had complained in 1750 of Kean and Murray's players, also a patron. It was produced upon the stage in 1767. The play of an earlier author is mentioned by Malone in Wegelin's bihliography—"Le Père Indien," by Le Blanc Villeneuve, written while Villeneuve was in the French service in Louisiana. This tragedy was produced in 1753 in the Governor's mansion in New Orleans. The same author, according to Alcée Fortier (Modern Language Association, 1886), wrote a tragedy called "Poucha-Houmma," based upon a story he had heard while employed by the government among the Tchactas, 1752-58. This constitutes the earliest play writing mentioned by our literary and theatrical historians as having been done in America.

None of these plays, however, was actually the first either to be produced or written in America; 1752 is not the earliest date to be attached to American stage authorship, nor 1732 the date of the earliest reference by name to a play acted in America, nor even 1702 (the date cited from Aston) the earliest date for either. Our dramatic authorship dates back of a certainty sixty-two years earlier than that; our stage history perhaps even earlier. When, in the year 1640, Father LeJeune and the Jesuit missionaries at Quebec added certain American scenes to a French tragi-comedy, they did what was probably the first dramatic writing to be done in what is now English-speaking America. Shakespeare had been dead twenty-four years. Miles Standish was still in command of the Pilgrim forces at Plymouth. William Penn was not yet born. Quebec at this time was only thirty-two years old. Nicolet, the protégé of its founder, had discovered the upper waters of the Mississippi only six years before, and was now living near enough Quebec to help in the polishing, had his linguistic attainments been absolutely needed. The great Jesuit martyrs, Jogues, Brébeuf, Garnier, Buteux, and Daniel, were still working among the friendly Hurons and Algonquins in the interior, while Gahriel Lalemant had not yet arrived from France. An account of this play is given by Paul Le Jeune in the "Jesuit Relations," dated Kébec, Septemher 10, 1640:

Last year we made bonfires for the birth of Monseigneur the Dauphin; we entreated God, by a solemn procession to make this child like his father. Our joy and our affection were not kept within the bounds of one year; Monsieur the Chevalier de Montmagny, our Governor, wishing to prolong it, has had a Tragi-Comedy represented this year, in honor of this new-horn Prince. I would not have believed that so handsome apparel and so good actors could be found in Kébec. Sieur Martial Piraubé, who had charge of this performance, and who represented the chief personage, succeeded excellently, hut in order that our Savages might derive some henefit from it, Monsieur the Governor, endowed with uncommon zeal and prudence, invited us to put something into it which might strike their eyes and their ears. We had the soul of an unheliever pursued by two demons, who finally hurled it into a hell that vomited forth flames; the struggles, cries, and shrieks of this soul, and of these demons, who spoke in the Algonquin tongue, penetrated so deeply into the hearts of some of them, that a Savage told us, two days afterward, that he had been greatly frightened that night by a very horrible dream.

What the play was we do not know, but it was plainly not a religious play. It may have been a play by Hardy—a play like "Alcestis" would afford an opportunity for the Algonquin scenes. Or it may have been a play by Corneille, possibly the "Cid." In all the editions of the "Cid," from 1637 to 1644, the play was called a "tragedy-comedy." Piraube, who doubtless selected it, was a royal notary in Quebec from 1639 to 1643, and close to the Governor. He must have seen the "Cid" played in France. As the tragedy was published in 1637, he could easily have secured the text. Or, it may

have been one of Richelieu's composites. We only know that it must have been a published play of some acting excellence.

The next reference to play-acting in Quebec speaks of the "Cid" by name. In the "Relations" for 1646 Jerome Lalemant tells us:

On the last day of the year they gave a performance at the warehouse, Enacting the sit. Our Fathers were present—in deference to Monsieur the Governor, who took pleasure therein, as also did the savages—that is, fathers de Quen, Lalemant and defretat: all went well, and there was nothing which could not edify. I begged Monsieur the governor to excuse me from attendance.

The Lalemant mentioned is the writer's nephew, Gabriel, who had just arrived from France, and who died by torture at the hands of the Iroquois in 1649. De Frétat had also just come from France. De Quen had been in Canada eleven years; but his attendance at this play of Corneille's suggests the interesting possibility that he may have heard its author's name before that name became famous. Corneille, we know, was educated by the Jesuits at Rouen; and De Quen entered the Society at Rouen the year that Corneille as a boy of fourteen was awarded the important prize of a large folio volume, for proficiency. Both Le Jeune and Vimont, who saw the 1640 "tragi-comedy," also entered the Society at Rouen while Corneille, as far as we know, was a student of the Jesuits there. In 1651 the "Relations" speak of another play by Corneille: "December 4. There was a performance of the Tragedy of 'Heraclius,' by Corneille." And in 1652 the "Cid" was played again: "April. On the 16th, there was a performance of Corneille's Tragedy, 'le Scide.'" These early Quebec plays seem to have been produced usually under secular auspices, but in 1658 the Fathers themselves, or rather, their French and Indian pupils at the college, gave a play:

July 28. Monsieur the governor did us the honor, with Monsieur The abbé queylus, of coming to dine at our house. There he was received by the Youths of the country with a little drama in french, huron, and Algonquin, in our Garden, in the Sight of all the people of quebec. The sieur governor expressed himself as pleased with that reception.

This play is the first that we know to have been written wholly in America; and perhaps it is our last example of genuine American dramatic writing—writing, that is to say, in a native American tongue. Sulte adds greatly to our knowledge of it by giving the names of the parts and players. Although it was produced by a religious order, and almost certainly written by some one connected therewith, it was in no sense a religious play, but a play more like one of our minor Jacobean masques—a compound of tableau, allegory, and ballad. I give the names of the characters: Le Génie universal de la Nouvelle-France; Le Génie des Forêts, interprète des étrangers; Les quatre Français qui chantent les compliments; Le Sauvage Huron; L'Algonquin; Étranger du Sud; Étranger du Nord; Captif Huron, and Captif Nez-Percé. At least four other plays were produced in Quebec before 1702, the earliest date named by Daly and Ford. One of these was a religious spectacle of some kind—one of two referred to by the Fathers during this period. I quote from the "Relations" of 1659: "August 3. A representation was given in our chapel of quebec, in honor of Monseigneur the bishop of petraea. Everything went well." In 1668 a secular play was given twice—by whom is not clear:

February The 7th and 9th. The play of Le sage Visionnaire was performed with great success and to every one's satisfaction. It was as well received the second time as the first.

And six weeks later, a second religious play: "March The 21st. Master Pierson had a short latin play performed, on the passion of our Lord; it was successful." The last of these plays was Molière's "Tartuffe," the performance of which at the castle, in 1794, caused a rupture between Governor Frontenac and the bishop, St. Vallier, which never healed. This was the only performance that was opposed by any one during the entire period, and it solely because of the subject-matter of the play.

I have brought these early dates together because of their interest to the students of the drama. Mexico would afford still earlier references to the acting of religious plays; but the later literary and dramatic history of Mexico has no connection with that of major North America. I think that 1640 will prove the earliest reference to dramatic writing in the America that now speaks English; but I hope to find allusions to play-acting that will carry that date back to nearer the beginning of the century.

WILLIAM J. NEIDIG.

University of Wisconsin, January 10.

INIQUITIES OF THE DUTY ON BOOKS.

To the Editor of The Nation:

Sir: In the recent articles in the *Nation* in regard to the iniquitous tariff on books it has been frequently stated that books in foreign languages are admitted free of duty. Of late, however, it has been rumored that the duty is again to be placed upon such books. A recent decision of the New York customs appraisers will show that a duty may be exacted from nearly all books in foreign languages under the present law. Some time ago I imported a copy of an annual publication, the Jahresbericht über die Leistungen und Fortschritte auf dem Gebiete der Neurologie und Psychiatrie. Like all such works it contains a full bibliography of the subject for the current year, in which the titles of books, medical journals, and articles are given in the original language. Of course, some of these titles referred to English and American works, so that the appraisers decided that the book was printed partly in English and therefore dutiable under the law! Soon some appraiser will decide that "a" and "die" are English words, wherever or however they may be used, which will enable the customs officials to collect a duty on every French, German, or Italian book.

PHILIP COOMBS KNAPP, M.D.

Boston, January 18.

ART COLLECTIONS FOR SMALL CITIES.

To the Editor of The Nation:

Sir: May I complain of the poverty of our small cities like Newburgh, for instance, with respect to collections of works of art? Neither painting, engraving, ceramics, nor architecture can be enjoyed or studied in any collection open to the public. If some of the money that streams towards libraries could be directed into this channel it would promote culture and confer the best sort of pleasure.

ISABELLE G. OAKLEY.

Newburgh, N. Y., January 19.

RETIRED OFFICERS FOR ACTIVE SERVICE.

To the Editor of The Nation:

Sir: I trust you will have a good word to say relative to utilizing the services of officers on the retired list, which is now being agitated in Congress. No one knows except those who have had the experience what it means to an active and capable man that on his sixty-fourth birthday he finds himself with nothing to do. Too old to take up new pursuits, he has outlived and broken all ties and associations formed before he entered the service, and the cemetery is about the only place open to him. Many of the officers of that class are very capable, have had long experience in responsible positions, and are of undoubted integrity. To those of us who have been busy all our lives, it is a great hardship to have nothing to do, and the army is losing the service of a large body of very capable men.

P. H. RAY,
Brigadier-General U. S. Army.

Youngstown, N. Y., January 18.

AN EXPLANATION FROM MR. FLEXNER.

To the Editor of The Nation:

Sir: I regret that absence from the city and other causes have postponed so long my noticing the objection which Dean Briggs has made in your columns to my interpretation of what he said in reference to the new method of examining students for admission to college. It is clear to me now that I have attributed to Dean Briggs a view that he was merely characterizing in phrases used by its partisans without his meaning in the passage cited either to approve or to condemn. I am very sorry, indeed, to have misunderstood his position. My criticism should have been directed altogether against the theory in question without saddling any responsibility for it on Dean Briggs.

ABRAHAM FLEXNER.

New York, January 30.

THE SENATE AND THE PRESIDENT.

To the Editor of The Nation:

Sir: In estimating the forces that make up Mr. Roosevelt's unpopularity with the Senate, should not more emphasis be laid on the feeling of envy in that august body than was done in your editorial paragraphs of January 14 on that subject? Mr. Roosevelt has achieved at one bound, rather than by the usual long and laborious path, the popularity which all politicians aim at. He was originally a political accident, was never liked by politicians anyhow, did not pursue their methods, was a man of profound convictions—blurted out those convictions—and, worse than all, won the popular heart by demonstrating that he had a backbone—somewhat as Cleveland did—to the horror of professional politicians. I am not discussing the correctness of his political views, but I wish to call attention to his earnestness and manliness, his frankness and fearlessness. To the average wire-pulling, log-rolling, trimming, and compromising politician, such a character is

inexpressibly hateful; there are few primaries in this land in which politicians would not instinctively join forces at sight to squelch such a dangerous and iconoclastic personage, and, per contra, there are few districts in which such a man would not be instantly taken up by the people and given the highest office at hand, provided he were brought to their notice. The gist of the situation is that Mr. Roosevelt is now shorn of all power, is practically a common citizen, but still the idol of the popular heart. Behind all the Senate's hostility lies the motive force of envy: really the greatest compliment under the circumstances possible. E. L. C. M.

Chicago, January 19.

Notes.

A. C. McClurg & Co.'s spring list includes the following titles: "Bill Truetell," by George H. Brennan; "The Delafield Affair," by Florence Finch Kelly; "Mission Tales in the Days of the Dons," a new collection of old tales of California, by Mrs. A. S. C. Forbes; a history and forecast of the Panama Canal, entitled "The World United," by John George Leigh; "Letters from China," by Sarah Pike Conger, wife of the late minister to China; "The Empire of the East," an illustrated description of Japan, by H. B. Montgomery; "A Summer in Touraine," an illustrated study of the châteaux of the Loire, by Frederick Lees; "A Summer Garden of Pleasure," by Mrs. Stephen Batson; "The Point of View," and "A Talk on Relaxation," by Alice K. Fallows; "Making the Most of Ourselves," by Calvin Dill Wilson, "True Manhood," by Cardinal Gibbons; two companion volumes, "The Art of Speech and Deportment" and "Selected Readings," by Anna Morgan; "The Railway Mail Service," by Clark E. Carr; "Jane Hamilton's Recipes," a book of old-time Virginian cookery, by Charlotte M. Poindexter; "What Is a Picture?" and "My Chums in Caricature," by Herschel Williams.

"Lincoln's Birthday" is celebrated by Moffat, Yard & Co., with an anthology of that name compiled by R. H. Schauffler. Harpers also will bring out a new and revised edition of the "Reminiscences of Abraham Lincoln," containing recollections by such men as U. S. Grant, Henry Ward Beecher, Walt Whitman, Charles A. Dana, and Robert G. Ingersoll. The book was first prepared by A. T. Rice, when he was editor of the *North American Review*.

A new book of "Yale Verse," covering the period from 1898 to 1908, is to be issued by the Yale Publishing Association. It will contain selections from the undergraduate magazines, together with a number of university prize poems. It will be uniform in style with the volume of 1898.

We have received the fourth biennial edition (1909) of "Who's Who in New York City and State," edited by John W. Leonard and published by L. R. Hamersly & Co. It is made on the plan of the national "Who's Who," but owing to its restricted locality is able to include many names not in the more general work and to devote more space to minor details of biography.

Of the new English "Who's Who," for 1909 (The Macmillan Co.), there is nothing to say, save that the number of biographies has been again increased, and that for excellence of form and for general usefulness it still leads the other directories of which it is the model. The time must soon come, we suppose, when its growing bulk will make necessary the exclusion of all but British names. This could be done with less loss now that America, Germany, and France have their own guides.

"Whitaker's Peerage, Baronetage, Knightage, and Companionage," for 1909 comes out in a new cover of blue and gilt, but is otherwise not changed in plan. By its lists of Titled Relatives it gives a complete survey of the families of the present nobility.

An eighth edition of J. G. Bartholomew's "Handy Reference Atlas of the World" (E. P. Dutton & Co.) contains several new plates and shows revision of the old maps. The lettering though necessarily small is clear. Some of the city maps, however, are scarcely detailed enough to serve any probable purpose. We observe, too, that Staten Island seems to have baffled the cartographist. In the general map of the Eastern States it is attributed to New York, while in that of the Eastern and Middle States (itself a useless duplication) it goes to New Jersey. Again in the map of New York city it is called only Richmond, though the other boroughs receive their local names.

Nearly one-third of the 686 pages of R. F. Foster's "Complete Hoyle" (Frederick A. Stokes Co.) is devoted to bridge and whist, and the rest to indoor games, including billiards and pool. Hoyle is probably more widely quoted than any other authority, and none is more fallible. Mr. Foster has, however, compiled the rules of all games in a systematic manner, and since he is second to none in this country in knowledge of the best way of playing the various games, his book will be valuable for reference. Hoyle, however, in this case, is merely a pseudonym nowadays. The original Hoyle would be absolutely worthless.

The progress of industrial education in this country is described by more than a score of its leaders in the January monograph in the *Annals of the American Academy of Political and Social Science*. Booker T. Washington contributes a summary of results and prospects. Carroll D. Wright reports on the work of the National Society for the Promotion of Industrial Education. All the other articles deal with special problems or schools. Miss Mary Schenck Woolman's estimates of the relative value and cost of teaching various trades in a girls' trade school bring us information much wanted at the present stage. Her figures are largely drawn from the Manhattan Trade School, of which she is director. Milwaukee, Philadelphia, Brooklyn, Columbus, and Manila institutions give account of themselves, likewise six schools conducted by private industrial corporations, stores, and labor unions. Too short and inconclusive, but in excellent spirit is the closing paper by John Golden, president of the United Textile Workers of America, on "The Position of Labor Unions Regarding Industrial Education." Mr. Golden cites instances to show that organized labor is no longer prejudiced against such teaching.

The emancipation of Mohammedan women is shown to be one of the most remarkable and encouraging results of the recent bloodless revolution in Turkey, by Miss Mary Mills Patrick, president of the American college for girls at Constantinople, in the *National Geographic Magazine* for January. What the first use which they will make of their freedom will be is indicated by the fact that "there is no subject that is being discussed with greater interest and vigor in the Turkish press to-day than that of the education of women." For some time past they have been permitted to become teachers; a normal school at the capital called the "Home of the Lady Teachers" sends out annually a class of from sixty to one hundred graduates, while weekly lectures for women are given in the new Mohammedan Medical College in Constantinople. During the past twenty-five years there have been many women writers of poetry, romances, and works on philosophy, ethics, and religion. Three new reviews for them are now being published in Constantinople, and women's papers in other parts of the empire. Another noteworthy indication of the new spirit awakened in the empire is given in the same magazine by President H. S. Bliss of the Syrian Protestant College at Beirut. For three days, to celebrate the granting of the Constitution, there were assemblies of Jews, Christians, and Moslems in that wonderful sacred enclosure of the Mosque of Omar in Jerusalem, which has been for ages barred to all but followers of Mahomet.

Further evidence of the progress of the English language in the Philippine Islands, a matter remarked incidentally in an editorial in the *Nation*, November 19, 1908, p. 485, discussing the beginnings of a Filipino literature, is afforded by the appearance of a bilingual monthly, edited and published at Manila, under the double title *Biblioteca Nacional Filipina* (*Philippine National Library*) by Manuel Artigas, a Filipino; and by the publication of a weekly English edition of *Libertas*, a daily periodical of Manila, owned by the order of St. Dominic and published as the organ of St. Thomas University and of the Roman Catholic hierarchy at Manila. During the earlier period of American occupation, *Libertas* was bitterly, though rather covertly, anti-American, as spokesman both of Spanish feelings of resentment and of the friars' fears and prejudices. A change in its attitude followed soon after the Manila archbishopric was occupied by an American; it has for some time been "reconciled," and is now, indeed, in general, a supporter of "the establishment," civilly, as well as ecclesiastically. Its English edition will serve as an organ of American Catholics, to some degree; but there is also, as in the case of the English edition of *El Renacimiento*, the Filipino radical newspaper, a desire to reach out toward that new generation of English-speaking Filipinos, especially in the provinces, that the American schools are beginning to bring on the Philippine stage.

A new edition of "A History of the Philippines," by David P. Barrows, director of education under the Philippine government, has lately been issued, this time with the imprint of The Bobbs-Merrill Co., Indianapolis. At the time of its appearance in 1905, it was noticed in these columns

(*Nation* of March 1, 1906, p. 177) as the best brief survey of Philippine history available in the English language. The book then attracted a good deal of attention, not because of its merits, but because it was assailed by Archbishop Harty and others in the Philippines and by the Catholic press of this country as being unfair to the Catholic Church in what was said of the Spanish friars and Jesuits in Philippine history. The fact of the matter is, the book is very fair, and is far more considerate of the friars and Jesuits than the most notable Spanish Catholic historians have been. Interested parties desired to oust Doctor Barrows from his position, and they employed Archbishop Harty and the American Catholic press to this end. It was represented that Doctor Barrows had used his position to introduce into Philippine schools this textbook, not only for his own profit, but with a view to "de-Catholicizing" the rising generation of Filipinos. The fact was, the book was written before he became director of the Philippine educational system, and, when it finally appeared, he declined to put it on the list of school texts, deeming such action improper, though his teachers desired to use it, as filling a place long vacant. To the demand that he withdraw the book from sale, a demand addressed to the War Department and transmitted to him by cable, without comment, he had the courage to answer that he would not do so. Now, in the second edition, he says:

> I have carefully reviewed all these criticisms that came to my attention and have concluded that, almost without exception, the statements should remain as first presented. The book, therefore, appears again practically without alteration, except for the correction of typographical errors and the occasional modification of a paragraph.

Students of Spenser will welcome a convenient edition of "The Fowre Hymnes" (1596), of Love, of Beauty, of Heavenly Love, and of Heavenly Beauty, by Lilian Winstanley (New York: G. P. Putnam's Sons). The introduction is a study of Spenser's debt in general to Plato, of the influence of Plato on these "simple songs," and of the influence of the renaissance Platonism of Marsilio Ficino and Giordano Bruno. This last influence, here treated more fully than in any previous commentary, is made especially apparent by numerous quotations and parallels. The notes, without being too minutely linguistic, clear up many of Spenser's archaisms. Chiefly, however, we are glad to have the poems themselves in this handy form, the only separate annotated edition available. Hardly in the splendors of the "Faerie Queene" itself do the enthusiasm and intensity of the poet's poet show more clearly or more significantly than in these throbbing stanzas.

"The Fool of Quality: or the History of Henry Earl of Moreland," a novel by Henry Brooke, very popular in the eigbteenth century, is issued by the John Lane Co. in two volumes of "The New Pocket Library." The work first appeared in 1766 in five volumes, and ran through several editions. In 1780 John Wesley got out an abridgment in which he commended the work "as one of the most beautiful pictures that was ever drawn in the world." In 1859 again Charles Kingsley edited a two-volume edition, in which he praised the book as containing "more of that which is pure, sacred, and eternal than . . . any book published since Spenser's 'Faerie Queen.'" And now Francis Coutts in his preface to this new issue apostrophizes Brooke as a "great-hearted, wittty, worthy creature," whose volume is "gay and yet gracious; bright, yet profound; human, yet incorrupt; ideal, yet true."

The purpose of W. S. Monroe's "In Viking Land" (L. C. Page Co.) is "to give prospective tourists some notion of the benefits to be derived from a visit to Norway and to inform those who prefer (or are forced by circumstances) to travel within the covers of a book." This purpose the volume serves very well. The historical chapters and those on commerce, transportation, education, literature, etc., give just a minimum of information, while the descriptive offer a clear idea of the nature of the country and the life of its people. Special chapters are devoted to the three principal cities, Christiania, Bergen, and Trondhjem. There is an appendix of suggestions for travellers. The illustrations are an important feature, well selected and executed. The text reads too much like a translation. On page 73 there is a curious error (misprint?), when the author says that "on the 4th of November [1905] *Karl XIII*, second son of King Oscar, was offered the Norwegian throne."

The *Atlantis*, a Greek newspaper of this city, has had the enterprise to publish in modern Greek a complete history of the United States in one volume (Ἱστορία τῶν Ἡνομένων Πολιτειῶν τῆς Ἀμερικῆς). The authors, Solon I. Vlasto and Nikolas Gertzis, make no pretensions, we suppose, to be specialists in the historical field, but, so far as we have looked into their work, they seem to have constructed a clear and interesting narrative. The book may be recommended to classical Greek scholars, who desire to familiarize themselves with the modern idiom. The transliteration of the proper names will alone afford considerable amusement. Μεϋφλάουρ, Τζὼν Χάγκοκ, Μπώφφαλο, and Ρῶσβελτ, for instance, have a certain piquancy.

"Banzai" (Baker & Taylor Co.) is a German prophecy in the form of fiction of the great war between Japan and the United States that is due this year. It was commented upon in the *Nation* (July 23, 1908, p. 73), when it appeared in the original. The translator has done his work smoothly, but without quite ridding the text of a foreign flavor. He might have taken the liberty to change such names as John Halifax and Traddles, which sound unconvincing when applied to living people.

In the Sammlung Göschen (Leipzig: Göschen) Wilhelm Kroll has just issued a compact though comparatively complete "Geschichte der klassischen Philologie." It is based upon the best of modern sources and is attractively written.

After the exceptionally long interval of ten years, the first volume of Robert Davidsohn's "Geschichte von Florenz" (Berlin: Mittler & Sohn) has been followed by the second, which, from a literary and artistic point of view, is fully equal to the first. This second volume of nearly thirteen hundred pages appears in two parts: one entitled "Staufische Kämpfe," covering the period of 1209-1267; the second, "Die Guelfenherrschaft und der Sieg des Volkes," coming down to the establishment of democracy in 1295. The two parts fill nearly thirteen hundred pages. The author announces that the next volume is in preparation.

That monumental product of organized German scholarship, Hinneberg's "Die Kultur der Gegenwart" (Berlin: B. G. Teubner), has now reached the modern literatures, and the tenth part, just published, is concerned with the Romance and Celtic languages. Of the valuable summaries of Gaelic, Cymric, and Cornish, by Zimmer, Stern, and Kuno Meyer, it is unnecessary to speak, nor of Meyer-Lübke's competent survey of Romance philology. But special attention should be called to Prof. Heinrich Morf's sketch of the Romance literatures. In three hundred pages he has summed up, with admirable tact and intelligence, the literary history of France, Italy, Spain, and Portugal, from their origins to the present day, with a glance at Rumania and South America. His work, written with equal lucidity and insight, represents German scholarship at its best; and if separated from its less interesting context, would be admirably adapted for translation into English as a sketch of the great literatures of Western Europe.

The edition of German classics published by the Deutsche Verlagshaus Bong & Co. of Berlin and Leipzig, under the general title Hempelsche Klassiker-Ausgabe, is now being reissued in a revision entitled Goldene Klassiker-Bibliothek. The characteristic features of this edition are a critically correct text, excellent introductions and biographies, copious and well selected notes, with good portraits and facsimiles. The books are very well made, but are sold at the low cost of 1.50 marks a volume.

Heinrich Heine's "Memoiren" have just been published in a beautiful edition by Carl Curtius, Berlin. Wherever the fragmentary character of the materials leaves lacunæ the skilled editor and Heine specialist, Dr. Gustav Karpeles, has as far as possible supplied the data from the other writings of the poet.

Carl Reissner of Dresden has begun the publication of a new series of fiction under the general title Deutsche Novellen. Four volumes have appeared, containing the works of Frida von Bülow, Ottomar Enking, Wilhelm Jensen, and Marianne Mewis.

"Der Rosengarten deutscher Liebeslieder" is a comprehensive and well selected anthology, containing 628 pages of characteristic German love songs of all times, beginning with the Minnegesang and coming down to our day. Julius Zeitler edits and publishes the work in Leipzig. The old Minnesongs have been retained in their original Middle High-German garb.

In the Kieler Studien zur englischen Philologie, edited by Dr. F. Holthausen, the latest addition is a "literary investigation" under the title "Samuel Richardsons Belesenheit." The author is Dr. Erich Poetzsche.

In view of the fact that on July 10 the four hundredth anniversary of the birth of Calvin will be celebrated, special interest attaches to the selection of his letters, "Johannes Calvins Lebenswerk in seinen Briefen: Eine Auswahl von 670 Briefen Calvins in deutscher Uebersetzung," soon to be published by J. C. B. Mohr of Tübingen. The translator is Rudolf Schwarz, and an in-

troduction is supplied by Prof. Paul Wernle. The work will appear in two volumes. The compiler has selected from the 1,400 letters of Calvin found in the Corpus Reformatorum those which present all sides of the man. The professed aim of the work is to do for Calvin what Carlyle has done for Cromwell. The text is to be accompanied by short explanatory notes.

R. Eckart's "Hundert Stimmen aus vier Jahrhunderten über den Jesuitenorden" (Leipzig: J. G. H. Wigand) is an excellent collection of material from both sides of a great controversial question. Vol. I. 200 pages, is entitled "Der Jesuitenorden im evangelischen Urteil"; and Vol. II, 175 pages, "Der Jesuitenorden im katholischen Urteil." The author has evidently aimed to select from both churches only witnesses who are scholarly and fair-minded.

The angling library of the late John Gerard Heckscher of this city, to be sold by the Merwin-Clayton Sales Company February 2, 3, 4, and 5, is said to be the largest but one in the United States, and quite the largest ever offered at public sale. It numbers 2,320 lots. Among the principal features of the collection are copies of all the editions of "The Compleat Angler," before 1824, including the rare first edition of 1653. Another uncommon book is Dame Julyans Barnes's "The Treatyse of Fysshynge wyth an Angle," separated from Wynkyn de Wordes's 1496 edition of "Hawkyng, Huntyng and Fysschynge wyth an Angle." With this, the earliest English book on angling, stands the first American book, C. S. Rafinesque's "Ichthyologia Ohioensis," Lexington, Ky., 1820. Other important titles are: Mrs. T. Edward Bowdich's "The Fresh-Water Fishes of Great Britain," 1828-38; Phineas Fletcher's "Sicelides," 1631; P. Bleeker's "Atlas Ichthyologique des Indes Orientales Neerlandaises," with 420 colored plates; Marcus Elieser Bloch's "Allgemeine Naturgeschichte der Fische," with 432 hand-colored plates; and Richard Blomes's "The Gentleman's Recreation," with about 100 colored plates.

Charles Rockwell Lanman, professor of Sanskrit at Harvard University, and general editor of the Harvard Oriental Series, has been elected a corresponding member of the Institute of France (Académie des Inscriptions et Belles-Lettres). He is the ninth American now holding that title.

The death is reported of "Hesba Stretton," a novelist who received her training under Dickens. Her real name was Sarah or Hannah Smith, although she was known in private life by her pseudonym. Among her many religious and philanthropic stories are: "The Doctor's Dilemma," "Hester Morley's Promise." "Half Brothers," "Carola," "Jessica's First Prayer," "Bede's Charity," "Soul of Honor," and "The Highway of Sorrow."

From Amalfi comes the report of the death of Ludwig Habicht, the popular novelist, at the age of seventy-six. Among his stories are "Der Stadtschreiber von Liegnitz," "Vor dem Gewitter," "Am Genfersee," and "Unter fremder Schuld."

Nikai Karasin, the Russian novelist and illustrator, has died at St. Petersburg in his sixty-eighth year.

THE RACE PROBLEM IN AMERICA.

Race Adjustment: Essays on the Negro in America. By Kelly Miller. New York: Neale Publishing Co. $2.

Following the Color Line. By Ray Stannard Baker. New York: Doubleday, Page & Co. $2.

Studies in the American Race Problem. By Alfred Holt Stone. New York: Doubleday, Page & Co. $2 net.

Each of these volumes is a compilation of more or less detached articles, many of them previously published in magazines or prepared as occasional addresses, and in some instances already widely read and commented upon. None of the books, accordingly, attempts an orderly treatment of the negro problem, either as a whole or in any large aspect of it. There are wholesome differences in point of view, and some observable differences in the equipment of the authors. Taken together, however, the writers are singularly in accord in their efforts to describe conditions exactly as they are, and to indicate with precision as well as with good temper the main lines of progress and retrogression. The appearance of three such books in a single publishing season testifies again to the abiding popular interest in this our gravest, most difficult, and most complicated social problem.

Of the fundamental change which has taken place in the attitude of even thoughtful Americans toward the negro and his future, these volumes are an interesting evidence. So long as the events of the Civil War and Reconstruction were fresh in mind, the dominant political opinion of the country unhesitatingly affirmed the essential equality of the negro and white races, notwithstanding the wide difference in social development; urged the supreme efficacy of the ballot as a means of strengthening and preserving the newly conferred freedom; and dwelt upon the moral wrong of denying to the negro, especially in the South, equality of civil, political, and even social opportunity. That this ideal, however, whether as a whole or in many of its detailed features, has lamentably failed of realization, the most ardent believers in the social philosophy of Reconstruction have been forced to admit. The ballot, widely and avowedly withheld in large parts of the South by a variety of ingenious devices, has long since ceased to be for the average negro either a means of grace or the hope of glory. Instead of social equality we have social discrimination. The significant thing about all this is, not that it has happened, but that it has been so generally acquiesced in. For ten years and more there has been growing a volume of literature which either assumes, or affirms as a fact, the fundamental and eternal inferiority of the negro race, justifies the exclusion of members of that race from effective competition with whites, denies their fitness to vote or hold office, disparages their efforts to obtain an education, and apologizes for the brutal vengeance too often wreaked upon them for their real or fancied crimes. It is no longer fashionable to praise the virtues of the negro, save as a menial, nor is it entirely easy to be friendly to him, save through the medium of an impersonal organization.

Partly as a result of this ominous revulsion of feeling, but mainly as a thoughtful protest against its excesses, there has developed a new method of approaching the negro problem, of which the three books named above may be regarded as typical and worthy examples. Students have at last begun to realize the necessity of observing the negro as he is, without prejudice for or against him; of determining his racial status, his intellectual and moral qualities, his physical constitution and tendencies, his conduct in free contact with the whites, and his productive capacity as a worker. Where the older literature dealt with the negro in the mass, the newer deals with him individually or in small groups, and on both the economic and the political sides. Such inquiries concern themselves little with the "rights" or the "future" of the negro, but much with what he is actually doing. To paraphrase Booker T. Washington's happy remark, the tendency today is not to discuss whether or not the negro ought to be recognized, but rather to discover and make clear what he has done to entitle him to recognition.

Professor Miller of Howard University, for example, himself one of the most scholarly representatives of his race, discusses in his book such practical matters as the negro's part in the solution of the negro problem, the status of the city negro, the surplusage of negro women, the movement for industrial education, the contrasted opportunities for the negro in the North and in the South, the rise of negro professional men, and the careers of notable negroes. His protest against lynching, already familiar under the title of "An Appeal to Reason," enforced as it is by carefully-sifted statistics, is still one of the best and sanest discussions of that hideous, but unsolved question; while his exposure of the shallow pretence, gross prejudice, and underlying brutality of "The Leopard's Spots" and other of Dixon's frothings is as admirable for its calmness and good temper as for its thoroughness and skill. Professor Miller announces no programme and permits himself little generalization; but his patient and detailed examination of the facts of negro industrial and political life, and his quiet emphasis upon that which is hopeful

and encouraging, compels belief that the negro, despite his admitted limitations, is steadily rising in the scale of civilization and justifying such freedom as is, however grudgingly, accorded to him.

Mr. Baker's attitude, on the other hand, is that of the experienced newspaper reporter, practised in observing closely and in following clues, skilled in choosing relevant and illustrative facts, accustomed to describing things as he sees them, but without marked sense of perspective. "Following the Color Line" is an attempt to discover and expose the facts regarding race discrimination and the reason for it, and to explain the attitude of the South, both black and white, towards race riots, lynching, and other less violent, but effective attacks upon negro individuals and negro communities in various parts of the country. Mr. Baker's conclusion that the white man rises against the negro whenever the negro comes, or appears likely to come, into effective economic or political competition with him, and that discrimination and denial of social equality, being grounded in a conviction of white superiority, are inevitable preventive checks applied to keep the races apart, is not, of course, novel; but the wealth of illustration which crowds his pages gives telling force to much of what he says.

Mr. Stone, who for several years has been known to a small circle as one of the most acute and painstaking students of negro conditions in the South, has made a volume out of a number of addresses and magazine articles, to which Prof. Walter F. Willcox adds three papers on negro criminality, census statistics of the negro, and the probable increase of the negro race in the United States. Mr. Stone is at his best in dealing with statistics and concrete economic conditions, and his studies of the negro in the cotton lands of the Yazoo delta have been recognized by economists as of prime importance. The paper on "The Mulatto Factor in the Race Problem," first published in the *Atlantic* in May, 1903, and extensively commented on at that time, is a substantive contribution of permanent interest. In the field of agricultural labor, which he is apparently making his own, Mr. Stone can speak with authority; but in the broader field of social and political relations, he is less happy. His papers on "The Negro in Politics" and "Mr. Roosevelt and the Negro" are repetitious and inconclusive. As regards negro criminality, Professor Willcox finds "a large and increasing amount of negro crime . . . manifested all over the country," due to "defective family life, defective industrial equipment and ability in comparison with their competitors, increasing race solidarity among the negroes, and increasing alienation from the whites" (p. 474). To the extent to which the Southern whites minimize their own responsibility, or Northern whites ignore Southern conditions and the effect of Federal policy since the Civil War, each helps to perpetuate sectional antagonism.

All of these writers agree in approaching the study of the negro problem with open mind, in keeping close to facts and avoiding vague or sententious generalizations, and in attending to small details with patient care. Mr. Baker, more accustomed than the others to tilting a lance, frankly affirms the intellectual and moral unfrankness of the South in its attitude towards the whole question; but his volume, like the others, bears testimony to the evident, though painfully slow and irregular, progress of the better class of negroes in morals, education, economic efficiency, wealth, and political capacity. The one fact that stands out glaringly, however, in all these discussions is the well-nigh universal tendency, North as well as South, to discrimination against the negro as belonging to an inferior race. We are brought face to face with the as yet unsolved problem of democracy—the ability of a democratic society to comprehend within its spirit races essentially diverse. To this hard question neither writer ventures more than a hesitant answer, an expression of hope rather than of confident faith. They leave the educated and efficient negro where they find him—on trial before a changing and unsympathetic democracy.

CURRENT FICTION.

Heather. By John Trevena. New York: Moffat, Yard & Co.

This book is the second of a moorland trilogy, begun with "Furze, the Cruel" (see the *Nation* of March 26, 1908, p. 387). Heather typifies endurance, and the last book is to deal with Granite as embodying strength. In spite of a certain crude power in the first of the series, "Furze," one was left wondering whether it would be possible for human ingenuity to construct a much more disagreeable book. "Heather" answers this question; it can be done, and Mr. Trevena has done it. After the present work, our faith in his dismal possibilities is unlimited. He may have a sense of humor and produce in "Granite" a thing of sweetness and light; but in this supposition the reader's hope and faith are not coöperative. "Heather" begins at a tomb, whence the scene shifts to a sanatorium for consumptives, an institution that, as portrayed by Mr. Trevena, savors strongly of an asylum for the insane. From this auspicious beginning the tale moves on consistently through disease, filth, madness, discouragement, and degradation indescribable of body and mind. By a final *tour de force*, Winnie Shazell, the personified Heather-spirit, is returned to her native moor and, supposedly, to happiness with George Brunacombe; but after almost five hundred pages of the ingredients specified above, one is inclined to meet the suggestion of a possibility of wholesome joy with incredulous apathy. The characters are for the greater part entirely unconvincing; Cruickshank at his wildest never conceived such a phantasmagoria of grim caricature. Their one great common bond is a strenuously dwelt upon aversion to personal cleanliness. Among them all only three are represented with a thoroughly sane and healthy outlook on life—Gregory Breakback, the clean-hearted peasant visionary; Tobias, the fox-terrier; and Bubo, the one-legged owl. One is compelled to believe that Mr. Trevena is endeavoring to set forth some great truth—no aim less potent could have sustained him through this grewsome task: the question is, What is he trying to tell?

The Adventures of a Nice Young Man. By Aix. New York: Duffield & Co.

The anonymity of this book really piques curiosity; for, unlike the general run of unacknowledged novels, it possesses exceptional qualities of style and temper. Its author is an observant spectator of the present, but his imagination turns for contrast and refreshment to the eighteenth century—to the time of the Queen Anne wits and moralists, to the time of Pamela, Joseph Andrews, and Dr. Primrose. It is a part of the interesting reaction, of which William De Morgan's books are also a part, against the self-consciousness, the small realism, the unhealthy psychologizing of the "new literature." The success with which "Aix" has laid off the new literary man and put on the old is remarkable; he has not only achieved a fluent, humorous, easy-chair style of the eighteenth century—we need not say exactly whose—but he has assumed also, with equal happiness, its moralizing and humanistic spirit.

The special novelty of the book is that it holds this antique literary mirror up to contemporary life in New York. The hero and narrator is a young man of to-day whose youth was nourished on Latin and Greek and the English classics by an almost extinct type of scholarly clergyman in an out-of-the-way place. Like an adventurer from another age, he enters the metropolis to seek his fortune. His ideas of religion and morals hark back to Pope and Bolingbroke; his notions of polite society to Congreve and Dryden. He steps into literary circles where Fanny Burney is mistaken for a living author and Fielding for a contemporary of "rare Ben Jonson." His scraps of Horace and Molière cause a raising of eyebrows. In many other re-

spects, however, he finds the modern world similar to that which Tom Jones knew. It is a pity that so dashing a piece of bravura was not more vigorously sustained. In the latter part of the novel the initial mimetic impulse seems to flag, and the piquant personality of the hero subsides rather disappointingly into that of the author. Furthermore, the narrative, episodic enough throughout, is artificially broadened toward the end, checked, and overburdened by the serious satirical purpose. As a result, the work is notable neither in structure nor in characterization. Its interest lies very largely in the archaic literary flavor and the peculiar play of the comic spirit over the selfishness, the vanity, the feverish business, the smug absorption in the present, the superficial culture of present-day Americans. The satire hits many marks, but it is singularly genial and entertaining; it strikes with a kind of old-fashioned wit and antique urbanity.

The Tramping Methodist. By Sheila Kaye-Smith. London: George Bell & Sons.

The first pages of this story give signs of its being a novel of theology and dogma. The time is eight years or so after the death of Wesley. The Methodists had seceded from the Established Church, Methodism was in bad repute, and the tramping preacher ran no small chance of ill-usage. Humphrey Lyte was born into a family of debased churchmen. Doctrine might be rigid, but life was lax, and the little boy underwent a quite theatrical amount of cruelty before experiencing instant conversion from reading à Kempis. Later, his yearning for a more frequent administering of the Sacrament than the easy-going parishes of his neighborhood afford, turns him from being "loyal churchman and devout Sacramentalist" to Methodism. The final impulse is furnished him by a happy falling in with a saintly Methodist trio of friends, a father and daughter, and a famous, ragged, wandering preacher, a man of "two loves, God and Nature, and two books, the Bible and the green earth." Just as the reader has settled to the expectation of a novel of creeds, a wind blows through the pages and the hero, preacher though he is, proves to be a gypsy of gypsies. His mission is to save souls and it takes deep hold of him. But Nature comforts him in all his wrestlings of spirit, and in his profound personal sorrows. With him, the reader does a bit of road wandering that Stevenson might have prompted.

And now begins the fermenting of a real plot in a good old English way. It deals with past injuries and present vengeances; with faithful love and loyal self-sacrifice; with treachery, murder, and sudden death; with foul prison life, and freedom on Sussex downs; with fervent religious faith, even to the brink of martyrdom, and rescue by the arm of the Lord. The whole is almost a revival of the novel of an older day; rather, perhaps, a combination of several time-honored models. It has a foundation of theology, an atmosphere of "Lavengro," but a "Lavengro" less occupied with towns and more with rivers, skies, dewy mornings, and the songs of birds; it has a touch, too, of the hero-villain-and-mystery manner of "Smugglers and Foresters." After the slight preliminary depression, after dogma has yielded to piety, it is a story of real substance and interest, in a vein uncommon now, a welcome return to dignified ways of fiction.

The Letters of Jennie Allen to Her Friend Miss Musgrove. By Grace Donworth. Boston: Small, Maynard & Co.

These letters are a strictly domestic product of a type sufficiently established to require no protective tariff. A New England woman, who lives in her brother's large and tumultuous family and makes her living by sewing on "rappars," writes voluminously to a friend and unfolds the heart and hearth affairs of herself, her family, and her neighborhood. She is "a woman without nerves" and with a capacious heart, and is disclosed by the march of her pen as a humble instrument of Providence in making crooked things straight and rough things smooth. There is not a kind action or a blunder in spelling that Jennie Allen does not profusely practise. From spoiling her little nieces and nephews to reuniting parted lovers runs the range of her altruism. Her letters are written in the quintessence of dialect made up of New England, Pomona of Rudder Grange, and Jeames Yellowplush. At lamentable moments some deplorable punning and other lapses from taste pull the book down below even its own moderate level. But with those drawbacks there is diversion of a plain, amiable, ragcarpetty sort between its covers.

Memoirs of the Dukes of Urbino: Illustrating the Arms, Arts, and Literature of Italy, 1440-1630. By James Dennistoun of Dennistoun. A new edition, with notes by Edward Hutton; illustrated. 3 vols. New York: John Lane Co.

"As for the corruptions and moths of history, which are epitomes, the use of them deserveth to be banished as all men of sound judgment have confessed." So wrote Bacon in his "Advancement of Learning"; and his great rival Coke, showed himself of the same opinion:

> This I know, that abridgments in many professions have greatly profited the authors themselves; but as they are used, have brought no small prejudice to others; . . . . for I hold him not discrete that will *sectari rivulos,* when he may *petere fontes.*

Such was the counsel of two great Elizabethans, and who shall gainsay it? Yet the author who would follow it, not only in his own researches but also in his manner of writing, can hardly hope for his reward from the general reader; and we are, therefore, not surprised that James Dennistoun's learned "Memoirs of the Dukes of Urbino" has reached only its second edition, after a lapse of well nigh sixty years. That he spared neither time nor labor, that he made himself acquainted with all available original sources, that he examined innumerable manuscripts in half the libraries of Central Italy, that his work is sound and scholarly and honest—all these things have profited him little with the public, because he is too full, too exhaustive, and too prolix. For years to come, his book will probably continue to form one of the principal quarries, from which historians of the houses of Montefeltro and Della Rovere must hew much of their most valuable material, but it has found and, we fear, will always find, even in its new dress, but a limited circle of readers. Its great and abiding usefulness is as a work of reference.

And this is a fact which Mr. Hutton has consistently borne in mind. Except for the correction of such errors as were obviously due to oversight and the occasional transfer to the footnotes of digressions which unpardonably interrupted the narrative, he has wisely left the text of his author untouched. His business lay with the notes; and his notes are precisely what notes to such a work should be. It would be difficult to imagine anything better. Crammed with references to all the latest Italian authorities, they form an extraordinarily complete catalogue of the literature of the subject, and have brought Dennistoun entirely up to date. The index, too, is remarkably full and accurate, and it is no exaggeration to assert that, thanks to its editor's unselfish industry and zeal, the value of the book has been more than doubled. Mr. Hutton has done excellent work before in more than one field of literature, but he has never yet done anything for which the serious student of things Italian will feel so profoundly grateful.

A special feature of this new edition is its illustrations, some of which, such as the portraits of "Giulia Diva" and Cesare Borgia, from contemporary medals, now in the British Museum, are of a more than superficial importance. The pictures, over a hundred in number, have been selected to reflect the spirit of the book, which flings its arms wide and embraces many things besides the Counts and Dukes of Urbino. Accord-

ingly, in addition to almost all existent portraits of the Montefeltro and Della Rovere Dukes, their Duchesses and courtiers, the artists and men of letters, with whom they surrounded themselves, we have a large number of pictures illustrating the fashions of the period, the manner of dressing the hair, the wearing of jewels, and so forth. In a word, both publisher and editor have done everything in their power to make the work as useful, as attractive (and, dare we say, as popular?) as its nature will permit it to become.

Naval Administration and Warfare: Some General Principles, with Other Essays. By A. T. Mahan. Boston: Little, Brown & Co. $1.50 net.

While every product of Capt. Mahan's fertile pen deserves careful reading, this latest collection of essays possesses the added merit of exceptional timeliness through the initial articles, "Principles of Naval Administration" and the "United States Navy Department." Written five years ago, they discuss calmly and with judicial detachment the questions of organization and method recently forced upon public attention by the now famous Reuterdahl strictures in *McClure's Magazine* and the equally famous Newport Conference. In this fog it is to the deliberate expressions of thoughtful students like Mahan that we should look for guidance, rather than to somewhat hysterical charges and personal recriminations which stir up bad blood without materially advancing our knowledge.

In these papers, Capt. Mahan goes briefly over the history of the Navy Department from its original constitution with a Secretary and one clerk in 1798 to its present form (established in 1842), with a Secretary and several bureaus. The number of the latter was fixed at eight in 1862. It is among these eight offices that the Secretary distributes his public business under a law which grants him absolute discretion. He could, if he so desired, direct the Bureau of Steam Engineering to build guns and that of Construction and Repair to build engines. It follows that, the Secretary being abundantly able to organize the Navy Department after his own fashion, if anything be wrong therein the fault lies primarily at his own door, and not with Congress, which has done its full duty in devolving upon him this very responsibility. The way to reforms, then, is not through fresh enactments, but, rather, through more competent secretaries.

Two articles follow on the war between Japan and Russia. They are interesting as giving, first, a careful study of the strategical lines along which the campaign was certain to develop, and, second, the proof, through the event, of the soundness of the forecast. Intellectually, Capt. Mahan is here at his best. We must regret, however, a trick of lapsing into ponderous and turgid diction, no true reflection of the clarity of his mental processes. Noting, with disapproval, the dispersion of the Russian naval forces at the outbreak of hostilities, he draws the warning, for us, to keep our battleships together. No matter where they may be, far or near, they are formidable in direct proportion to their concentration.

The space at our command forbids discussion of all the other papers in this volume, but those relating to the Pacific cruise cannot be passed over. There was no necessity for Capt. Mahan's attributing to the critics of this move "a campaign of misrepresentation" in which "an obvious and perfectly sufficient reason for this cruise" was "ignored in favor of one less probable and *so far as knowledge went, non-existent*" [the italics are ours]. These last words and the guarded manner in which he qualifies his definition, as "a measure designed *upon its face* [the italics ours] to reach a practical solution" of an important technical problem, suggest a deeper and a hidden motive. If the inner history of this modern Odyssey is ever made public, it will undoubtedly transpire that the movement was originally planned in strategic preparation for an eventuality which, at the time (the spring of 1907) seemed not impossible; that, when the news of the contemplated voyage leaked out, the immediate result was to arouse grave suspicions of its real purpose abroad and downright consternation at home; that the ensuing tangle of confession and denial left us at last in such a position as to make advance and retreat almost equally ridiculous; that, as the best way out the mess, the transfer of our fleet to the Pacific was ordered under the guise of "a practice cruise"; that what would have been a startling move, if made without warning in March, 1907, became, through the delay till December of that year (most happily for all concerned) a peaceful round of international visiting; and that, save in learning better economy in the use of fuel, and in accustoming officers and men to rely less upon dockyards and more upon their own resources, the cruise has been largely devoid of professional education. Indeed, the itinerary has rendered evolutions in general and battle tactics in particular quite inadmissible. In this connection the list of questions posed by Capt. Mahan, such as where to coal, the amount required, how to get it to the points selected, the availability of certain estuaries and stretches of the ocean for this object, could as easily have been answered from the knowledge already in the possession of the authorities in Washington. In fact, many of the questions were so answered, as the excellent arrangements made in advance for replenishing empty bunkers and storerooms abundantly proves. Of course, something has been gained by the demonstration that these arrangements were found efficient, but, on this point, no reasonable doubt could ever exist. Had the experiment been tried under the conditions which govern in time of actual warfare, its value would have been very great; but these conditions were in no case simulated. In view of the fact that the commander-in-chief, Admiral Evans, was unfortunately incapacitated by serious and at times alarming illness from going on deck, more than a very few times, after leaving the West Indies, and that his duties were necessarily performed in his name by others, who rendered faithful and loyal service, it is surprising that Capt. Mahan would have us "recognize explicitly the indebtedness of the nation" to Admiral Evans.

The Bernstorff Papers. The Life of Count Albrecht von Bernstorff. By Dr. Karl Ringhoffer; translated by Mrs. Charles Edward Barrett-Lennard and M. W. Hoper. 2 vols. New York: Longmans, Green, & Co. $6 net.

This English version of "Im Kampfe für Preussens Ehre" puts before us, in a less inflated style than that of the original, the public career of a typical German diplomat. Count Bernstorff played some part in domestic politics. Like Hohenlohe and others, he was among those who early sighed for German unity, though with not a glimmering of the fiery furnace in which Bismarck was to forge it. Bernstorff had a brief experience in the Prussian ministry, but his chief title to remembrance is as a representative of his country at Naples, Paris, Munich, Vienna, and, longest and most important of all, London. The latter city was the scene at once of his chief trials and his main triumphs. He was there through the Crimean War and also during the war with France in 1870. In that year, by getting off to German warships prompt warning of impending hostilities, he saved them from probable destruction by the French. Throughout the contest, he played a useful part. To his hands fell the abortive negotiations with the Empress Eugenie, under Bismarck's direction, when that statesman was looking about, after Sedan, for some one to treat with. Yet little new light is thrown by these volumes upon that episode. Count Bernstorff's official correspondence, as here given, was icily regular, diplomatically null. The really interesting things are the private letters of Countess Bernstorff. Her accounts of family affairs, with her comments upon ministers of state, ambassadors, and royalties, public ceremonies, balls, en-

tertainments at Windsor, etc., can be read with mild pleasure.

Count Bernstorff's son, whose birth in London is here recorded, has just assumed his duties as German Ambassador to the United States.

Science.

Ruwenzori: An Account of the Expedition of H. R. H. Prince Luigi Amedeo of Savoy, Duke of the Abruzzi. By Filippo De Filippi. F. R. G. S.; with a preface by H. R. H., the Duke of the Abruzzi. Pp. xvi+408. New York: E. P. Dutton & Co. $8 net.

The expedition of the Duke of the Abruzzi to Ruwenzori, anciently known as the Mountains of the Moon, was in some important respects without a parallel in the annals of African exploration. Though the range was accurately described by Ptolemy as mountains "whose snows feed the lakes, sources of the Nile," its existence has been doubted in modern times, since European travellers have been close to it without seeing it—owing to the extraordinary opacity of the atmosphere which often makes it invisible even in fair weather. On May 24, 1888, the range was discovered by Stanley, who gave it its present name—the one among many native names by which it was most widely known. Since that time there have been partial explorations of the region, but it was left for the Duke of the Abruzzi, who had already attained a leading place among explorers, by his ascent of Mt. St. Elias and his Polar expedition, to solve the mystery still hanging over the snow-clad peaks. With ten European companions, he left Naples April 16, 1906, and so wonderfully have the transportation facilities increased in east Africa by railway, steamer, and well-built roads that the place chosen for his headquarters camp, nearly a thousand miles from the coast and at an altitude of 12,461 feet, was reached in fifty-four days. Ten years ago, this journey would have taken more than a year. It was a singularly uninviting spot, so drenched with the nearly continuous rain that it was difficult to light a fire or to get fuel. In the ensuing five weeks ascents were made of sixteen of the ice peaks of the six mountains constituting the range. This gave the knowledge requisite to describe the general formation of the line of watershed, the configuration of the mountains, the relative height of the different peaks, their connection with the several valleys, and the extent and position of the glaciers. Astronomical, geological, and meteorological observations were taken and collections were made of the minerals, fauna, and flora of the region. In the 337 different species of plants collected, sixteen were found to be new genera and seventy-one new species; while the 106 new genera, species, and sub-species in the zoölogical collection make a valuable contribution to the knowledge of the African fauna. Many of the known species also in the collection had never been recorded in this part of Africa. The chief geographical result of the expedition was the demonstration of the fact that the range is composed of six masses, each mountain having several peaks set on a curve, the long axis of which runs north and south. The central group was named appropriately Stanley, the other five, Speke, Baker, Emin, Gessi, and Prince Luigi. To the untiring energy of the leader, seconded by the zeal and ability of his companions, the great success of the expedition may justly be attributed.

The account is not by the Duke or either of his associates, but by Cav. Filippo De Filippi, his companion on and narrator of a previous exploration. He has made such a judicious use of the notes and journals furnished him that it is difficult to conceive that he was not an eye-witness of the scenes which he describes so graphically. The first part of the volume narrating the incidents of the journey from the coast, and especially the account of Entebbe, the principal town of Uganda, has the greatest general interest. The details of the exploration work and of the numerous ascents, very similar in character as to perils braved and difficulties overcome, to which the main part is devoted, cannot be made entertaining. We except, however, the account of the ascent of the highest peak. When the Duke and his three Swiss guides reached the top:

> They emerged from the mist into splendid clear sunlight. At their feet lay a sea of fog. An impenetrable layer of light ashy-white cloud drifts, stretching as far as the eye could reach, was drifting rapidly northwestward. From the immense moving surface emerged two fixed points, two pure white peaks sparkling in the sun with their myriad snow crystals. These were the two extreme summits of the highest peaks. The Duke of the Abruzzi named these summits Margherita and Alexandra, "in order that, under the auspices of these two royal ladies, the memory of the two nations may be handed down to posterity —of Italy, whose name was the first to resound on these snows in a shout of victory, and of England, which in its marvellous colonial expansion carries civilization to the slopes of these remote mountains." It was a thrilling moment when the little tricolor flag, given by H. M. Queen Margherita of Savoy, unfurled to the wind and sun the embroidered letters of its inspiring motto, "Ardisci e Spera" (Dare and Hope).

The work of the translator from the Italian, Caroline De Filippi (born Fitzgerald), is admirable. The reproductions of the splendid photographs, nearly 200 in number, by a member of the expedition, Cav. Uff. Vittorio Sella, make the volume one of the most sumptuous books of travel within our knowledge. The wonderful beauty of the representations of the forests and the superb panoramic views of the range it is impossible to describe. In addition to the mountain scenes there are many pictures of the natives. In three appendixes are given the main scientific results of the expedition. There are five maps and an excellent index. We are glad to call attention to the fact that "the royalties on the sale of this book will be given to a Fund for the Relief of Italian Emigrants."

In his "Pulmonary Tuberculosis and Its Complications" (Philadelphia: W. B. Saunders Co.), a handsome volume of nearly eight hundred pages, Prof. S. G. Bonney of Denver has the medical man, practitioner or student, in mind, and gives much space to purely clinical and practical matters. In the sixth part, particularly in its first fifty pages, however, there is a good deal of general interest for the intelligent layman as to safeguarding the community and the individual. A little further on there is an instructive discussion of the limitations of sanatoria. As to therapeutic measures, the attitude of the author is commendable, and he very properly protests against extending to pulmonary patients the principles of "physiological economy" in feeding, as some with more zeal than wisdom have recently proposed to do. Concerning current discussions of the importance of bovine tuberculosis, Bonney holds that the practical danger to man fully justifies vigorous measures for its extinction. Here, as elsewhere, the complete absence of reference to the literature makes it difficult for the student to appreciate the sources of the conclusion. The theory of Von Behrendt is mentioned, but we fail to find the fuller discussion of it which p. 35 seems to promise. The last chapter of all contains at some length the author's personal experience with bacterial vaccines, concerning which his conclusions are decidedly cautious, although not altogether negative. Among the numerous illustrations are more than sixty very instructive X-ray pictures (why not Roentgenotypes?) which would be yet more helpful if a clear picture of quite normal conditions were given for comparison.

The "Encyclopädie der mathematischen Wissenschaften mit Einschluss ihrer Anwendung" (Leipzig: Teubner), which was begun about ten years ago as the joint product of the Academies of Sciences in Göttingen, Leipzig, Munich, and Vienna, and which is edited by Felix Klein and Conrad Müller, has now reached its fourth volume, entitled "Mechanik." The first part, a book of more than seven hundred pages, has been issued. The first three volumes treated of pure mathematics.

The death is reported from England of George Gore, a writer on scientific subjects and especially electro-metallurgy. He was born in Bristol in 1826, but most of his life was spent at Birmingham, where, for a time he was lecturer in chemical and physical science at King Edward's School,

His investigations of hydrofluoric acid and the fluorides, definitely proving the analogy of these compounds with those of chlorine, are well known to chemists; and in 1865 he was elected to the Fellowship of the Royal Society, in recognition of the value of his work. In 1877 the honorary degree of LL.D. was conferred on him by the University of Edinburgh as an acknowledgment of his services to science. Some years later he declined the offer of a knighthood, but in 1891 he accepted a civil list pension. In addition to his contributions to the publications of scientific societies, his writings include: "The Art of Scientific Discovery" (1878) "The Art of Electro-Metallurgy," "The Electrolytic Separation and Refining of Metals" (1890), "The Scientific Basis of Morality," and "The New Scientific System of Morality."

The death is announced of Josef Maria Pernter, professor of meteorology and geology in the University of Vienna. He was born in 1848 at Neumarkt, Tyrol, in 1864 became a novitiate in the Society of Jesus, taught in various institutions, and in 1882 accepted a place in the Central Meteorological Institute of Vienna. Later he was made a professor in the university. He wrote largely on his subject, his chief work being "Meteorologische Optik," 1901-6.

Drama.

If "The Dawn of a To-morrow," the new play by Mrs. Frances Hodgson Burnett, which was produced in the Lyceum Theatre on Monday evening, is not a very powerful or logical demonstration of the direct intervention of a divine providence in human affairs, it is, at any rate, more wholesome in sentiment than most recent pieces professing to deal realistically with the extremes of life, and tells an interesting though entirely conventional, unreal, and theatrical story. It is imitative in motive, incident, and character, and somewhat vague in purpose, but is adroitly put together, contains some effective scenes, and is likely to prove popular. Apparently it is intended to suggest the intimate relationship between what it calls the "new thought" and the orthodox faith in the potency of prayer, but it is too full of trite sensation and sentiment to merit much serious attention on either the scientific or religious side. The main theme of it is the mental, spiritual and physical regeneration of a once powerful and brilliant baronet, now seemingly in an advanced stage of paresis, through the agency of a feminine waif, who, by diverting his thoughts into new channels, giving him a new object in life, and inspiring him with her own simple trust in some mysterious, unseen guardianship, effects a cure which science had declared to be impossible. Unfortunately, the source of the providential interventions, which enable the ragged heroine to emerge triumphantly from various melodramatic trials and perils, may be traced so easily to the wire-pulling dramatist that happy coincidence no longer seems miraculous. Nevertheless, the story is an effective one for the stage.

The "Kassa" of John Luther Long, which Mrs. Leslie Carter has produced, at great cost, in the Liberty Theatre of this city, is offered as a poetic and allegorical romance, founded on the story of a Broken Butterfly in the ancient Hunnish "Book of the Dragon of Care," but is, in fact, one of the most violent, empty, and silly melodramas seen here in a decade. It is crammed with all sorts of absurd extravagances, sentimental claptrap, and ridiculous anachronisms. Kassa, a lovely princess and destined vestal, flees the cloister with a royal lover, who betrays her with a mock marriage, and then deserts her. She is then pursued by an amatory imperial chancellor, who threatens to have her false lover executed for sacrilege, if she will not secure his pardon by self-surrender. In the end she returns to the convent, thinking that she has passed through an evil dream. Doubtless the piece is intended to have a poetic and parabolic significance, but its construction is so crude, its personages and incidents so unreal, and its dialogue so commonplace that its meaning is unimportant. Regarded simply as a vehicle for the display of lurid and volcanic emotion, it may fulfil temporarily the purpose of Mrs. Carter, who provoked loud applause by her customary demonstrations of a passion which too often degenerated into frenzied rant. She no longer possesses the physical qualifications for a character of this sort, and her acting, though marked by a certain technical proficiency, has no intellectual or spiritual message. The piece is mounted splendidly.

Readers of the magazine *Der Türmer,* who have occasionally met in its pages aphorisms on life and art by Ludwig Fahrenkrog, the artist who has provoked much discussion by his heads of Christ, will not be surprised to see the announcement of a drama from his pen, "Baldur" (Stuttgart: Greiner & Pfeiffer; imported by G. E. Stechert & Co.).

Music.

The Story of Musical Form. By Clarence Lucas. New York: Charles Scribner's Sons. $1.25 net.

Musical Forms. By Ernest Pauer. Boston: Oliver Ditson Co. 75 cents.

To enjoy music, it is no more necessary to understand its structure than it is to know botany in order to appreciate flowers. Yet the study of botany and of the anatomy of music is likely to call attention to many beautiful details that might otherwise escape attention. Most books on musical forms are, unfortunately, so technical, so dry, so crammed with details, that the general reader shuns them. For this reason one must welcome Mr. Lucas's volume, which is not a text book, but an attempt to tell cultivated readers who are interested in good music some interesting and suggestive things about the art of composition. Students also will find it useful, because it is always an advantage to get a bird's-eye view of a subject before undertaking a systematic examination of details. Having held a position in this country as a professor of musical composition and history and had a varied experience in England as composer, conductor, and author, Mr. Lucas has secured that thorough mastery of his subject which enables him to write about it in a light, gossipy fashion. He further holds the reader's attention by an abundance of modern instances and references to the works of composers now popular.

There is no attempt to exalt form above substance, such as one usually finds in books on this subject:

> Form is the servant; ideas are the master. The function of form the servant is to help ideas the master to a better expression.

Mr. Lucas endorses and applies Herbert Spencer's doctrine that the chief function of the brain is feeling, not intellect: "the greater the brain, the more feeling." Holding this opinion, he naturally assigns a high place to composers whose works are preëminently emotional, among them Wagner, Liszt, Tchaikovsky, Grieg, regardless of their attitude toward traditional form. Pedants will stone him for what he says regarding Mozart and Saint-Saëns, yet every word is true:

> When the sonata form was new, Mozart put many compositions on paper that are of the slightest possible value except as excellent examples of balanced sonata form. . . . Probably not one young composer in a hundred would prefer Mozart's D-minor piano concerto to Saint-Saëns's G-minor concerto for the same instrument. Why must Mozart's be held up as the standard, and Saint-Saëns's as the irregularity? If we accept the latter work as the standard, then Mozart's is irregular. The fact is that neither is standard and neither is irregular. Any form that serves the composer adequately to express his thoughts is a good form.

A number of illustrations and facsimiles are scattered through the volume in a somewhat haphazard fashion.

Many details missing in Mr. Lucas's sketch may be found in Ernest Pauer's treatise, which is a text book for students. The first edition was printed thirty years ago, and in this new edition no attempt has been made to bring the remarks on programme music and Italian and on German opera up to date. These, however, take up only a few of the pages; the rest of the book, being concerned with forms established for generations, called for no revision. The variety of these forms is bewildering; of the sacred and secular forms of vocal music alone, Professor Pauer discusses fifty-five. He also devotes chapters to the national dances, mediæval and modern, illustrating his remarks with copious citations in musical type. When the student has mastered the contents of this volume, he will be ready for Riemann's "Kompositionslehre."

The concerts of the Philharmonic Society to be held Friday and Saturday evenings at Carnegie Hall will commemorate the one hundredth anniversary of the birth of Felix Mendelssohn-Bartholdy, who was from 1846 an honorary member of the Philharmonic Society.

The third symphony concert for young people will be given in Carnegie Hall on Saturday afternoon, January 30, under the direction of Frank Damrosch. The programme will show the influence of legends on symphonic music, and Ossip Gabrilowitsch will be the soloist, playing pieces by Mendelssohn and Chopin.

Art.

Herculaneum, Past, Present, and Future. By Charles Waldstein and Leonard Shoobridge. 48 plates. New York: The Macmillan Co. $5 net.

We have heard so much of Herculaneum in recent years, so many conflicting opinions regarding the importance of excavating the site have been voiced, that a book was distinctly needed giving an exact survey of present knowledge—such as a collection of data regarding the history of Herculaneum and the circumstances of its destruction, a full account of the excavations on the site during the past centuries, and a description of the objects found. A book presenting such material in concise and accurate form would have been more than welcome. "Herculaneum, Past, Present, and Future" is a work of a somewhat different nature. It contains, indeed, a number of chapters on the topography, the inhabitants, and the history of Herculaneum since the eruption, as well as some useful appendixes, passages from ancient authors referring to Herculaneum, a bibliography, a plan of the villa, etc. But the main object of the book is the publication of Professor Waldstein's scheme for an international excavation of Herculaneum. It might have been thought that the rejection of his plan by the Italian government in the spring of 1907 would have definitely ended his campaign. That supposition, it seems, was vain. This book reiterates the history of the various controversies on the subject and gives us an account of Professor Waldstein's travels through Europe and America, as well as of his correspondence with ministers, ambassadors, chancellors, and others. That this material is unique no one will dispute, but its scientific value to the world is not quite evident.

Another feature of the book is the presentation of Dr. Waldstein's advice as to the best ways and means for carrying on the excavation. A vivid picture is drawn of what an ideal excavation of Herculaneum should be. In Dr. Waldstein's opinion:

While all the experimental and mechanical sciences have within the last few generations been improved and have kept pace with all the discoveries of modern times, archæological excavation has remained in the cross-bow stage as compared with the modern repeating rifle.

Moreover, he thinks that "it is not only important to excavate, but also to preserve the monuments and objects which have been excavated," apparently implying that this sentiment is peculiarly his own and not generally shared by other excavators. Had these statements been written twenty years ago, they would hardly have been true; but it would seem that no one familiar with excavations carried on at the present time in Greece, Crete, and Egypt could fail to be impressed with the intelligent and up-to-date methods adopted for the actual digging, the careful manner of keeping accurate records (sometimes with an elaborate system of photographing each layer as it is found), and the manifold contrivances to preserve the various finds. Every one will admit with the author that the circumstances and methods of the Argive Heraion excavations were unfortunate; but, happily for the science of archæology, this case is not typical. If it were, our methods of excavation would indeed "require complete revision and reform."

There are different opinions regarding the expectations we should entertain from a complete excavation of Herculaneum. But even those who think that our future finds there will be at least on the level of the rich harvest derived from the Herculaneum villa will hardly go so far as to propose that the energies of the whole world should be concentrated on this one site to the neglect of others. And yet Professor Waldstein, in the scheme which he has so picturesquely mapped out, proposes to have at Herculaneum a staff of one hundred archæologists and other experts, together with a number of associates, and apparently an army of workmen. The facilities which he would afford to these excavators are royal, but we cannot help thinking that if the world can suddenly be made to show such an intense interest in archæology, we should like to use these generous gifts to the best advantage, and instead of presenting a spectacular show at one place, help on the work at other equally important sites. For, though the finds at Herculaneum have been both numerous and exceptionally well preserved, we must not forget that, even if often derived from Greek originals, they are almost entirely of Roman workmanship, and that there are many sites in Greece, in the islands, and in Asia Minor, where we may look for genuine Greek works of the first importance, or perhaps the solutions of some of the problems of prehistoric and early Greek archæology.

Besides the chapters mentioned above, which deal with the historical side of the subject, and which we understand are mainly due to the industry of Mr. Shoobridge, the book has another merit—a remarkably rich series of illustrations. It is therefore a pity that there is not included a general chapter on the art of Herculaneum, with a short discussion of the more important pieces found there.

The literary style is uneven, as is natural in a case of joint authorship. The English is poor in places and the sentences are often involved; for example:

Even without the destructive hand of man, envious Time of itself sees that its own soul of change should feed on the death of the spirit of each age of man, and on his works, perennial as bronze, on which he has imprinted his living spirit.

The series known as Hausschatz deutscher Kunst der Vergangenheit, published for the Allgemeine Lehrerverein of Düsseldorf by Fischer & Franke of Berlin, has lately added two numbers to its reproductions. One is entitled "Aus den Kupferstichen Daniel Chodowieckis," by S. Rüttgers, with forty-two plates; and the other, "Die Kleinmeister; Auswahl aus dem Werk der Kupferstecher nach Dürer," by the same editor, with thirty-four plates. The illustrations, especially those of Chodowiecki, are well selected, and all are well reproduced. This series is, considering the low price (1.20 marks), one of the best of the many now being published in Germany.

Among the new books recently published in Christiania none is of more general interest to the world of art and letters outside of Scandinavia than "I Kamp og i Fest" ("Fighting and Feasting"), "stories about himself and others," selected from Fritz Thaulow's papers, and edited by his widow (Copenhagen, Christiania, and Chicago: Gyldendal Publishing Co.). To those who are interested in Fritz Thaulow's personality almost all of these stories will be significant. American readers will find a special interest in the papers dealing with his trip to America, some years ago, to act as judge at the art exhibition in Pittsburgh. It is to be regretted that the editing and the proofreading has been so carelessly (or ignorantly) done. The closing paper, entitled "Literature-Painting, Literature-Music, and Literature-Dancing," written on the occasion of the Rembrandt celebration in the Amsterdam Rijks Museum, must be regarded as Thaulow's artistic will

and testament. Though unfinished, it will appeal to all admirers of Thaulow's art. A carefully edited and annotated translation of a selection from this volume might find a considerable public in America.

The superintendent of museums and monuments, Prof. Antonino Salinas of Palermo, reports that the most important picture of the collection, the altar-piece, by Antonello da Messina, has been found in the ruins of the Museum of Messina. The central painting, the Madonna Enthroned, signed and dated 1473, was found almost uninjured, but falling stones had broken the wings and the upper panels, although their principal parts were preserved. This fine work had previously been much injured. Three valuable Flemish paintings also were recovered, and strangely enough, over seventy specimens of vases from the mediæval potteries of Urbino and Faenza, and seven cases of artistic silver. It is also officially stated that all the Byzantine and Greek manuscripts and the Aldine editions in the university library have been found unhurt. Although the cathedral is a mass of ruins, some of the sculptures of the ancient façade and the mosaics from the apse have been saved.

A French archæological mission has made some interesting discoveries in Tangiers, Morocco. During some building operations in the new quarter of that city a Roman necropolis has come to light. In one tomb were found well-preserved frescoes; the subjects are varied—a bird of bright plumage encircled by wreaths, a Roman standing between two horses, a leopard, a peacock, etc. Though several of the tombs show that they have already been at least partly plundered, it is hoped that further discoveries will throw light on Roman civilization in Morocco.

Among the exhibitions in the dealers' galleries in this city are paintings by Paul Cornoyer at Powell's, till January 30; portraits by Emil Fuchs and water colors by H. Anthony Dyer, Knoedler's, January 30; paintings, Henry W. Ranger, Macbeth's, February 4; American Society of Miniature Painters, Knoedler's, February 6; paintings by Edward Lind Morse and drawings by William Fuller Curtis, Bonaventure's, February 7; etchings and engravings by Schoengauer, Dürer, and others, Wunderlich & Co.'s, February 15.

The Emperor William has conferred the decoration of the order "Pour le Mérite" on J. S. Sargent, in recognition of his preeminence as a portrait painter.

We have to report the death of several French artists: Auguste Mury of Donzy, who was in his fifty-fifth year, had studied under Rossin and exhibited first in the Salon of 1876; a flower-painter of Lyons, André Perrachon, at the age of eighty; Amédée Besnus, a landscape painter, aged seventy-seven, who lived in Paris; Antony Regnier, aged seventy-two; and Honoré Boze, aged seventy-eight, both of Marseilles.

JUST ISSUED

SEAGER'S ECONOMICS (*Briefer Course*)

By **HENRY R. SEAGER,** Professor of Political Economy in Columbia University. *467 pp. and index. $1.75 postpaid.*

Intended primarily for teachers who wish to give only that amount of attention to economic theory that is essential to the intelligent discussion of practical economic problems.

Not only are several topics discussed in the author's larger "Introduction to Economics" entirely omitted, but the treatment of others is simplified as well as condensed. In the first, or theoretical, half of the book clearness and brevity have been sought; in the second, or practical half, adequacy and up-to-dateness.

The Working People as They Are.

Out of the Dump

A Story by MARY E. MARCY. Illustrated with eight original wash drawings by R. H. Chaplin. *Cloth, 50 cents, prepaid.*

"The book is a voice from the depths. . . . Its outlook is from the viewpoint of the very poor. . . . Mrs. Marcy says that organized charity is unworthy . . . to direct the private charity of wealthy people. . . . The little book will prove especially valuable to settlement workers and those interested in charity."—*The Inter Ocean.*

The Nation.

NEW YORK, THURSDAY, FEBRUARY 4, 1909.

The Week.

There is no reason for surprise at the Supreme Court's decision in the Continental Wall Paper Company case, that debts cannot be collected through the courts by a Trust. The language of the so-called Anti-Trust Act of 1890 is distinct and its penalties severe; one of its sections goes further even than the court went on Monday, and provides that "any property owned under any contract, or by any combination, or pursuant to any conspiracy," as defined in the prohibitory clause of the law, may, in the course of interstate transportation, be seized and condemned. What the court declared on Monday was, in the words of Justice Harlan's opinion, that the court "will not lend its aid in any way to enforce or to realize the fruits of an agreement which appears to be tainted with illegality," even when such refusal shields "a defendant who has got something for which, as between man and man, he ought perhaps to pay." This statement enunciates no novel principle. The real question at issue was whether the Wall Paper Company was or was not acting in restraint of trade under the law of 1890, and therefore an illegal enterprise. The court declares this to have been the fact; for the company had obtained a virtual monopoly in its branch of trade, had fixed prices 50 per cent. above what would have prevailed in a competitive market, and had refused to sell to the defendant, a jobbing merchant in the trade, except under a signed agreement to maintain the artificial prices. The decision, it is true, is rendered by a divided court on a vote of 5 to 4, but it will be taken as cumulative evidence, in line with the decision in the Tobacco Trust case, and last week's refusal of the Senate committee to emasculate the Anti-Trust Act itself, that there is to be no diminution of the terrors of the law for capitalistic tyranny.

If anti-Japanese agitators in California insist upon the passage of their bills, they may involve the nation in grave difficulties. Do the Californians wish to endanger our trade with the Orient? If they were really in danger of being submerged by an inrush of Japanese, there might be some excuse for their conduct, but that is not the case. The population of California, according to the last census, was 1,485,053, and is now much larger. The total number of Japanese under the Japanese consulate-general at San Francisco in the four States of California, Colorado, Utah, and Nevada and the two Territories of New Mexico and Arizona, is but 44,883, according to official figures. All told, the Japanese government does not know of more than 71,712 Japanese in the whole United States, of whom 3,403 are in Oregon and 17,623 in Montana, Wyoming, Idaho, Washington, and Alaska. Surely, it is ridiculous to speak of peril from such a mere handful of Japanese —even though our fear may be a compliment to their industry and ability.

The outlook for the Newfoundland fisheries convention, signed last week by Secretary Root and Ambassador Bryce, is somewhat uncertain. The fact that the treaty is to be withheld from the Senate until approved by the Newfoundland government shows that such ratification is by no means regarded as a certainty. The treaty leaves the adjustment of our dispute with Newfoundland so completely in the hands of the Hague Tribunal that Premier Bond should have no valid reasons for holding back. But utter distrust of American intentions has become a part of the Bond faith, and he may feel that not even the Hague Court can escape the subtle effects of our corrupting influence. Hence it is reported that the Newfoundland Cabinet has not accepted the Washington arbitration treaty, but has submitted counter proposals. So the *modus vivendi* arranged last August for the season of 1908-09 runs on, the Newfoundlanders evidently thinking that ninety-nine years of *modus vivendi* are better than a permanent solution in which "principle" shall be sacrificed. If Newfoundland does yield, the change will come, we imagine, as a result of the play of domestic policies. Premier Bond's former unquestioned ascendency is breaking down. In November's general elections for the Legislative Council, the government secured a majority of only two in thirty-six. With less united backing Mr. Bond may become more conciliatory.

Secretary Root's last official act will not count least to his credit. In dismissing the demand of the Russian Government for the extradition of Christian Rudovitz, he has given deep satisfaction to thousands of American citizens who have seen in Russia's campaign against Rudovitz and his fellow-prisoner in this city, Pouren, an assault on the right of political asylum. The Russian Government charged Rudovitz with having committed murder, arson, burglary, robbery, and larceny in 1906. The defence argued that the acts committed by Rudovitz were in his capacity as a member of the Social Democratic party, delegated with others to inflict punishment on certain government spies. Commissioner Foote, in Chicago, held that Rudovitz was an ordinary criminal. Secretary Root has now reversed that decision. The doctrine of political asylum demands that the accused be given the benefit of every doubt; and that the absence of all intention to punish him for political offences be made a certainty. In the brief submitted to Mr. Root by counsel for Rudovitz, great stress is laid on the fact that the Russian case was based on the testimony of practically a single person; and that this direct witness had made two depositions, of which one, made less than a month after the acts charged in the indictment, is contradicted by another made sixteen months later. The first affidavit did not profess to identify the accused. The second did, besides falling into other discrepancies. Counsel argued that there could be little doubt of what had happened in the interval. Russia's well-known methods of dealing with political offenders had been brought to bear on recalcitrant or unsatisfactory witnesses. Their memories were refreshed. And that constitutes the crux of the question. Evidence that comes from a government that tolerates torture and summary execution must be received as suspect. We do not say that such reasoning entered into Mr. Root's decision. The case against Rudovitz, even if manufactured, was weak. But in

the undecided case of Pouren and in all future cases of the kind, it must be remembered that neither truth nor liberty flourishes under the knout.

If the House concurs, a new position in the State Department will soon be created with a title unknown in our political history: "Under-Secretary of State." The Senate voted this office, with a salary of $10,000, because of the overworking of all the recent Secretaries of State. "I know," said Senator Lodge, "that the work was so severe, the burden so heavy, that it was a leading cause in the breaking-down of Mr. Hay's health. I know how heavy the burden has been for Mr. Root to carry." Some man, he went on to explain, is needed who can administer the State Department in the absence of the Secretary, or when he is engrossed with diplomatic work of such moment that it can be entrusted to no other hands. "We want a man," Senator Lodge declared, "in a higher position, at a larger salary, than is awarded an Assistant Secretary." No one who is familiar with the State Department could possibly deny the need Mr. Lodge described. The Secretary is so harassed by politicians and by newspaper correspondents, is compelled to give so much of his day to visiting diplomats, or to visitors with legitimate business, or to dictation of necessary correspondence, that the wonder grows that he has any time and strength for the quiet, constructive planning and execution of large policies that have marked both the recent administrations of the office.

The importance of the Senate's action lies not so much in the fact that the Under-Secretary is to take rank immediately after the Secretary and above the Assistant Secretaries, as in the suggestion that this may be the beginning of the introduction into all our more important departments of the permanent sub-official, who shall uot be removed with every change of Administration, but shall become the repository of secrets, traditions, and customs, and therefore an efficient coach to the Secretary himself. The function of such an officer in England has been clearly set forth by the president-elect of Harvard in his notable work "The Government of England." A political chief of the department brings his administration into harmony with public and Parliament. He is also charged with rooting out old abuses, correcting the tendency to red tape and routine and preventing the department from going to sleep. The Under-Secretaries, on the other hand, advise on the questions that arise, from their background of experience and knowledge. The Under-Secretary is also something like the executive officer on a warship in that he gives directions to the proper subordinates for carrying out the decisions and policies of the Secretary. Again, he acts as a reader for his chief, making briefs on all questions requiring attention, so that a decision may be rendered quickly and intelligently. Sometimes the known opinions of an Under-Secretary make it impossible for him to stay in office, but generally, he is supposed to work with Tory or Liberal chief alike. Frequently, by reason of knowledge aud ability, he is the real Secretary. It was said of Sir Robert Herbert, who was permanent Under-Secretary from 1871 to 1892, that he was the man who controlled "the destinies of the Colonial Office." For the present, our Under-Secretary of State, if created, will probably hold office only with each Administration. Senator Nelson, however, in the debate, expressed the hope that he would become a permanent official and no one objected.

Whatever the motives prompting Congress to vote $500,000 for the development of military flying-machines, the act may have important consequences. The amazing progress of the past five years in aerial uavigation promises things that, but the other day, were wild dreams, and, even now, seem extravagant when set down in cold type. We cannot think out the possibilities of a perfect dirigible war balloon without realizing, long before we reach the end of the story, that, in the presence of such an instrument, a regiment will be as a swarm of caterpillars, and a Dreadnought scarcely more dangerous than a mud turtle. Were our government to offer a prize of $500,000 for a perfect aerial fighting machine, the naval budget might, in another twenty years, give us no more concern than the pensions for Mexican War veterans.

The thing that stands out most sharply in Mr. Root's address to the New York Legislature, last week, is his warning against throwing too great burdens upon the national government. Already, he declares, the efficiency of the governmental machine is much impaired by the excessive strain to which it has been subjected. Here, then, we have a great centralizer, speaking out concerning the dangers of centralization. Here is a man who has been part of the brain of Federal government, for ten years past, reporting that it is being seriously congested. The blood must somehow be got back to the extremities, or there will be a stroke. As it is, too much government work "smells of apoplexy," as Scott said that his later writings did. The process of heaping loads on the strong back of Congress and the administration began before Mr. Roosevelt became President, but under him it has gone on prodigiously. It is common to speak of this as "usurpation." Sometimes, there is pictured to us a dictator, greedy of power, reaching out to assume one function of the States after another. In reality, that does not seem to us the true explanation. We do not suppose that Mr. Roosevelt ever stops to think whether he is absorbing duties that had better be left to others. He is of inexhaustible energy and unbounded confidence, and sees no reason why all the troubles and problems of the people should not be referred to him direct. For him, it only means one sympathetic speech the more, an additional message to Congress, the appointment of still another commission, the enrolling of more investigators and agents. That costs him little time or thought; so that he welcomes the thick-coming appeals to undertake one novel task after another, and impetuously calls upon Congress to hand out legislation while he waits. But this is not government; this is high spirits tinged with general benevolence, in a man who thinks it, not a "cursed spite," but a cause of pure happiness that he was born to set right the times out of joint. The net result, however, is precisely the same as if all this binding of burdens upon the general government had been done with malice aforethought, instead of in sheer insouciance.

The only recourse is to stimulate and develop local government. Accordingly, Mr. Root, whose speech a couple of years ago was thought to favor the

idea of submerging the State governments in the national, put in an earnest plea for vivifying and extending the power of the State Legislatures, and for exalting home rule in every way possible. He avowed himself a convinced and unrepentant Hamiltonian, in the sense of believing in a strong national government, but is evidently fearful of the consequences of an unrestricted Hamiltonianism. He beholds with dismay the procession to Washington of men desiring Congress to attend to matters which village selectmen are competent to care for; and, evidently, if he could have his way, he would send all such persons home to work out their own salvation on the spot. At Washington, the President showers Congress with recommendations, but it, like the man in Anatole France's latest satire, who was buried under the valuable material which he had collected, is simply overwhelmed and does nothing. It is close observation of this spectacle that leads Mr. Root to issue his summons to this State, as well as others, to "exercise its powers."

Gov. Hughes cannot but regard as a blow the forced withdrawal of his nomination of Frederick A. Wallis as Superintendent of Insurance. The incident will be seized by all the small politicians of the State as proof that it is dangerous to make appointments without consulting the little tin gods of the machine. We shall hear again the familiar talk that the party leaders are really the only men who can exercise infallibly sound judgment in choosing persons of capacity. In fine, on the frail basis of a single conspicuous exception, there will be the usual attempt to erect a general rule. But if Mr. Wallis had been nominated on the recommendation of Herbert Parsons or T. L. Woodruff, no hostile inquiry would have been made into his record. The files of the Insurance Department would not have been combed to find matter that could be used against him. And if any outsider had attempted to impeach the fitness of the nominee, he would have been denounced as a "holier-than-thou" meddler. Of course, a different standard must be applied when it is a case of the Governor making his own selection. Reformers will not complain of this. They must be ready to have their acts searched as with a lighted candle. But it cannot be denied that the Governor acted in entire good faith, and that when he discovered his error in regard to Mr. Wallis he acted promptly and honestly. The position of Superintendent of Insurance is a most difficult one to fill. The Governor is absolutely right in feeling that the incumbent should be, if possible, an expert in this extremely complicated business. Yet the insurance expert can command a salary far greater than the State can offer him, and he may be unable to afford the sacrifice for the sake of serving the public. Then, too, the insurance business has been much demoralized by sharp practice, some of it within the letter of the law, some of it flatly illegal; and the older and more experienced agents are too often suspect. It may well be that under these circumstances the Governor will be compelled to rely simply on a man of high character and proved ability in other fields, and trust him to master the duties of a new office.

The Conference on Dependent Children, which met in Washington last week at the suggestion of President Roosevelt, is another of the praiseworthy undertakings to which he has lent the aid of his personal popularity and his office. In these social reforms he generally takes a keen interest, and he shows a chivalrous desire to help. This particular conference, composed as it was of 200 of the foremost workers of all faiths, who are devoting themselves to the care of destitute, orphaned, or delinquent children, reached the unanimous decision that the use of institutions for such children should continue only until homes may be obtained for them. Such a conclusion must carry great weight throughout the country. The conference decided, first of all, that children of parents of worthy character, suffering from temporary misfortune, should be kept in their homes, on the principle that a reasonably efficient family life is of greater value than the suppression of individuality and initiative by the routine and impersonal care of an institution; and that a little less cleanliness, together with the affection of a mother or of a good foster-mother, is vastly better than machine-like life of an asylum. The conference admitted, of course, that for certain classes of children there must still be institutions, but that where they exist they should be conducted on the cottage plan, after the manner, for instance, of the excellent New York Orphan Asylum at Hastings-on-Hudson. With that position every one must agree. The conference also recommended that the State inspect the work of all agencies which care for dependent children in any way, whether by means of private or public funds. This inspection should cover both the formal education of the children and the matter of physical welfare. Finally, the conference urged the close coöperation of all child-caring agencies, and the promotion of curative and preventive reforms. Since 52 per cent. of the dependent children in Troy, for example, are dependent because of the ravages of tuberculosis in that city, the reason for the last suggestion is obvious.

The latest "crisis" in the Balkans is to go the way of its numerous predecessors under benign pressure from the great Powers. Bulgaria is to be reasoned into discontinuing her warlike demonstrations, and the Porte is to be persuaded to accept monetary compensation for lost sovereignty. Servia and Montenegro are being made to understand that the Powers will not let their hands be forced. By its treatment of Greece, after its brief and disastrous war with Turkey in 1897, Europe showed that a little nation could not always plunge into a row and expect to be saved from all evil consequences by its big brothers. Consciousness of this fact must be present in the minds of Servian and Montenegrin statesmen. So far as the Powers themselves are concerned, the thought of war is unwelcome, not solely because of the terrific nature of a general European conflict. Even those people who have been predicting the inevitable approach of such a struggle—the war-mongers of Germany and England, for instance—would object to having the war forced upon them at a time and on a *terrain* not of their own choosing. German strategists engaged in ticketing every square mile of the North Sea and every rod of the English coast, or English naval lords, plotting as to the exact way in which the German fleet shall be destroyed off Kiel, would surely be vexed to have the fighting suddenly begin on the Rumelian border, or off Salonica.

OUR TRUSTEESHIP OF CUBA.

Americans may take solid satisfaction in reviewing their guardianship of the island of Cuba, which ended last week. By the early withdrawal of its troops and its military and civilian administrators, this country has again proved to the world the unselfishness of its efforts to establish in the island a government that is stable and independent. We found the Palma Republic in ruins in October, 1906; in 1909 we give back to the Cubans the control of their own affairs, with their governmental machinery considerably reorganized, with a new President, and practically a new Congress. As an additional security, some American troops are to remain near Havana until April 1; after that time the administration of President Gomez will stand alone. Thus under the direction of President Roosevelt the United States has kept its plighted faith in a way to make every one of its citizens proud.

We may be proud, too, of the work of the American military and civilian administrators, who have been unsparing in their efforts to recreate the government in twenty-seven months. Since the island was first turned over to us in 1899, we have learned much in the art of guiding Latin peoples, and the new knowledge has been put to good use. Many of the American officials have frankly regarded their task as hopeless because of the shortness of the time; but much has been attempted, such as the redrafting of the entire body of law, an undertaking which might well have extended through at least five years, with a subsequent period for observing the operation of the new statutes; for bestowing Anglo-Saxon laws upon a community accustomed only to a mixture of Roman law with Spanish and with American military decrees is an experiment new in colonial history. But the heads of departments have none the less given of their best, even when believing that they were asked to do the impossible. Men like Col. E. H. Crowder, Lieut.-Col. E. St. J. Greble, Col. William M. Black, Major J. D. Terrill, and Major J. R. Kean, who have respectively administered the Departments of State and Justice, of Government, of Public Works, the Treasury, and the Department of Sanitation, deserve public recognition for their fidelity to their arduous tasks.

The army of occupation commanded by Major-Gen. Thomas H. Barry has also merited high praise. The United States has probably never had in the field anywhere a better-trained or better-behaved body of men. Only a single grave crime has marred their extraordinary record. Everywhere, the soldiers have made friends and wiped out the memories of the excesses of the volunteer troops who overran Cuba in 1899. The health of Gen. Barry's army has not only reflected great credit upon his officers of the line and the Medical Corps, but it has proved that American soldiers can live in the tropics and work hard. The schooling of the troops has gone on vigorously, and the careful mapping of every foot of the island is, in itself, a valuable achievement. Gen. Barry has had every reason to tell his men, soldiers and marines, that they have lived up to our best traditions, and the President has officially extended his thanks.

It would, of course, be idle to deny that mistakes have been made. The general policy of the American Administration has too often smacked of compromise, of a desire to conciliate where a vigorous grappling with discordant elements would have been wiser. Thus the retention of one-third of the Congressmen on the insular payroll for doing nothing during the interregnum has seemed an injustice and a bad example to set to the community; again, Mr. Taft's inclusion within his amnesty proclamation of the men who killed the innocent rural guards at Guanabacoa, nearly a year before the revolution, was a tactical error, as was the payment of the insurgents for the horses they stole while "in the woods." But on these minor details we do not desire to dwell to-day. Moreover, it would be unjust to hold Mr. Magoon wholly responsible for the mistakes; Havana is too near Washington to make it always clear whether a given policy was Mr. Magoon's, or a superior's at the Federal Capital.

As to the island itself, time alone can tell whether the new administration is ready to stand on its own feet, or whether the Republic of Gomez will go the way of the Republic of Palma. There are disquieting signs, like the election of one of the reputed Guanabacoa assassins as the chief officer of the Senate, and of Orestes Ferrara, as President of the House—a man whom the Hague Conference would not accept as a delegate. But a land enslaved and degraded, deprived of all voice in its own affairs, corrupted by venal officials, cannot be expected in ten years or twenty to forget the lessons of long centuries of misgovernment.

HARRIMAN AS A POLITICAL PORTENT.

The election of E. H. Harriman to the directorate of the New York Central has been widely discussed as an important event in the world of finance. He has proved himself a railway operator of uncommon skill: under his management the properties of the Union Pacific, for example, have largely increased in value. It is not surprising, therefore, that in expectation of improvements to be made in the Central when he should be in control, the stock should, within a month, rise some 15 points. The patrons of the road are likely to secure better service; and in that respect his accession will be for the general benefit. But there is another side to the question. The Financial Supplement of the New York *Evening Post* on Saturday published a table showing the eleven systems in which Harriman, either directly or through coöperating capitalists, now has a dominating voice:

	Mileage.
Union Pacific	5,916
Southern Pacific	9,731
Illinois Central	4,378
New York Central	12,282
Atchison	9,350
St. Paul	8,687
Northwestern	7,623
Baltimore and Ohio	4,462
Delaware and Hudson	845
Georgia Central	1,914
Erie	2,571
Total	67,759

This means that Mr. Harriman now has in his grasp nearly one-third of the total railway mileage in the United States; and that third, embracing as it does such important interlacing trunk lines, implies a domain far wider than the bare figures would indicate.

But it is on the political rather than the financial aspect of these facts that we would dwell. The two phases of the subject are, indeed, inseparable. Mr. Harriman's ventures in the stock market with the $131,000,000 which he raised a year and a half ago through the use of Union Pacific's credit and surplus, not only demoralized the stock market, but extended his sway both as a

railway proprietor and a politician. He has his creatures not only in Congress, but in the Legislatures of the many States through which his lines run. He is even reported to have owned Governors. Certainly, B. B. Odell, jr., was very friendly toward him. If any one wants an example of State political machines manipulated in the interests of a railway, one has only to go to California, where Harriman's Southern Pacific stretches its tentacles from the Oregon line to Mexico. There one will quickly discover that the objection to Harriman is not merely that he is unscrupulous. It is bad enough to have legislators and city officials, as well as newspapers, devoted to the interests of a man whose methods are sometimes those of a buccaneer. But were Mr. Harriman the Archangel Gabriel, were he the most benevolent despot alive, were the Southern Pacific simply a huge engine run for the sole purpose of benefiting the inhabitants of California, those unhappy people would still groan under the yoke and cry out in wrath for deliverance. The American people will not view with equanimity the centralization of such vast power in one person. They say, and say rightly, that it weakens, and ocasionally even destroys, representative government. It is not the voters; it is huge corporations that more than once have declared what the laws shall be and who shall execute them.

This is why it is inevitable that the unbridled greed of Harriman and his kind is sure to be made the excuse for renewed agitation against corporations. We have just passed through a panic, and from one end of the country to the other financiers have been imploring, "Let us alone!" Well, if letting alone results in one man's securing so many thousand miles of railway—the common carrier of America—the advocates of government regulation, and even ownership, will find weapons ready forged to their hands. In this State we now have Public Service Commissions, vested with unusual authority; and though Harriman and the newspaper organs of Wall Street speculators may rage, the tendency will be—if we may judge the future by the past—to strengthen rather than weaken these commissions. The example, too, is sure to be followed in our neighboring States. The subject is already up for discussion in New Jersey and Connecticut. There, as in New York, the corporation interests are offering a brute opposition, but that opposition is certain to be defeated as soon as ever the issue is fairly presented to the electorate. Furthermore, there has been a long campaign for amending the Sherman Anti-Trust law. The defects of that statute are patent; but we doubt whether, with the vision of Harriman bestriding this country like a colossus, Congress would dare run counter to popular opinion by passing any amendment that might seem to favor the corporations. If corporations are subject to what their managers call vexatious and unjust restrictions, it is largely because men like Jay Gould a generation ago and John D. Rockefeller and E. H. Harriman to-day are the embodiments of corporate activity.

And it is to be remembered also that much of this talk about vexatious and unjust restrictions is based on an assumption as to the doctrine of *laissez-faire* that is no longer tenable. We go as far as any one in urging that each man be allowed, within the bounds of honor, to manage his own business in his own way. We view with dread all laws that may tend to cripple industry or check initiative. But we cannot assent to the theory, sometimes openly proclaimed, often tacitly accepted by corporation managers, that a public service corporation, by its very nature a monopoly, is a private business; that any man can manage a railway or a gas company as if it were merely his personal property. The public interest there must be conserved by firm restriction upon rates to be charged, securities to be issued, and operations in finance. As John Morley points out in his last volume of "Critical Miscellanies":

> Where a whole class of men is permanently at a disadvantage in its bargains with another, then by strict Gladstonian principle the state has a right to intervene as arbitrator, provided that it can do so with sufficient equipment of knowledge and impartiality.

It is because we would have the state as arbitrator, acting through an Interstate Commerce Commission, a Federal Bureau of Corporations, or through State Public Service Commissions, play its part with intelligence and moderation and avoid such violent extremes as government ownership that we are profoundly disquieted by the performances of the men of whom Mr. Harriman is a type. They furnish the demagogue and the wild radical with inexhaustible ammunition; they rob the conservative of his strongest arguments.

UNREST AMONG BOSSES.

Magazine writers are analyzing "spiritual unrest"; other great minds are explaining "discontent" of various kinds, afflicting various classes; but no one has given due attention to a social and political phenomenon more significant than any of them. We mean boss unrest. The usual state of soul in a boss is one of blissful self-complacence. Such a thing as searchings of heart—we do not say conscience, for the practical man in politics is not fool enough to search for what does not exist—has been strange to him. But on a sudden we see his class falling into doubt, uneasiness, and dissatisfaction. All the well-known signs of unrest are, in fact, visible to-day among the small Republican bosses of New York State.

It is not necessary to take our word for this. One of the suffering body has himself gone into the witness-stand, or the confessional. William Barnes, jr., of Albany has been publicly diagnosing his own ailment, and that of his fellows. He admits a "chaotic condition" in local leadership, which is, he confesses, "thoughtless and wanting in initiative." The chief trouble with the bosses is, he concedes, that for some years they have been thinking of themselves only as divinely ordained "patronage brokers," and not at all "leaders of opinion." And Mr. Barnes would have us now believe that they are filled with contrition for their shortcomings, and are proposing to develop a true "capacity for leadership," together with "the requisite stamina to withstand alleged popular demand." This is interesting, but perhaps even more so is Mr. Barnes's explanation of the causes of the low estate to which the bosses have been brought in New York. He strikes his finger on the spot in this way:

> The real cause was that the astuteness and cleverness of Senator Platt furnished for many years the thinking machine for the up-State Republicans. Being so long accustomed to having political advice given to them by Senator Platt, they became dull and atrophied.

This testimony of an expert, however, we are unable to accept as conclusive. Platt and a "thinking machine" are contradictory terms—unless money thinks

as well as talks. The power of Boss Platt was built up on a basis which was frankly mercenary. He took in the party funds, he paid them out by individual check, and that enabled him, as paymaster of the forces, to name and control members of the Legislature, hence to sell legislation, hence to force his creatures to vote into the United States Senate a man whom they despised—himself. This was the sole magic of Platt's power. He exercised it for some years through steady defeat. The party loathed him, but could not get rid of him, because he controlled its source of supplies, the campaign contributions. Then along came Bryan to make New York hopelessly Republican, and to deceive some into thinking that a vulgar and mercenary boss, of shocking morals, was really a shrewd political leader.

Pushing one side, therefore, Mr. Barnes's pathetic delusion that it is the disappearance of T. C. Platt which has disclosed the fact that his followers and understudies are men without force, grasp, or prescience, we must ask what is the true cause of the confusion and shame-facedness of the little bosses. The best answer is furnished in Gov. Hughes's speech in this city last Saturday night. Political conditions have arisen in which the bosses are not at all at home, and with which their old methods do not fit them to cope. A new spirit is astir. People are tired of political dictators, large or small. The voters have been fixing their eyes upon the exact facts, and they know that the Governor is right in declaring the delegate and convention system to be, in practice, a sham. It is not what it pretends to be. Instead of affording the party a means of expressing freely and accurately its wishes, it is, too often, the device by which it is bound and gagged and delivered into the hands of a selfish and dishonest clique. It is because the people have found out the fraud, and are determined to put something genuine in its place, that there is this great shaking of the dry bones going on. Ideas are taking possession of the popular mind. Gov. Hughes is but making himself their interpreter and enforcer. Now, nothing is so fatal to political bosses as ideas.

This is deliciously implied in the summons which Barnes issues to his partners in distress to muster up "the requisite stamina to withstand alleged popular demand." In the race-track agitation, last year, there was an idea—a moral idea—at work which Barnes valiantly withstood, but nevertheless it was strong enough to bowl him over. He also displayed splendid stamina, along with abundant stupidity, in opposing the renomination of Gov. Hughes, but then, too, down he went. Now he is starting out on another losing fight against an idea. That is the trouble with him, although he does not suspect it. All his vague discontent, his restless turning this way and that, and wondering what has become of his leadership, are merely symptoms that his disease is gaining upon him. Its cure is fresh-air treatment—that is, going out and getting into touch with the moral aspirations of the people. But, of course, that form of cure would be, to a boss, the same thing as suicide.

FILLING IN THE MAP.

Even so unmercenary a pursuit as geographical exploration does not escape the ineradicable taint of money-grubbing. Peary, before he sets out for the North, thinks it necessary to suggest how "useful" it would be finally to reach the Pole, or to hint at great savings to international shipping which might be effected by a definite examination into the antics of the magnetic pole. As a matter of fact, Peary knows, and those who are behind him know, that it is only the eternal lure of the hidden and the vague that draws men to the dreary regions of the Pole. Curiosity has been a sufficient reason for men's leaving home and kin and risking their lives in strange lands. It was primarily the desire to see that led on the Jew, Benjamin of Tudela, in the twelfth century, Marco Polo in the fourteenth, the great Portuguese and Spanish navigators in the fifteenth century, and their successors in turn down to the present day. How much of Columbus's interest in a shorter route to India and the conversion of its natives was fundamental, and how much was practical argument addressed to the cupidity of financial backers? He had the Unknown Sea to conquer, and he could think of any number of good business reasons why he should make the trial. And essentially the spirit of exploration is still the same. The zoölogist who goes to the Arctic with his knives and preserving fluids has little hope of bringing back a new breed of domestic animal for the use of man. He wants only to extend or rectify his lists of quite useless species and sub-species. In other words, he is curious.

For the curiosity of the professional explorer, the world, as the London *Times* notes in a recent article, still holds large stretches of unmapped ground. There is, of course, the classic North Polar region, where Peary is now busy, and whither Capt. Amundsen is planning to lead a six-year drifting expedition, largely on the lines of Nansen's famous undertaking. There is the vast Antarctic realm in the partial conquest of which Charcot's French expedition is engaged. In discussing this enterprise, Charles Rabot sums up the case in the Paris *Temps:*

> Imagine that in our own hemisphere our geographical knowledge were to stop at the White Sea, at the Siberian coastland, at Bering Strait, and the northern part of Hudson's Bay, and you will have an idea of the regions round the South Pole that still lie hidden from us.

Is not that answer enough as to the "use" of Antarctic exploration? The North and the South Pole are where man has still to draw the complete main outlines of his map. Elsewhere it is largely a matter of filling in—South America, which still holds two million square miles of unexplored territory; Arabia, with nearly half a million; Tibet, which Sven Hedin has not so thoroughly mapped but that there is plenty of work left for others; New Guinea, and Africa. Strange it is that the Dark Continent should come last, far from a dark continent now, and offering opportunity almost entirely for the detailed work of the scientific specialist.

How strong is the pull of the unknown in itself, is shown by the almost complete absence of what we may call the human element in modern exploration. It was not so much strange lands as strange beings that the early explorers went out for to see—foreign peoples, with their odd customs and costumes, their cities and temples, their politics and beliefs. The unknown that waits for the explorer of the present day is an unknown bereft of man. In the jungles of the Amazon, a few thousand aborigines may still be lingering; in the wilds of New Guinea we may come across some odd subdivisions of the Papuan stock; in the Sahara, there

may be an uncharted oasis here and there. But for the most part, our *terra incognita* of the present day is also *terra inculta*, great sand wastes in Sahara, Gobi, and Arabia; rock wastes in the Tibetan highlands; and the dreary immensities of ice about the Pole, where life itself is inconceivable.

Yet a few years more, therefore, and the romance of exploration that comes from the discovery of new faces and new minds will be gone. No other explorer will have Sven Hedin's opportunity in Tibet, where it was given him to sketch and photograph the daily life of partly unknown races. But even here our ignorance was only partial. With the broad lines we were fairly familiar; and, naturally, there is a corresponding decrease of the charm that feeds on curiosity. Ethnologists no longer have in store for us thrilling tales about Melanesians who eat their own offspring, or Bornese headhunters who can count only up to three and dine on steaks sliced from a living enemy. Even if some new tribe be discovered that is addicted to such unpleasant habits, the tale has lost its novelty. Besides, what the modern museum expedition lays most emphasis on is the fact that the Mulahs are brachycephalous, that they have several complicated dance steps, and that they show strong linguistic connection with the neighboring dolichocephalous Taritari. Yet, we presume that, too, is filling up the map of human knowledge.

EARTHQUAKES THEN AND NOW.

The flood of comment on the earthquake at Messina continues; yet in all that is said there is—as in the case of San Francisco—but little serious moralizing. We have the conventional expressions of pity and horror, we have generous responses to appeals for help; but we view the event with a scientific detachment which would have been impossible a century ago. Few persons speak of the hand of God; many, of the inexorable laws of nature. The difference indicates, we think, a far-reaching change in our attitude toward the universe.

True, a writer to the London *Nation* asks: "Why this holocaust of human lives? . . . for what reason; to what end?" This importunate questioner adds:

> I have considered my faith in God to be impregnable, my chief possession in life. I have questioned nothing, doubted nothing, but now I feel the bonds of faith snapping, and I turn to the teachers of the Christian religion and implore them to give me an explanation. . . . My reason tells me that this waste of human life, this gigantic sacrifice, in an unspeakably cruel form, of hard working, innocent men, women, and little children is—unnecessary. I will leave aside the epithets of unjust, unmerciful, and simply say, unnecessary. What purpose had it all?

The letter called forth various answers, the tone of which is very significant. Of a dozen which are published, all but two or three point out that earthquakes are merely natural phenomena, and that man, if he is to escape destruction, must keep out of the path of nature's lethal forces. The following is a typical reply:

> The earth commenced its existence as a nebulous mass possessed of a vast store of heat. It has been slowly cooling down for untold ages. The solid crust which has thus slowly developed is thinner in some parts than in others. As the cooling process continues, the *shell*, at its weakest parts, warps a little. This phenomenon of nature is called earthquake. That is "Why?"
>
> "Why" your correspondent should now "feel the bonds of faith snapping" I am at a loss to understand. In my turn I ask, Why? Does your correspondent require Almighty God to regulate the forces of nature in the interests of puny mankind?

But this curt contempt for the believer in "special providences," who is unable to reconcile such a frightful catastrophe with the idea of an omnipotent and merciful God, could have found relatively little sympathy and support in the eighteenth century; for then the notion of divine interposition in human affairs was still widely prevalent. Indeed, the theory of immutable law had hardly begun to penetrate the common consciousness; few men of that age could look upon our solar system as a clock wound up once for all, to run throughout eternity. Cowper in his "Task" described the great Sicilian earthquake of 1783:

> Revelry, and dance, and show
> Suffer a syncope and solemn pause,
> While God performs upon the trembling stage
> Of His own works, His dreadful part alone.
> . . .
> His wrath is busy and His frown is fell.

More striking yet are the lines of the professed Deist, Voltaire, occasioned by the earthquake at Lisbon:

> Comment concevoir un Dieu, la bonté même,
> Qui prodigue ses biens à ses enfans qu'il aime,
> Et qui versa sur eux les maux à pleines mains?
> Quel œil peut pénétrer dans ses profonds desseins? . . .
> Il existe pourtant. O tristes vérités!
> O mélange étonnant de contrariétés!

This same shock at Lisbon had a profound influence on Goethe, then a lad of six. In "Dichtung und Wahrheit" he tells us how the mighty terror which then spread over the world "deeply disturbed the boy's peace of mind." Like the modern Christian whom we have quoted, he felt that his faith in the goodness of God had been undermined:

> God, the Creator and Preserver of Heaven and Earth, whom the explanation of the first article of the creed represented as so wise and benignant, had, by giving both the just and the unjust a prey to the same destruction, not manifested Himself, by any means, in a fatherly character.

To the young Goethe there seems not to have been offered the ready consolation —which appears so satisfying in 1909— that in the cooling process the thin shell of the earth warps a little, and that it is silly to imagine Almighty God regulating the forces of nature in the interests of puny mankind.

The man of strictly logical bent may further sustain himself with the argument that from the point of view of mere physical law, the disaster that sweeps away a hundred thousand human lives may have no more meaning than the fall of that single sparrow which the Heavenly Father used to note. And even those of us who regard man as of more value than many sparrows, must admit that the fatalities from earthquake and tempest are no more perplexing, as part of a divine and benevolent order, than the agonies of millions of mothers dying in childbirth, the slaying of countless hosts on countless fields of battle, and the tortures of flame-wrapped martyrs. But death's daily toll of youth and innocence as well as of age and sin finds our minds staled by custom; and so feeble are our imaginations that the slaughter of whole armies at distant times and places seems dim, unreal, and of little moment. We are scarcely stirred unless the event stares at us from the front page of to-day's paper, and unless travel or reading has made us fairly familiar with the scene.

But close as Messina is to us, detailed as is our knowledge of city and people, prompt as are our offers of aid, we seem unable to look at the happenings there as a tremendous moral lesson. Goethe tells us how the earthquake at Lisbon struck fear to the heart of the whole civilized world. "The religious

were ready with reflections, the philosophic with grounds for consolation, and the clergy with warnings." From other sources also we know that this dreadful calamity was one of the stimulating causes of the Great Awakening. Men long dead in trespasses and sins began to reflect as never before on the meaning of life, here and hereafter. Can it be that the scientific spirit has robbed us of the old power to discern in the universe something beside the play of blind force on brute matter? Are we no longer plagued by misgivings as to the justice of the smoking sacrifice at Messina? This globe seems to have dwindled to a whirling clod of dirt in blank immensity. There are no vast unknown regions from which an angry God may launch his thunderbolts. The chemical constituents of land and water, of plant and animal, are analyzed, ticketed, and pigeon-holed; we think we know the exact laws by which they combine, disintegrate, and recombine in myriad forms. There seems to be nothing that can surprise, perplex, awe, or terrify us; nothing that can make our pulse check at a sudden vision of eternity and startle us out of our humdrum and sordid pursuits. We see in the present fleeting opportunity nothing immeasurably precious because within the hour the solid bases of the hills may heave like the sea and hurl us on "the black infinite ash-heap of the dead."

A GLANCE AT CURRENT AMERICAN FICTION.

Story-telling is now so important a matter to us, the art of fiction is so much a part of our daily talk and walk, that we may well take time to consider now and then what it is doing for us and what it is likely to do. We have ceased to look for the Great American Novel: the phrase suggests a kind of limitation. We produce, by all accounts, so many novels of eminence, that a distinction implying prëeminence must be regarded as invidious. This rather stiffens the problem for the busy reader who cannot give all his time to the masterpieces of the hour. He would really like to know what dozen or half-dozen among the novelists of the day are best worth following: to what writers he may look with cheerfulness, yet without fatuity, during the year or two to come?

In America the prospect is perhaps rather pleasing than imposing. Never, we are told, has there been so "high a level of workmanship"; never, certainly, have the workmen been more sedulous, more productive of fiction in bulk. The fact remains that we have nothing colossal to point to since the prodigy of "The Scarlet Letter." That was sufficiently American, one would think, in substance, as the best of our subsequent fiction has been. "Huckleberry Finn," "The Grandissimes," "Silas Lapham," "Daisy Miller," the short tales of Hamlin Garland and Miss Wilkins and Mrs. Deland—upon these exhibits we might well allow our case to rest. Taking them together, one must be struck with the geographical range of their Americanism. These writers are without exception still at work; but they may be taken to have made their distinctive contribution; no new thing has come from them of late, nor can it be expected in the future. Mark Twain's reputation is firmer than ever before; his academic honors have merely signalized the general consensus of bis importance as a national figure. For a long time he was listened to with amusement not unmingled with consternation, as something odd and egregious; but he is now recognized as the bell-wether of a vast flock. His fun, his hyperbole, his imperturbability are, after all, mere Wellerism with a different accent: it is the magnanimity of the man, literary and other, which we have come to see; and, rightly or wrongly, we take that virtue to be a property of the best Americanism, as of the best cosmopolitanism. There has been some extravagance in recent estimates of him as a man of letters, but he is undoubtedly a greater power in the land than the other veterans we have named. Mr. Cable, while he has retained much of his old charm, has made distinct concessions of late to the demands of popular romance. Mr. Howells long ago gave up the propaganda of realism, and has been for some time rather the amiable and humorous commentator on life than its stern or literal delineator: it is clear that we shall have no more Laphams. Mr. James, with an enthusiasm as indefatigable as that of Mr. Pickwick on tbe ice, continues the refinement of his method—to the confusion of all but the adept. "Henry James's fiction," says one of that number, "is ultimate in its exposition of the possibilities of a high psychical entertainment." This, it appears, is the kind of entertainment which the future holds for lovers of fiction.

Certainly they might fare worse: but is the jig quite up with romance? It must be admitted that, while the popular romancers still command the ear of the general, their audience is brief. Masterpiece follows masterpiece, and at the end of the twelvemonth hardly an echo of them all lingers. Far and away the most popular American novel of the past season, the best-selling best-seller in the book-mart, was Mrs. Frances Hodgson Burnett's "The Shuttle." It is a book of no moment whatever, from any reasonable point of view, and the busy reader need not trouble himself with its author in the future. Of her, as of Elizabeth Robins, Ellen Glasgow, John Fox, jr., Robert W. Chambers, and, alas, F. Marion Crawford, it need simply be recognized that they are popular and intend to remain popular. Winston Churchill, on the other hand, shows promise of pulling ahead of what we had come to regard as his class. He remains quite without distinction of manner, and has not even learned to be firm in his syntax. But persons who found in "Richard Carvel," "The Crisis," and the rest a pretentious crudeness of substance as well as of form, must have discerned in "Mr. Crewe's Career" a quality really distinguished and rare. The singular thing is that this quality should be so pure, in view of the tractarian character of the tale. Mr. Churchill's experience as a defeated reform candidate for political office in a State ridden by a great corporation would have supplied a petty person with a store of small flings and innuendoes—and little else. But Mr. Churchill has come out of it all in excellent spirits, and his novel is less a work of satire than of pure humor. He may yet be a person for the literary historian to reckon with. At all events, he promises better things than he has done, better things than he has ever promised before.

Meantime the cause of wholesome romance continues to be supported by Mr. Cable and Mrs. Deland. On the part of Mr. Cable, as we have said, there has been of late a leaning toward the incidental and spectacular. He seems to have said to himself, "Go to, I am a romancer: and if people want their romance spiced with adventure, with bloodshed even, they shall have it." So we find him considerably occupied, in "The Cavalier" and "Kincaid's Battery," with the purveying of incident and situation—or apparently occupied, for it is clear that old New Orleans has again laid its spell upon him from the first page, and it is the communication of that spell in which he really delights. So of Mrs. Deland's "Old Chester": she never seems to breathe quite freely away from it. We grudge her absence, her excursions into more commonplace fields of romance. And we wish she might confine herself to the simpler elements and the simpler methods of tbe earlier tales. Another Helena Ritchie we need not ardently desire.

A writer of the younger generation with a natural vein of romance is Robert Lovett. One suspects him to be a little fearful of it, a little smitten with the methods of the new "psychical" realism. A confusion of motives has been his undoing hitherto. He does not know when to have done, when to let well enough alone. For example, the first part of "The Winged Victory" is

a well-nigh perfect thing in itself, a very beautiful idyl of youth which one is tempted to tear out its context and have bound by itself. For the ensuing parts have to do with undergraduate life in a Middle-Western coeducational university—a crude life which has the air of being reported verbatim; and with a studio life of which the writer has nothing new to delineate. No method of realism, plain or fancy, physical or psychical, is likely to serve Mr. Lovett as his really rare instinct for romantic interpretation may.

It is true that most of the names which range themselves in one's mind as of the best promise, as most to be looked to in the immediate future, refuse to connect themselves in any way with the idea of romance. These writers are concerned, they would tell us, with life as they find it, not as they fancy it, and chiefly with a life mental, psychic, or individual. Now a microscope is to be held up to nature, now a camera; never by any chance a Mirror of Shalott. The limitations of a talent so preoccupied are clearly seen in the work of Robert Herrick. In the first place, he asks us to be interested in perfectly commonplace persons, little individuals snapshot at random from the crowd, and set before us "enlarged." How much more do we know of his characters at the end than we knew at the beginning? At best they remind us of the people we meet every day, people with whom we have a bowing acquaintance, whose features may have interested us at first sight, but who seem thereafter to have no attributes of consequence beyond these same features. Mr. Herrick has, we understand, been accused of reproducing in the form of fiction actual persons and situations of his acquaintance. The charge is one that many novelists have had to face, but in this case it has an inherent probability beyond the common. And if his novels are lacking in dignity of characterization, they are also haphazard in construction, both episodical and diffuse. There is a profusion of materials, but too little command of them in the large. His stories continue, incident is added to incident, and speech to speech, but there is little natural development. For example, the opening chapter of "Together" is of marked interest. A study of American marriage, ventured with the reverence and high enthusiasm which mark those introductory paragraphs—what might it not amount to? But the thing, somehow, does not come off. Various subsidiary persons and episodes intervene; or, rather, there is such a reduplication of possible interests that in the end one is by way of becoming indifferent to the question of their relative value. And yet one cannot feel that Mr. Herrick is born a mere recorder of the casual fact. What we have to hope for from him is an increased power of elimination and of sublimation, fewer lifelike individuals and more speaking types, less of didacticism and more of free interpretation.

A less experienced writer has ventured with firmer step upon the very ground chosen by Mr. Herrick. "Neith Boyce" is interested in the same types of Americanism, or rather of human character as colored by the conditions of our American life; and in "The Bond" she has dealt successfully with the absorbing problem—the problem of marriage under the complicated condition of modern life—which "Together" seems, after all, to have done no more than successfully circumnavigate. And there is a restraint, a compactness, a saliency, in this study of a single striving and erring human pair which is lacking in Mr. Herrick's naturalistic panorama of matrimony. They are, to be sure, an exceptional pair, even in this day: their marriage is a disconcertingly modern "arrangement," yet a perfectly logical and by no means unparalleled application of current theory. The man is a painter, the woman a sculptor. They are drawn together by the old-fashioned emotion of love as well as by congeniality; but the marriage is based upon the explicit understanding that the individual life of neither is to be interfered with. The wife retains her "bachelor" quarters and studio, as the husband retains his. A flat, neutrally situate, is the common ground upon which the business of matrimony is to be somewhat parentheticallly conducted; children are not provided for in the scheme. But children occur, to appear at first as mere incidents, but later in their true light as symbols of the psychical process through which an inevitable fusion has taken place. And so, however strained at, the bond holds firm; their mutual love is real, if not heroic or exultant. They are not converted in the end to a different kind of pair, we leave them yet committed to the familiar and merely not hopeless task of mutual forbearance and affection. A serious study of such a theme, free from sensationalism as well as from sentimentalism, is an achievement of great merit in itself, and of still greater promise as the work of so young a writer as we take "Neith Boyce" to be.

Of Miss Sedgwick and Mrs. Wharton, we, of course, expect much. Their methods have a common delicacy, due to common sources: without Bourget, without Mr. James, they could hardly be what they are. Yet we take it that finesse is really the breath of their nostrils, and not merely the trick of their pens; and it is, in the nature of the case, a feminine finesse. Miss Sedgwick is said to have a wider audience in England than at home; she has certainly not achieved such a degree of popularity as has been accorded to Mrs. Wharton. Yet they seem at a glance to be doing much the same kind of thing. Miss Sedgwick might almost have written "Madame de Treymes"; and Mrs. Wharton might almost have written "The Rescue." Their work has the episodical quality of its kind—little epic breadth, much elaboration of detail. We breathe a rarefied air: not for us the vulgar tumult of that life so eagerly depicted by our Fielding, our Dickens; we are as little exposed to "lowness" as in an eighteenth century comedy. A cosmopolitan suavity of manner, a Gallic grace of diction, are to be expected of such characters as occupy the foreground; persons like servants, tradesmen, poor relations, and others to be naturally held under suspicion of vulgarity, are strictly kept in the background, as they are said to be in polite life. Such being the specifications of personnel, we are confined pretty closely to the Atlantic seaboard, in so far as we insist upon being interested in life upon this side of the water at all. But London offers a better body of material and Paris a better still. There is, after all, something extraneous and exotic in the method of such writers. It represents a degree of sophistication, of civilization if you like, to which we have not yet attained, and to which it is hardly our dearest ambition to attain. Mrs. Wharton seems on the whole to be more closely confined to the situation, the episode, than Miss Sedgwick, so that her novels present the elongated situation, or the multiplied episode, rather than a fluid or cumulative narrative. Her latest long story contains the suggested material of at least three novels. But she has amazing cleverness: one has the feeling that if she were to addict herself altogether to the novel for awhile a larger power might develop than is likely to under the steady importuning of magazine editors for the commodity which everybody knows she can turn out. One is sorry to hear of her contracting for a series of "stories about men" in the near future for a well-known periodical. This method of subsidizing talent and bending it to an editorial notion is not a promising omen for our fiction.

The present worship of the short story may naturally lead to such arrangements. The market price of the commodity is so high as to be practically mandatory. And, indeed, however reluctant one may be to admit all that is claimed for the article itself on absolute grounds, there is no denying that it is our specialty. The short story is certainly not so new a thing as has been asserted, nor is it, perhaps, so great a thing; but we shall leave it better than we found it—almost as good, perhaps, as it can be made. Mrs. Wharton is, thus far, at her best in the tale, and so are most of her contemporaries. So are Joseph Conrad, Mrs. Wilkins Freeman, H. M. Rideout, Miss Alice

Brown, "O. Henry," F. J. Stimson. So, we should say, is Hamlin Garland, if he did not seem to have slipped already into the past. "Main-Travelled Roads" was and remains the most powerful collection of short stories dealing with American provincial life. Mr. Stimson's "Jethro Bacon," Mr. Rideout's "Wild Justice," and several of the earlier tales of Miss Wilkins, are, taken by themselves, as effective in the same field. Miss Wilkins's experiments in extended narrative have lacked the peculiar excellence of her short stories; and some of her recent excursions in the direction of romance have approached the ludicrous. Her command of New England rustic life and character is as assured as ever, and we need only wish of her a renewed fidelity to the theme and mode of her early choice. Miss Alice Brown is another painter of New England genre, to whom we must continue to look: she sees her country folk through other-colored glasses than those of Mrs. Freeman, but with equal sympathy and candor. And with her again the short story form seems to be the natural medium. Short-story writers of a younger generation abound: whether creators or created of the popular magazines, it would be hard to say. Perhaps the most brilliant and versatile of them is "O. Henry"; but many of them are brilliant and most of them are versatile. It is hard to guess which of them will improvise best in the near future, or what their improvisation will be seen to amount to in the long run.

H. W. Boynton.

CANADIAN LITERATURE IN 1908.

Ottawa, January 25.

The last year has been notable for the number of important publications bearing upon the history of Canada. In several respects first place must be given to Miss Agnes Laut's "Conquest of the Great Northwest" (Outing Publishing Co.). This is, as the sub-title says, the "Story of the Adventurers of England Known as the Hudson's Bay Company." The two previous histories of the company—Dr. Bryce's "Remarkable History of the Hudson's Bay Company" and Beckles Willson's "Great Company"—being notoriously inaccurate, Miss Laut's book will be the more welcome. Miss Laut found the bulk of her material in Hudson's Bay House, London, and in the Public Record Office. From the former she secured many important documents, the very existence of which was hitherto unknown, such as the Journals of Peter Skene Ogden and the Letters of Colin Robertson; from the latter a great deal of entirely new material bearing upon the voyages and character of Radisson, d'Iberville's exploits in the Bay, etc. Covering to a large extent the same field, but from a different point of view, is L. J. Burpee's "Search for the Western Sea" (New York: Appleton & Co.), a history of the exploration of Northwestern America. The course of exploration is traced through Hudson Bay and inland to Lake Winnipeg, on the one hand, and, on the other, from Lake Superior westward, the united streams of exploration culminating in the famous overland expedition of Alexander Mackenzie. Two volumes that are admirable examples of scholarship combined with readability are Prof. C. W. Colby's "Canadian Types of the Old Régime, 1608-1698" (New York: Henry Holt & Co.), and Prof. George M. Wrong's "A Canadian Manor and Its Seigneurs" (New York: The Macmillan Co.). Time was, and it is not so very long ago, when a Canadian professor of history would have scorned to waste his valuable hours on Canadian history. Here, however, we have two books on purely Canadian themes, by the professors of history in two great Canadian universities. In the former book, Professor Colby discusses various aspects of French colonization in the New World from a novel point of view; in the latter Professor Wrong tells the romantic story of the old Seigneury of Murray Bay, as gleaned from letters and papers found in an attic room of the Manor House. A. G. Bradley's "The Making of Canada" (New York: E. P. Dutton & Co.) seems to be part of a series of histories of Canadian periods, of which his "Fight with France for North America" is an earlier, and his "Canada in the Twentieth Century" a later, link. The period here covered is that immediately following that of the "Fight with France for North America"—the half-century to and including the War of 1812-14. Though the book contains nothing new, nothing, in fact, which has not been more fully dealt with in such books as Smith's "Struggle for the Fourteenth Colony," Scott's "Simcoe," Mr. Bradley's own work on "Dorchester," and Lucas's "Canadian War of 1812," it fulfils very satisfactorily the author's intention "to depict the most vital and most interesting period of Canadian history within a compass that is neither sketchy on the one hand nor monumental on the other." The year has also been marked by the practical completion of an ambitious, and on the whole creditable, Canadian series, The Makers of Canada (Toronto: Morang). Four volumes were published in 1908: George R. Parkin's "Sir John Macdonald," Adam Shortt's "Lord Sydenham," R. H. Coats and R. E. Gosnell's "Sir James Douglas," and Charles Lindsey's "William Lyon Mackenzie." The latter is a reprint of an earlier edition, with a considerable amount of additional material by the author's son, G. G. S. Lindsey. The four are of unequal merit, Dr. Parkin's "Macdonald" and Professor Shortt's "Sydenham" being decidedly superior to the other two. A supplementary volume, now in preparation by L. J. Burpee, will contain a complete analytical index to the series of twenty volumes, a critical bibliography of the several periods of Canadian history, and a collection of brief descriptive and biographical notes covering many topics and lives omitted from the series. All this material will be in one alphabetical arrangement, and will be followed by a series of historical maps and plans.

During the year, the Second and Third of the Publications of the Champlain Society appeared. The former is Nicolas Denys's "Description and Natural History of the Coasts of North America (Acadia)," translated and edited, with a memoir of the author, collateral documents, and a reprint of the original, by Prof. William F. Ganong, of Smith College (see the *Nation* of November 12, 1908, p. 467); the latter is "Documents Relating to the Seigniorial Tenure in Canada, 1598-1854," edited, with an historical introduction and explanatory notes, by Prof. W. B. Munro, of Harvard. Apart altogether from the advantages to students of having an authoritative translation of Denys's peculiarly difficult and inaccessible text, and a serviceable collection of the more important documentary material, bearing on the seigniorial tenure in Canada, these publications will be found valuable for the sake of the full and scholarly historical introductions with which each is equipped. The current volume of the Transactions of the Royal Society of Canada contains a number of important papers of an historical nature, in both the French and the English sections. Of these, probably Dr. J. Edmond Roy's "Essai sur Charlevoix"—the first instalment of an exhaustive study of the father of Canadian history—is of the greatest value. Benjamin Sulte brings together a quantity of scattered and hitherto inaccessible material bearing on Étienne Brulé and his explorations; Col. E. A. Cruickshank discusses Hull's Invasion of Canada in 1812; Archbishop Howley throws new light on the Labrador Boundary Question—a matter of local interest to Canada and Newfoundland; James H. Coyne edits the Talbot Papers, with their interesting bearing on the early history of Ontario; and Mr. Burpee edits the Journal of Anthony Hendry, of the Hudson's Bay Company—a narrative of the earliest visit of a white man to the Blackfeet. While no publication has come from the Canadian Archives in 1908, a great deal of highly useful work was accomplished—some of the results of which will appear during the current year. These will probably include a second instalment of Professor Shortt's "Documents Relating to the Constitutional History of Canada," and the first of the Archives Bulletins, containing

three journals, edited by L. J. Burpee —La Rocque's Journey to the Yellowstone, Murray's Yukon Journal, and McDonell's Journey to the Qu'Appelle. A summary of the work of the Archives, present and prospective, will be found in an article on "Coöperation in Historical Research," in the October number of the *University Magazine* (Montreal).

It may not be inappropriate to mention here a book by the Dominion Archivist, Dr. Arthur G. Doughty—"The Cradle of New France" (Montreal: Cambridge Corporation). This is a popular history of Quebec, prepared in connection with the Tercentenary. It is unnecessary to say that, while the story is condensed into some three hundred pages, and is intended for the average reader rather than the scholar, it has none of the faults of most popular histories. The Quebec celebration is also more or less responsible for F. B. Tracy's "Tercentenary History of Canada," in three volumes (New York: The Macmillan Co.); for a couple of small volumes by Dr. J. M. Harper of Quebec, "The Earliest Beginnings of Canada" and "Champlain, a Drama"; for a new edition of William Kirby's "Golden Dog," and for a grist of more or less important articles in Canadian, English, and American magazines. A few other publications of an historical nature may be briefly mentioned. John S. Ewart's "Kingdom of Canada" (Toronto: Morang) is a collection of lectures and essays bearing upon Canada's status in the British Empire and her international relations (see the *Nation* of September 17, 1908, p. 262); W. B. Tucker's "Camden Colony" (Montreal: Lovell) is an interesting contribution to the romantic story of the United Empire Loyalists; "Through the Mackenzie Basin," by Charles Mair and R. MacFarlane (Briggs), contains a narrative of the Athabaska and Peace River expedition of 1899, with a number of valuable notes on the mammals and birds of Northern Canada; J. W. Tyrrell's "Across the Sub-Arctics of Canada" (Briggs) is a new edition of an old book, with additional chapters on Hudson Bay as a sea route to Europe, and upon musk-ox hunting; and in "The Story of Old Kingston" (Musson) Miss Agnes M. Machar tells the romantic story of one of the oldest of Canadian towns. One may also mention here the appearance of a new edition of a very useful Canadian book of reference—"Lovell's Gazetteer of the Dominion of Canada" (Montreal: Lovell), edited with an introduction by G. Mercer Adam.

The imaginative side of Canadian literature has been rather neglected in 1908. In poetry, there is not much of importance to record beyond Dr. Wilfred Campbell's volume of "Poetical Tragedies" (Briggs). Two of these plays, "Mordred" and "Hildebrande," were published in a small volume in 1893; of the other two, "Daulac" tells the dramatic story of the heroic young Canadian who, with his handful of followers, held back a horde of Iroquois at the Long Sault; and "Morning" is a purely imaginative piece of work. In "The Great Fight" (G. P. Putnam's Sons), Mrs. Drummond has brought together a few of the hitherto unpublished poems of the late Dr. W. H. Drummond, with several brief prose sketches, interesting as revealing the unsuspected powers of the "Poet of the Habitant," in a different medium. During the year, Canada lost the two leading imaginative writers of Quebec—the veteran poet, Louis Fréchette, and the young lyrist, Émile Nelligan. Among several of the more recent writers of Canadian verse, one at least must be mentioned, because of the promise of her occasional poems in the periodicals — Miss Marjory Pickthall. Her "Evening" in the *University Magazine*, reveals the character and quality of her verse. In fiction, by Canadians, one may barely name Mrs. Everard Cotes's "Cousin Cinderella" (see the *Nation* of October, 1898, p. 415); Miss L. M. Montgomery's "Anne of Green Gables"; Charles G. D. Roberts's "House in the Water" (see the *Nation* of August 27, 1908, p. 187); Theodore Roberts's "Brothers of Peril"; W. D. Lighthall's "The Master of Life" (a strong historical romance); and Nellie L. McClung's "Sowing Seeds in Danny." Without attempting to give even the briefest summary of their valuable contents, mention must be made here of two recent works by Prof. John Watson, of Queen's University, "The Philosophy of Kant Explained," and also "The Philosophical Basis of Religion" (see the *Nation* of August 6, 1908, p. 117).

Of French-Canadian publications in book form, the more important are A. G. Morice's "Dictionnaire historique des canadiens et des métis français de l'ouest" (Kamloops, B. C.: published by the author); F. J. Robidoux's "Conventions nationales des acadiens" (*Moniteur Acadien*); F. L. Desaulniers's "Les Vieilles Familles d'Yamachiche" (Montreal: Pigeon); Abbé Henri Cimon's "Aux Vieux Pays" (Chicoutimi: Delisle); Eug. Rouillard's "La Côte nord du St. Laurent et le Labrador canadien" (Quebec: Laflamme); and Abbé Camille Roy's "Essais sur la littérature canadienne" (Quebec: Garneau).

NEWS FOR BIBLIOPHILES.

Several items of Americana are included in the library of Lord Polwarth, which is to be sold by Sotheby, Wilkinson & Hodge, London, on February 15 and 16. The most interesting is a perfect copy, with the frontispiece and map, of "The Discovery of New Brittaine," by Edward Bland and others, London, 1651. The only copy offered at public sale in recent years is Barlow's, which brought $135 in 1890. That is probably the same copy that, after having been in the libraries of Charles H. Kalbfleisch and Marshall C. Lefferts, is now in the E. D. Church collection. It contains the curious frontispiece showing "Indian Wheat" and "An Indian Jay," but does not contain any map. The map, noted by Sabin, seems to be the identical map issued with the third edition of Edward Williams's "Virginia Richly and Truly Valued," also published in 1651, and it may have been inserted in a few copies of "The Discovery of New Brittaine." The John Carter Brown Library copy lacks the leaf of dedication, as well as the frontispiece and map. Among other books included in this sale are: The "Æneidos," Caxton's translation, 1490, an imperfect copy (78 leaves out of 84); Higden's "Polychronicon," Southwarke, Peter Treveris, 1527; Gower's "Confessio Amantis," Berthelette, 1532; Sir Thomas More's "Woorkes" (1557); and a very extensive and interesting collection of English pamphlets, several thousand in number, sold as 120 lots.

On February 10 and 11, C. F. Libbie & Co. of Boston sell an unusual collection of session laws, statutes, codes, etc., 1,609 lots, relating to fifty-two States, Territories, and Indian nations. A few eighteenth century imprints are included. On February 16, 17, 18, and 19 the same firm sells the genealogical library of the late Samuel S. Purple, the most extensive collection of this kind ever offered for sale at auction. Dr. Purple began collecting books on American genealogy as far back as 1850. His copy of the "Genealogy of the Family of Mr. Samuel Stebbins," Hartford, 1771, the first Amercan genealogy to be printed in separate form, lacks several leaves, but the pamphlet is practically unprocurable in any condition. Of the total 2,807 lots, 235 are manuscript genealogies and pedigrees, many of them made for Dr. Purple. Sets of the *New England Historical and Genealogical Register* the *New York Genealogical and Biographical Record*, the *Magazine of American History*, and other periodicals are included.

Arthur Sjögren's papers on printers' marks ("Boktryckare- och föläggaremärken under 1400-talet"), which appeared in *Nordisk Boktryckavckonst* during 1907 and 1908, have been issued in a handsome edition of 100 copies at the remarkably low price of 10 kronor. Some fresh material has been added. While containing little that is new, the volume is interesting as the first on this subject in Swedish.

Correspondence.

BOOKS IN COLONIAL VIRGINIA.

To the Editor of The Nation:

Sir: The recent discussion in the *Nation* in regard to the earliest appearance of copies of Milton in Massachusetts, and, incidentally, in the other colonies, has suggested the idea that it might be of interest to carry the investigation farther and make a more general survey. It should be re-

membered, however, that the information which remains in Virginia (and no doubt the same is the case elsewhere in the United States) is far from comprehensive. The inventories, which are the main reliance, in a majority of cases where books are mentioned, only say "books," "a parcel of books," or "a library of books." In numerous instances where references to such inventories have been published, the persons who made the notes have not had time to copy titles, where they have been given; but only to count them. The entire or partial destruction of the records of a number of the older Virginia counties has also deprived us of much data.

I have not included Greek and Latin books which appear to have been quite numerous in all of the colonies from an early date. The following list is compiled from the *William and Mary Quarterly,* the *Virginia Magazine of History and Biography,* and some manuscript inventories in the collection of the Virginia Historical Society:

Ben Jonson's "Remains," 1667.
Donne's Poems, 1667.
"Astrea" (French), 1667.
Prynne Against Prelacy, 1667.
Selden's "Titles of Honor," 1667.
Bacon's "Natural History," 1690.
Baxter's "Saints Rest," 1690.
Homer's Iliad (in English), 1690.
Hooker's "Ecclesiastical Polity," 1701.
Fuller's "Worthies," 1701.
Sir William Davenant's Works, 1701.
Camden's "Britannia," 1701.
Taylor's "Holy Living and Holy Dying," 1701.
Waller's Poems, 1701.
Howell's "Letters," 1701.
Herbert's "Divine Poems," 1701.
Sandys's "Travels," 1701.
"Hudibras," 1701.
Quarles's "Divine Poems," 1701.
"Don Quixote," 1701.
Montaigne, 1701.
Gower's "Confessio Amantis," 1701.
"Pilgrim's Progress," 1710.
"Orlando Furioso," 1715.
Hobbes's Works, 1715.
Raleigh's "History of the World," 1715.
Chaucer, 1716.
Cowley, 1716.
Drayton, 1716.
Erasmus (in English), 1716.
Bacon's "Essays," 1716.
Milton's "Paradise Lost," 1716.
Shakespeare, 1719.
Locke "On the Human Understanding," 1719.
Machiavelli, 1722.
Clarendon's "History," 1722.
Evelyn's "Sylva," 1722.
Burnet's "History of Own Times" and "Reformation," 1722.
Pascal's "Thoughts," 1722.
Locke's Works, 1734.
Temple's Works, 1734.
Shaftesbury's "Characters," [*sic*] 1734.
Spectator, 1734.
Tatler, 1734.
Pope's Homer, 1734.
More's "Utopia," 1734.
Guardian, 1751.
Addison's Works, 1751.
Pope's Works, 1751.
"Robinson Crusoe," 1751.
"Tale of a Tub," 1751.
Dryden's Satires, 1751.
Congreve, 1755.
Farquhar, 1755.
Pope's Odyssey, 1760.
Swift's Miscellanies, 1760.
Pryor's Poems, 1760.
Bolingbroke on History, 1760.
Jonson's Plays, 1760.

W. G. Stanard,

Virginia Historical Society, Richmond, Va., January 21.

FACTS AND FIGURES FROM SHAKESPEARE.

To the Editor of The Nation:

Sir: My attention has only just been drawn to Dr. W. J. Rolfe's interesting letter in your issue of December 10 last under this heading. Mr. Rolfe quite justifiably draws attention to some inaccuracies regarding the numerical length of Shakespeare's plays, which figured in the original edition of my "Life of Shakespeare" (first published in 1898). But I should like him and others to know that all save one of the errors to which he now draws attention stand corrected in the second edition of my "Life of Shakespeare," which was published in London in 1899. In the various English reissues of my work since that year, my statistical information corresponds except in one point, with Mr. Rolfe's "facts and figures." It is a matter of deep regret to me that the publisher of my book in America has omitted in successive reprints up to this date to incorporate any of the corrections which I duly forwarded to him. As a consequence I have from time to time, as on this occasion, been esteemed in America to be oblivious of misconceptions and misstatements which I have as a matter of fact long since acknowledged and set right. I am glad to be able to add that my American publisher has now promised to issue a revised edition of my work, which will incorporate all the corrections and new information accumulated by me during the past eleven years. I think that Mr. Rolfe will find in the revised American edition no discrepancy between his "facts and figures" and my own.

Sidney Lee.

London, January 20.

POE'S DEFINITION OF POETRY.

To the Editor of The Nation:

Sir: J. M. Robertson, in his "New Essays Toward a Critical Method" (p. 84, note), says:

> It is remarkable that no one has ever pointed out that Poe's excellent definition of poetry, "the rhythmical creation of beauty," is a condensation of a sentence by (of all men) Griswold.

The authority for this statement is not clear, the facts being apparently as follows: Griswold, in the preface to his "Poets and Poetry of America" (1842), has the following: "The creation of beauty, the manifestation of the real by the ideal, 'in words that move in metrical array,' is poetry." This preface is dated "Philadelphia, March, 1842." In the same month, if not earlier, Poe was writing the review of Longfellow's "Ballads" in which his famous definition first occurs—since this review appeared in *Graham's Magazine* for April, 1842. Griswold, then, may have slight priority; but considering the dates is it safe to assert that Poe was indebted to Griswold?

There is, however, further evidence bearing on the point. Poe wrote at least three reviews of Griswold's "Poets," besides lecturing in Philadelphia on the same subject. In the second of these, which appeared in the Boston *Miscellany,* November, 1842, he quotes the sentence from Griswold's preface given above, "because," he says, "it embodies the *sole true* definition of what has been a thousand times erroneously defined." This perhaps looks as if Poe were giving Griswold credit for the definition. In a third review, however, published anonymously in the Philadelphia *Saturday Museum,* 1843, he says, after quoting the same sentence:

> Now what is this but a direct amplification by our poet [Griswold] of the definition of poetry—"*the rhythmical creation of beauty*"—which appeared in Mr. Poe's *critique* of Professor Longfellow's ballads, from which *we* know and *he* knows he stole it?

Would Poe make this charge so explicitly and directly without warrant? Is it possible that Griswold stole from Poe, instead of *vice versa*? Is it possible, for example, that Griswold, who succeeded Poe as editor of *Graham's* (in April, 1842, as the date is usually given), had access to the manuscript of Poe's review of Longfellow as early as March, 1842, when he was writing his own preface? Or is there any other explanation of the similar
Some of your readers may be able to clarify this matter. F. C. Prescott.

Ithaca, N. Y., January 28.

SCHURZ'S "REMINISCENCES."

To the Editor of The Nation:

Sir: The appreciative reviewer of the third volume of Carl Schurz's "Reminiscences" (*Nation* of January 21), in transcribing the sub-title, accidentally makes it appear that the supplementary sketch of Mr. Schurz's public career covers only the years from 1869 to 1896, instead of to 1906. It would be a pity to leave the reader of the review with the impresson that the last decade of Mr. Schurz's life had been ignored. During this decade he again and again gave illustrations of his best qualities as orator, writer, and publicist. Yet the limitations of space positively forbade that more than a chapter, mainly about him as an anti-Imperialist, should be given to these years. Here, as elsewhere, all but a few of the most interesting personal details and documentary citations had to be excluded, not from lack of material, but from lack of room.

Frederic Bancroft.

Washington, D. C., January 25.

"LOVE'S OMNIPRESENCE."

To the Editor of The Nation:

Sir: The letter of Mr. Gamaliel Bradford, jr., in the *Nation* of January 14, with its allusion to the sonnet, "Love's Omnipresence," credited to Joshua Sylvester, moves me to inquire upon what authority anterior to Palgrave's, if any, the credit is given.

In the volume of selections from Sylvester, prepared by myself, and published last fall, I should have liked to include the sonnet in question, but did not feel justified in so doing, because I was unable to find it in any edition of Sylvester's collected writings, and further, because it had a more artistic finish than any other of the love sonnets of that poet. If I can make it appear to myself that I was mistaken, by finding that the verses were attributed to Sylvester before the beginning of the eighteenth century, I shall be greatly pleased. The sturdy old Puritan has been a victim of unreasonable prejudice for so long a time that I rejoice in whatever tends to his good repute; but I don't

believe that he himself would desire to obtain honors not actually his due.

THERON WILBER HAIGHT.

Waukesha, Wis., January 25.

TO THE EDITOR OF THE NATION:

SIR: I am sorry that I cannot answer Mr. Haight's question. I confess that in attributing the sonnet to Sylvester I went no further back than the "Golden Treasury."

Now that the subject has come up again, may I quote Shelley's version of the Plato epigram, which I have long looked for, and at last found introduced into the concluding stanza of Canto ix of "The Revolt of Islam"?

"Fair star of life and love," I cried, "my soul's delight,
Why lookest thou on the crystalline skies?
O that my spirit were yon Heaven of night,
Which gazes on thee with its thousand eyes!"

GAMALIEL BRADFORD, JR.

Wellesley Hills, Mass., January 28.

A PROPOSED PLAN OF COLLEGE ENTRANCE EXAMINATIONS.

TO THE EDITOR OF THE NATION:

SIR: The problem of college preparation has been much simplified since the formation of the College Entrance Examination Board, with the consequent tendency toward a real uniformity in requirements. But these examinations have one great disadvantage, namely, that they are subdivided to such an extent that a student may find himself obliged to take, for example, six or seven separate examinations in Latin, as Prof. W. T. Foster of Bowdoin pointed out in the *Nation* of December 17, 1908. This multiplication seems caused by the effort to discover both the amount and the quality of work done by the student. The alternative plan of admitting on certificate and without examination students from approved schools carries with it its own well-known evils. A third possible plan, followed by a few colleges, of admitting on examinations set as tests of the quality of work done with no attempt to determine the amount (for example, sight translation only as the language requirement) has also disadvantages that I shall point out later. A combination of these plans would, it seems to me, be both practicable and efficacious. Under this plan the college would require (1) a definite statement from the preparatory school as to the amount of work; (2) an examination to test the quality. Both the statement of the school and the result of the examination would thus be considered in admitting students. This plan would have certain considerable advantages for the college, the school, and the student.

The colleges that now admit without examination, on certificate, are always in danger of accepting ill-prepared students. Under the scheme proposed, such students would show in examination their unfitness, and would be excluded. The colleges that now make their examinations a test of quality of work, with little regard to amount, would no longer run the risk of admitting superficial students who manage to "bluff" their way through. Most American colleges attempt to avoid the evils of both systems by giving examinations to test both quality and amount of work. But the evidence as to amount thus obtained is not so trustworthy as a detailed statement from the school; nor is the test of quality so searching as an examination on quality only would be.

The advantages to the preparatory schools are no less marked. The preparatory school would have an authoritative word as to the admission of students, without taking the undue responsibility that it now really assumes in issuing the certificate. Moreover, in preparing students, the school would be able better to fit them for college work, without sacrificing interest to the necessity of reviewing over-minutely in the last years the whole requirement for admission.

The student, instead of entering solely on the statement of his school, with consequent uncertainty as to his fitness for college work, would enter with the consciousness of having had his work thoroughly tested. On the other hand, as compared with the student now attempting to gain admission through examination only, the student entering under the plan proposed would approach his examinations with comparative freedom from uneasiness, knowing that his work in the four or five school years would be duly considered, and that he would not be denied admission on the unsupported testimony of a few days of hasty writing. He would also be spared the great number of examinations, as explained above.

Of greater importance than anything else would be the coöperation between college and school, the placing on the college of the responsibility for admitting students, and on the school of the responsibility for preparing them not merely to pass entrance examinations, but to pursue freshman studies.

Toward this desired end we have already taken a decided step in the formation and the successful operation of the College Entrance Examination Board—proof that we have the necessary machinery for making the readjustments suggested.

ELIZABETH FORREST JOHNSON.

Bryn Mawr, Pa., January 22.

A JUDICIAL EXCRESCENCE.

TO THE EDITOR OF THE NATION:

SIR: In view of the recent Hains trial, and of the many other exhibitions of similar character which have been witnessed throughout the country in late years, is it not about time that we abandoned the practice of temporarily delegating sovereign power for certain purposes to a miscellaneous collection of twelve men who happen to be gathered together in a jury box? The practice is indefensible from any standpoint. It is not legally recognized; and, though a conspicuous reality in fact, in theory it has no existence. The theory is that the sole function of the jury is to determine the facts, and that it belongs exclusively to the court to determine the law and apply it to the facts found by the jury. The practical application of this theory is a task of considerable difficulty, but it is accomplished fairly well in civil cases, where the court exercises a supervisory control over the action of the jury through its power to direct or set aside verdicts. But in criminal cases it is not so. There the theory breaks down through the operation of the principle of criminal jurisprudence that the accused shall not be twice placed in jeopardy for the same offence—"jeopardy" in this connection being held to mean "the situation of a prisoner when placed on trial before a jury duly sworn and empanelled, and charged with his deliverance." This principle effectually cuts off the power of supervisory control which the court exercises in civil cases, and thereby renders the action of the jury final and irretrievable, where the verdict is in favor of the accused. The result is that, in such cases, the jury may render a verdict that involves impossible findings—for example, a finding that white is black, or that two and two make seventeen—and there is no power of correction. Here, instead of the court's applying the law to the facts as found by the jury, the jury are told what the law is, and are then virtually left to make the application for themselves, free from all power of correction. In this way the jury are for that particular case temporarily vested with what is practically sovereign power. Possessed thus of this accidentally acquired power, the jury may if they choose give arbitrary acquittal of the most heinous crimes in defiance of the plainest principles of law and the most conclusive proofs of guilt.

That such power cannot safely be entrusted to the average jury is abundantly proved by the many flagrant miscarriages of justice which we constantly see resulting from it. Examples of national prominence are plentiful, but they are only typical of a great number less prominent, but no less flagrant. For example, last year in this city a man sought out his wife, whom he had mistreated and from whom he was separated, and on her refusal to return and live with him, promptly drew a revolver and did his utmost to kill her, firing a number of shots and wounding her seriously, but not fatally. He was tried for assault with intent to kill. There was the usual defence of emotional insanity, and the usual attempt to blacken the woman's character. After a long drawn out trial the jury returned the incomprehensible and utterly preposterous verdict, "Guilty of simple assault"—a verdict which necessarily involved the absurd finding that the accused was sane enough to be guilty of simple assault, but not sane enough to be guilty of assault with intent to kill or to do great bodily harm. The judge was furious. He scored the jury roundly and dismissed them from further attendance as unfit for jury duty, but beyond this he was powerless. The utmost penalty prescribed for the small misdemeanor of which the defendant was convicted was a brief imprisonment, so that the net result of the trial was that the defendant had a few days in jail for rest and recuperation, after which he was free to resume the practice of wife-shooting whenever so inclined. Some light was thrown on the mental processes by which this verdict was reached by a remark afterwards made by one of the jurymen giving as a reason for voting as he did, that he did not like the way in which the assistant prosecuting attorney treated the defendant's attorney. With this remark as a starting point, one may imagine the great variety of influences which contributed to the rendition of this marvellous verdict.

In many cases of verdicts of acquittal it is quite evident that the jury have reacbed that result not by finding the facts and applying the law to them, but through the in-

fluence of sympathy—thus in a manner usurping and exercising that branch of sovereignty which is known as the pardoning power. The fact that the jury may be thus influenced is often the chief reliance of criminal practitioners. To induce the jury to usurp and exercise this power in violation of their sworn duty is the sole purpose of the many sensational appeals that are constantly being made to sympathy and prejudice. And it is precisely in this vulnerable point in our jury system that the insidious and anarchistic lie that is partly concealed in that highly mischievous phrase "the unwritten law" has found its most effective lodgment. There is no doubt that by the frequent repetition of this phrase both orally and in the newspapers jurymen have been led innocently to believe in a vague way that besides the law given them by the court there is another and higher law which excuses the criminal act and authorizes them to disregard the law of the land and follow instead the dictates of their own feelings.

The blame for these miscarriages of justice is usually laid upon the jurymen; but this is frequently to follow one injustice by another. While the jurymen may not be altogether blameless, the chief blame rests not upon them, but upon ourselves, who complacently tolerate and perpetuate this defective system—a system which imposes difficult and highly important duties upon untrained men not fitted for their task, and at the same time further enhances their difficulties by leaving them exposed to insidious and powerful influences which they are unable fully to comprehend or resist.

In justice to those who are compelled to do jury duty as well as to society at large this evil demands to be remedied —now as never before. The frequent occurrence of such cases in our courts is fast becoming a national disgrace, which can and should be averted. The peculiar feature of our judicial system involved in these cases is not a legitimate and necessary part of that system, but rather an accidental and unnatural outgrowth from the maladjustment of the two principles above adverted to—a judicial excrescence which should be removed and replaced with something more consonant with reason and common sense and more promotive of the ends of justice. What that "Something" shall or may be is too large a question to be discussed here. That the task of devising it and securing its adoption will be an arduous one must be admitted, but it must also be admitted that this very serious danger-point in our judicial system should be no longer left unguarded. If it be true as assumed in theory that the power in question cannot be safely intrusted to the courts, it is at least equally true as demonstrated in practice that it cannot be safely intrusted to the jury. And it surely should be possible to devise some method of vesting it where it will be freer from danger of abuse than it now is.

HERBERT L. BAKER.

Detroit, January 30.

THE HETCH HETCHY VALLEY.

TO THE EDITOR OF THE NATION:

SIR: In your issue of January 21, Warren Olney, an ex-Mayor of Oakland, Cal., makes an appeal to the readers of the *Nation* to favor the taking of the Hetch Hetchy Valley as a reservoir for the city of San Francisco, and to aid against the "monopoly" which is making the "principal fight" against it. We here in the East have been under the impression that the "principal fight" against this unnecessary invasion of the National Park was being made by the Appalachian Mountain Club, and that the good citizens of San Francisco who are clamoring for this taking are afflicted with the same form of hysteria that seems to characterize their action when the word Japanese is mentioned to them.

Their neighbors in California are not so charitable in their view. The Los Angeles *Evening News* said, editorially:

> There was never any reason or excuse for giving away this water, except that San Francisco wanted it, and was too stingy to be willing to go into the open market and buy. The Hetch Hetchy scheme is a fine thing for San Francisco, but, in plain language, it is a "steal." We concede that San Francisco needs more water and needs a municipal water system. That being true, the city should either buy the Spring Valley system outright or buy elsewhere.

The facts, which the ex-Mayor neglects to give, are these:

The city is now using daily about 32,000,000 gallons of water. The present capacity of this "monopoly" is 35,000,000, and it has undeveloped resources sufficient to supply over 100,000,000 gallons per day. The quality of the water is good. The city engineer's report estimates the daily use of water in 1948 at only 57,000,000 gallons. The city and the water company have been jockeying for some years over the sale of the company's plant. The city wants it, and the company is willing to sell. The present plant has cost in actual cash over $28,000,000. The company has indicated a willingness to sell for $32,000,000. The city, through its engineer, has appraised the value at $25,000,000, and has stated a willingness to give $28,500,000, although neither side has ever made a formal offer. The State Constitution requires the city to fix annually the water rates to be charged by the company. This it has done for the past six years at so low a figure that the United States courts have, on the application of the company, regularly and promptly enjoined the proposed rates as confiscatory. The Board of Supervisors of the city in 1906 ordered the "works and franchises" forfeited to the city, because the company would not accept rates based on a 5 per cent. return on $25,000,000, above actual operating expenses without any allowance for depreciation. The city has full power to take the entire plant of the water company by eminent domain, and have the price to be paid fixed by the courts. This proceeding the water company, the market value of whose securities has been much depressed by these attacks, has urged the city to adopt, but without avail.

There are a number of other excellent sources of water supply open to the city by purchase, either in the open market or through the courts. It frankly prefers the Tuolumne River supply because it hopes to get that from the national government without cost. No one seriously objects to this exhibition of municipal thrift. The present fight comes because the city not only wants the water for nothing, but also wants the nation to surrender one of the natural wonders of the National Park for a reservoir, because the high walls and narrow mouth of the valley make its transformation into a reservoir cheap. The proposed scheme will give the city 500,000,000 gallons daily, sixteen times its present needs, and it does not propose to construct a delivery system of more than 60,000,000 gallons daily, which it is estimated will be sufficient for the next forty years. Mr. Olney omits to tell us that a part of the plan of the city is to dam Lake Eleanor, a beautiful lake also within the park, and this part of the system, as at present planned, will deliver 57,000,000 gallons per day, and is capable of large extension; and that, in the opinion of its engineers, this supply alone is ample for the city's needs, as in its drainage basin "there are many small lakes which can be converted into storage reservoirs of considerable capacity." There are plenty of other sites for storage reservoirs than Hetch Hetchy. The existing reservoirs on the San Francisco peninsula will hold nearly 28,000,000,000 gallons, while the capacity of Hetch Hetchy, as at present planned, is but 33,000,000,000 and a reservoir can be built in the Calaveras Valley, near San Francisco, to hold 30,000,000,000, so that a supply for fully two years can be constantly kept on hand in the vicinity of the city. It must not be forgotten, therefore, that the only reason Hetch Hetchy is desired is because it is a very cheap place to build a dam.

There is one more cat in this meal. The city also has discussed using this mountain supply for the generation of electric light, and thus save its present annual expenditure of $300,000 a year for municipal lighting. This is a highly commendable object, if it were not sought at the expense of the whole country.

I say nothing here of the beauties of the valley. If there were mosquitoes there, I did not see them. The valley is remote because Congress has not yet seen fit to build seven or eight miles of road from the end of the present road at Hog Ranch. When that is built, the valley will be as accessible as the Yosemite itself was up to the time of the building of its railroad two years ago. The taking of Hetch Hetchy closes for all practical purposes the whole northern half of the park. How long will the city permit parties of 150 people, with attendant servants and horses, to camp along the river which supplies its reservoir? It was with such a party that I camped for four weeks in this watershed, where we were forced to leave two dead horses.

I submit that the Los Angeles *News* has made out its case, and the country is facing, and fighting, an attempt to secure from Congress "a license to steal."

EDMUND A. WHITMAN.

Cambridge, Mass., January 25.

AN APPEAL TO SUMMER RESIDENTS OF MAINE.

TO THE EDITOR OF THE NATION:

SIR: Among your readers there must be many generous persons who are summer residents of Maine, and who may, therefore, be interested in the following statement: The laws of Maine provide for State agents appointed by the Governor to enforce the statutes respecting cruelty to

animals, and such an agent, Dr. J. H. Rollin, was appointed about sixteen months ago, at the request of the Farmington Humane Society. Dr. Rollin gives his whole time to the work, goes to all parts of the State, and is, in fact, a travelling humane agent—the first of the kind, it is believed, in the world. The scheme has attracted wide attention, and seems likely to be adopted in many other States, especially if it can be continued in Maine as an object lesson. The Farmington Humane Society is a weak society, consisting chiefly of one benevolent woman, and Dr. Rollin's salary has been paid mainly by summer residents. Among those who have taken especial interest in the matter are, Mrs. Margaret Deland, Miss Sarah Orne Jewett, S. R. Taber of Chicago, the Hon. William B. Sanders of Cleveland, Clement Newbold of Philadelphia, and George B. Dorr of Boston. But the fund is now exhausted, and the work must cease unless new contributors come forward. The cruelty to horses and cattle in northern New England, especially in winter, and especially on remote farms, in logging camps, and on logging roads, is far greater than would be imagined by any one unfamiliar with the facts. Dr. Rollin has been remarkably successful. In two hundred cases he has procured an improvement in dilapidated barns which sheltered horses and cattle; he has mercifully killed 150 worn-out and incurably lame horses; he has prosecuted the worst offenders, among whom was a man who tied a rope to a horse's tongue and pulled it out; he has given away blankets to poor men; he has supplied needy families with food aud clothing; and has distributed books and papers among school children.

The undersigned acts as agent in this matter for the Farmington Humane Society, and any contributions sent to him will be received with gratitude. He refers to the Hon. S. T. Pullen, president of the Portland Humane Society; George T. Angell, president of the Massachusetts Society for the Prevention of Cruelty to Animals; and Dr. William O. Stillman of Albany, president of the American Humane Association. HENRY C. MERWIN.

No. 3 West Cedar Street, Boston, January 26.

"NO REFUGE BUT IN TRUTH."

TO THE EDITOR OF THE NATION:

SIR: I cannot let your editorial of January 28, "No Refuge but in Truth," pass without a word of respectful protest.

With the general principles which you lay down no man of sense will in these days refuse to agree. All of us, be we conservative, liberal, or radical, can surely come together on this point, at least, that truth which we ourselves recognize as truth cannot honorably, profitably, or, in the end, successfully, be concealed or disguised. Nor is it difficult to admit that a theology maintaining itself by subtle sophistries and forced interpretations must, "in this era of universal education," eventually, and even quickly, succumb to the growing demand for openness and clearness of thought.

But that "much of ancient Christian dogma rested" on the "old cosmology," or that "the Christian ideal of character" is all that is left of Christianity, or that sound theology sanctions the belief in a "crassly materialistic and inconcelvable heaven," or that "the findings of natural science" necessitate the attenuation of theism to a half-hearted belief in Arnold's "cold impersonal force that, at best, makes for righteousness"—such statements as these, appearing under the general *imprimatur* of a journal like the *Nation* demand some indication that not all of your readers yield to them their agreement and consent.

Whether modern Christian thought is to be overwhelmed by the contention that the cosmology on which "ancient dogma" rested has given way before a truer system, is, to say the least, rather doubtful. I am not aware that the theology of to-day is in any particular inconsistent with the verified findings of astronomers, geologists, and physicists from Galileo to Lord Kelvin. Nor can I perceive any inherent opposition between Christian doctrine and the modern philosophy of evolution—even if the latter include, among its subsidiary hypotheses, the theory of abiogenesis, or "spontaneous generation." Those portions of early theology which have been invalidated by scientific discovery were in no instance essential to the general doctrine itself, and have long since been discarded and forgotten. To say, again, that present-day theology teaches a "crassly materialistic and inconceivable heaven," is to argue with epithets, and to educe proof from mere accentuation of statement. That nothing remains of Christianity but the ethical ideal developed from its doctrines, is an assertion against which there is here space but to oppose an earnest denial. And, lastly, the assumption that theism has been finally despoiled of all rational justification and basis, is not for a moment to be admitted. That modern science is atheistic, may by granted; but that is only because science is confessedly restricted to material phenomena, and can never penetrate, in either physics or psychology, to the supramaterial, life-giving Fundament. Our greatest psychologists are precisely those who teach this doctrine.

It should not require repetition, at this day, that theism is not disproved or weakened because the telescope has scanned the heavens in vain for an anthropomorphically conceived deity; or that the theory of an immaterial source of mental activity has not lost any of its force through the inability of the X-ray to get beyond molecules and matter. Theism has nothing to fear from, has, indeed, nothing to do with, "the findings of natural science." It rests, as Cardinal Newman so gently but persistently urged, not on any scientific examination of matter, but on an introspective examination of our mental and moral life. Theism starts with the "Universal Postulate" of Spencer that "inconceivability of the opposite is the highest assurance of truth"; it challenges any mind, scientific or other, to conceive of a thought, or a volition, or a prayer, as a material, spatial entity, so many inches long, or broad, or deep—that is, to conceive of mind as matter; and it concludes—snatching its test of truth from the mouth of the apostle of cosmic evolution—that the mind is a supramaterial, *i. e.*, a spiritual entity. But this spiritual entity must have a source, and that source itself must be spiritual, and must be, like its offspring, possessed of intelligence and will.

The question, of course, is not one that can be adequately discussed in the space that may be allotted here. Let it be recognized, finally, that religion is not a syllogism, but a standpoint; not an inference reached after a scientific or philosophic "voyage of discovery," but a deliberate and thoroughly reasonable choice of one attitude towards life and its mysteries in preference to any other. It finds its source in spirit and conscience; and as such is forever immune from a science that, on its own admission, is restricted to the spatial and material, and from a philosophy that, again on its own admission, is restricted to the phenomenal and the relative, and perpetually excluded by its very nature from the spiritual realm that contains a conscience and a God. WM. J. DURANT.

Seton Hall College, South Orange, N. J., January 29.

Notes.

The Oxford University Press is about to publish a book by W. H. V. Reade, called "The Moral System of Dante's Inferno" Mr. Reade thinks that the common opinions concerning "The Divine Comedy" may be considerably modified.

Harpers are to issue a new edition of Trevelyan's "Life and Letters of Lord Macaulay," which will include Macaulay's "Marginalia," recently published in a separate volume.

In answer to an inquiry as to the original editions of Eugene Lee-Hamilton's poetry, we may say that all of the books, except, we believe, the two novels, were published at his own expense. The editions were small and bear many imprints. We are informed that no authorized edition is obtainable in the ordinary way, except "Dramatic Sonnets, Poems, and Ballads: Selections from the Poems of Eugene Lee-Hamilton," with an introduction by William Sharp, London, Walter Scott (in Canterbury Poets). The selection was made by Lee-Hamilton himself, but is representative only as regards the sonnets. The same house has an edition of his novel, "The Lord of the Dark Red Star." An unauthorized edition, "Sonnets of the Wingless Hours," has been published by Thomas B. Mosher of Portland. Heinemann of London and Duffield & Co. of this city have in preparation an amplified copyright edition of "Mimma Bella," and, we understand, are planning a comprehensive book of selections to be made by Mrs. Lee-Hamilton.

Of the attractiveness of W. S. Braithwaite's "Book of Georgian Verse," just published by Brentano's, there can be no question. A surprising amount of poetry has been packed into a single stubby little volume, printed in good type and on thin but opaque paper. On the editor's judgment in selection some strictures might be made, although in the making of anthologies, if anywhere, the rule *de gustibus* is in force. Still it does seem reprehensible in a book devoted mainly to the eighteenth century to pass over Christopher Anstey, if only for the place of Bath in Georgian society; and there are other names missing which certainly have as strong a claim on our memory as some

of the obscure Scottish gentlemen admitted. However, enough of every sort is included to give a good survey of verse from Thomson to Wordsworth. For ourselves, we almost forgot to criticise the book under the spell of Landor's epigrams which first caught our eye. Certainly he is the prince of anthology writers, as is natural in one who drew so much of his inspiration from the Greek Anthology. Reading his poems here amidst the work of so many other poets, we were impressed by his power of producing an impression by a deliberate restraint and, so to speak, diminution, as seen in his "night of memories and of sighs" (which a famous German scholar once emended to "life"!), his "tears are longer ere they dry," and a score of other minute touches. We observe that the notes forget to mention that "Mother, I Cannot Mind My Wheel" is from Sappho; and we protest against the inclusion of "The Hamadryad" in place of his wonderful masterpiece, "Iphigeneia and Agamemnon."

Prof. F. A. Blackburn's edition of the "Exodus" and "Daniel," once attributed to Caedmon, is one of the most satisfactory offerings that have so far appeared in the Early English section of the Belles-Lettres Series (D. C. Heath & Co.). From a literary point of view these poems are much more inviting for classroom use than Prof. J. W. Bright's specimens of the West Saxon Gospels, and though they are less brilliant than the "Judith," edited by Prof. A. S. Cook, they are not open to the objection to that interesting text—its extreme shortness. It should be said, however, that Professor Blackburn has had primarily in mind the linguistic student. He has transcribed his text from the Junian manuscript with the most painstaking literalness. All proposed emendations are relegated to the footnotes, in which are included copious suggestions of earlier commentators—many of them worthless—to exercise the critical acumen of the young philologist. The vocabulary is exhaustive, even to the point of recording the 159 occurrences of the conjunction "and." The formal merits of the introductory matter are perspicuity, conciseness, and methodical arrangement. The more vital merits are a cautious judgment and a fondness for facts. He sets forth one original suggestion of considerable importance, namely, that the accent marks in Anglo-Saxon poetry do not, as is generally supposed, indicate long vowels, but rather metrical stresses. He admits, however, that the evidence is as yet incomplete, and, with the sound critical spirit that makes the whole book a model of its kind, suspends judgment.

There is a place for the Oxford edition (Henry Frowde) of "The Works in Prose and Verse of Charles and Mary Lamb." Canon Ainger's edition suffers both from incompleteness and from deliberate and utterly unwarranted alterations of the text. The seven volumes edited by E. V. Lucas have the merit of scholarly exactness, and contain everything that can reasonably be attributed to Lamb; but they are not pleasant books to handle and read, and, after all, comfort in reading in the case of an author like Lamb is an essential requisite. The edition in twelve volumes, edited by William Macdonald, is accurate, sufficiently complete, and is made up in the attractive form commonly given to his publications by Mr. Dent. We must add, however, from personal experience, that the books, if dainty, are also somewhat flimsy, and do not wear well. The edition now prepared for the Oxford Press by Thomas Hutchinson (editor of Wordsworth and Shelley in the same series) is for the "works" practically complete and is textually accurate. It is, too, considering its cheapness and the amount of matter (1,720 pages) crowded into two volumes, agreeable to eye and hand. The Letters are not included, and this may seem like having "Hamlet" with the Dane left out. Perhaps they are retained for a third volume, and, if so, Mr. Hutchinson, who has proved his capacity for painstaking and judicious work, may perform a true service; for the text of the Letters still needs rectifying in many details.

"Hazell's Annual" for 1909 (imported by Scribner's) is, as usual, the indispensable book for any one who wishes to have at hand a survey of the recent events of legislation, government, finance, civil life, education, army, etc., of Great Britain and, in less detail, of other countries. A number of new titles appear this year, including, among others, Airships, Old Age Pensions, and Unemployed Question. The book is minutely indexed and thoroughly trustworthy.

"The Commercial Products of India" (E. P. Dutton & Co.), by Sir George Watt, is an official publication consisting of a digest of information on the products which are of present or prospective industrial or commercial importance. It is an abridgment of the "Dictionary of the Economic Products of India," by the same author published in six volumes in 1885-94, and now out of print. The general plan of treatment may be indicated by the article on cotton, which occupies fifty-six pages. It begins with a sketch of the history of the plant in all countries from the earliest times. Then follows an account of the various species in India, the methods of cultivation, the manufactures, including the wages of mill operatives, and the foreign and domestic trade. To each section is appended a list of authorities from which the facts are derived, the statistical returns being brought down to 1905-6. All who carefully examine this unique work, the aim of which is to be of practical value to the commerce and industry of the land, must be profoundly impressed by the enormous development of India's natural wealth under English rule. To take a few products only; the exports of linseed in 1832 were 3 cwt., in 1904 they amounted to 11,182,000 cwt. The output of the coal mines increased from 459,408 tons in 1868, to 9,783,250 in 1906. "Tea now occupies half a million acres of land formerly waste," the exports amounting to thirty million dollars a year, while the annual value of the cotton crop, insignificant a century ago, is now one hundred million dollars. Some of the information, we observe, is rather trivial. Moreover, the usefulness of the work as a book of reference would have been increased by the addition of tables of measures and values.

The two latest additions to the series of Baedeker guide-books (imported by Charles Scribner's Sons) are "Italy from the Alps to Naples" and "Greece." The former is the second edition of an abridgment of the three more detailed volumes, "Northern Italy," "Central Italy and Rome," and "Southern Italy and Sicily." It is designed for "travellers who have only four or five weeks at their disposal, and intend to devote their time either to a rapid and comprehensive survey of the country or mainly to the attractions of Rome and Naples." It contains 25 maps and 52 plans. The "Greece" is the fourth edition, with 16 maps, 30 plans, 2 diagrams, and a panorama of Athens.

"A Woman's Way through Unknown Labrador," by Mrs. Leonidas Hubbard, jr. (Doubleday, Page), is an account of a journey through Labrador, from Hamilton Inlet, on the Atlantic Coast, to Ungava Bay, a part of Hudson's Bay, by the Nascaupee and George Rivers, and Lake Michikamau. The purpose was to explore this route, which had been chosen in 1903 for the first "Hubbard expedition," under the leadership of the author's husband, Leonidas Hubbard, jr. It will be recalled that, on account of fatal initial mistakes, he lost his life in the frozen wilderness, while his two companions, Dillon Wallace and George Elson, barely escaped. Mr. Hubbard's chief objects were the indulgence of his love of adventure, the desire to get material for a "good story," and to pick up what scientific information he could, by a close study of the Indians and an effort to map the country through which he passed. These were presumably also Mrs. Hubbard's objects, as she expresses her purpose to "complete" her husband's work. Well outfitted, and accompanied by four good woodsmen, one of whom was the faithful Indian, George Elson, who was with Mr. Hubbard, she finished her adventurous journey with singularly little hardship, but at such a rate of speed, especially towards the end, that she found very little time for scientific observation. Though the party encountered a few Indians, both Montagnais and Nascaupees, there was no opportunity for any study of their habits. Little shooting was done, except for the pot, and almost no fishing, which was a pity, in view of the fact that the expedition passed through a fine game and fish country. The topographical results were of slight value, and the book is almost devoid of notes on flora and fauna. In a word, it is as a volume of entertainment that the work is recommended, for it is excellently written, in a natural style, and with much vivacity. Though Labrador is far from being the *terra incognita* that many later explorers would have us believe, and journeys through it are common and by no means very dangerous if proper care is used, Mrs. Hubbard's expedition nevertheless proves her a woman of enterprise, energy, and pluck.

Miss Beatrice Grimshaw's "In the Strange South Seas" (J. B. Lippincott Co.) is the continuation of the story of her enterprising journey in the Southern Pacific, the first part of which, on Fiji and the New Hebrides, was noticed in the *Nation* of January 30, 1908. Here she narrates in the same lively and entertaining way her adventures in Tahiti, Samoa, the Cook and other groups of islands mostly under the control of the New Zealand government. Their great undeveloped wealth in soil and climate admirably adapted to the cultivation of tropical fruits and the opportunities which they offer to white settlers with

some capital are clearly shown. The chief impression left by her book is that these isles are a "garden of Indolence, a lotus-land, a place where one dreams, and wanders, and listens to the murmuring reef-song, and sleeps under the shade of a palm, and wakes but to dream again." For nearly three years she voyaged from one to another of the eight groups in the small sailing vessels which are the only means of communication with the outside world. It was an adventurous journey as she was without any companion, but she was treated everywhere with unfailing courtesy, especially in those islands which she was the first white woman to visit. Her descriptions of the wonderful color effects in the coral atolls, the fruit groves, and the life of the natives, their passionate fondness for flowers, dancing, singing, and swimming are very vivid. One of the most interesting places was Tonga, one of the Friendly Islands, which has a king, "a real palace, guards of honor, a parliament, a prime minister, a chancellor of the exchequer, and a large number of public officials. All these are Tongan natives." Six or seven years ago the king, wishing to provide himself with a queen of equal rank with himself, "first applied to the Emperor of Germany to know if there was a German Princess of marriageable age whom he could have. The Kaiser politely replied in the negative." Their high opinion of their own importance is shown by the fact that "when the war between China and Japan broke out, Tonga politely sent word to Great Britain that she intended to remain neutral." The concluding chapters contain an account of a short stay in Samoa and a visit to the Hot-Water Country and Geysers in New Zealand. There can be no doubt that such a cruise as Miss Grimshaw took would be ideal for the wearied toiler of the busy world. Many of the fifty-six illustrations are remarkable for their beauty. If the author would condense her two volumes into one, leaving out many of the descriptions of scenery which are tiresome because of their sameness, and scores of trivial incidents, and add an index and a map, she would make a valuable contribution to the literature of a little-known part of the world.

Our strongest impression on picking up W. M. Rossetti's "Family Letters of Christina Georgina Rossetti" (Scribner's) is one of disappointment for a great opportunity lost. Mr. Rossetti has for a number of years been issuing monographs, biographical introductions, and books on the greater members of his family. The pity is that he should have scattered his energy on so many incomplete publications instead of concentrating it upon one solid memoir. As it is, the best of his material has gone into pamphlets and introductions, leaving his larger works, like the two volumes of 1906, entitled "Some Reminiscences," singularly jejune and fragmentary. A proper history of the Rossetti family would be a book of great interest and value, and no one had better opportunities for writing such a memoir than the editor of these letters; as it is, we must look to another. The present letters of Christina Rossetti, we must say regretfully, are of slight interest, and this slightness is emphasized by their publication in a separate volume. They are almost entirely brief notes. Here and there some reference to literary matters drops in, as when she mentions the family liking for Barham's extraordinary ballad "As I Lay A-thinking," or when she speaks of Emily Dickinson's "wonderfully Blakean gift, but therewithal a startling recklessness of poetic ways and means"; but these are exceptions. Nor do the letters throw any new light on the character or experience of the writer. Considering the intimacy of her verse, we should be glad to have any clearer revelation of her feeling toward James Collinson and Charles B. Cayley; but of such confession there is in these pages not a hint. The only excuse we can find for the publication is that some day the man who shall write the desired history of the family may find in it a few sentences to his purpose.

A collection of family letters of unusual charm is published under the title "Memoirs of a Vanished Generation" (John Lane Co.). The family of Edmond Knox, cadet of a noble Irish house, had the habit of sprightly and intimate correspondence. Their letters from 1813 to 1855 mirror life with an agreeable distortion of the scale which reduces the doings of '48 to the same magnitude as Bessy's matrimonial chances. "By the time you come home," writes Mrs. Knox to her soldier-son in Canada, "I shall be occupied in taking Bessy into the world. I wonder if I shall have any luck!" Bessy was no beauty, but was "thought very agreeable in conversation." From her letters, she was a merry, sweet-hearted girl, and the reader hopes anxiously that one of the eligible young men with whom she dances may endow her with a title and a carriage. But fate is as inexorable as Henry James, and Bessy married a country parson and a widower, and died at thirty. The soldier-son came home in 1842 on a year's leave. He crossed from Sandy Hook to Deal in thirty days, reached London the day after landing, "ordered a complete rig-out of clothes from Jones in Regent Street," and went to the Haymarket to see Mme. Vestris the same evening. His laconic diary shows his joys in Paris, where he dined in company with "Thackeray, the author," and hired a window for five francs to see two men guillotined.

In calendaring the State Papers (Colonial Series) for the year 1700, Cecil Headlam, the editor, has found a census, taken in that year, of the white inhabitants of Jamaica. In view of the fact that many of the families in the United States are descendants from forefathers who first settled in the West Indian colonies, this announcement will be of interest in this country. It will not be practicable to print the names in the next Calendar, but the fact of their existence will be noted. Family associations between the States and the West Indies were pointed out by Samuel Drake, in the Register of the New England Historic-Genealogical Society, about fifty years ago, and since then they have been further elucidated. It is well known that Hamilton came from Nevis. Dallas, the first Secretary of the Treasury, was a native of Jamaica. Gen. George Gordon Meade of Gettysburg fame was descended from a family of colonists in Montserrat. A branch of the Winthrop family "planted" in Antigua; and a branch of the Lees in Barbados. There is good reason to believe that it may yet be proved that John Washington, who settled in Virginia about 1657, went thither from Barbados.

The British League of the Empire has just issued its text-book, "The British Empire: Its Past, Its Present, and Its Future," a work of about 800 pages, with 54 pages of good index. About 240 pages have been contributed by the editor, Prof. A. F. Pollard, on the history of the British Isles. The treatment of India, the Colonies, and their possessions, is therefore, necessarily, on a very inadequate scale. Of places in the New World, Canada is assigned 75 pages; Newfoundland less than 9; Bermuda, less than 2; the Falkland Islands 1½; and the West Indies, about 30. One of the committee for the preparation of the history, Sir Frederick P. Pollock, has contributed 34 pages on "The Future Organization of the Empire." The work has been prepared from moneys provided by the Spitzel Imperial Education Trust, founded on a gift of £5,000 by the late Mr. Spitzel.

Interest in Thackeray has revived in Germany. In a series of treatises on English and German philology, edited by Alois Brandl, Erich Schmidt, and Gustav Roethe there has appeared a book of 152 pages by Dr. Erwin Walter, entitled "Entstehungsgeschichte von W. M. Thackerays Vanity Fair." The first German edition of Thackeray's complete works, translated by Heinrich Conrad, has also appeared upon the market.

A contribution to the Turkish question has just come from the press of Rütten & Löning, the Literarische Anstalt of Frankfort, "Der erlöschende Halbmond," by Alexander Ular und Enrico Insabato. The subtitle, "Türkische Enthüllungen," is not a happy choice; for a book that frankly promises revelations of any kind is rarely devoid of an unpleasant element of sensationalism. It is to the authors' credit that they have maintained a certain dignity in the treatment of a subject which lends itself so easily to the methods of yellow journalism. The work is likely to add to the reputation of Ular, who came into prominence as the author of "Die gelbe Flut," a novel of Chinese life remarkable for its insight into customs and conditions ordinarily hidden from the foreigner. The two authors merely report the facts, point out the relation between seemingly unrelated things, guide the reader through the labyrinth, and analyze the various aspects of the economic and political problems involved.

The city of Hamburg, Germany, has just opened a Colonial Institute, and a modest pamphlet gives the addresses on the occasion. Hamburg has steadily increased the number of its useful institutions—a great hospital, an excellent astronomical observatory, a capital municipal library, a well planned system of schools, now culminating in a local university, with a scientific academy. And finally, mindful of its large interest in the prosperity of German colonies, it has provided a Colonial Institute, for the training of officials, merchants, planters, and all who may seek employment in the colonies. The hearty acknowledgment of the imperial government was made by the secretary of the colonies, Bernhard Dernburg, who was trained as a merchant in the United States, and as an official in the German African colonies. The principal address was that of Prof. Karl

Rathgen, of the staff of the new institute, describing its scope and organization. In addition to chairs filled by members of the various local faculties, three new professors have been called to teach law, geography, and Eastern history; and in addition courses will be given in languages, natural history, medicine, and politics.

A useful compendium of facts is the new work of Dr. O. Schwarz, which appears in the Sammlung Göschen, entitled "Die Steuersysteme des Auslandes." It describes in considerable fulness the tax systems of all the leading nations of the globe, except Germany.

"Buddha: Sein Leben, seine Lehre, und sein Einfluss bis auf unsere Zeit," by Theodor Simon (Gütersloh; C. Bertelsmann), is divided into four parts which treat of Buddha's Life; Buddha's Teachings; the Spread of Buddhism in Asia; the Influence of Buddhism on Modern Thought and Life. One feature is the author's effort to show the similarity between Buddhism and the philosophies of Schopenhauer and Hartmann. The parallels between the teachings of Jesus and Buddha are, according to the author's view, more seeming than real. He further insists that Buddhism does not advance but retards and deadens civilization.

The house of J. C. Hinrichs, Leipzig, has now, with the publication of the twenty-first volume, completed the third edition of that greatest storehouse of Protestant theological learning, the "Realencyklopädie für protestantische Theologie und Kirche," originally projected by Prof. J. J. Herzog, but now edited by Prof. Albert Hauck. Some four hundred scholars have contributed more than forty-three hundred articles to the more than seventeen thousand pages of this edition. A supplementary index is yet to follow.

John Gilmer Speed, grand-nephew of the poet Keats, died at Mendham, N. J., February 2. He was born in Kentucky fifty-five years ago, and was a graduate of the University of Louisville as a civil engineer. After his graduation he practised his profession, built several railroads, and at one time was city engineer of Louisville. At the Centennial Exihibition he was chief of the bureau of transportation. From 1879 to 1883 he was managing editor of the New York *World*, and from 1883 to 1887 travelled abroad extensively, doing magazine work. On his return to America he engaged in various editorial work and wrote much for the magazines. In later years he made the horse his special subject. In 1904 he was appointed commissioner to purchase breeding stock for the Philippines, and was afterwards employed to inspect horses and mules bought for work in the Panama Canal. His published books are: "Keats' Letters and Poems," "A Fall River Incident," "The Gilmers in America," "A Deal in Denver," "The Horse in America."

Miss Martha Finley died at her home in Elkton, Md., January 30. She was born at Chillicothe, O., in 1828, and spent her girlhood at South Bend, Ind. In 1868 under the pseudonym of Martha Farquharson she put out the first story of "Elsie Dinsmore," which was such a success as to justify twenty successors, the last, "Elsie's Winter Trip," being published in 1902. She was also the author of the "Mildred Books."

The death is announced of the Rev. Arthur G. Butler, for a time assistant master at Rugby, head master of Haileybury from 1862 to 1867, and from 1875 to 1895 tutor of Oriel College, Oxford. Besides winning distinction as a teacher he published several books of verse: "Charles I, a Drama," "Harold, a Drama," "Choice of Achilles, and Other Poems."

News comes of the death at Paris of Albert Mérat, poet and librarian of the Senate, at the age of sixty-eight. He was in early life a friend of Verlaine's, and collaborated with him in a book of sonnets, "Avril, Mai, Juin."

Charles Tardieu has died at the age of seventy in Brussels. He was a well-known figure at Paris during the later years of the Second Empire, and founded *L'Art*. He afterwards went to Brussels, where for several years he edited *L'Indépendence belge*.

From Jena comes the news of the death, in his fifty-second year, of Karl Vollers, professor of Oriental philology. His best known work is "Die Weltreligionen."

Johan Jakob Borelius, professor of theoretical philosophy at the University of Lund from 1866 to 1898, has died in his eighty-sixth year. A follower of Hegel, he felt that the anarchistic and materialistic views held by the Hegelian left were caused by their not having drawn the full consequences from the master's dialectic principles. Borelius was most widely known for his polemics with C. J. Boström and Boström's followers, especially Sigurd Ribbing. During the last years of his life he was engaged on a large work on metaphysics, only parts of which have been published.

OSCAR WILDE.

Oscar Wilde. By Leonard Cresswell Ingleby. New York: D. Appleton & Co. $3.50 net.

It was only a little while ago that R. H. Sherard published what professed to be an authoritative biography of Oscar Wilde; and now appears a criticism of much the same scope and intention by Mr. Ingleby. While recognizing the impossibility at this point of anything like a final or definitive evaluation of his author, Mr. Ingleby expects to reach, if only for the time being, a relatively just, or at least a thoroughly comprehensive, estimate. He hopes to make a correction or two, if not an entire rectification. In this respect his volume is a pendant to Mr. Sherard's. Unfortunately, however, neither of these gentlemen succeed in inspiring much confidence. To be sure, Mr. Ingleby has moments of great sanity; but they are followed by paroxysms of enthusiasm so reckless and extravagant as to prejudice even his more lucid intervals. His book is further compromised by the circumstance that its conclusions are wholly inconsistent with its principles. Mr. Ingleby censures Oscar Wilde's character and condemns his theories of literature; and yet he lavishes unsparing praise upon the writings which are the expression of that personality and the illustration of those ideas. At the same time he is quite devoid of petty intolerance and unfairness. He quotes as liberally from detractors as from panegyrists. He recognizes that there is such a thing as a difference of opinion, and he looks behind as well as before. The fact seems to be that admiration has become an involuntary habit with him—a kind of tic which he is unable to check or control, and which has ended by suborning the intelligence to issue it a set of counterfeit credentials.

For Mr. Ingleby, Oscar Wilde is simply a brilliant example of the general thesis that character has nothing to do with literature—or art, as he would probably prefer to call it. He insists that "the man's life and the man's work" are wholly separate and independent, and "should not be regarded as identical," much less judged by the same standard. On the one hand, there is "the artist, all of whose works were pure, stimulating, and splendid," and who never wrote "a line that was immoral and impure"; and, on the other hand, there is "the criminal, part of whose life was shameful," but whose "criminal side . . . was only a part of his complex nature horribly disastrous for himself and his personal life, but absolutely without influence upon his work." For this reason Mr. Ingleby prefaces his criticism by a distinct study of "the Man"—though on his own showing such a study in this connection must be merely idle, if indeed it does not prejudice his author in the very manner he himself deplores, particularly as this is the most interesting and significant part of his book. And, by the bye, when will critics have done with this silly fashion of dissecting their subject into man and artist, as though an artist were ever anything but a man? In this case, at all events, Mr. Ingleby apportions his "man" among four "periods"—the period of æsthetic pose and attitudinizing, the brief heyday of literary and social fashion, an interval of obscuration and eclipse, succeeded by a sudden momentary flare and rapid extinction. On the whole, nothing could be more moderate and impartial in tone than this survey. That it is, if anything, over-indulgent, is a fault with which the generous reader will find it easy to sympathize. After acknowledging Wilde's "unconquerable egoism," the "self-appreciation and confidence which reached not only the heights of absurdity, but surely impinged upon the borders of mental failure," the "extraordinary and abnormal divorce between will-power and intelligence"—in a word, the man's fatal *hybris;* Mr. Ingleby draws a balance in the following terms:

> In regarding the whole field of the poet's life . . . one finds him to be a sweet and noble nature, with much of the seren-

ity of "highness" which accompanies a great genius, yet obscured, soiled, overlapped, and periodically destroyed by a terrible and riotous madness, both of talk and thought. It is a facile and dangerous thing to attribute all the good and noble actions of any man to his "real self," and to say that all the evil he wrought and did came from madness or irresponsibility. If such a doctrine were to be generally accepted and believed, laws would lose their *raison d'être,* punishment would become a mockery, and society would inevitably end.

Yet possibly it may be that some few souls exist of whom such a statement may be true. If such exceptions do exist and have existed, then surely Oscar Wilde was one of them.

So be it. It is ill to crowd the dead. In view of the inequality of custom one would be as charitable as possible with a man of extraordinary gifts lest one confound too many in an indiscriminate condemnation. Yet in view of Mr. Ingleby's general proclamation of divorce as between literature and character it is impossible to avoid recalling Boileau's commentary:

Le vers se sent toujours des bassesses du cœur,

or, to keep somewhere near the same artistic kind, the remark of Théodore de Banville:

Comme, en somme, ta poésie exprimera ton âme, on y verra se refléter clairement les vices, les faiblesses, les lâchetés, et les défaillances de ton âme. Tu tromperas les hommes peut-être, mais non la Muse.

But Mr. Ingleby goes even farther. Toward the close of his volume he virtually concludes a separation between a writer's opinions, too, and his work. That he himself, in spite of his protestations, is sufficiently under the influence of common prejudice to feel the desirability of setting out his author's life in the fairest possible colors, is clear from the preceding quotation. But his condemnation of Wilde's views is thoroughgoing:

Enough has been said and quoted to prove . . . that art, while it is the chief regenerative force in life, cannot possibly be dissociated from morals, that Wilde's view of art in its relation to morals is entirely unsound and dangerous to the half-educated and those who do not know how the greatest brains of the world have regarded this question.

And it is strictly in accordance with these principles, developed at length in the chapter on "The Philosophy of Beauty," that he censures "De Profundis" solely on the strength of its content:

Now if the book were merely an excursion in attitude, a considered work of art without any profound relation to the truth of its personal psychology, then I think the book would be a less saddening thing than it undoubtedly is. . . . [But] if the work is absolutely sincere, as I believe it to be, then, from the moral point of view, it is, indeed, a terrible document. It shows us how little the extraordinary, complex temperament of Oscar Wilde was really chastened and purified. It provides us with a moral picture of monstrous egotism set in a frame of jewels.

What, then, is left to a work of art in default of character and ideas? Nothing, apparently, except style. But while the conclusion may serve to explain the possibility of Mr. Ingleby's enthusiasm, in the teeth of the preceding considerations, when he comes to examine his author's "work," yet it must also diminish the value of his praise for the serious reader. And, indeed, this part of the volume leaves the mind in something of a turmoil. It is disconcerting enough to hear Wilde's frequently superficial and catchy trick of expression lauded through thick and thin as "the supreme art of the genius," to find his rather amateurish dramatic vein ranked with the thoroughly experienced stage-craft of Sardou, to listen to the confident prophecy that "'A Woman of No Importance' is certain of immortality," to read of "the *supreme* and splendid passages" in which he has treated of Dante's Divine Comedy—and that, too, in the same breath with "his curiously topsy-turvy views of life." But all this is nothing to the *volte-face* whereby the critic concludes of "De Profundis," in defiance of his own criticism just cited—"I know of nothing written in recent years that comes anywhere near it as an almost flawless work of art." Surely, in reference to such "a terrible document," such "a picture of monstrous egotism," this can mean nothing if it does not mean that a work of art is art only in as far as it is factitious.

It is not so much that Oscar Wilde was not in his way a clever and even at times a brilliant writer—but that all this laudation is so entirely wanting in proportion, in the sense of measure and relativity. Indeed, the critic himself is wickedly suggestive at times of the *bourgeois épaté,* to whom he frequently refers with some disdain—the dumfounded Philistine, who is too dazed to exercise his judgment upon the object of his detestation or admiration. And it is just this fact, that the writer does not understand exactly what he is praising, or why or how much, which damages in its upshot and intention what is in some particulars an interesting and even a judicious book.

CURRENT FICTION.

Septimus. By William J. Locke. New York: John Lane Co.

Septimus is a fresh and delightful figure among story-book heroes. Superficially, he is a person frequently to be seen upon the comic stage: the lack-lustre, anæmic, wool-gathering young man of genius, who cannot manage his cuffs, or remember where he lives. In short, he appears to be an ass, and the spectator is encouraged to enjoy him to the full as such. But the point of the story is that he is gradually perceived to be, not an ass, but a lion in ass's skin. Septimus Dix ("Simple Septimus" he was called for serial purposes) is a lonely, eccentric young Englishman, with the brains of a mathematician and the heart of a child. He has plenty of money, but insufficient presence of mind to care for or enjoy it rationally. He is at the mercy of a rascally valet, an ex-burglar, and of whatever sharp practitioners may chance upon him. Of course, the irrational thing about the situation is that such a born victim should have outlived an unprotected boyhood without being absolutely stripped by the sharp practitioners, who in real life seldom leave their operations to chance. To make matters worse, Septimus is an inventor, with heavy ordnance as a specialty. When we come upon him, however, not even the patent lawyers have succeeded in draining him dry, and he is safely if aimlessly pottering about at Monte Carlo. At the roulette-table he meets a young Juno of an English widow, Zora Middlemist, who is, like himself, loitering alone through Southern Europe. They strike up a whimsical acquaintance. Each really needs the protection and companionship of the other, and they resume their travels in discreet proximity. Presently there enters upon the scene another man, almost as unusual as Septimus, one Clem Sypher, proprietor of "Sypher's Cure," and self-styled Friend of Humanity. His remedy is worthless, but he does not know it. On the contrary, he believes that it is destined to relieve the world's suffering: it is a religion with him. Virtually a quack, he is spiritually a "poet with an ideal." Of course, both men fall in love with Zora Middlemist. But the love of Septimus is all meekness, and he is easily convinced of the sisterliness of Zora's feeling for him. It remains for him to prove to his own satisfaction the depth of his devotion by an act of self-sacrifice which involves another woman and in the end makes for his own happiness. Zora is for Sypher—not Sypher the triumphant friend of humanity, but Sypher the fallen, robbed of his great mission. yet resolute and worthy of a strong mate. It all makes up a pleasant fantasia, perhaps, rather than a novel in the "strenuous" sense now commonly attached to the term: and for this, one is inclined to say, so much the better.

Rose-White Youth. By Dolf Wyllarde. New York: John Lane Co.

This book will take readers of a certain age back to that favorite of their youth, author of "Phyllis," "Molly Bawn," and other delectable tales of somewhat long-drawn sentiment, who called herself "The Duchess." In later

years one came to associate that title with the simulacrum of a middle-aged figure in dressing-sack and curl-papers discoursing unctuously and profitably of young love. "Dolf Wyllarde" is better bred than "The Duchess," but the style is not quite free from the shabby-genteel complacency of the middle-class romancer sure of an audience. Most of the persons, the wicked and beautiful society woman, the languid middle-aged breaker of maidens' hearts, the silly young lord, are among the ordinary properties of British fiction. And Betty, the present incarnation of "rose-white youth," bids fair at first to be a mere replica of the familiar pathetic heroine: the young girl whose real (and unfortunate) parentage has been concealed from her, and who is destined to become an heiress in time to secure the matrimonial services of the middle-aged heart-breaker. But there is something really fresh and youthful about this particular Betty, something altogether unconventional in the manner in which death is permitted to release her from the responsibilities of her wealth and the condescensions of her languid lover. The consummation is unexpected, but it retroacts upon one's impression of the story as a whole.

Captain Margaret: A Romance. By John Masefield. Philadelphia: J. B. Lippincott Co.

Buccaneering in the seventeenth century is a theme of perpetual attractiveness, and it would take a far less animated pen than Mr. Masefield's to divest it of interest and spice. This, however, is only the third or fourth reflection suggested by his romance. The first one is that he has shown atrociously bad taste in the delineation of his villain, whose vices are pricked out in intolerable detail. The second thing that strikes the reader is the amazing incomprehensibility of everybody's behavior. A stained glass window sort of lady may marry an odious animal and may ignore his vices, but she could not be so blind to his unspeakable boorishnesses as Olivia was to those of her husband. Captain Charles Margaret, who was forced by accident into taking his old love and her brute of a husband on his own ship from England to the Spanish Main, was of a long-suffering patience, too good to be true; too good, indeed, to be good. His friend Perrin is variously described as a burnt moth, very wretched and haggard, a broken emotional creature, with the defects of a woman, wearing a bright green satin lining to his coat, "for, like most vicious men, he loved the color green." And he, too, is incomprehensible, minutely described but in nowise conveyed. The sailing master, an expirate, is more defined, but equally incredible in his blending of patience and violent temper.

There is unquestionably power of a sort in the ruthless adventure and uncovenanted blood-curdling; and a chivalrous appeal in the unexplained worsbip of the boneless Olivia by all the characters except her husband. He, in the end, is handsomely treated in being allowed to die of yellow fever, and Capt. Margaret's long-suffering adoration finds reward. Long before these romantic events have run their course, however, still another point has been forcibly thrust upon the reader, namely, the astonishing language of the recital. Strong in the matter of phrase and epithet, the sentences are literally hacked into pieces by periods. And what kind of speech, for any one, but especially for subjects of King James, is here? "Don't you forget it." "She was a bute, all right." "Not on your life." No archaic cock and pye for Mr. Masefield.

The Calico Cat. By Charles Miner Thompson. Boston: Houghton Mifflin Co.

This is a study in rustic pettinesses, humors, vanities, and angularities; in boyish imaginings and resolve; in comical situation threatening to grow serious; in buffoon cowardice ultimately made ashamed. A Calico Cat was at the bottom of the events which for a time convulsed the village of Ellmington. Though not in permanent evidence as an actor, she is the propelling force behind all the commotion, and is appropriately clothed with the attributes of mysterious power. To be calico is to be without possible reproach of monotony. To be a cat is to be unapproachable, diabolically remote, yet damagingly present; a model of domesticity, if large families and a taste for mild milk in the saucer of civilization can prove it; an untamed daughter of the jungle, if pedigree may be established by voice, ferocity, and witch-like powers of prey. The mystery of the East and the creation being in every cat, give a competent author one, and he has a subject made to his hand. To entangle one, and that a yellow calico one, in the meshes of a shooting affair, a hint at smuggling on the Canadian frontier, a grand jury inquiry, and yet to keep it a genial family tale, doughnutty and comfortable, proves ingenuity and deserves thanks from seekers after the harmless necessary story of amusement.

Venice: Its Individual Growth from the Earliest Beginnings to the Fall of the Republic. By Pompeo Molmenti; translated by Horatio F. Brown. Part III: The Decadence. 2 vols. Chicago: A. C. McClurg & Co. $5 net.

With these volumes Professor Molmenti concludes his history of Venice. They cover, roughly, the last two centuries, from the battle of Lepanto in 1571 to the extinction of the Republic in 1797. They are written on the same plan as their predecessors—political events occupy little space, whereas the life of the people is studied in great detail. In so far as the outward affairs of the Signory had relatively little importance after the Spanish Conspiracy, this method of treatment suits very well; and yet we cannot think it right to dismiss Sarpi with a page, the twenty years' war in Candia with a paragraph, and the achievements of Morosini "the Peloponnesian" with bare mention. Friar Paul's management of the controversy between Venice and Rome not only typifies the policy which Venice maintained for a thousand years towards Papal encroachment, but it will serve forever as an example for any state which is defending itself against the attempt of ecclesiastics to get control of its temporal affairs. So the Candian War and Morosini's campaigns in the Morea deserve to be treated fully, because they display the persistence, in spite of old age and of the enervation of a long period of luxury, of the spirit which made Venice great. The contrast between these truly heroic episodes and the prevailing decadence ought to be emphasized strongly.

But Professor Molmenti's chief interest is in the social and moral conditions of the last two centuries. These he describes vividly and minutely. He has literally ransacked every cupboard. He tells the life of all classes—patricians, priests, artists, courtesans, gondoliers, servants—from birth to death. He writes exhaustively about industries and finance, theatres and sanitation, art and literature, crimes and dissipation. Nowhere else in English can one find such an elaborate array of facts concerning the manners, activities, and morals of the later Venetians. In addition to the printed material, which is enormous, Professor Molmenti has had access to many family archives, and he enriches his notes with many striking extracts. While doing full justice to the thoroughness of his work, and gladly admitting its interest, we may question whether he has not devoted undue space to the period of decadence. Venice had a political existence extending over thirteen hundred years. Of this great duration, three centuries may be assigned to adolescence and two centuries to old age; but the period of old-age was not particularly significant. Gambling, jaded sensuality, extravagance, elaborate and vapid ceremonies, folly triumphant—these are the symptoms common to prosperous states in their decrepitude. That Venice lasted as long as she did in spite of them shows how solid her constitution, both social and political, was at prime.

In reading a mass of social details such as are here set forth one must al-

ways distinguish between what is characteristic and representative, and what is unusual or unique. Naturally, the scandals are reported: how far do they indicate the average conduct of the time? Above all, when it comes to sexual license, it is difficult to know the exact limits; for witnesses otherwise careful are inclined to generalize from too few data, if not to accept rumor and suspicion as valid testimony. The topical method itself, which Professor Molmenti uses, tends to destroy the balance. Nevertheless, there can be no doubt that his general description is correct. He has done for Venice singly what Burckhardt tried to do for the Italian renaissance as a whole. This work, which is an expansion, as we have said, of his earlier monograph, deserves to have a permanent place among the social chronicles of Italy. The great variety of its subjects, the well-chosen illustrations, and Mr. Brown's fluent translation will commend it to English-speaking readers, for whom the charm of Venice never grows cold.

Miscellaneous Papers. By Charles Dickens. New York: Charles Scribner's Sons. $1.50.

The "Miscellaneous Papers" of Charles Dickens, consisting of contributions to various newspapers, and now—nearly forty years after his death—first included in the authentic edition of his works are interesting chiefly as additional evidence of the man's enormous activity. Here are 736 closely printed pages, matter enough to represent the life work of a slender literary talent of these degenerate days, and all this is but scattered wisps of Dickens's harvest, negligently left for the gleaning of an overscrupulous posterity. Though there is much good reading between the covers of this bulky tome, there is little of rare quality. As an editor Dickens was not so much a literary genius as a masterful business man. He did, indeed, conceive his journal *Household Words* with his genius, but he edited it, as it were, with his left hand.

Readers of his life will remember that it was his original design to call the paper by his own name, *Charles Dickens*, or *Charles Dickens's Own*—so completely had he identified his sentiments with those of the middle-class households into which he wished to penetrate, and so well did he understand the commercial value of his name. He did not pose as an intellectual leader, nor had he thought deeply on the matters which excited his editorial comment; he had, however, seen with his own eyes and felt in his own person many widespread evils against which he cried out as with the *vox populi*. But even in dealing with the gravest subjects he never sacrificed his sense of fun to his sense of dignity. For example, he writes as follows of the "late lamented Mr. Dove," a recently executed murderer:

> That amiable man, previous to taking the special express-train to Paradise, which is vulgarly called the Gallows, indited a document wherein he made it manifest to all good people that the mighty and beneficent Creator of the Vast Universe had specially wrought to bring it about that he should cruelly and stealthily torture, torment, and by inches slay, a weak, sick woman, and that woman his wife, in order that he, Dove, as with the wings of a Dove (a little blood-stained or so, but that's not much) should be put in the way of ascending to Heaven.

Moreover, in spite of his fierce diatribes on the bowie-knife press of "The States," the author of "American Notes" knew the journalistic value of strong sensations. The two long papers in this volume on "The Lost Arctic Voyagers" will compare favorably with Jack London's best for raw and horrible shudders. The official report on the lost exploring party of Sir John Franklin made it fairly certain that the latest survivors had prolonged their lives by "eating the dead bodies of their companions." Dickens, under the pretext of reassuring the public, pours out all the information he possesses on the grewsome devouring of human flesh by travellers and shipwrecked sailors in the last extremities, judicially weighs the evidence, and proves—nothing at all.

Few of the papers in lighter vein are specimens of the author at his best: the humor romps with rather artificial energy; the conceits have not had time to mellow. Yet the fact that they were written at less inspired moments may give them value in the eyes of the Dickensian. The reader of the novels is bewildered—Dickens himself was bewildered—by the mysterious and unaccountable vitality of his characters. He felt rather like their man-midwife than their creator; for when he had set them on their feet and given them a start in the world they hurried with impudent independence away from his beck and call. In his work as editor he is still a writer of extraordinary vividness and abundance of impression, but he is working without daemonic assistance. He is an astonishing but fairly comprehensible phenomenon—a captain of literary industry utilizing his by-products.

Science.

The Psychological Phenomena of Christianity. By George Barton Cutten. Pp. 487. New York: Charles Scribner's Sons. $2.50 net.

Many a man who had remained untouched by the appeals of the clergy was drawn by the literary charm of Prof. William James's "Varieties of Religious Experience" to consider seriously matters of religious interest. That work had preëminent value in that it led not a few crabbed minds to a wider religious sympathy, and awakened many of those who felt themselves estranged from the churches to see that they might still maintain a religious attitude, though they were unable to embrace the beliefs of their fathers. No other author treating the same subjects can be expected to entice his readers as does such a literary master as Professor James; nevertheless, the work before us may well be classed with his as a probable source of enlightenment. It approaches the subject from an entirely different point of view; it appeals to a different audience, being addressed primarily to the theological student; yet being written by a theologian rather than a professed psychologist, it may well have a special and salutary influence where James's greater work might not be effective.

Although Mr. Cutten cannot profess to be a psychologist of originality, he is by no means lacking in psychological learning, and his work displays few points that can be attacked on technical grounds. To be sure, he seems at times somewhat credulous in minor particulars, but no more than must be expected in one who is not trained as a scientist. On the other hand, the reader cannot but be impressed by the firmness of his conviction of the value of the religious attitude, a conviction which renders him the more willing to look facts in the face, and to accept valid interpretations of religious phenomena which a few decades ago would surely have barred him from Christian fellowship.

In one particular his book is especially timely at this moment: viz., in bringing before us in convincing form the close relation between hysterical phenomena and religious ecstasies. In these days when not a few of his clerical brethren, ill-informed in the history of human pathology, are teaching that nervous disorders are universally prevalent and on the increase, it is salutary to see sketched the record of the far more violent and more morbid neurological symptoms recorded in the story of religious habits and expressions, of "religious epidemics," "contagious phenomena," and "revivals."

Our author's insistence that the mental attitude of which prayer is the expression is of the very essence of religion (*e. g.*, p. 405) is surely fundamentally true and cannot be too often reiterated. His references to authorities display wide and discriminative reading, and in the main his deference to high authorities does not lead him astray. In one respect only do we discover a serious lapse in this direction. When he holds, as he does throughout the book, that "if God works directly in man He must work through the sub-

consciousness" (p. 18), he accepts a notion which appears to be entirely unwarranted, but which he can scarcely be blamed for entertaining, for he has probably gained it directly from certain words and implications found in Professor James's writings. He thus displays that unfortunate tendency, which Professor James has done so much to strengthen, to fall back upon mysticism when one finds one's self balked in the endeavor to attain clarity of conception. This "subconscious" is surely no more than what some of our psychologists now describe as "sub-attentive consciousness"; it is fundamentally of the same nature as clear attentive consciousness; and its manifestations therefore cannot be more essentially indicative of the influence of the Divine upon or within the man, than are the manifestations within the narrower field in which life appears to be guided by intelligence and reason.

"The Prevention of Tuberculosis," by Arthur Newsholme (E. P. Dutton & Co.), a volume of the new Library of Medicine, is confessedly written for the instruction and guidance of medical officers of health, to which service the author formerly belonged. Clinical and therapeutical matters are barely touched upon, save as they bear directly on the general question of the protection of the community. There is a good deal of historical and statistical detail, but not too much for the proper development of the argument. A longish first part treats of causative conditions with a good discussion of the sources of infection—and the conclusion that consumption is essentially an indoor disease, much encouraged by great density of population, general misery, and organic filth, favored by a moist soil in a manner difficult to explain, and transmitted by infection. Newsholme takes a firm stand that tuberculosis in man may be caused by the bovine bacillus, and that this is a constant source of danger, although much less frequently effective thau the human form. The view of Von Behring that most of us are infected by cow's milk in childhood, the disease having remarkable powers of latency, is regarded as untenable because it coutains too many assumptions quite opposed to our knowledge of the bacillus. The second section deals with the conditions which have already led to a reduction in the mortality. An interesting parallelism between general pauperism in Great Britain and deaths by phthisis is brought out, but with the distinct reservation that one does not explain the other. The examination of the statistics of a number of places and several countries develops the opinion that "the increase of institutional segregation has been associated with reduction of tuberculosis in the community affected by it." The reader will find it worth while to follow the steps by which this view is reached. Then follows, as a third part, a careful, but necessarily somewhat repetitious consideration of the methods to be employed in the reduction and extinction of tuberculosis. Here early recognition and the full employment of the resources of the dispensary and sanatorium are urged, but of paramount importance are the enlightenment of the public and a hearty coöperation at every step, few of the agencies to be employed being of a lasting value unless the patient and his friends fully appreciate the part they have to play. A bibliography of perhaps one hundred and fifty titles, in which we note Ruchle for Ruehle, makes no pretence to completeness, but will be found useful.

The ease with which new material is obtained must always be a strong argument for the study of the embryology of the chick, although many teachers doubt the wisdom of letting the student devote as much time to this animal as is usually given to it. In either case the new "Development of the Chick" (Henry Holt & Co.), which Prof. F. R. Lillie has prepared as an introduction to embryology, will be heartily welcomed; for there has long been need of a new text-book or a thorough revision of the best old one. This work is of medium size, about five hundred pages, liberally supplied with illustrations which, as a rule, are exceptionally clear. So special is the treatment that no extended notice need be given here, but it may be added that, although the author professes to have intended his book for beginners, he seems to have in mind beginners of a pretty high grade. In an appendix of about twenty pages are detailed references to the literature arranged according to the chapters of the book, a plan which has many inconveniences.

"A Laboratory Course in Plant-Physiology" by Prof. W. F. Ganong of Smith College (Henry Holt & Co.), a second and somewhat modified edition, is exceptionally concise and clear, and is written with good judgment throughout. Professor Ganong has fully comprehended the difficulty of giving in small compass the essential facts relative to the life of plants, and he has therefore wisely omitted most of the controverted matters which might indicate the range of his study, but which are of little use to the student. The treatise is, first and foremost, a safe guide to accurate experimentation. Various new devices are suggested, somewhat after Prof. W. J. V. L. Osterhout's admirable plan for constructing efficient apparatus of simple types. The author has attempted with a fair success to make his book of use also to those who have not within their reach the advantages of an institutional outfit. When we reflect that a good part of our recent knowledge in regard to the distribution and habits of our native flora has been due to the enthusiasm of amateur botanists, we may confidently hope that inquisitive persons may attempt the solution of some of the perplexing questions relative to the nutrition and movements of plants. Then, too, as a handbook for disciplinary training in elementary exact research, the volume will be of service. Physiology is substantially the application of chemistry and physics to the investigation of the activities of organisms; but it so happens that both chemistry and physics are just now undergoing certain rather radical changes in the fundamental conceptions, especially along the border between the two sciences. Even such an apparently simple matter as osmosis has been placed temporarily on a new speculative basis. To select from these subjects still undergoing revision, a few which will serve as a discipline in exact and satisfying research has not been easy, but Professor Ganong has done well with his task.

Modern scientific work is being conducted according to broader and better methods, as is illustrated in recent reports of various field workers. In place of the old-fashioned, meagre, more or less personal uarrative, with a mere uninteresting list of birds or mammals at the end, we have thorough accounts of the region explored. North American Fauna, No. 27, "A Biological Investigation of the Athabaska-Mackenzie Region," by Edward A. Preble, published by the Government Biological Survey at Washington, is a most valuable paper. This central portion of Canada is the chief habitat of the fur-bearing animals, and is the breeding ground of most of our great flocks of ducks and geese. Here, too, the wood bison still survives in sadly depleted numbers, for the majority of the calves are killed each year by wolves. Mr. Preble's monograph (574 pages, with colored maps and illustrations) begins with a brief itinerary, and then treats in detail the physical geography and climatology. Though the advance of spring in this boreal latitude is extremely slow, migrating crossbills, mosquitoes, moths, butterflies, and flowers appear as early as April. The next section is devoted to Life Zones and the causes underlying the remarkably sharp lines of distribution of animals and plants. The work of previous explorers—Hearne, Mackenzie, Franklin, and Kennicott—is reviewed, and their errors are corrected. Finally, presented in thoroughly systematic manner, with elaborate notes on food and life histories, we have a summary of the mammals, birds, reptiles, batrachians, and fishes of the region. A list of trees and shruhs, a bibliography, and a good index bring this important contribution to science to a close.

The eleventh volume of the sumptuous and admirable edition of the "Œuvres complètes de Christiaan Huygens," published by the Holland Scientific Society, has recently been delivered to American subscribers. It contains only the work of his youth, mainly upon mathematical subjects—rectifications, quadratures, tangents, magic squares, etc., and a more extended essay upon floating hodies, interpreting and completing Archimedes's treatment of this subject. The first feeling upon opening the work is sure to be one of delight at the completeness, the admirable form, and the apparatus for interpreting the text—plates, indexes, etc. Then one wonders why much of this material was thought worthy of publication at all. Surely the literature of precocity is already extended enough. But many of these essays have content as well as form, reminding one of Maxwell's early work; and throughout they are annotated with such care as to show what is new and the sources of the old. Where are our boys of sixteen who are doing this kind of work?

The current number of the *Archiv für Anthropologie* contains a detailed report of the excavations made last summer at Le Moustier, Dordogne, France, by the Swiss anthropologist, O. Hauser of Bâle; a critical analysis of the characteristics of the human skeleton found there, and its relation to the Neanderthal type, by Prof. H. Klaatsch of Breslau; and ten illustrations and a full-page plate which give a clear idea of the form and relative posi-

tions of the more important objects discovered (see "The First Race of Fossil Man," *Nation*, January 14, p. 44). These articles are published also as a separate monograph, "Homo moustieriensis Hauseri," by Fredrich Vieweg & Sohn, Brunswick. The general advance in methods of exploration, and especially the great care with which every detail has been scrutinized in this instance, have resulted in establishing facts regarding their burial customs unperceived in the earlier discoveries of skeletons of the Neanderthal type.

The hundredth anniversary of the birth of Charles Darwin and the fiftieth of the publication of "The Origin of Species" will be celebrated at the American Museum of Natural History in this city on February 12. A bust of Darwin will be presented to the museum by the president of the New York Academy of Sciences, Charles F. Cox, and accepted by the president of the museum, Prof. Henry Fairfield Osborn. Prof. John J. Stevenson will speak on "Darwin and Geology"; Dr. Nathaniel L. Britton will discuss "Darwin and Botany"; and Dr. Hermon C. Bumpus, director of the museum, "Darwin and Zoölogy." Dr. Edmund Otis Hovey, of the museum, chairman of the Darwin Memorial Committee, has arranged an exhibition of Darwiniana, and a series of illustrative specimens and groups of specimens bearing upon the Darwinian theory of natural selection. The exhibition will continue for one month.

Lorenzo Gates, the well-known botanist and conchologist, died at Santa Barbara, Cal., January 30. He was of English birth, but came to this country in 1853. He was the author of "The Channel Islands," "Aboriginal Weapons in California," and other works.

Drama.

THE DEATH OF COQUELIN.

Benoît-Constant Coquelin, the French actor, died January 26 at Pont-aux-Dames, Seine-et-Marre. Only a few days earlier, Edmond Rostand, who had been giving the finishing touches to "Chanticler," arrived in Paris, ready to begin the rehearsals of the play in which M. Coquelin, who had the leading rôle, was expected to be as successful as in "Cyrano de Bergerac"; but M. Coquelin succumbed suddenly to an acute attack of embolism, from which he long had been a sufferer.

He was born in Boulogne in 1841, the son of a baker. His natural inclination and ability soon led him in the direction of the theatre; and in 1859 he gained admission to the Paris Conservatory, and became a pupil of the distinguished actor, M. Regnier. From the first Coquelin exhibited extraordinary capacity. In less than a year he won the second prize for comedy, and made his first appearance at the Théâtre Français in the character of one of Molière's lackeys. Before he was thirty he had been elected a *sociétaire*, and was established as one of the leading attractions of the famous house. For a number of years he was seen most frequently in plays of the classic repertory, such as "Dépit amoureux," "Les Fourberies de Scapin," "Les Plaideurs," "Le Mariage de Figaro," and "Don Juan." By degrees he drifted into the more modern drama. One of his triumphs was in "L'Aventurière," his Don Annibal furnishing one of the most striking examples of humorous, yet realistic, intoxication known to living memory. Another famous impersonation was his Duc de Septmonts, in "L'Étrangère," which was followed by his Léopold in "Les Fourchambault." M. Coquelin early established what may be called a second reputation by his extraordinary felicity in the recitation of witty, pathetic, and humorous poetry. His delivery of these tid-bits was a wonderful illustration of finished elocutionary art.

As he became more famous, he began to grow restless under the restrictions of his contract with the Théâtre Français. Objection was raised to the provincial tours which he had undertaken, and he was informed that he must confine his public appearances to the Français, or forfeit the pension to which he was entitled. He declined to yield, severed his relations with the theatre, and signed agreements for his first American engagement. The fight lasted for three years, when a compromise was effected, by which he returned to the Français (in 1889), with the understanding that he should act there for six months in the year and be at liberty to play where he chose during the remainder of the time. Thereafter, M. Coquelin made frequent tours in France, England, and elsewhere, until his final retirement from the Français.

In this country his success was instantaneous and complete. His most characteristic performance, perhaps, was his Mascarille, long recognized as a masterpiece, but he appeared also in "L'Aventurière," "L'Aiglon," and "Les Surprises de divorce." Another impersonation that was greatly admired, especially for its admirable declamation and its noble death scene, was his Cyrano de Bergerac. But he was not at his best as a picturesque or romantic actor, as was shown by his unimaginative interpretation of the part of Mathias in "The Bells," and in his correct and clever but uninspired performance of Labussière in Sardou's "Thermidor."

Of his career viewed as a whole it must be said that he was not one of the world's great actors—he could not be ranked, for instance, in the same category with Talma, Rachel, Bernhardt, or Salvini—but he was one of the most accomplished performers produced by the French stage during the last century. Reared in the best traditions of the Théâtre Français, he was, in all the regions of comedy, a complete master of his art, his impersonations being no less remarkable for the perfection of their technical finish than for the richness of their natural humor. He owed much, of course, to the endowments of nature—high spirits, great bodily vigor, a vibrant voice, and an extraordinary comic and intelligent facial mask—but his chief triumphs were mainly due to sheer histrionic skill, an exquisite appropriateness of attitude and gesture, infallible control of facial expression, an irresistible vitality, and a wonderful elocution that gave the fullest effect to the most delicate emphasis. In the broader classic French comedy he had no rival. He could be effective also in romance or melodrama, so long as he was not required to interpret the deeper springs of pathos or passion.

The seven plays now added to John S. Farmer's Tudor Facsimile Texts (London: T. C. & E. C. Jack) were written probably in the twenty-five or thirty years following 1537, and thus bring to the general use of students valuable material for the study of that obscure period when the drama was passing from its mediæval to its renaissance form. They include such varied matter as "The Life and Repentance of Mary Magdalene," by Lewis Wager, one of the latest of the old English morality plays, here printed from a British Museum copy of 1567, a copy of an earlier-dated (1566) but otherwise identical edition being in the possession of W. A. White of this city; "The Play called the Four P. P.," one of the undoubted interludes of John Heywood, from the British Museum copy of 1545 (?); "The Chief Promises of God unto Man," one of the reformation plays by John Bale, Bishop of Ossory, from the unique copy in the British Museum of the first edition of 1538, a later edition being dated 1577; and the "Ferrex and Pollux" of Thomas Sackville and Thomas Norton, from the authorized edition of 1570, one of the first beginnings of tragedy which has been frequently reprinted, but never before in facsimile. The other volumes are: "Apius and Virginia," by R. B. (Richard Bower?), from the Irish find of 1906, probably written in 1563; "Damon and Pithias," by Richard Edwards, from the British Museum copy of 1571; and "Jacob and Esau," from the British Museum copy of 1568. All these collotype facsimiles have been compared with the originals by J. A. Herbert of the museum and are guaranteed by him as practically perfect. Only admiration can be felt for the editor's zeal in thus at once placing these rare works out of the chance of destruction and making them easily accessible. As we have remarked of earlier issues of the series, the value of the undertaking depends on its bulk, and it is pleasant to know that already some fifty plays are in preparation. Our sole criticism we must repeat. The books could have been made doubly useful, and at relatively small expense, by printing a transliteration of the text in each volume.

The Ghetto is coming in for a large share of attention in recent German drama. Be-

sides the plays by Schalom Asch, a Yiddish writer successfully brought forward by S. Fischer of Berlin, there is a play by Arthur Holitscher: "Der Golem," a *Ghettolegende* in three acts, of which the scene is the house of a rabbi in the ghetto of a mediæval city.

The latest play of Charles Klein, "The Third Degree," which was produced in the Hudson Theatre on Monday evening, is an inferior work to "The Lion and the Mouse," in respect of significance and purpose, although it shows some advance in the art of technical construction. In general character it never rises above the dignity of melodrama, although the fact that it is founded upon a definite motive of general public interest distinguishes it from purely sensational pieces of its class. There can be no doubt that its central theme, the unscrupulous methods adopted by a certain type of police officer to secure the conviction of a suspected prisoner by the manufacture of a case against him, is a legitimate subject for dramatic treatment, but the particular instance used is not very ingenious or convincing, while the attribution of hypnotic power to a police captain of the lowest political type—apparently with the notion of giving the play a dash of the quasi-scientific flavor which is the latest theatrical fashion—is an expedient so far fetched as to be almost ridiculous. As a matter of fact, the piece is more of a demonstration of the occasionally deceptive character of circumstantial evidence than of dangerous police intrigue. In other words, the dramatist almost entirely fails to maintain his original proposition, which, in the end, is lost sight of. But he has written an effective and in many respects, well made melodrama, in which the situations are often interesting, if the types are conventional. The representation is helped greatly by some remarkably good acting by Helen Ware, who, in the part of the distressed heroine, fighting against desperate odds, gave an uncommon display of perfectly natural and womanly emotion.

The story of Rudolf Besier's new play, "Olive Latimer's Husband," now to be seen in the Vaudeville Theatre, London, is not a pleasant one but it seems to be told with considerable dramatic skill and knowledge of human nature. Practically the whole play is a series of conversations in the ante-room to a chamber where Mr. Latimer has died. Before his death he had written a letter to Mrs. Latimer's lover, Sir Charles Weyburne. Of this letter the doctor secures possession, and he insists upon delivering it in spite of Mrs. Latimer's tearful appeals. She fears that it is a denunciation and will make mischief. Finally, after much suspense, the missive is opened, and proves to contain the writer's dying wish that his widow and Weyburne may be wedded at the earliest possible moment, being plainly intended for each other. But the request has an effect directly opposite from that which was intended, for it provokes remorse in the breasts of the former lovers and makes them both resolute to avoid union. The acting of Mrs. Patrick Campbell in the character of the heroine is described as remarkably effective.

Somerset Maugham's latest comedy, "Penelope," which has just been produced at the Comedy Theatre, in London, seems to be in the main a conventional piece, but full of amusing touches and an occasional unexpected turn. Penelope is a young wife, who discovers that her husband is engaged in an intrigue. She summons her parents, and demands a divorce. But her father, a sage philosopher, bids her pretend ignorance, arguing that the husband will soon tire of his new flame. This turns out to be true. The husband finds his double life expensive, grows heartily sick of it, and finally makes a confession. He is told that everybody has known all about it all the time. Then, instead of professing penitence, he flies into a rage, denounces his wife's conduct as disgraceful, and proclaims that he alone of the whole family is possessed of any moral principle. This was the turn that most pleased the audience. All the critics agree that Marie Tempest is exceedingly well suited in the part of the wife, and never acted with more humor or spirit.

Charles Frohman has a new one-act play by J. M. Barrie, in which Ethel Barrymore will be seen before long.

Music.

MENDELSSOHN AND STRAUSS.

February third was the hundredth anniversary of the birth of Mendelssohn. During his brief life of less than thirty-nine years, he was the idol of the musical world, and for about a quarter of a century after his death in 1847, his popularity continued unabated. Then came a violent reaction. Schubert, Schumann, Chopin, Liszt, Berlioz, and Wagner, who had been overshadowed by Mendelssohn, came forward, and his fame paled. For a time it seemed as if it would fade away altogether; his music was neglected in private houses as well as in concert halls; to be a Mendelssohnian was to be an old fogy. Presently the pendulum began to swing once more the other way, but not so far. Music-lovers were learning to discriminate between inspired work and uninspired. Mendelssohn's songs, which had so long triumphed over the far superior productions of Schubert, Schumann, Franz, and others, are now, with a few exceptions, acknowledged to be obsolete. Much of his pianoforte and chamber music also has vanished. But his choral works, "St. Paul" and "Elijah," have stood the test of time, if not so well as Bach's and some of Handel's; and among his orchestral pieces several are as fresh to-day as when they were written.

Musical compositions are as ephemeral as literary works. To be able to say of any composer sixty-two years after his death that some of his works are as fresh as when they were given to the world, is to assign him a place among the immortals. That Mendelssohn is looked on as an immortal is shown also by the extraordinary interest in his centenary, here as well as abroad. Apparently, every musical organization in the country, small or great, is arranging a Mendelssohn programme. Everybody will thus have an opportunity to confirm or revise his opinion of the greatest of the Hebrew musicians. Richard Wagner once wrote a sensational pamphlet in which he declared that in none of the arts had the Jews produced creators of the first rank. In a more temperate mood, however, he declared that Mendelssohn was the greatest specific musical genius since Mozart. Wagner called him "a landscape painter of the first order," and regarded the "Hebriden" overture as his masterpiece; Wagner admired the "Midsummer Night's Dream" overture, that marvel of genius which Mendelssohn wrote when he was seventeen, and which he never afterward surpassed or even equalled. This overture, with other numbers of his incidental music to Shakespeare's play, has often appeared on concert programmes, and it bids fair to live as long as any music now in existence.

There is reason to suspect that the great interest in the Mendelssohn centenary is due not merely to a desire to pay tribute to his now acknowledged genius and his fixed place among the classics, but is partly a result of the reaction against present tendencies of music, particularly in Germany. By an interesting coincidence, Richard Strauss's latest opera, "Elektra," was produced in Dresden last week—only ten days before the Mendelssohn centenary. The peculiarities of this music-drama have been cabled to all parts of the world, and in this city we had our own revival last week of "Elektra's" predecessor, so that an opportunity was afforded every one by attending "Salome" at the Manhattan, and one of the Philharmonic Society's Mendelssohn concerts at Carnegie Hall, to observe for himself the enormous difference between Germany's present musical hero and the hero of two generations ago.

Perhaps, the American correspondent who telegraphed after hearing "Elektra" that it is "a prodigious orchestral orgy, with nothing that can be called music in the score," was guilty of exaggeration; yet when Mme. Schumann-Heink was studying the rôle of Clytemnestra, Strauss himself is reported to have said to her: "It is not singing at all. You have only to groan, moan, and sigh, but it requires tremendous dramatic power." Deliberate exclusion of melody from both the vocal and the orchestral parts of his operatic music is Strauss's trade-mark. Long ago he discovered that the faculty of creating melodies is the weakest part of his musical equipment, so he cast about for means to hide that deficiency. The easiest way was to follow the example of Berlioz, enlarging the orchestra immoderately and laying on the colors so thick that few would know whether or

not a melodic pattern was sketched underneath. Wagner required for his stupendous Nibelung tragedies four clarinets and four trumpets, but Strauss must have seven clarinets, seven trumpets, and other instruments in proportion. Nor does he waste them; they are used for the weaving of a polyphonic web so intricate that the most expert musicians can hardly find their way. Indeed, it is conceded that much of this intricacy is not for the ear at all, but only for the eye of the reader of the orchestral score. Too much contrapuntal skill hath made Strauss mad, as it did the old Netherland masters of the sixteenth century, who wove together as many as thirty separate vocal parts, regardless of everything but ingenuity. Mme. Schumann-Heink tried to study the "Elektra" score with the composer himself, but found it "a forlorn hope"; he then advised her to apply to the man who had made the version for piano, and with his aid, at last, she "got a definite clew"!

In the hands of Strauss, German music has thus degenerated into a riot of virtuosity, a mere sport, in which he and his imitators (among them Max Reger) try to "go each other one better." But there are signs of revolt—signs that this orchestral virtuosity will ere long be ranked by serious musicians not much higher than the vocal fireworks of the colorature prima donna. Strauss would have never come into such vogue had not orchestral conductors been as eager to show off the skill of their bands as singers were to display their trills and runs and staccati. The universal interest in the Mendelssohn centenary indicates that the public is eager to return to the land where flows the milk and honey of melody. No doubt, Mendelssohn's music contains too much milk and honey; but even thus it is better than the mixture of vinegar, gall, and cayenne pepper which we get in the Strauss operas.

Among the latest publications of Breitkopf & Härtel is "Mozart as a Composer at the Age of Eight." It contains minuets and other pieces written in 1764 and found lately among autographs given to the German Emperor by Ernst von Mendelssohn-Bartholdy. The same firm has also just issued the third and last volume of Litzmann's biography of Clara Schumann; a book on Beethoven's "Immortal Beloved," and the correspondence between Liszt and the grand duke, Carl Alexander of Saxony, who were close friends for forty years. Many of these letters show how energetically and persistently Liszt tried to pave the way for Wagner. The grand duke called Liszt his "ministre intime," and often consulted him on other than musical matters, testifying: "He never gave me a bad or a selfish piece of advice."

Ever since the King of the Belgians, some years ago, made a public speech in Flemish, the literature of Flanders has been looking up. The latest work in Flemish to attract special attention is an opera by R. Verhulst and A. De Boeck, entitled "Reynaert de Vos," which has recently been produced at the Antwerp Flemish Opera, and which is declared to be successful from the musical point of view, though the text is rather prosy. The fact that this is the first purely Flemish piece of the kind put on the stage, and that Belgium is the early home of *Reynaert* gave unusual interest to the production. The story is based on the famous "Roman du Renart" and Goethe's "Reinecke Fuchs," and there is said to be an interesting analogy between Verhulst's production and the play by Rostand dealing with the tale of "Chanticler."

Paderewski gave his only New York recital on Tuesday afternoon before an audience which crowded Carnegie Hall. He has crossed the Atlantic this time not with the object of giving concerts, but of helping the Boston Symphony Orchestra to launch his symphony which he has only just completed and which will be played here in a few weeks. The fears that his absorption in that work might have impaired his skill as a pianist were dissipated at once when he played Bach's "Chromatic Fantasia and Fugue," a piece which he interprets as a sort of prophecy of modern music—an improvisation with modern recitative. He played Beethoven sonata Op. 111 in the same free and poetic manner; and then delighted his hearers with pieces by Schumann, Chopin, Debussy, and Liszt, to which he had to add seven extras.

In connection with the observance of the centennial of Haydn's death, May 31, 1809, the third congress of the International Music Association will be held in Vienna May 25 to 29. There will be special selections for Catholic and Protestant church music.

Twelve letters by Chopin to his friend Fontana were recently sold at auction in Berlin for $600; five Brahms letters went for $42; fifteen Wagner letters $200; and a Wagner manuscript, a dedicatory composition for the hotel-keeper Kraft, $240.

Art.

THE "INTERNATIONAL'S" EXHIBITION.

LONDON, January 23.

Of late, the foreign element at the International has shown signs of growing less, and this winter it is very much in the minority, to the great loss of the exhibition. Comparatively little comes from France; next to nothing from other European countries; from America, a disappointingly small group, though the Americans who have sent are all worth seeing. But if, for the moment, old standards are less rigidly upheld, the society still accomplishes much that an Academy of Arts, deserving the name, would never have left any other body of artists the chance even to undertake. One striking example will explain. Among the few Americans represented is Saint-Gaudens. The International was the first society in England to recognize him and to make him at all known in this country. Once it had exhibited his work, the Academy elected him an Honorary Foreign Academician. To most people, it would have seemed the duty, the pleasure, and the privilege of the Academy to organize a show of his sculpture, after his death. On the contrary, it has allowed this to be done at the New Gallery by the International. The pity is the impossibility, the first time Saint-Gaudens is at all adequately represented in London, of including any of his large, distinguished monuments. The bust of Gen. Sherman and the Head of Victory are here, and also photographs of at least the Sherman statue and the Shaw memorial, but they hardly give a fair idea of the originals. For the rest, there are many of his beautiful *bas-reliefs*—portraits of Mrs. Stanford White, Justice Gray, Robert Louis Stevenson, the Hon. John Hay, Bastien Lepage, Mr. and Mrs. Wayne McVeagh, and several others. But the British critics have scarcely noticed his work at all, or else have given it the faint praise that damns.

It is the same with almost all the American work. Mrs. Bessie Vonnoh has some charming little bronzes, studies of childhood and motherhood, of the people and things of the life she knows and understands, full of that right soul of realism which gives vitality and the stamp of truth. But, if I am not mistaken, she has not shown in London before, her name is not as yet familiar, and she is passed over for those who are busy turning out imitations of imitations of Rodin's least desirable work. Miss Cecilia Beaux's full-length of Mother and Child does not fare much better, though in its restraint, its quiet color scheme, its dignity, it is a reproach to the more sensational bids for notoriety of too many of the other exhibitors. But it is when the critics come to Arthur B. Davies that they are most wholly at a loss. Three of his paintings are here: Wavering Twilight, Bud to Blossom, and Four o'Clock Ladies, beautiful and tender impressions of color and light, arranged with a poetic feeling for pattern and an entire disregard of that sort of meaning which degenerates into anecdote. There is little in the galiery to compare with them in decorative charm of line and color balance, but they have been ignored save by one or two of the more enterprising critics. Henry Muhrman and Frank Mura, though more frequently seen in London, do not fare much better. Another American exhibitor is Henry Wolf, whose wood-block reproductions of paintings stand quite alone—as Timothy Cole sends nothing this year. Mr. Wolf's prints, after Ambrogio de Predis, Couture, and R. Swain Gifford, and his impression of Morning Mists are among the most distinguished work in the little room set aside for black-and-white.

To turn to the other foreign work is

to find that France has never made so indifferent a showing. The past has been drawn upon, and a small Manet—a beautiful, fresh impression of the sea at Boulogne—and an early Monet, a Daumier, and a Delacroix have been included. A prominent place is again found for Maurice Denis, the most national and logical of modern Primitives. It is amusing to come direct from the labored affectations of Burne-Jones, now at the Royal Academy, to the sincere simplicity of a large design like La Vierge à l'École, with its expressive spacing of flat color and large decorative feeling. Blanche has an amazingly clever, but unpleasantly violent, arrangement of flowered chintz, in an otherwise quiet interior; and Simon Bussy a nude, which, no doubt, appealed to him as a curious study in perspective, but to which he has not succeeded in imparting any other interest. It is, however, more personal than Caro-Delvaille's huge Sommeil Fleuri, which is nothing more than the able piece of flesh painting of the accomplished technician. With the sculpture there has been careful, if limited, selection. A characteristic series of bronzes, plasters, and marbles, by Carpeaux has been got together, less interesting in itself than as a record of a period very near to our own in point of date, but, in aims and methods, already remote. The busts of the Empress Eugénie and the Princess Mathilde, the statue of the little Prince Imperial, with his dog, Nero; the Susanna, and the Genius of the Dance have the prettiness and sentiment of the sculptor's generation, but less of the larger beauty and distinction that belong to all time. A comparison between them and as characteristic a series of Rodin might have been most interesting, but Rodin's contributions are fewer and of less striking importance than usual, consisting of a marble La Jeunesse de Minerve so smooth and trim and lifeless that it hardly seems to be the work of Rodin; and a plaster of the head of one of the *Bourgeois* in the large group at Calais, which does not explain itself when it is thus taken from the rest of the figure.

Italy is represented by a good but small Segantini, and Spain by one not very striking Garrido, instead of the many Angladas and Zuloagas that more than once have decorated the walls of the International. From Holland come two examples of Bauer's romantic architecture and a study of flowers by the late Vincent Van Gogh, a painter of individuality, who never won the success he merited; from Belgium, two brilliant, matter-of-fact outdoor impressions by Emil Claus. Beyond these things, I recall nothing from abroad in particular, except the vigorous and remarkable colored etchings by Olaf Lange, whose work I now see for the first time. It may be objected that the effects he strives after are beyond the proper scope of etching, but, at the same time, he manages very wonderfully to get what he wants; he knows how to put a design together, and his arrangements of reds and greens and golds have a distinct decorative value.

The work of British exhibitors hardly makes up for the absence, or the indifference, of so many foreign artists. I have said nothing as yet of George Sauter, who is a German, but he lives here and is associated rather with the British group. Of this group, not one other shows so interesting and personal a painting as his large Resurrection. It is an arrangement of nude and partly draped figures, the subject one the old masters loved, but the feeling and treatment essentially modern, the whole canvas full of sunshine and air. Sunshine and air again fill the ordinary London street as he sees it through its Spring Veil of tender green and luminous mists. Mr. Sauter is always the sincere, tireless student of nature, concerned with problems of atmosphere and light, and not handicapped by convention. This is why his work, whether you like it or not, has a vitality which other members of the International are in danger of sacrificing to formula. Mr. Ricketts and C. H. Shannon, for instance, have become so absorbed, each in his own formula, that they seem to forget the very existence of nature. Even William Nicholson, ingenious as he is, at times is so engrossed in pattern that everything else must be subordinated to it. The large, stately interior in which he has grouped his Earl of Plymouth and Family is charming, composed and painted with skill and unmistakable zest; but, if Lord Plymouth, as he lounges in the foreground, is an excellent portrait, the other figures have no more importance in the picture than the furniture, no more suggestion of life than the little statuette introduced into a study of still life which Mr. Nicholson is also exhibiting. James Pryde, too, is overweighted with pattern. He has a painting called The Doctor, with the explanation added that it is "No. 1 of a series of twelve pictures entitled The Human Comedy. This invites the inevitable comparison with Hogarth, and therefore reminds us that it is the study of character, together with a beautiful rendering of it in paint (scarcely the most salient qualities in Mr. Pryde's design), that alone can give value to the moral tale told on canvas. If I mention a fresh, radiant stretch of the sea at Dieppe by Morrice, I have come to the end of the list of paintings that had any interest for me.

But though the exhibition has been finer in the past, though much that is second-rate has crept in, it still reaches an infinitely higher level as a whole than such a collection of Academicians as the McCulloch show at the Winter Academy (see the *Nation* of January 21, p. 73), and is far more truly representative of all that is best in the art of to-day.

N. N.

THE GOVERNMENT AND ART.

A bill is pending in Congress to appropriate $20,000 for the purchase of a portrait of Abraham Lincoln, to be hung in the Capitol. The artist's name is not given in the dispatches, and he may have produced a masterpiece; but this process of acquiring works of art by special act of Congress is vicious. It has led to the defacing of the Capitol in the way that every visitor of taste must deplore. Some pushing Senator with a pushing artist among his constituents, a Representative skilled in log-rolling, will get through a bill for buying a statue by Gifted Hopkins, or a canvas by the greatest self-taught painter of Arizona; and that has been our equivalent for the art encouragement given in France by the label "acheté par l'état." Impulse and favoritism and preference without artistic guidance have brought together in the Capitol statues that fight with each other and paintings that scream at each other and at the spectator. One has only to go across the square to the Congressional Library to see the difference between official art of the happy-go-lucky sort, and that which exhibits really capable direction.

It is to introduce something like order and taste into the whole realm of the government's contact with art, that the President appointed the other day a volunteer Council of Fine Arts. The same end is sought by a bill presented on January 19 by Senator Newlands. It provides that the office of Supervising Architect of the Treasury shall be known hereafter as the Bureau of Art and Public Buildings. To this bureau is to be granted artistic control of all government art work. Of course, it is not possible to take from Congress its Constitutional right to display bad taste. Neither under the Newlands bill, if it should become law, nor under the President's order, would it be feasible to prevent the enactment of a special act to buy for a Senate committee-room a replica in marble of the pleasing bust of the Vice-President done in the best creamery butter for exhibition at an Indiana county fair. But short of interfering with these high prerogatives of Congress, the Council of Fine Arts can have supervision of all parks and public buildings and memorials in Washington, seeing to it that the matured scheme for the beautification of that city be adhered to; and can pass upon the plans for all Federal buildings to be erected in any part of the country.

This would be undisputed if the Newlands bill were to pass, authorizing by

law such artistic control. Set up solely by executive order, its validity has been attacked. The statute forbidding any department or officer of the government to "accept voluntary service for the government," is cited as a fatal barrier. But the apparent intention of this was to prevent the creation of a body of officials, commissioned but without pay; while the Council of Fine Arts, as appointed by the President, is purely an unofficial advisory body. Mr. Roosevelt simply declared that he should direct his Cabinet officers, in any public work which might fall under their power, to take the advice of these accredited artists. It does not seem possible to contest that action on the grounds either of law or of common sense. Clearly, it would be better to have the whole matter regulated by act of Congress. If there had been any chance of getting the needed legislation at this session, the President would doubtless have waited for it. As there was not, he acted, not at all in opposition to the Newlands bill, but in anticipation of it; there is little doubt that Mr. Taft will continue in force the executive order until the appropriate law is passed.

It was no reformatory spasm that led to this action at Washington. The project had been under consideration for nearly four years. It was brought to the attention of the Society of Beaux Arts Architects in 1905, and after being endorsed by them, was referred to the Fine Arts Federation of New York. At the prompting of a committee appointed by that body, the matter was laid before the American Institute of Architects. That being a national organization, might be expected to have more weight with Congress; and it appointed an able committee which reported at the annual meeting in 1907. Again the subject was worked over for a year, a new committee making an exhaustive study of the laws and customs regulating the action of foreign governments, particularly France, Germany, Italy, and Spain, in relation to the fine arts. Thorough search was also made of the records at Washington, to discover just how much this country had spent, and Congress was proposing to spend, for works of art. The whole result of the investigation, with a recommendation that Congress be appealed to, was laid before the Institute of Architects in Washington last December. Certainly, therefore, there has been neither haste nor lack of due consideration.

On its merits, the question can be argued with only one conclusion. This country has got beyond the Pleiocene age of art. With millions to lay out upon public buildings and monumental works, this government is simply bound to give the people the finest product that can be had for their money. A concrete illustration of the need of unified, competent, and consistent artistic direction is furnished just now by the controversies over the proposed Lincoln Memorial in Washington. The Senate favors building a highway from Washington to Gettysburg. In the House, a bill is pending to expropriate the land between the Capitol and the new railroad station, itself a monumental structure, and use that site for a memorial. Now comes the American Institute of Architects, to protest against both these proposals, and to insist that the original conception of the Park Commission plans for beautifying Washington be adhered to. This was to reserve a site for Lincoln by the Potomac, beyond the White House and the Washington Monument, where a noble approach and sweeping and harmonious vistas could be had. Clearly, all these plans should be passed upon finally by a disinterested tribunal of acknowledgd authorities in art. Only by setting up such a body of expert advisers can the government be saved from muddling and waste in its artistic work.

We have received from Charles Scribner's Sons the third volume of John Murray's reprint of Crowe and Cavalcaselle. A rival edition now being published by J. M. Dent & Co. has already had the good effect of compelling Mr. Murray to promise the completion of his undertaking within the year. We reserve till that date our appreciation of Cavalcaselle's original work, and our criticism of the competing editions.

"How to Appreciate Prints," by Frank Weitenkampf (Moffat, Yard & Co.), differs from half a dozen approved handbooks of the subject in being written for the unqualified beginner. Mr. Weitenkampf, as curator of prints in our public library, knows as no other man the many interests, mostly non-æsthetic, that centre about a collection of prints, and, while his own taste is trained, he gives to each popular motive its due place in his book. For readers moderately well informed on these matters his manual will seem diffuse and roundabout. But it is not written for them. The diffuseness is merely that of the patient mentor who by repetition, illustration, and apt dilution must make his lesson clear. For its public the book will do good. It will reach many who cannot grasp such manuals as the late Dr. Lippmann's. The field is covered fully, and even the different sorts of process engraving are included. We could wish the very summary and thin encyclopædic portion had been reduced in favor of a more extended appreciative treatment of a few great and typical engravers; also that the inferiority of reproductive engraving had been more strongly insisted on. Under the soft ground etching (p. 21), Cotman's "Liber Studiorum," almost the classical instance of the *genre*, should have been mentioned. Whistler (p. 38) had two, not one, mediocre prints in the book of the Junior Etching Club. If only for the record, John Foster, the first, and perhaps the worst, wood engraver of America, might have had his word of mention. Somewhere, too, in the discussion of autograph signatures there should have been a warning against late impressions, which, being subsequently signed by the artist for a fee, acquired a standing as proofs. We have seen, for example, Whistler's authentic butterfly monogram upon plates from the Thames set, of the latest (though really excellent) impression, that he affected utterly to scorn and disown. These casual suggestions may be useful in a second edition of this meritorious book.

Eduard Fuchs, who will be remembered as the author of "Die Frau in der Karikatur," a work which bore proof of great scholarship and judgment, has completed another ambitious work, "Illustrirte Sittengeschichte vom Mittelalter bis zur Gegenwart" (Munich: Albert Langen). It is in three volumes, each complete in itself, treating respectively the renaissance, the gallant, and the bourgeois period. Each volume contains about 450 illustrations in the text, and from fifty to sixty two-page illustrations, some in color, and all reproductions of the rarest pictorial documents of the history of morals and manners since the middle of the fifteenth century.

The excavations of the Deutsche Orient Gesellschaft in the vicinity of Ericha, the supposed site of the ancient Jericho, have resulted in most interesting discoveries. Not only have the walls of the city been unearthed, but the entire northern part of the citadel, which is situated on the slope of one of the seven hills on which Jericho was built, has been brought to light. It was fortified by an external and an internal wall, both of which were crowned by strong corner towers and connected at irregular intervals by walls. On the northern slope of the city, outside the walls, numerous remains of Canaanite houses were discovered, some of which were built against the city wall. In many cases the clay partition walls were still standing. Bodies of children, buried in jars, were found beneath the clay floors of the houses. Ovens and a drainage canal were also brought to light. Besides the Canaanite houses an interesting collection of Israelite houses, dating from about 700 B.C., was partly unearthed. Of these one was exceptionally well preserved. It contained a court yard open to the air, with a bench, a long room, and a kitchen opening on to the yard, in which the great water tun still stood in its original position. In this house were found numerous domestic utensils, such as plates, dishes, pots, amphorae, corn mills of red sandstone, lamps, torch-holders, and many iron implements. A number of graves of the early Byzantine era, containing vessels of clay and glass, were also discovered, showing that the site of ancient Jericho was inhabited at a much later period. Unfortunately, practically no inscriptions have as yet appeared. All that has been discovered are a number of stamps on the handles of jars apparently bearing the name of the divinity Jahu. The letters are Aramaic and probably date from the fifth to the third century before Christ. The excavations will be resumed in the course of the winter, and further discoveries are looked to with great interest.

The one hundred and fourth annual exhibition of the Pennsylvania Academy of the Fine Arts opened Saturday and will close March 14. There are 447 pictures and 180 pieces of sculpture, including seventy-six works from men who have never before exhibited at the Pennsylvania Acad-

emy. The following awards have been announced:

The Temple Gold Medal to Frederick P. Vinton for his portrait of Carroll D. Wright, president of Clark College.

The Walter Lippincott Prize for the best figure picture in the exhibition to Thomas P. Anshutz for The Tanagra.

The Jennie Sesnan Gold Medal for the best landscape in the exhibition to Theodore Wendel for Winter at Ipswich.

The Carol H. Beck Memorial Gold Medal, now awarded for the first time for the best portrait in the exhibition, to John S. Sargent for his portrait of Miss Mathilde Townsend of Washington.

The Mary Smith prize of $100 to Miss Martha Walter for her Portrait.

An exhibition of the paintings of Joaquin Sorolla y Bastida will be held at the Hispanic Museum in this city February 8 to March 8.

Among the exhibitions at the dealers' galleries in this city are pictures by T. W. Dewing and D. W. Tryon at Montross's, till February 13.

Alfred B. Copeland, artist, died in Boston, January 30, at the age of sixty-nine years. Much of Mr. Copeland's work was done abroad in Antwerp and Paris, but since 1896 he has lived in this country. His large painting, "Falling Leaves," is owned by the Boston Athenæum.

Hitchcock's Enlarged Practice-Book in English Composition

xiv+374 *pp.* 12*mo.* $1.00

A manual for two years' work on the lines of the author's widely used *Practice-Book in English Composition.* Part I. of this new book is identical with Part I. of the earlier book. Similarly, Part II. reprints *Words and Sentences* (heretofore published separately), which provides abundant drill in word-study and sentence analysis. Part III., called "Rhetoric in Practice," and substantially new, comprises chapters on Substitution and Combination; Clearness through Unity; Clearness through Coherence; Clearness through Punctuation; Brevity, Precision and Euphony; Variety in Sentence Structure; Figures of Speech and the Paragraph. Part IV., on Versification, is entirely new, and is intended as an aid to the appreciation of poetry.

The earlier *Practice-Book* will be retained in its present form for the large number of schools which prefer a separate book for first-year work.

THE LINCOLN TRIBUTE BOOK

Appreciations by Statesmen, Men of Letters, and Poets at Home and Abroad, together with a Lincoln Centenary Medal, from the second design made for the occasion by Roiné. Crown 8vo Illus. $1.75 net.

This book, including a full-face Lincoln medal designed by the distinguished artist Jules Edouard Roiné, is offered as a fitting souvenir of the Centenary of Abraham Lincoln.

The volume brings together from widely scattered sources the finest tribute given by statesmen, men of letters, and poets, at home and abroad, to Abraham Lincoln. In the midst of the tributes to Lincoln is bound a full-face medal of rare artistic quality which admirably expresses the dignity and weight, the tenderness, sweetness, and strength, the depth and the varied richness of the nature of the man it represents.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 11, 1909.

The Week.

Mr. Roosevelt's treatment of the anti-Japanese bills in the California Legislature illustrates his mental processes and slap-dash methods. With his desire to prevent the passage of those bills, the *Nation* is in heartiest sympathy. But the President has gone about the delicate task of allaying race prejudice, of preventing an action which was bound to give grave offence to a friendly nation, as if he were anxious to centre the attention of the world upon the California Legislature, as if with deliberate calculation he were seeking to produce the impression that war would result from the misbehavior of the Californians. A conference on the issue at the White House is immediately followed by a conference with the Secretaries of War and Navy. Then comes the dispatch of a column-long telegraphic message, and its immediate publication, although it is filled with alarming phrases, asserting that the proposed legislation "might accomplish an infinity of harm," "might cause very great mischief." All quiet and calm methods of moral suasion are thrown to the winds; and every opportunity is offered to the Jingoes and sensation-mongers of the press. Thus the prominence and prestige of the noisy little band of anti-Japanese agitators in California is heightened, and the position of the steady and conservative men who have no sympathy with the demgaogues is rendered more difficult. Indeed, in this whole matter the President's course has been very perplexing. In his annual message to Congress in 1906, Mr. Roosevelt not only severely criticised the Pacific Coast, but urged the naturalization of the Japanese, the actual extending to them of the ballot and all the privileges of American citizenship. This week, however, he assures the Californians that the "policy of the Administration is to combine the maximum of efficiency in achieving the *real object* which the people of the Pacific Coast have at heart." "Let me repeat," he added, "that at present, we are actually doing the *very thing* which the people of California wish to be done. . . ." The very thing? Exclusion, segregation, and all?

To drag such issues as miscegenation, race deterioration, and white supremacy into the discussion of the Japanese question, is merely to becloud it. Senator Newlands of Nevada may be right when he learns from history "that it is impossible to develop a homogeneous people by the juxtaposition of races differing in color on the same soil." The eloquent Fresno editor who writes in *Collier's Weekly* may be right when he asserts that the immigrants New York swallows the country can digest, but that the immigrants San Francisco swallows the country cannot digest. But the question of race-assimilation and nation-building with Asiatic materials was disposed of when the Japanese government agreed to limit emigration to this country. It is now for California to say whether the Japanese government shall be given the opportunity to carry out its agreement or whether it shall be badgered and harassed into a state of suspicion and hostility toward this country. The official figures are here to prove that the Japanese immigration has been cut down. Every sign points to a concentration of Japan's surplus population upon Korea and Manchuria. The flood that never was a flood is getting down to a driblet. There is no reason for alarm.

Newfoundland's acceptance of the fisheries arbitration treaty constitutes the last step but one in the settlement of a long-standing dispute that has engendered bitter feeling on both sides. It now remains for the Hague Tribunal to act. Its decision will give no room for cavil or cry of unfair play, such as unfortunately followed upon the verdict of the Alaskan Boundary Commission. Neither party to the present case is likely to come out seriously the loser. In the first place, it is already a gain to have substituted peaceful arbitrament for quarrelling; and once people agree to have their rights weighed by an impartial judge, it is wonderful how many a claim and "right" that has swollen to enormous size in the progess of mutual exasperation, shrinks to its proper small significance.

Much attention was drawn to the action of the House of Representatives in cutting down the appropriation for experimenting with military balloons from $750,000 to $250,000. Little notice, however, was taken of the defeat of an amendment to permit the War Department to import balloons and material for balloon experimentation free of duty. Recommended by the Military Committee, it was at first, on a division, adopted by a vote of 48 to 33. But then the wickedness of laying a hand upon the ark of the tariff began to penetrate the minds of the Republicans, and on a roll-call they rejected the amendment by 132 to 118. Thus was a great principle vindicated. American balloons for Americans! It was no answer to say, as Congressman Gaines did, that "a balloon when imported costs about $15,000 duty, and instead of saving the $15,000 to experiment with, we take it out of one pocket and put it in another." No such low and mercenary considerations could appeal to those who saw the real danger. The man who led this gallant resistance to paupermade balloons—and to common sense and progress—was a New York Representative, Herbert Parsons.

There are two distinct aspects to the facts elicited in the Senate investigation of the Steel Corporation's purchase of the Tennessee Coal Company in 1907. One has to do with the financial side of the operation, pure and simple; the other, with the famous "White House interview," in which a sort of plenary absolution from the legal obstacles was granted in advance. To a certain extent, the two considerations bear upon each other; at all events, the main defence of President Roosevelt's attitude has been the allegation that a crisis of extreme gravity was averted by the Steel Corporation's purchase, and could have been averted in no other way. On this assertion the testimony before the Judiciary Committee has now thrown considerable light. No institution was in danger because of its holdings of Tennessee Coal shares; in supposing so the President appears to have been misled. Certain individuals, however, and, according to the testimony, at least one Stock Exchange firm, were in

an awkward predicament. They were so placed, because they had tried one of those rash experiments familiar in Wall Street for half a dozen years before the panic of 1907—buying up the stock of a $23,000,000 property, chiefly on borrowed money, "jacking up" its price to a "corner" basis, and awaiting the day when they could force a powerful competitor in the trade to take over the property at fancy figures. This was the nature of what Wall Street described as the financial "hold-ups" of 1902, when the enterprising John W. Gates successfully "unloaded" his Louisville and Nashville and also Chicago, Indianapolis and Louisville stock on the bankers of competing railways.

Gates, as was to be expected, figured again among the principals in the "Tennessee Coal deal"; his presence was a pretty sure warrant of the nature of the undertaking. It was not, however, a guarantee of its success. With the help of bank loans the process of putting up the price of this 4 per cent. dividend-paying stock to 166 was easy enough; but when the panic of 1907 swept over Wall Street, matters assumed a different aspect. Mr. Schley told the Senate committee that his banking house had borrowed five to six million dollars to carry the Tennessee Coal stock. Banks, however, were cleaning house in November, 1907; stocks with fictitious values and an artificial market were not in favor as collateral; the borrowers were asked to put up better security or pay off their loans. It was precisely then that the Steel Corporation managers, who had calmly refused to be coerced by the "hold-up" of the two preceding years, were begged to take the Tennessee Coal and Iron stock at their own price. The visit of Judge Gary and Mr. Frick to Washington, and the purchase of the property through issue of Steel Corporation bonds, were the result. People at large will doubtless reach contradictory conclusions. Some will say merely that the Steel Corporation drove a hard and clever bargain; others, that the corporation, with Mr. Roosevelt's assent, averted a serious disaster; still others, that the whole transaction amounted to pulling a group of speculators out of a scrape which their own recklessness had invited. But no one of these conclusions will touch the real question at issue—namely, whether the President had the right to pass final judgment, in advance of his legal advisers, on the legality of a great industrial merger.

Tulio Larrinaga, the delegate to the House of Representatives from Porto Rico, made a speech the other day in which, denying press reports that the whole of that island had become hostile to the United States, he said that, "as regards the American people and the nation, the same sentiment that existed at the landing of the Americans exists to-day." He was willing, however, to admit that there is some discontent, and that the island was dissatisfied with both its political and economic conditions. But to say that this spelled anti-Americanism was the greatest calumny that could be invented. He regretted to inform Congress that the agent charged with sending news to the American press was a paid employee of the government, which takes care "to have him always in a very good office." In return this correspondent disseminates wholesale lies. The Porto Rican Executive Council is, it appears, a monstrosity, an intolerable tyrant, which encroaches more and more upon the people's liberties; but the time has come when the people will no longer permit it to go beyond the law. Of course, the fault is with the organic act of 1900. That was specifically stated at the time to be a temporary one; but nine years later there is no sign of a change, and Porto Rico is really very hurt that Congress will neither amend this act nor care for its economic welfare. Then, too, local government is pushing the islanders to the verge of humiliation. But barring these slight troubles, Porto Rico is quite well, happy, and loyal, thank you!

The drastic punishment of Capt. Qualtrough of the battleship Georgia leads to the suspicion that the offence was more serious than the press dispatches have led us to expect, or that it was one of a series. Why else should Rear-Admiral Sperry have insisted upon so speedy a trial in the last foreign port of the cruise? Why could not the investigation have been postponed until the arrival of the fleet in home waters, when justice could have been done without attracting the attention of the whole world? There have been perhaps ten or a dozen officers tried since the fleet left Norfolk, but, on the whole, the behavior of officers and men has been so good as to reflect great credit upon the service. Hence the notoriety of the Qualtrough incident must cause especial pain to those who have conducted themselves so well during the long cruise. If, on the other hand, the severity of Capt. Qualtrough's punishment means that the navy is hereafter to be stricter with its drinking officers, the sentence is to be welcomed. Naval courts-martial have, of late years, seemed to display too great leniency with offenders of this class.

Gov. Hughes has at least forced his opponents to adopt new tactics. They have found out that they cannot beat him by cabal and midnight conference—by the bosses putting their heads together. The latter process, as in the case of Sydney Smith's jest about the vestry of St. Paul's, has in the past resulted in making merely a block pavement, over which the Governor could ride to his goal. This year, however, Gov. Hughes is not to be the only one to go before the people with argument and persuasion. Speaker Wadsworth's long address on Friday night in opposition to the direct primary shows that a new plan of campaign has been adopted. The fighting is to be in the open. That of itself is a great gain. A good part of what the Governor is contending for is already attained, if it be settled that all these questions are to be threshed out publicly. But Speaker Wadsworth is a little ridiculous, when he pictures the displacement of present party leaders by bosses of a much worse type, in case the scheme of direct nominations is put into effect; and when he describes the existing boss as one whose "every act is subjected to the closest scrutiny by the people." Then, too, Mr. Wadsworth points to Senator Stephenson of Wisconsin, who has already done such hard work as a horrible example of what may happen under the direct primary. He is said to have spent a large sum, variously estimated at from $100,000 to $250,000, in order to obtain his reëlection to the United States Senate. Speaker Wadsworth asks what limit to the corrupt expenditure of money there would be if the big New York millionaires should set out to buy a Senatorship under the direct-primary

system. To this it may be rejoined, first, that the new plan cannot be more expensive, or lead to more corruption, than the convention system; and, second, that the same means of checking venality in elections, which have been adopted under the latter, may be applied to the former, and extended when necessary. That is to say, a corrupt practices act may go hand in hand with a direct-primary law. Not only may full publicity of election expenses, both before and after election day, be compelled, but the sum beyond which a candidate may not go without thereby disqualifying himself may be fixed by statute. It has been done in England, and may be here.

Mr. Wadsworth further objects that, with the people making nominations direct, the cities would swamp the villages and the rural districts. What the objection really amounts to is to deny to the majority in the party the rights of a majority. The Speaker is confusing the government of the State, under the Constitution, with government of the party. In the Legislature, New York city cannot have, unless the Constitution is changed, the weight which her population might entitle her to have, on the democratic theory. In Rhode Island, the villages swamp the cities, by being over-represented, and becoming practically rotten boroughs, so as to keep Republican Senators at Washington. Does the Speaker wish that sort of misrepresentation fastened upon his party in this State? His argument really comes to this, that he is afraid the men who furnish most of the votes will desire to make most of the nominations. That is scarcely a position which a man can defend who believes in party management on democratic principles. In practice, it is probable that the Speaker's fears would prove to be imaginary. Men of weight and compelling personality and conspicuous fitness for office would not have their political opportunities cut off simply because they live in the country. The Speaker's remaining objection to the direct primary is that it would make an end of fusion movements in New York city, and be also a fatal blow to the non-partisan nomination of judges But it was not the direct primary, it was the delegate convention, that prevented fusion against Tammany in 1897. If there had then been an open and direct primary, the Republican bosses would have been compelled to endorse the nomination of Seth Low. As for a non-partisan judiciary, that has had its birth and support in the sentiment of the people, not in the benevolence of party chiefs; and there is no reasonable doubt that the same sentiment would make itself felt, perhaps even more powerfully, under the new system proposed by the Governor, but opposed by Speaker Wadsworth.

King Edward's visit to Berlin is in fulfilment of a promise made last summer. Relations between the two countries were none too pleasant then, and they have since become more strained. The Kaiser's indiscreet interview in the *Telegraph* let loose an immense amount of anti-English feeling which had been lurking in Germany. This set up, across the North Sea, the process of developing ill will and suspicion by induction; and we have just seen the nation stirred to the depths by a foolish play intending to show that England is exposed to invasion and ruin. The agitation has led the Admiralty to change its plans, so that the building of six Dreadnoughts is announced on the very day of the King's arrival in Berlin. It is naturally, then, a kind of restrained and sober hospitality which the German press and people are extending to him. The visit may be called well or ill-timed, according as the opportunity is used by the royalties and diplomats on either side. King Edward has been remarkably successful, on his travels, in promoting cordial understandings. With France, Russia, Italy, and Spain, the relations of England are on a much better footing than when he came to the throne. But the trouble with all these *ententes*, from the German point of view, is that they have left Germany out, and have given to European diplomacy the air of wishing to shut her up in a "circle." Hence the King's achievements in other capitals will make his work for conciliation in Berlin all the more difficult. Yet there can be no doubt that both he and his Imperial nephew earnestly desire peace, and will do all in their power to make the fêtes and speeches of the present week count for a better feeling and a firmer friendship.

The definition of Russian government must now be revised so as to read, "despotism modified by assassination regulated by the police." The *agent-provocateur* is a traditional feature of government by espionage. Police officials, to demonstrate their zeal and importance, will concoct plots for the purpose of discovering them. But that the Czar's secret police should have given their representative in the councils of the revolutionists a free hand against everybody save the Czar himself and certain favored ministers and officials, seems almost incredible. The fact that the prime leader of the Terrorists should have been a police spy, and that the head of the Russian secret police should now be tried for high treason, shows the chaos that rules both in the government of Russia and in the hearts of its citizens. If precedent counts, it will turn out that Azeff, head of the Fighting Organization of the Social Revolutionary party, who was permitted by the police to kill Sipiaguine, Von Plehve, and Grand Duke Sergius, provided the police were duly notified of the forthcoming event, was not all a spy. He was probably three-quarters revolutionist and one-quarter spy, just as the degraded Chief of Police Lapukhin was probably three-quarters spy and one-quarter revolutionist. Men who have worked both for the police and the revolution have not been rare in Russia. Father Gapon was almost certainly one of those. The sad feature of the Azeff affair is not so much in the hundreds or thousands of revolutionists whom the traitor must have sold into the hands of the police, but in the revelation it makes of the tremendous difficulties against which the revolutionary campaign must be carried on in Russia. The policy of Terrorism, always of questionable wisdom, is now practically shattered. What chance is there for "coercing" the tyrants into submission, when every step made in the policy of "coercion" is watched and checked up by the police? In other words, assassination has lost even its efficacy as a check upon despotism when it is assassination regulated by the police. Only a rising of the nation in mass can frighten the government, as in 1905. And for furthering such a national upheaval, the best measures are not dynamite and the pistol, but education.

LINCOLN AND HIS CONTEMPORARIES.

The first instalments of the Diary of Gideon Welles, now publishing in the *Atlantic*, furnish us with one more means of measuring Lincoln with his contemporaries. In those dark days of 1863, Welles was not visibly under the spell of Lincoln's genius; he did not think that everything the President did was right and wise; the mythic faculty had not then begun to work. Yet in the matter-of-fact and impartial record which the cool Secretary of the Navy set down at the time of the Cabinet intrigue to secure the removal and disgrace of McClellan, the greatness of Lincoln is builded by Welles better than he knew. Stanton appears testy, vindictive, scheming; Chase was jealous, vain, meddling; Seward indifferent, when not tricky and dodging. Lincoln, throughout, was calm, patient, honorable, and of a sagacity overtopping the combined wits of his advisers.

The just way of judging a man is to endeavor to see how he ranks with those of his own generation, and how he meets the highest standards of his own time. To compare him with the great ones of another century, earlier or later, or to test him by moral or political principles not acknowledged, or not vivid, in his day, is to destroy historical perspective. It would be absurd, for example, to appraise Lincoln as a civil-service reformer. The thing had not swum into his ken. He practised the spoils system in the innocence of ignorance. For the true searching of his character we must look to the way in which he bowed before the categorical imperatives which tried the stuff of public men at the time he actually lived; and place him, to find his true rank, alongside his fellows.

It may be said that Abraham Lincoln as President was as much superior to the statesmen about him as George Washington, when President, was to the men whom his lofty presence dwarfed. But there was this difference: Washington's preëminence had been achieved and was generally acknowledged in 1789. Lincoln's was not only not admitted, but was denied, in 1861. Neither Knox nor Hamilton, nor even Jefferson, thought of challenging Washington; but Lincoln had at least two men in his Cabinet who thought themselves much his better, and took no pains to conceal this notion. It was with something almost like contempt for Lincoln's ability that Seward wrote that amazing letter to him, early in his Administration, practically offering to take upon himself the functions of the President. Readers will recall the gasp of astonishment with which that extraordinary communication was received when it was first given to the light in the Hay and Nicolay "Life." It was a fearful ordeal for the Illinois lawyer, unskilled in statesmanship. Here was his Secretary of State, the brilliant, the admired, the favorite of the educated classes, not only proposing to him the madcap policy of defying the world in arms, so as to unite the dissevered parts of the country, but plainly intimating his disbelief in the President's capacity and initiative, and proffering himself as the leader and saviour of a feeble Administration. A timid man would have been frightened, and either yielded to Seward or pretended to yield, while planning to get rid of him. A sensitive and violent man would have flown into a passion, lost the services of Seward and disrupted his Administration at the very start. Lincoln did neither. He quietly let Seward know that he expected both to direct his own Administration, and to have from his Secretary of State loyal coöperation. It was as easily and naturally done as if it were merely a case of adjusting the relations of a lawyer and his chief clerk in a Springfield office, but it was a crowning proof of Lincoln's magnanimity and fitness for great affairs of state. Seward never wrote him any more letters of that tenor! He had got his lesson.

This incident, first known more than two decades after Lincoln's death, well illustrates the way in which his fame has been heightened by all the disclosures of the lapsing years. Letters, diaries, archives have yielded their secrets, but not one of them has diminished Lincoln's stature. On the other hand, the reputation of his rivals has been deeply gnawed into by the tooth of time. Seward, we have referred to; he has been hurt, not helped, by what has been published since he quitted the scene. Chase has suffered almost more. His great abilities and undoubted patriotism were eaten into by the acid of ambition, so that he stands before us often petty, querulous, exigent, intriguing, and discontented. But perhaps none of Lincoln's contemporaries has had his once great fame more dimmed than Horace Greeley. He, too, felt himself above Lincoln by a thousand diameters; yet from the pitch of his assumed greatness as a statesman, he has fallen grievously, as history has set the forces of truth at work. Impatient, vacillating, impetuous, vainglorious (consult that letter which he wrote to Lincoln complaining that great men were getting to be few, and that even his own health was not good!), Greeley was about as ill fitted for high office as a man could be. He thought himself a great politician, but even there Lincoln beat him out of sight. Greeley's fatuousness in misjudging a political movement has just now been once more strikingly proved in a letter published by the biographers of Carl Schurz. Anything more pathetically absurd than his confidence that he was going to be elected President in 1872, when the very heavens were thundering the ruin of his campaign, it would be hard to find.

This sort of comparison may seem too feebly panegyrical for the Lincoln centenary. Yet when the poets and the orators have done their best, after legend and myth-making have begun, it is well to consider Lincoln in habit as he was, a man among men. When we perceive how the near-great or the over-great public men of his own life-time fall away from him, as he and they recede, and leave him towering above them in unmatched greatness of soul and reach of mind, we can at least feel that our appraisement of him is sure. Saul is higher than any of the people from his shoulders and upward.

THE VETO OF THE CENSUS BILL.

In vetoing the spoils-tainted Census bill, President Roosevelt has splendidly met the hopes pinned to his stanchness as a civil-service reformer. He uses few words, but few are needed to expose and rebuke so obvious a fraud on the public. With great directness and entire frankness, the President shows that the provisions of the bill respecting the appointment of clerks in the Census Bureau are merely a blind for a division of the spoils among Congressmen. This veto is conceived in the spirit of the Roosevelt of the old ideals, strong on the side of good administration, and ready to put the brand upon those who

would cheat the people while pretending to serve them. So doing, the President deserves and will receive the support of intelligent and upright men.

The chief objection to the bill lies in the clause calling for the appointment of the 4,000 clerks in the Census Bureau by means of "such non-competitive examination as the Director of the Census may prescribe, the said examination to be conducted by the United States Civil Service Commission." That is most innocent-seeming. No spoils about that! All breathes of reform—examinations, the Civil Service Commission, and so on. Where do the spoils come in, along with the stratagems, if not the treasons? The facts are perfectly open, to those who care to seek for them. In the debates on the bill in both House and Senate, no secret was made of the intention to divide these appointments *pro rata* among Representatives and Senators. The talk about a non-competitive examination is merely an attempt to throw dust in the eyes of the people. How the same device worked in the taking of the last census has been explained by F. H. Wines, who was at one time Assistant Director of the Census. He showed, in the first place, that all these non-competitive examinations were not free to everybody to try. The permission of the Director was necessary, and "such permission was a matter of favor, depending upon 'influence.'" Mr. Wines proceeds:

> In making selections from the list of those who passed the examination, no attention whatever was paid to their comparative rating. It was a "pass" examination pure and simple, and a rating of 75, with proper political or other endorsement, was sufficient to secure an appointment, where a rating of 100 would count for nothing without it.
>
> There were numerous instances in which an unsuccessful applicant was granted a second, third, or fourth trial, at the request of some Senator or Representative; and, to the best of my knowledge and belief, it occasionally happened that the rating made by the examiner upon the papers filed was arbitrarily changed after they left his custody.

In reality, there has been no concealment in either house of Congress about what was actually planned. The clerks were to be parcelled out among the members—each man to have the naming of six or eight. Congressman Gillett of Massachusetts, who ably opposed the spoils features of the bill, stated in open debate what was the tacit but explicit agreement. The clerks were to be "equally divided among Congressmen without regard to party." Ten years ago, a Republican member got a larger share of the spoils than a Democrat, but this year it was to be share and share alike. What was the reason for this noble spirit of equality? Why, simply that the Democrats would not vote for the grab of offices unless they got their due portion; and there were enough Republicans to go against the bill and defeat the spoilsmen, unless the latter had struck hands with the Democrats on the basis of an equal "divvy." Mr. Gillett challenged contradiction of this "understanding," and no one rose to deny it. The same thing was made clear in the Senate. Senator Lodge said that there was no use in sticking in the bark of the phrases of the bill. "We throw open these 4,000 clerkships for appointment by Senators and Representatives. That is what it means."

Now, all this is not simply a disreputable trick, not alone a clinging to a system which has been proved demoralizing and which Congress has professed to abandon: it is also directly to endanger the accuracy, and so the value, of the Census itself. Students know that the trustworthiness of previous censuses has been seriously open to doubt. In some cases it has been damagingly impeached. We are bound to use every means within reach to put the Thirteenth Decennial Census as far beyond suspicion as possible. But if we load a lot of incompetent subordinates upon the Director, we directly increase the chances of bad work. He has to take the men whom Congressmen dictate, and he has to keep them whether they have any merits or not. Some of them may work out into a fair degree of efficiency, but, if a new Congress comes in, and their backer is not reëlected, out they go to make room for the hangers-on of the new member. The method infallibly produces poor clerks, and a census dragged out as much as possible in order to continue patronage as long as possible. Spoilsmen in Congress, it is true, like the glorious Hepburn, pull a long face and say that they never recommend anybody but able archangels to office, and would never think of trying to prevent the removal of an incompetent clerk who had been appointed at their request—or demand. But why endeavor to deceive, when the facts are known? The truth was bluntly put by Senator Lodge in a colloquy with Senator Curtis of Kansas:

> Mr. Curtis—Let me ask the Senator if he believes that there is a Senator on this floor who would ask a department to hold in office an incompetent clerk.
>
> Mr. Lodge—I am afraid, Mr. President, since the Senator asks me that question that we have all of us in both houses done it a great many times. [Laughter.]

The provisions of the bill are so indefensible, so vicious, that we do not see how Congress can fail to retrace its steps. There certainly would be no possibility of passing the original bill over the President's veto, were it not for the bad blood now existing between him and Congress. But it would be a fine way of taking revenge on the President, to injure the public service and damage the Census!

THE NEW CHARTER FOR BOSTON.

After nearly two years of investigation and discussion, the commission appointed to suggest improvements in the government of Boston has laid its report, with a draft of an amended charter, before the Massachusetts Legislature. The proposed changes are almost revolutionary. At a time when the New York City Charter Revision Commission is expected soon to publish its findings, and when unusual interest exists everywhere in experiments in municipal government, the conclusions of this Boston report deserve a wide hearing.

The report begins by setting forth conceded facts. The municipal administration has been both wasteful and inefficient. Expenditures have increased twice as fast as the population; yet the city is not keeping pace with its rivals, its growth is slow, "there is little demand for real estate, and almost none for vacant land," while there is general complaint of poor public service. The chief cause of the evil is bluntly stated to be that unscrupulous politicians have taken advantage of a cumbrous system of city government. There are "two legislative bodies," the members of which are "intellectually and morally incapable of action in the interest of the citizens at large." Their power has been used mischievously. In the executive departments, men of skill and character are rare. Appointments have been made purely for political reasons, and while the number of employees in-

creases, their efficiency decreases. It is an old story. The government of Boston has been made a prey of party politics.

Several radical plans of reform were urged upon the commission. There was, for example, the "Greater-Boston" idea, by which outlying communities were to be brought in to sweeten and save the city proper; there was the town-meeting method, such as has been adopted in Newport; there was government by a State commission; there was the theory of limiting the municipal suffrage to property-owners. But none of these things moved the commission. It contented itself with urging alterations of the existing charter, designed to make administration more business-like, and to drive out, so far as possible, the evil spirit of politics.

First of all is the aim to simplify. The thirteen aldermen and seventy-five members of the Common Council are to be swept away and replaced by a single council of nine. This is in line with general tendencies. Everywhere the bicameral system in municipal government is falling into disfavor. In Massachusetts, eleven cities have now adopted the single legislative body, and nowhere is there any desire to go back to the old plan. Moreover, the nine members are to be elected at large—three each year. This is expected to secure more capable men than election by wards. Their power, too, is to be limited. They may approve the budget, but not originate it; may reduce or omit appropriations, but not increase them. All their acts and resolves are subject to absolute veto by the Mayor.

It is proposed greatly to extend and centralize the powers of the Mayor. He is not to be hampered, as now, in the choice of his subordinates, and he may remove them at pleasure. One novel limitation is, however, introduced. Heads of department must be selected for peculiar expertness in their work, and cannot take office until the State Civil Service Commission has certified that they are well qualified. Imagine the terror of Tammany at such a provision! All these officials are to hold office for four years, and so is the Mayor, though in his case a modified form of the "recall" is provided for. The municipal election is to be held in January, when a Mayor will be chosen for four years. But a year from the following November, at the State election, the following question is to be submitted to the voters: "Shall there be an election for Mayor at the next municipal election?" In case this is answered "Yes" by a majority, then the Mayor will have to take his place on the ballot, with other candidates, in January; or, if by October 1 he files with the Secretary of State notice that he does not desire to go before the electors, then his term of office shall cease with two years. As will be seen, this is an ingenious plan, short of absolute recall, to compel the four-year Mayor to have his record passed upon at the end of two.

The most drastic change is a direct attempt to reduce partisan politics to the minimum. No party nominations are to be made. There are to be no city conventions, no delegates chosen to nominate. The commission, with a strange readiness to agree with Gov. Hughes, declares that the convention-system has "become completely discredited by the gross abuses" which have crept into it. Hence, the whole scheme is to be discarded, and nominations to the office of Mayor made on petition of 5,000 registered voters. No party designations of any kind are to be allowed on the ballot, "and there shall not be appended to the name of any candidate any such party or political designation or mark, or anything showing how he was nominated or indicating his views or opinions." Seasoned politicians, on reading this, will admit that it is not an *émeute*, but a revolution.

This bare outline suffices to show the nature of this proposed reform of the government of Boston, and how it fits in with the general movement to clean up and strengthen municipal administration in this country. Varied methods of attacking the problem are desirable. This Boston plan will be eagerly watched, both under discussion in the Legislature, and in operation in the city.

THE PH.D. AGAIN.

The uses and abuses of the Ph.D. degree is a subject which seems to be always with us. The matter is brought up again by an article in the *University of Chicago Magazine* for February, "Symposium on the Doctors' Questionnaire." In order to study the relation of the doctorate to the teaching profession, the following questions were sent to those who have taken the degree at the University of Chicago:

> In view of the fact that the great majority of doctors are obliged to engage in the work of practical teaching, would you propose that the university should in any respect modify its policy as to the doctorate? For example, would you support any or all of the following propositions: (1) That candidacy for the doctorate should be conditioned upon a higher and broader standard of general culture; (2) that candidates for the doctorate should be required to pursue courses in the philosophy of education or in the pedagogy of special subjects; (3) that the university should discourage a much larger number of persons from proceeding to the doctorate?

Some seventy-five replies were received, which Dr. Eleanor P. Hammond has briefly summarized. A large majority approved the idea of a higher standard of general culture; opinion on the second question was more evenly divided; and the third "was generally regarded as allied with the first in such a way as to make any explicit answer impossible apart from a profound consideration of the whole subject." Among the practical suggestions was the proposal "that a more extended command of English . . . be added to the present requirement of French and German." Still another recommendation was that a special degree be created for persons preparing to teach, or that the A.M. be rehabilitated for that purpose.

The idea of a special degree points pretty clearly to one cause of the present disrepute of the Ph.D. Several of the replies dwelt on the fact that not only colleges, but normal schools, high schools, and academies are, as one writer put it, making "a constant demand for doctors as members of their faculties." Of course, the supply is forthcoming. Institutions which are not at all equipped for training in research go through the motions, so to speak, and gravely confer a Ph.D. on youths who never have enjoyed any rigorous intellectual discipline. Other universities, whose resources are by no means contemptible, are so eager to build up a graduate school that they grant the degree to any one who has studied faithfully for three years and has written what may be euphemistically described as a thesis. In fine, taking the United States as a whole, we may say that the conditions under which the degree is now obtained are scandalous. To particularize is unsafe; but we should probably be within the truth in declaring that, with the present mad competition for quantity of

students rather than quality of work, not half the degrees of Ph.D. represent a serious contribution to knowledge.

The prospect of reforming those heads of schools and colleges who are now clamoring for doctors on their faculties is not at present bright. The college and school catalogue is still regarded in the light of a show-window where the goods must be displayed to the best advantage; and a list of teachers with "Ph.D." appended to each name is thought to have an hypnotic effect on parents and to convince them that here is the real thing in the way of scholarship. As a matter of fact, the man with the Ph.D. may be, as a teacher, grotesquely incompetent, particularly with pupils of the secondary school and of the college proper. His very training in research may have narrowed him till he is unfitted to guide any students except those who are advanced in his own little specialty. And yet some school principals and college presidents are so bent on making a cheap display that, to the neglect of real qualifications for teaching, they virtually force their teachers to secure a higher degree by hook or crook.

Nor does there seem much hope of turning the small but ambitious graduate school from the error of its way. The Ph.D. of Johns Hopkins and of perhaps half-a-dozen other American universities really has some meaning; but for the rest it indicates nothing more than industry, frequently misguided, for a period of two or three years after the bachelor's degree. On the other hand, the results of such industry, rightly directed, might be admirable. If the graduate student should zealously devote himself to what has been called "a higher standard of general culture," he might come to the work of teaching with excellent equipment—better, indeed, than if he had vigorously pursued some recondite subject in philology, history, or science. We really need, then, a higher degree to serve as a sort of certificate of liberalizing study of this kind. There are many men who, whether they intend to teach or not, would profit by advanced study; but they are not cut out for investigators; and unless they take a Ph.D. which is a sham, they have nothing to show for their progress beyond the now rather colorless A.M. Instead, then, of prostituting the Ph.D. till it is worth little more than the title "professor" as assumed by a bootblack or peripatetic quack, we might well, as some of the Chicago doctors urge, establish the "non-research" degree.

The idea is by no means new. It has been brought forward again and again in recent years. One of the most active advocates of the plan has been Prof. Irving Babbitt of Harvard. In his book, "Literature and the American College," as well as in other writings, he has argued that our doctor's degree might well be reserved, as in France, for work of considerable maturity, produced, perhaps, some years after a man has entered upon the labors of his profession. The French doctoral thesis is often a genuine contribution to knowledge, presented in effective literary form. Were our doctor's degree granted only for achievements of such distinction, we should obviously need the "non-research" degree. But even if we do not go so far as the French, rough common honesty, not to say the delicate conscience of the scholar, should dictate some change in the present method of conferring the doctorate.

THE DEATH OF CATULLE MENDÈS.

Catulle-Abraham Mendès was found dead in the railway tunnel at Saint Germain February 8.

Mendès, born in 1841, came of a line of Jewish bankers established in the south of France, but most of his childhood was spent in Germany and Italy. At twelve, the family returned to France and settled down in a château of Toulouse. Catulle was not sent to college, but he was under a tutor, a Latinist after the old fashion. When the boy was fourteen years old he gave to the local Variétés a vaudeville entitled the "Bailiff's Garters," which was played several times. At fifteen, he started a theatrical paper, and the following year his indulgent father allowed him to go up to try his fortune in Paris. Arsène Houssaye at once began printing his verses; and the elder Mendès, willing to give his son a start in the career he had chosen, set aside 20,000 francs to begin a magazine. So, in 1860, the new *Revue fantaisiste*, with its eighteen-year-old editor, made its appearance. Among the contributors are found the names of Théophile Gautier and Richard Wagner, Baudelaire, and the two Daudets. The review and its contributors were not looked on with favor by the police of the empire. An indiscreet poem, which, however, had nothing to do with politics, published under his own name, enabled the police to bring Mendès before the courts on the ground of bad morals. He was fined 500 francs and sent up to the prison of Sainte-Pélagie for a month. On his release, he found his review defunct and his father unwilling to advance any more money. Now followed a period of extreme poverty. Banville brought him four sous' worth of tobacco each morning; and, at last, Mendès sold a short story for thirty francs. It was the beginning. Much later, his father accepted the inevitable, but only on condition that his son should make another long sojourn in Germany. This had for chief result the rooting of the young man in Wagnerism, of which he was one of the first messengers to refractory France.

Meanwhile a thin volume of verse, "Philomela," printed in red and black with an exasperating dilettanteism of form, announced that a new school of poetry was arising in Paris. The single etching of the volume was signed Bracquemond—a name long since at the head of contemporary engraving, but then practically unknown. The widow of Gen. de Ricard gathered together in her salon the adepts of the new school. There were, besides Mendès, her son, who has written its history, François Coppée, Sully-Prudhomme, Stéphane Mallarmé, and Villiers de l'Isle-Adam. Xavier de Ricard started a review, but Mendès found nothing better to write in it than his "Lettres à la fiancée." Barbey d'Aurévilly, the Romantic, had dubbed these poets "Parnassians" disdainfully. Mendès adopted the name and began a new review called *Le Parnasse contemporain*. Lemerre was persuaded to take up the review, and soon a series of volumes of verse appeared under the name. The newspapers, for a while, made fun of it, and of the long hair affected by the poets, but Théophile Gautier took up the cudgel for Mendès, who had married his daughter Judith, and forced the critics to recognize that French poetry had entered into a new phase, with verse classically correct, but with a new sparkle and limpidity. To this verse Mendès remained faithful, never yielding to the experiments in prosody or to the obscurity of the Symbolists, who succeeded the Parnassians, and whom he lived to see disappearing in their turn. Since money was as yet lacking to the young poet, the Princess Mathilde came to the rescue, making him an allowance of 1,200 francs from her own purse.

During the seventies he was still an intermittent editor, and his name was then associated with men rapidly becoming more famous than himself. A publication which had ventured to begin Zola's "L'Assommoir" suddenly took alarm and stopped it short; Mendès accepted it for the pages of his own erratic review. The scandal helped the

fortune of Zola, for the novel had an enormous sale, but it did little for the charitable editor. Despite all his work as editor and journalist, he was able to turn out an extraordinary number of plays and novels, many of them tainted with eroticism—years ago the number had already passed one hundred and twenty. Yet his plays—perhaps because the requirements of the stage enforced a much-needed reserve—have been remarkable in literary quality, as well as thoroughly dramatic. "La Fille de Tabarin" and "La Reine Fiammetta" are among the most famous. And his fiction has always shown a literary touch. Of his many novels may be mentioned "Les Folies amoureuses," "La Vie et la mort d'un clown," "Le Roi vierge," "Le Crime du vieux Blas," "Monstres parisiens," "Jeunes filles," "Jupe courte," "Tous les baisers," "Lesbia," "Méphistophéla," "L'Homme tout nu," "La Première Maîtresse," and "La Grande Maguet."

RECENT FRENCH BOOKS ON HISTORY.

PARIS, January 25.

In the usual abundance of French historical publications, there are a few works of high importance, many that form a solid underpinning of serious history, and more still that popularize readably the work of documentary historians. The notices which follow are placed in the chronological order of the epochs to which their subjects belong.

"Au Temps des Pharaons," by A. Moret, adds to the account of the Pharaohs as known to history some knowledge of that previous epoch of Egypt before the Pyramids, on which recent excavations have shed so much light (Armand Colin). Albert Vogt publishes "Basile I," emperor from A. D. 867 to 886—a history of Byzantine civilization at the end of the ninth century, wherein new research has also added much to the outlines drawn from scantier material by the genius of Gibbon (A. Picard).

R. Delachenal, in his two volumes, "Histoire de Charles V (1338-1364)," follows out the career of the first Dauphin of France to the death of Jean II and then through the wars of the English Edward III. It is a work of capital importance for the history of English attempts at conquest in France (A. Picard).

Three new books draw on the undying interest of Port-Royal and the Jansenists, who had the great advantage over our own Modernists of picturesqueness, political hatreds, and emotional personality. André Hallays has taken, *en flânant*, by the way, "Le Pélerinage de Port-Royal," from the church of Saint-Étienne-du-Mont in Paris, where its dead lie buried, and the Paris Port-Royal to Port-Royal des Champs, the Granges, and so back to Paris and Saint-Médard. Over the existing remains he reads each associated fragment of letters and chronicle of the time (Perrin). A. Gazier, last of the Jansenists, though all others perish, adds another to his volumes of gleanings by an edition of Racine's "Abrégé de l'histoire de Port-Royal," with full notes and bibliographical apparatus (Société française). The popular and documentary Ch. Gailly de Taurines in "Père et fille" gives, without theology, the touching history of the painter Philippe de Champagne and his daughter Sœur Catherine de Sainte-Suzanne, who was the Port-Royal nun cured by miracle; this does not hinder their friend's daughter, the great poisoner La Brinvilliers, from flitting across the page (Hachette).

"La Maison de Madame Gourdan," with a sub-title, "Vieilles façades parisiennes," by Eugène DeFrance, is an illustrated history of manners and customs at the end of the eighteenth century (Mercure de France). This brings us up to the Revolution, where we have a substantial work on "La France économique et sociale à la veille de la Révolution," by Maxime Kovalewsky, professor in the University of St. Petersburg (Giard). In the series of reproductions of the all but unknown works of L'Élite de la Révolution, the new volume consists of "Discours et rapports de Robespierre," with notes by the editor, Ch. Vellay (Fasquelle).

Frédéric Masson adds to his apparently endless series of documentary works on Napoleon, two volumes, "Autour de Sainte-Hélène"—striking and intimate details of the last years and of the adventurers who still swarmed around the great man (Ollendorff). L. de Lanzac de Laborie publishes a fifth volume of his series Paris sous Napoléon, comprising the history of public charities and assistance and the provisioning of it (Plon-Nourrit). Commandant M. H. Weil, who has already published five volumes on Prince Eugène and Murat, now issues a first volume of completest history of the last year of reign of "Joachim Murat, roi de Naples (1814-1815)"; so far we are given the preliminaries of the Congress of Vienna, from May to November, 1814. Each volume is sold separately (Fontemoing). "Journal du Comte P.-L. Roederer," with subtitle "Autour de Bonaparte," and notes by Maurice Vitrac of the Bibliothèque Nationale, is a rather dear volume (400 pages, 15 francs), by a man without much imagination or sympathy, and with some prejudices, whose occupations called him to the daily presence of Napoleon (Daragon).

Princess Radziwill née Castellane has edited with notes the "Chronique de 1831 à 1862" of her grandmother, Duchesse de Dino, the German princess, who was married passively into the family of Talleyrand, and came into his life to such a degree that she guided the veteran diplomat to the very door of the tomb. Meanwhile, she observed with immense common sense the court world of which she was a part, at London, and in Paris, and listened with untiring intelligence to the sayings of the man whose own memoirs proved so cruel a disappointment to those who insist on looking behind the scenes (Plon). "La Jeunesse libérale de 1830" is made up of letters of Alphonse d'Herbelot to the young Charles de Montalembert, and Léon Cornudet, men who resolutely turned from salvation in restored kings and began the movement of Catholics toward Pope and people—a movement still uncertain after eighty years (A. Picard).

The two volumes "Lettres à un ami," by the late Edmond Rousse, head of the Paris bar, and member of the French Academy, range from 1845 to 1880; they give the unpremeditated observations and opinions of a highly cultivated, professionally accurate mind in the presence of public events (Hachette). The letters of the siege of Paris and Commune are peculiarly valuable. It is not always easy for historians to discover just what competent persons thought on the spot. "La Commune au jour le jour," from bloody beginning to bloody ending, by Élie Reclus is a book of very honest memories by one who says of himself:

> I was not one of the personages, not even a confidant of the personages; I was a citizen among those who were least ill-informed—a thermometer lost in a corner.

This did not prevent Élie Reclus, whom the Commune had named director of the National Library, from being forced to fly his country, while his brother, Élisée, the eminent geographer, had his sentence commuted only as the result of a petition of Englishmen of science, led by Charles Darwin. This book deals with none of the philosophy, but only with the day-by-day realities of that enigma of terror (Schleicher). "La Comtesse de Valon," by G. Clément Simon, carries us to the opposite extreme of those troublous times (Plon). She was Apollonie de La Rochelambert, one of three sisters who had been close friends of the Empress Eugénie before her elevation. In spite of her friendship, she refused to give up her Legitimist prejudices and to appear at the new court. When the crash came, she was able to serve France, and later her own party, through the friends of her youthful years in Berlin, Manteuffel and others. Although the book is heavily put together—remembrances of life, of family and friends, and correspondence—it throws strong and interesting sidelights on the critical moment when the last and best of the Bourbons,

Count of Chambord, either deliberately and honestly or quixotically rendered the old monarchy forever impossible in France.

Two books tell the religious and honorable effort of a few men who recognized the causes of the destruction of all they held dear, and have striven to win back the French workman to Christian society. Count Albert de Mun, in "Ma Vocation sociale," tells his memories of the foundation of Catholic workingmen's clubs (1871-1875); they still exert an influence, perhaps slowly increasing, under a clergy no longer bound to the state (Lethielleux). The economical theory of the movement is explained in a large book by another of its founders, Marquis de La Tour du Pin La Charce—"Vers un Ordre social chrétien"—milestones from 1882 to 1907; it is probable many more weary miles will have to be traversed before any one social order triumphs in France (Nouvelle Librairie Nationale). A. Debidour, professor at the Sorbonne, in a second volume completes his erudite work, "L'Église catholique et l'état sous la troisième république," from 1870 to 1906, when state churches, though not state legislation of churches, ceased to exist in France. "Dans la Bataille" is a collection of papers by the present foreign minister of the Republic, Stéphen Pichon, whose activities have extended during his diplomatic career from the French West Indies to Tunis, and then to China, when the allied Powers entered Peking; they are written clearly and with point, and are good samples of the new diplomatic literature, unknowing pretence or ceremony.

Perhaps the chief book in French history of those recently published is the "Histoire de la France contemporaine," by ex-Foreign Minister Gabriel Hanotaux. The fourth volume has just appeared, comprising the entire foundation by Gambetta of the "république parlémentaire," and ending appropriately with the death of its founder (Boivin). It is probable that Gambetta, of whom the author was a pupil and disciple, would frown at the inordinate development since given to his main principle—the omnipotence of the legislative branch of government—but the egg is very apt to grow according to the laws of its species. It is natural that M. Hanotaux should not altogether appreciate or even understand the position of those less and of those more radical than Gambetta; but it is much that he should completely understand that which came into existence at the time it began. S. D.

NEWS FOR BIBLIOPHILES.

The first part of the J. C. Chamberlain collection of first editions of American authors, which has been frequently referred to in this column, will be sold by the Anderson Auction Company of this city in four sessions on February 16 and 17. This part includes the books of ten nineteenth-century authors: Bryant, Emerson, Hawthorne, Holmes, Irving, Longfellow, Lowell, Poe, Thoreau, and Whittier. The rarest and most sought for books of these authors, almost without exception, are included. While the first edition of Bryant's "Embargo" (1808), and Poe's famous "Tamerlane and Minor Poems" (1827), two practically unattainable books, are absent, a score of titles scarcely less notable, some of works which are now offered at public sale for the first time, are included. Among these are: Bryant's "Oration delivered at Stockbridge, July 4, 1820" (only once before offered at auction, Pierson sale, 1908, $145); Hawthorne's "Time's Portraiture," being the carrier's address to the patrons of the Salem *Gazette* for January 1, 1838 (only three copies known, never before offered at auction); "The Sister Years," another carrier's address, 1839 (six or seven copies known, two offered at auction, the record price, $290); Holmes's "New England's Master Key," 1863, six copies printed (this the only copy traceable, sold twice at auction, bringing $16 in 1894, and $110 in 1904); Holmes's "Lecture—1863," six copies printed (this the only copy traceable, twice sold at auction, bringing $15.50 in 1894, and $112 in 1904); Holmes's "Oration before the City Authorities of Boston" (1863), twelve copies printed before the lecture was delivered (this the only copy to come upon the market, twice sold at auction, bringing $19 in 1894, and $75 in 1904); the same, a second issue, with corrections, twelve copies only printed after delivery (this only copy to come upon the market); Longfellow's "Noël," an eight-page leaflet, 1864 (five copies known, this the only one ever offered at auction, Arnold sale, 1901, $55); Longfellow's "The New England Tragedy," 1860, the trial issue in prose (only two copies known, the other still in possession of the Longfellow family); Longfellow's "The New England Tragedy," 1868, the privately printed first issue of the poetic version, ten copies printed (never before offered at auction); Longfellow's "Kéramos," 1877, trial issue, printed before the poem appeared in *Harper's Magazine* for December, 1877 (never before offered at auction); Lowell's "Poems," 1844, large paper copy (only six copies known, only once offered at auction in recent years, in the sale of Brown University duplicates, 1901, $150); Lowell's "Mason and Slidell," 1862, the separate, printed from the types of the *Atlantic Monthly* (only once before offered at auction, in the Arnold sale, 1901, $175); Lowell's "Bigelow Papers," Second Series, London, 1864 (never before offered at auction); Lowell's "Address on Democracy," private issue, printed on one side only (three copies known, once before offered at auction, in the Arnold sale, 1901, $70); Lowell's "Lines on Reading of the Capture of . . . Slaves etc.," a leaflet, printed with Whittier's "The Branded Hand," 1845 (never before offered at auction).

In the above list the better-known, though equally valuable, titles which have occurred with greater or less frequency in the sales have been omitted. Among notable titles of this class, which would of themselves make any collection famous, are: Hawthorne's "Fanshawe" (1828); "The Gentle Boy" (1839); "The Celestial Railroad" (1843); "Peter Parley's Universal History" (1837); Holmes's "A Family Record" (1877); Irving's "History of New York" (1809); Longfellow's "Outre-Mer" (1833-34), the two numbers as first issued in the original paper covers, uncut; "Poems on Slavery" (1842); "Evangeline" (1847); Lowell's "A Year's Life" (1841), presentation copy from Lowell to Tennyson; "Conversations on Some of the Old Poets" (1845), presentation copy; "Poems of Maria Lowell" (1855), presentation copy; "Il Pesceballo" (1862), all three issues of this year; "Ode Recited at the Commemoration of the Living and Dead Soldiers of Harvard University" (1865); Poe's "Al Aaraaf and Minor Poems" (1829); "Poems," second edition (1831), presentation copy; Thoreau's "A Week on the Concord and Merrimac Rivers" (1849); Whittier's "Legends of New England" (1831); "Moll Pitcher" (1832), in the original paper covers, uncut, probably the finest copy known; "Mogg Megone" (1836). The copy of Poe's second book, "Al Aaraaf," is one of the finest known, being in the original boards, uncut, with a presentation inscription from Poe's sister, Rose M. Poe. It is from the Frederick W. French sale, April, 1901, where it brought $1,300. It had cost Mr. French about $175, four or five years before. Since that sale the Nelson copy, with presentation inscription in Poe's autograph, sold in the Peirce sale for $1,825, and a copy with trimmed edges in the Appleton sale, 1906, for $1,500.

The Longfellow-Greene correspondence, comprising 545 autograph letters (37 being postal cards) from Longfellow to George W. Greene, was acquired by Mr. Chamberlain from a member of the Greene family. The earliest of these letters was written in 1830, and the last a few days before Longfellow's death in 1882. It is not probable that such another collection of Longfellow's letters has been preserved. Many of the letters, especially the early ones, are of great literary interest; and about 400 of them are unpublished. Samuel Longfellow printed many of them in his Life of his brother, but a comparison of the original manuscripts with the letters as there printed shows that he has exercised undue license in making alterations in the wording, and has deleted long passages without indicating omissions. Among other manuscripts are several early poems by Bryant, including one written at the age of twelve; Irving's manuscript note-book for "The History of New York," and a manuscript diary kept by him in Spain in 1828-29; Longfellow's "Hermes Trismegistus," the last poem published before his death; portions of Lowell's manuscript of "Our Own"; Whittier's poem on Fitz-Greene Halleck; besides autograph letters of most of the ten authors, many of them of exceptional interest. Eight books from the library of Nathaniel Hawthorne containing autographs (several of the signatures with the early spelling "Hathorne") are valuable association items.

The catalogue contains a preface by Major Emory S. Turner, a frontispiece portrait of Mr. Chamberlain, and numerous reproductions of title-pages and manuscripts.

Part II of the angling library of the late John G. Heckscher, which will be offered by the Merwin-Clayton Sales Co. of this city February 15 to 18, includes the editions of Walton's "Compleat Angler," 127 lots. The

first edition of Walton's "Angler" (London, 1653) is, when in fine condition, one of the most valuable books of the period. The last copy sold at auction was William C. Van Antwerp's (formerly the Rowfant copy), for which Quaritch paid £1,290 in 1907. This, one of the finest known copies, in the original sheep binding, is now in J. P. Morgan's library. The Heckscher copy is described as fine and perfect, in a binding by Rivière, copied from an old English binding of the period. The Heckscher library includes also the second edition (1655), both issues of the third edition (1661 and 1664), the fourth edition (1668), and the fifth edition (1676). The fifth edition, with which was incorporated Charles Cotton's "Compleat Angler" and Venables's "Experienced Angler," was the last issued during the author's lifetime. C. S. Rafinesque's "Ichthyologia Ohiensis; or, Natural History of the Fishes Inhabiting the River Ohio and Its Tributary Streams," a pamphlet of ninety pages (Lexington, Ky., 1820), is the rarest and most valuable of American books on fishes. The Heckscher example is the first perfect copy to be sold at auction. Other notable books in this part are: Mascall's "Booke of Fishing with Hooke & Line" (1590); Nobbes's "Compleat Troller" (1682), first edition; Smith's "True Art of Angling" (1696); Gervase Markham's "Pleasures of Princes" (1614), as well as a number of other books by this writer; Dean Sage's "Restigouche and Its Salmon Fishing" (1888), one of the most valuable of modern books on angling.

Correspondence.

THE FIRST AMERICAN PLAY.

To the Editor of The Nation:

Sir: The writing and acting of the first play in what is now English-speaking America may be assigned to a date at least thirty-four years earlier than 1640, the date given by William J. Neidig, in your issue of January 28. In 1606, two years before Quebec was founded, and when Shakespeare was still alive, the Sieur de Poutrincourt brought a band of Frenchmen to settle at Port Royal, in Acadie. Among them was Marc Lescarbot, who wrote a history of New France, in which he tells what happened there under his own eyes. His chief, de Poutrincourt, coming back after a cruise along the New England coast, "arrived at Port Royal the fourteenth of November, where we received him joyfully and with a solemnity quite unknown in those parts." The account continues:

> For just as we were looking for his return (with great longing, for had ill befallen him we should have been in danger of confusion), I bethought myself of setting forth some piece of merriment, which we did. And, as it was written hurriedly in French rhymes, I have put it in "Les Muses de la Nouvelle-France," under the title of "Théâtre de Neptune," to which the reader is referred. ("Histoire de la Nouvelle-France," Book iv, Chap. 16).

The third piece in "Les Muses de la Nouvelle-France." Paris, 1609, is the masque, "Le Théâtre de Neptune en la Nouvelle-France," containing 242 rhymed lines. The characters are Neptune, six Tritons, four Indians, and a jovial attendant. Neptune appears clad in a blue robe and socks, hair and beard long and hoary, holding in hand his trident, seated on his chariot decked out with his colors. The chariot is drawn on the waves by six Tritons to board the launch wherein De Poutrincourt and his followers took their places on leaving their ship to go ashore. When the chariot is made fast to the launch Neptune addresses De Poutrincourt in fifty-eight lines, calling him "Sagamos." Neptune tells who he is, how great his power on the sea, and how he has often protected De Poutrincourt; Neptune further promises to favor De Poutrincourt's undertaking because he foresees destiny is preparing a flourishing empire for France in the New World. A trumpet then strikes up and encourages the Tritons to speak; one after another they deliver their parts covering eighty-four lines. They praise Neptune, implore the help of France and commend De Poutrincourt's bravery. The Indian word "adesquides," friend, is used. Strangely enough, the part of the fifth Triton was taken by a Gascon, who pronounced his verses "à peu près en sa langue." Next Neptune draws aside to make room for four Indians in a canoe bringing gifts. In seventy-eight lines they offer moose meat, beaver skins, and shell ornaments, but do not forget to beg for "caraconas," bread. Neptune and the Indians are thanked for their good will by De Poutrincourt, who invites them to the fort. Forthwith Neptune's troop sing a four-part song of four lines. This ended, the trumpet again sounds and they go their several ways. Cannons roar for a full quarter hour. On reaching the fort, De Poutrincourt is met by the merry attendant, who speaks the last eighteen lines of the piece greeting the returning chief and bidding the cooks to make ready every kind of good cheer. We have Lescarbot's word that this masque was actually "représentée sur les flots du Port-Royal le quatorzième de Novembre mille six cens six, au retour du Sieur de Poutrincourt du pais des Armouchiquois."

Here, then, is a play both written and acted in North America in 1606. As a masque it fulfils all conditions required by the definition of the word, if it is agreed that a masque was a dramatic performance in which the actors, properly disguised, represented mythical or allegorical characters.

Brookline, Mass., January 29.

AN EARLY VIRGINIA PLAY.

To the Editor of The Nation:

Sir: The following may be of interest as a contribution to the discussion as to the first play presented in America—a subject which W. J. Neidig takes up in your issue of January 28. In 1665, a play, known as "Ye Beare and Ye Cluh," was acted in Accomac County on the eastern shore of Virginia, by three citizens, Cornelius Wilkinson, Philip Howard, and William Darby by name. As soon as the fact was reported to the King's attorney, John Fawsett, he summoned them to court, where each was subjected to a rigid cross-examination. The justices of the court contented themselves at that session with ordering the culprits to appear at the next session in the habiliments which they had worn in acting the play; and they were also required to bring with them for inspection on that occasion a copy of "the verses, speeches, and passages" which they had declaimed. The justices must have found the performance to have been of a very innocent nature, for they directed the three men to be discharged, and the person who had informed on them to pay all the expenses of the presentment.

Norfolk, Va., January 31.

ARNOLD'S "CHURCH OF BROU."

To the Editor of The Nation:

Sir: M. Charles Cestre, professor at Bordeaux, printed in the Novemher-Decemher number of the *Revue germanique* an interesting study of Matthew Arnold in connection with Edgar Quinet. He points out that Arnold's poem, "The Church of Brou"—one of his most popular poems—owes much to an opuscule, "L'Église de Brou," published by Quinet in a volume of "Mélanges," in 1839. M. Cestre says courteously and sincerely that there is no fear of diminishing the just admiration deserved by Arnold for the poetic quality of his verses, by showing that they must have been suggested in their "motive," and in many of their details, by Quinet's prose.

Arnold transplants the church from its real situation in the neighborhood of Bourg, which Quinet accurately describes, to an Alpine valley; but he follows Quinet, not closely, but in spirit, in his enumeration of the builders—"the working train."

> Flemish carvers, Lombard gilders,
> German masons, smiths from Spain.

And he echoes Quinet's sentence, "Elle conduit elle-même la main de son architecte aveugle" with

> Clad in black, on her white palfrey,
> Her old architect beside.

But it is in the last stanza that the resemblance becomes important. Quinet sketches the main lines of a vision that had come to him of these beings who "sleep their marble sleep" in the surrounding silence:

> Who could relate their dreams? When they lift their cold eyelids they see the arches above their heads, the transfigured light of the windows, the motionless Virgin and saints, and they think to themselves: "This is eternity." And when the wind moans in the doors they murmur to one another: "Why, my beloved, do you so loudly sigh?" And when the rain drips on the roof above, they say: "Do you, too, hear on your dais the rain of the Eternal Love?"

Compare:

> So sleep, for ever sleep, O marble Pair!
> Or, if ye wake, let it be then, when fair
> On the carved western front a flood of light
> Streams from the setting sun, and colors bright
> Prophets, transfigured Saints, and Martyrs brave,
> In the vast western window of the nave. . . .
> Then unclose
> Your eyelids on the stone where ye repose . . .
> Or let it be on autumn nights, when rain
> Doth rustlingly above your heads complain . . .
> Then, gazing up 'mid the dim pillars high,
> The foliaged marble forest where ye lie.
> *Hush*, ye will say, *it is eternity*! . . .
> And in the sweeping of the wind your ear
> The passage of the Angels' wings will hear,
> And on the lichen-crusted leads above
> The rustle of the eternal rain of love.

To compare—not a small thing, but a smaller thing, with a great one, this is like Shakespeare's use of Holinshed. He takes from him his facts, even his phrases, and throwing on them the light of imagin-

ation, transmutes them to something far more rich and rare. It should be said that the lines omitted in the above quotation render the passage much more beautiful.

M. Cestre, in connection with this discovery of his, remarks that some of Arnold's prose writings have so much resemblance, not verbally, but in thought, to those of Quinet, that it would seem not improbable that this was due to familiarity with Quinet's works. Some of Arnold's most important opinions bear the impress of French influence, and may be more or less definitely attributed to the special influence of Quinet. But this is too large a question to enter on here.

GRACE NORTON.

Cambridge, Mass., January 29.

CARL SCHURZ AND MARCUS AURELIUS.

TO THE EDITOR OF THE NATION:

SIR: In your review of Vol. III of Carl Schurz's "Reminiscences" (January 21), this extract is quoted from one of his letters:

Ever since I have been in official life I have adhered to the rule of regarding the official position occupied by me at the time as the last one ever to be held by me, and as decisive of my reputation as a public man.

This is a splendid present-day application of the general proposition set forth by Marcus Aurelius:

Hourly and earnestly strive, as a Roman and as a man, to do what falls to your hand with perfect unaffected dignity, with kindliness, freedom, and justice, and free your soul from every other imagination. This you will accomplish if you perform each action as if it were your last, without wilfulness or any passionate aversion to what reason approves. ("Meditations," ii, 5.)

BURGESS YOUNG.

Copper Cliff, Ont., January 29.

THE UNIVERSITY PRESIDENT AND THE UNIVERSITY PROFESSOR.

TO THE EDITOR OF THE NATION:

SIR: In Prof. A. Lawrence Lowell's first formal address as president-elect of Harvard University, printed in the *Harvard Bulletin*, he says:

It is commonly thought that President Eliot has ruled Harvard and the faculty with a heavy hand. It is not so. When I went to Cambridge one of my colleagues said to me: "If you fail to give satisfaction you will go; but so long as you give satisfaction you may teach as you please." That has been President Eliot's method of treating his subordinates, the members of the faculty.

Is it to be understood that as president of Harvard University Mr. Lowell proposes to retain his subordinates only so long as they give him satisfaction?

The president of another great university has recently expressed his opinion of the relation between the university president and the university professor. In his recently printed lectures before the University of Copenhagen, President Butler of Columbia University writes:

Almost without exception the men who to-day occupy the most conspicuous positions in the United States have worked their way up, by their own ability, from very humble beginnings. The heads of the great universities were every one of them not long ago humble and poorly compensated teachers.

AN 'UMBLE PROFESSOR.

New York, January 30.

PRESIDENT ALDERMAN EXPLAINS.

TO THE EDITOR OF THE NATION:

SIR: I clip the following from your issue of January 21, and beg you will reprint it, and give me the privilege of saying just a brief explanatory word:

POE ECLIPSED.

TO THE EDITOR OF THE NATION:

SIR: The enclosed item from a Cleveland paper you have perhaps already seen. It is hard to tell whether it is humorous or pathetic. The University of Virginia, which seems to depend upon a sprinter for its reputation, is entitled to sympathy.

EDWARD DICKINSON.

Oberlin, O., January 11.

CHARLOTTESVILLE, Va., January 8.—Although President Roosevelt has written a personal letter to "Jim" Rector, urging him to another race with Walker, the man from South Africa, Rector cannot take part in such a contest without endangering his life. Rector, who is taking law here, and has done more to bring the University of Virginia into popular notice than any man since the days of Thomas Jefferson, the founder of the college, has been warned that he cannot live two years if he continues in training.

The article, dated Charlottesville, of course, did not emanate from this university, but appeared simultaneously in the sporting columns of various papers. Its author is unknown to us. President Roosevelt had no communication whatever with Mr. Rector. Mr. Rector has decided not to run any races with anybody, because he feels that his time should be given to his work in the department of law, and not because anybody has told him that his life is endangered. All of the facts stated, therefore, are untrue. The sporting reporter's opinion as to Mr. Rector's part in bringing the University of Virginia into popular notice is his own opinion, about which we knew nothing, and for which we are in no sense responsible. I had seen the article, and thought it very stupid to pay any attention to such absurd statements, thinking it rather an amusing example of wild enthusiasm on the part of a young reporter of sporting news. I know nothing of Mr. Edward Dickinson, of Oberlin, O., who felt impelled to send you the above communication. His impulse to write at all, and his reflections after yielding to the impulse, seem to me to reveal him quite plainly as a man lacking in about equal degree in both commonsense and common justice.

EDWIN A. ALDERMAN.

University of Virginia, Charlottesville, January 26.

[We should not have published the matter to which President Alderman objects had we supposed that our readers would regard the clipping as anything more than an amusing example of American journalism. We are confident also that our readers have not missed the point of Mr. Dickinson's irony, and will not deny him either common sense or common justice.—ED. NATION.]

THE REMOVAL OF MASON AND SLIDELL FROM THE TRENT.

TO THE EDITOR OF THE NATION:

SIR: Within the last year and a half, three letters of Lord Palmerston, two of them addressed to Queen Victoria and one to Mr. Delane, editor of the London *Times*, have been published that show beyond cavil that the highest ministers and legal advisers of the British crown recognized that Capt. Wilkes, in taking Mason and Slidell from a British merchant steamer and then allowing the vessel to proceed on her voyage, had acted strictly according to the rules of the laws of nations as recognized and interpreted in practice by Great Britain herself.

In a letter on November 11, 1861, to Mr. Delane, Lord Palmerston, the Premier, wrote that on that same day he had presided at an important meeting, to consider what could be done to protect an expected English mail steamer, supposed to have on board the Confederate envoys, from being stopped and searched by an American war vessel just arrived at Portsmouth, supposedly with that object in view. Besides the Premier himself, according to Lord Palmerston's statement, there were present at this meeting the Lord Chancellor, the Duke of Somerset, Sir George Grey, Mr. Hammond (afterwards Lord Hammond), Permanent Under Secretary of State for Foreign Affairs, and the three law officers of the Crown, Sir William Atherton, Attorney-General, Sir Roundell Palmer, Solicitor-General, and Dr. Phillimore, Counsel to the Admiralty. Of the conclusion at which these gentlemen arrived, Lord Palmerston wrote to Mr. Delane:

It appeared that, according to the principles of international law laid down in our courts by Lord Stowell, and practised and enforced by us, a belligerent has a right to stop and search any neutral not being a ship of war, and being found on the high seas and being suspected of carrying enemy's dispatches; and that consequently this American cruiser might, by our own principles of international law, stop the West India packet, search her, and, if the Southern men and their dispatches and credentials were found on board, either take them out, or seize the packet and carry her back to New York for trial. Such being the opinion of our men learned in the law, we have determined to do no more than to order the Phaeton frigate to drop down to Yarmouth Roads and watch the proceedings of the American within our three-mile limit of territorial jurisdiction, and to prevent her from exercising within that limit those rights which we cannot dispute as belonging to her beyond that limit.

Two days later Lord Palmerston wrote to the Queen to the same effect.

Two weeks afterwards, on November 29, however, upon hearing that Capt. Wilkes had taken Mason and Slidell off the Trent in the West India seas, the British Cabinet, contrary to their previously formulated judgment, decided to demand in a peremptory way the release of the Confederate envoys, and began to prepare for war. The same day, Lord Palmerston wrote from Downing Street to the Queen that at a Cabinet meeting just held, "the law officers and Dr. Phillimore, counsel to the Admiralty," in attendance, "it appeared to the Cabinet that a gross outrage and violation of international law has been committeed and that your Majesty should be advised to demand reparation and redress."

When the news of the act of Capt. Wilkes

reached America, every one, from Secretary Seward down, acclaimed Wilkes as a national hero. President Lincoln, alone, seemed to have had doubts about the wisdom of the bold sailor's action aiding the cause of the Union. In England, practically the whole nation, except Cobden, Bright, and their friends, regarded the proceeding as high-handed and an insult to the British flag. And had not Earl Russell's dispatch to the American government, demanding the release of the captured envoys, been revised and toned down in the cause of peace by the Queen and the Prince Consort, so as to afford the American government an avenue for honorable retreat, war would almost certainly have resulted between America and England. As it was, England's demands were so made that in the excited state of the public mind in America it was difficult for President Lincoln, Secretary Seward, and the Cabinet to meet the case so as to avoid an armed conflict with the motherland. But Secretary Seward, in a dispatch written on December 26, 1861, to Lord Lyons, the British minister at Washington, with rare ability acceded to the British demands without, however, conceding that Capt. Wilkes had not the right to stop the Trent in order to prevent the accredited envoys of the Confederate States from reaching the theatres of their intended action. Secretary Seward maintained, in writing to Lord Lyons, that Capt. Wilkes, in stopping the Trent to find Mason and Slidell, had acted in accord with the laws of nations, and that he could properly have placed a prize crew on board of her to bring her to an American port, so that the question whether Mason and Slidell could be considered as contraband, should be reviewed before and passed upon by a prize court. But because Wilkes, since his crew was much reduced in numbers and he did not wish to cause delay to the passengers on the Trent, had taken Mason and Slidell off the Trent and allowed her to proceed, Secretary Seward said that, acting under the rule laid down in 1804 by Secretary Madison, during President Jefferson's Administration, his government could not sustain the act of Capt. Wilkes. That American contention as formulated by Madison was that:

> Whenever property found in a neutral vessel is supposed to be liable on any ground to capture and condemnation, the rule in all cases is, that the question shall not be decided by the captor, but be carried before a legal tribunal, where a regular trial may be had, and where the captor himself is liable to damages for an abuse of his power.

Messrs. Mason and Slidell were, accordingly, given up to the British authorities, and taken to England on a British war vessel as gentlemen "of distinction."

The exigencies of the situation, as the British government fully appreciated, were such that the American government, because of the life struggle on its hands at home, could not afford to engage in a foreign war at that time, and was forced to yield to the British demand. Thus once more, as on so many other occasions, Great Britain's statesmen, taking advantage of the actual situation of affairs, won for her a contention to which she was not legally entitled. But at the same time, Capt. Wilkes's action and Secretary Seward's reserving the point that the American captain had acted within his legal rights by the laws of nations in stopping the Trent and taking the Confederate envoys from her, are sustained by the original judgment of the Premier of Great Britain and his legal advisers.

THOMAS WILLING BALCH.

Philadelphia, February 5.

THE POLICY OF RECONSTRUCTION.

TO THE EDITOR OF THE NATION:

SIR: Referring to your review of Schurz's "Reminiscences," January 21, and other past utterances concurring with the now common charge that the reconstruction laws were dictated mainly by revenge and party policy, and that the avowed reasons were invalid, may I suggest some considerations justly to be borne in mind:

(1.) Is there not a confusion between what we now—not know, but are coming to think likely—and what was the natural inference from observed conditions then? The question is not of facts, but of motives; and how can the experience of forty years be fairly cited to cast blame on a generation which had not had that experience, so long as they reasoned justly from what they had? Or rather, the question is between two sets of motives, the Southerners' and the Northerners'. That the Southerners were *not* trying to reënslave their ex-slaves is, if true, a good argument for pitying their unjust fate, even while we wonder at their mischance in producing so astoundingly perfect a simulation of that process; it seems to me no argument at all for attributing worse motives to their opponents than before. If we think those motives defensible, provided the reënslavement was projected, we must hold them so if the reasons for belief would convince all rational persons now.

(2.) *Were* these reasons not sufficient? The *Nation* will hardly regard it as irrelevant or without weight that its conductors then thought them overwhelmingly so, and heartily advocated negro suffrage as the one alternative to permanent quartering of a Federal battalion in every Southern county. Mr. Godkin, Professor Norton, C. F. Adams *et al.* will not be termed vindictive partisans talking behind a mask; nor will Mr. Schurz or scores of others easily rememberable, among the then Republican leaders. Then why should the members of Congress generally be not entitled to credit for a like honesty of motive, at the bottom of action, with perhaps meaner motives on top? Would not the same facts now, if existent, lead the present editors and most other Northerners to the same conclusion? Every planter was to have his own negroes permanently back on his own plantation (by understood comity that would ostracize any one who hired another's, and laws forbidding town employment and compelling yearly contracts), hunt them down and chain them up if they ran away, and whip them at will. If this was not at least "semi"-slavery, to what would the name apply? Wherein did it differ from the old except for inability to transfer the negroes to other owners, and a nominal wage easily made a farce? When a righteous motive is supplied by all the knowledge possible short of Divine intuition, why is it necessary to postulate an unrighteous one?

(3.) Beyond this, a further justification has commended itself to perfectly cool and very acute minds. The late Alexander Johnston—anything but a passionate or partisan judge—held that to have admitted the Southern whites, hot with vengeance and with every conceivable motive for resisting the conversion of their old labor system into a new one they utterly disbelieved in and hated, to their old power in the national councils, would have been madness. The historic justification of the reconstruction policy, in his mind, was precisely its keeping the South busy with its internal policy till it was glad enough to let the new system remain. The truth of this view does not concern the question in hand; its honesty does, and there is no doubt that this policy of tying the hands of the South by the negro vote was entertained by many, and was not necessarily a policy of spite, but of serious and defensible statesmanship.

In a word (for a type), Stevens the partisan and the wrathful acted no otherwise than Stevens the shrewd and sincere statesman might well have done, and as the best of the Northern liberals—the very backbone of the later Liberal Republicans and the still later Mugwumps—did also, or advised and helped others to do. Is it good logic to attribute a different set of motives to men for the same action, according to whether we like them or not, or still worse, according to our later change of mind as to the judiciousness of their action? Since a Congress composed wholly of Godkins and Nortons and Schurzes would certainly have enacted substantially the same laws, those laws cannot *per se* be proof of other basic ideas than theirs.

LAUDATOR TEMPORIS ACTI.

Hartford, Conn., January 31.

Notes.

The Macmillan Company announces the following books for publication during the spring: "Peace and Happiness," by Lord Avebury; "The Melting Pot," by Israel Zangwill; "Social Life at Rome in the Age of Cicero," by Prof. W. Warde Fowler; "The Roman Assemblies," by Prof. George W. Botsford; "The Earth's Bounty," by Mrs. Kate V. Saint Maur; "History of the City of New York," by Mrs. Schuyler Van Rensselaer; "Statistical and Chronological History of the United States Navy," by Robert W. Neeser; "The Story of the Great Lakes," by Prof. Edward Channing; "History of the State of Washington," by Prof. Edmond S. Meany; "The Oldest English Epic," by Prof. Francis B. Gummere: "The Life and Times of Laurence Sterne," by Prof. Wilbur L. Cross; "Walt Whitman," by Prof. George R. Carpenter; "Selections from American Literature, 1607-1800," by Prof. William B. Cairns; "Robert Y. Hayne and His Times," by Theodore D. Jervey; "Principles of American Government," by Prof. Charles A. Beard; "The Government of European Cities," by Prof. William Bennett Munro; "The Government of Great American Cities," by Delos F. Wilcox; "The People's Law," by Judge Charles Sumner Lobingier; "Socialism in History and Practice," by Morris Hillquit; "Artificial Waterways and Commercial Development," by A. Barton Hepburn; "Wage-Earn-

ing Women," by Prof. Annie Marion MacLean; "The Laws of Friendship, Human and Divine," by President Henry Churchill King; "The Approach to the Social Question," by Prof. Francis Greenwood Peabody; "Studies in Religion and Theology," by Principal A. M. Fairbairn; "A Valid Christianity for To-day," by the Right Rev. Charles D. Williams; "Modern Thought and the Crisis in Belief," by Prof. Robert M. Wenley; "The One Volume Commentary on the Holy Bible," edited by the Rev. John R. Dummelow; "History of New Testament Times in Palestine," by Prof. Shailer Mathews; "What Is Pragmatism?" by Prof. James Bissett Pratt; "History of Education Before the Middle Ages," by Prof. Frank Pierrepont Graves; "The American High School," by John Franklin Brown.

The fifth volume of Ferrero's "Greatness and Decline of Rome" is promised by Putnams for this month. Among their other early publications are: "The Columbia River," by Prof. W. D. Lyman; "Fraternity," by John Galsworthy; "The Government of American Cities," by Horace E. Deming; "Historic Indiana," by Julia Henderson Levering; and "The Great Lakes," by J. O. Curwood.

During this month Sherman, French & Co. will publish "The Art and Science of Advertising," by George French, and "A Motley Jest," by O. F. Adams.

The Yale University Press announces for early publication "The Beginnings of Gospel Story," a study of St. Mark, by Prof. Benjamin W. Bacon.

A complete edition of the works of Tolstoy will, according to an Associated Press dispatch, be issued by a Moscow publishing house. It is announced that with the approval of Premier Stolypin the censored works of Tolstoy will be included in this edition, which will number about twenty-five volumes.

The Macmillan Co. has brought out an excellent edition of two of Mrs. Horatia Ewing's series: "Six to Sixteen" and "A Flat Iron for a Farthing," with illustrations in color, by M. V. Wheelhouse. The charm of Mrs. Ewing's style is still fresh, greater, perhaps, for the adult than for the child.

An edition of Mrs. Gaskell's "North and South" in the World's Classics (Henry Frowde) will no doubt introduce many readers to what is certainly "one of the finest books in modern English fiction," and will help to dispel the delusion that the author has written only one book, "Cranford"—or two, if "Wives and Daughters" be added,—worthy of notice to-day. The editor of the present edition, Clement Shorter, quotes a fragment of an unprinted letter from Charlotte Brontë on the novel, and points out that two lengthy sentences have been repeated in the text with but slight alterations. In the standard Knutsford edition these sentences are omitted on their second appearance. They are here retained as a curiosity in literature.

The last six volumes containing Northanger Abbey," "Persuasion," "Emma," and "Mansfield Park," have been added to the ten-volume edition of Jane Austen, in St. Martin's Illustrated Library of Standard Authors (London: Chatto & Windus; New York: Duffield & Co.). The introductions, by R. Brimley Johnson, are brief, but they are sufficient; for Jane Austen needs no mediator between herself and the reader. The illustrations, by A. Wallis Mills, ten in each volume, are, as we noted in commenting on the earlier issues, well printed, dainty in color, faithful to the costumes of the period, and cleverly designed. No one but a genius can suggest pictorially the delicacy, the humorous characterization, and the irony of Miss Austen; but Mr. Mills has done as well as any one. The important point is that the type is bold and clear, the paper good, the book light to hold in the hand. Of the inexpensive editions of Miss Austen's novels, this is distinctly the best and most readable.

An anthology of some 650 closely printed double-column pages, containing "Poems of American History," sounds rather formidable, but as a matter of fact it includes an astonishing amount of verse which, if not great or artistically fine, has a certain go and interest. The editor, Burton Egbert Stevenson, remarks in his introduction that his difficulty has been to keep the volume within bounds, and that he has rejected material equal to three times the bulk of what has been included. It cannot be said that his work suffers from too narrow a standard, although any one will miss a favorite or two whose omission seems to him unaccountable—that sonnet of Longfellow's, perhaps, on the unknown victim of the war which Mr. Howells has singled out as one of the best in the language. The collection errs on the side of the too much rather than of the too little, but it remains true that the level of vigor and spirit will be a surprise to most readers. From the anonymous ballad on Nathan Hale, with the almost mystical lilt of its first two stanzas:

> The breezes went steadily thro' the tall pines,
> A-saying "Oh! hu-ush!" a-saying "Oh! hu-ush!"
> As stilly stole by a bold legion of horse,
> For Hale in the hush; for Hale in the hush.
>
> "Keep still!" said the thrush as she nestled her young,
> In a nest by the road; in a nest by the road.
> "For the tyrants are near, and with them appear
> What bodes us no good; what bodes us no good—

to the various effusions on the Spanish war by versifiers of to-day, there is an abundance of memorable work. Perhaps the least interesting section of all is that which deals with the Revolution; while the most striking feature of the later verse is the influence of Kipling and of Mrs. Howe's "Battle Hymn of the Republic." The arrangement is by the chronology of events, not of writers; and brief editorial paragraphs make an historical thread on which the poems are strung. Houghton Mifflin Company has published the book in a style uniform with Prof. C. H. Page's anthologies of British and American poets.

The "Select Poems of Shelley," edited by George E. Woodberry for the Belles-Lettres Series (D. C. Heath & Co), should help Shelley to find his friends. The collection is a genuine golden treasury of the poet's most widely attractive pieces, and it is arranged with unusual tact and suggestiveness. Without in the least desiring to have the emphasis changed from literature to literary history, one wishes that the editors of the modern poets in this series had seen fit to follow the example of the editors of the older authors in furnishing a bibliography—it need not be exhaustive—and page references in the notes. To discover an editor who will render the student these mechanical aids is, however, vastly easier than to secure one who can induct the reader into the heart of the subject. One would not dispense with Mr. Woodberry's critical preface for any number of bibliographies. Happily endowed by temperament for this particular task, and fortified by extensive earlier studies, he displays in the treatment of his difficult theme a rare union of scholarly breadth with keen poetical sympathy and insight. More effectively, perhaps, than any previous critic, he defends the poet against the charge that he is lacking in substance and sense of reality. Particularly to be commended is the omission from this essay of everything tending to excite a petty and prurient curiosity about Shelley's private life.

It has been so long since any new volume has appeared in the Tudor and Stuart Library (Henry Frowde) that we had begun to fear its discontinuance. Now comes a reprint of Turbervile's "Booke of Hunting," line for line and letter for letter (with the exception of a few obvious misprints corrected), from the edition of 1576. It is a proper and entertaining book of venerie, which shows on every page that it proceeds from the great times of Elizabeth. "Afterwardes," as may be read on a page facing a quaint wood-cut of the Queen and her court—"afterwardes when all the huntsmen be come together, they shall make their sundry reports, and present their fewmishings [curiously enough, the "New English Dictionary" quotes no example of this word from Turbervile] unto the Prince or master of the game in field, one after another, every man rehearsing what he hath seene." What a picture of the old life such a sentence evokes. It is this seriousness as it were of a royal art that gives the book its attraction.

We have received with pleasure the last of the books printed by W. B. Yeats's sisters at the Cuala, formerly the Dun Emer, Press, at Dundrum, near Dublin. It is made up of an essay by W. B. Yeats, called "Poetry and Patriotism," interesting for its biographical details, and of a lecture by Lionel Johnson, which has never before been published. Johnson's essay is somewhat of the nature of an apology for his own aloofness from the Gaelic movement, and a plea for a larger tolerance of outside influences.

A forgetful generation may need to be reminded by "Memorials of Two Sisters" (Longmans, Green, & Co.) that Susanna and Catherine Winkworth were agents in the importation of German thought and literature into England in the last century. The letters of these worthy ladies open a window upon the "earnest," humorless, efficient society in which it was possible to meet the Cobdens and the Gaskells at "an eating-tea in the Pompeii room." Susanna Winkworth was chiefly known for her translation of Niebuhr's life and of the life of Luther. Catherine's main work was the "Lyra Germanica." They lived strong, wholesome, helpful lives, finding their chief excitement in theology and wrestling successively with Kingsley, Miss Cobbe, Pusey, John Stuart Mill, *l'art pour l'art*, Frederic Harrison and Protab Chunder Mozoomdar.

The "Recollections of a Spinster Aunt" (New York: Paul R. Reynolds) deals so

predominantly and so fluently with impersonal matters, the art, the music, and the social customs of the mid-Victorian period, that the reader is led to suspect that the "Dear Mary" to whom most of the letters are addressed was really the *Creamshire Chronicle*.

Mrs. John Lane contributes to the English translation of Anatole France's works a graceful and generally idiomatic rendering of "Balthasar" (John Lane Co.). This volume illustrates its author's versatile talent in the rôle of a teller of tales, brilliant, ironical, and fantastic. Besides the story which gives its title to the book—a daringly original conception of one of the Three Wise Men, dazzling in its Oriental color—there are included here "The Curé's Mignonette," a whimsical little satire on miracles; "M. Pigeonneau," the love-story of an Egyptian archæologist in M. France's happiest vein; "The Daughter of Lilith," based on a curious passage in the Talmud; "Laeta Acilia," dealing with an unsuccessful attempt of Mary Magdalen to convert a Roman matron; "The Red Egg," a physician's story of abnormal psychology; and "Honey Bee," which we are now enabled to say is one of the finest fairy romances in the language. This last tale, which was written *virginibus puerisque*, is of singular beauty and purity, and, being long enough to make a small volume in itself, might well be detached from its more sophisticated companions to serve as entertainment for old-fashioned children, uncorrupted by scientific story books. As for the rest, they are such things as a modern Sheherazade with masterly lightness of touch and artful silences might devise to beguile the leisure of a monarch.

Considering the period covered by Vol. VIII of Gaillard Hunt's "Writings of James Madison" (G. P. Putnam's Sons), very little really new material has been found. It begins with 1808, when Madison was still Secretary of State, carries him through his Presidency and the War of 1812, and runs to 1819, when he was in retirement with prestige and popularity seriously impaired. The last year of his service in the State Department had seen the fruitless negotiations with Rose on the Chesapeake affair, negotiations doomed to failure because the instructions of the British commissioner were based upon a profound and contemptuous error in estimating the American feeling on that subject. Madison had a difficult part to play, as he was still seeking to make effective Jefferson's commercial policy, and was defending to the best of his ability neutral commerce against the "sport of belligerents." He had not been President long before he found that he had been duped by the English, and again by France, and war was the only possible result. Little light is thrown upon the war, though Madison was often obliged to take charge of the different departments, so incompetent were the nominal heads. Fortunately, he became reconciled to Monroe; but even Monroe brought little strength to the administration. There was difficulty in filling the Treasury Department after Gallatin left on his peace mission, and the want of a good Secretary of War was chronic. The President was not able to attract to his service strong men, and the letters in this volume prove how restricted were his confidences. To Jefferson alone he wrote with entire freedom, and as if the outpouring of his thoughts on paper was of service to himself. John Q. Adams, minister to Russia and Monroe's Secretary of State, commanded his respect and a large measure of his confidence. This respect was gained by Adams's ability and capacity for intelligent management of public questions; but Madison could not follow Adams's suggestions for suppressing the Barbary pirates, deeming them too bold. Some letters on slavery and the Supreme Court, written in his retirement, make interesting reading, and his special Presidential messages are models of brevity. To Robert Smith he said: "A resort to formal messages on every occasion where executive information might be useful, is liable to obvious objections." Mr. Hunt might have enlarged his notes with advantage, and filled in the missing dates in diplomatic references. Was not the Cerberus intended on p. 76, where "Cerbeau" is printed?

Paul Barbier's "Age of Owain Gwynedd" (London: David Nutt) will prove of peculiar interest to the student of Welsh history. It was in the twelfth century that the struggle was most acute between forces of the Anglo-Norman monarchy and the Celtic tribal organization, between the ideals of the Celtic Church as they presented themselves to Sulien, and those of the Roman as they were conceived of by Hildebrand. Then, too, the literature of Wales revived and Celtic folklore began to penetrate into the writings of neighboring peoples. Mr. Barbier has selected for treatment the years between 1135 and 1170, between the death of Henry I and the eve of the overthrow of Welsh independence by Edward I, and he has taken as his central figure Owain Gwynedd, who, along with Rhys of Gruffudd and Llywelyn Fawr, swayed the destinies of the whole country during this period. Hence the present work is a connected and chronological account of the history of Wales during the years that he ruled in Gwynedd. It is published as it was written eleven years ago for the Newport National Eisteddfod, and is a welcome addition to the scanty literature on Welsh history.

A quarter of a century has elapsed since the appearance of Helen Hunt Jackson's "Ramona," which was written with the object of doing for the American Indian what "Uncle Tom's Cabin" had done for the negro. It was promptly translated into many languages and was hailed by many as the "great American novel." It is still a good seller, but is now more modestly called "*the* California book" by George Wharton James in his "Through Ramona's Country" (Little, Brown, & Co.), a book of 406 pages, with many pictures, telling and showing all that any tourist on the trail of a famous story can want to know. There are Californians who profess to have known the original Ramona, or the Indian Alessandro; but Mr. James assures us that every character in the book is fictitious, Ramona herself being a composite portrait. The descriptions, however, and the background, are real; and this background of California scenery, missions, Indians, and their avocations and habits, is repainted by the author in sober prose. He is one of those sentimentalists to whom most Indians are white and most whites black, but let that pass. The Indians certainly were maltreated by the whites, though not so badly as they maltreated each other. The most interesting pages in this book are those describing the astonishing changes that have taken place in California since Ramona's day—the Indians nearly all gone, and replaced by Chinese and Japanese; Los Angeles, then a town of 5,000 inhabitants, now a city of 300,000, taxing itself this year $23,000,000 for an aqueduct to bring water a distance of over two hundred miles, and so on. A guide-book of even ten years ago is useless.

"Highways and Byways of the Pacific Coast," by Clifton Johnson (The Macmillan Co.), covers more ground than the preceding book, beginning with the Grand Cañon of Arizona, dallying in southern California, and then proceeding northward to the Yosemite, to Oregon, Puget Sound, and Canada. It is not a guide-book filled with facts and figures, but simply relates what the author saw with his own eyes and heard with his own ears; and the camera has aided the pen. San Francisco is described as it was before the earthquake. Each chapter has a note appended containing suggestions for intending travellers.

The project of publishing a great "Thesaurus of the Greek Language," which, largely through the efforts of Sir Richard Jebb, had been practically adopted by the International Association of Academies of Sciences, but which was later abandoned, has now been taken up in a new quarter. The Greek government announces its intention of marking the centennial anniversary of the War of Independence (1921) by the publication of such a "Lexicon of the Greek Language from the Earliest Times to the Present Age." The preparation of the work has been entrusted to a committee composed of Prof. Th. Kantos, G N. Chatzidakis, and S. Menandos, who are to select their coworkers and make all other arrangements. The government has for the present set aside 10,000 drachmas annually for the purpose. The committee has its offices in the Bureau of the National Library in Athens, where the manuscripts, too, are to be preserved. Prof. Karl Krumbacher, of Munich University, the leading living scholar on Byzantine Greek literature, publishes in the *Internationale Wochenschrift* of Berlin, No. 51, an article of considerable length on the character and contents of such a dictionary, and makes a plea for the organization of a Greek Academy of Sciences with headquarters in Athens.

A wealth of hitherto unavailable material is made accessible in the new "Quellenbuch," on the history of Ethiopia, published by the Jesuit scholar, C. Beccari, under the general title, "Rerum Aethiopicarum: Scriptores inediti a seculo xvi ad xix" (Rome: C. de Luigi). The new volume, "Emmanuel d'Almeida Historia Aethiopica," is the third in a set of four, which contain the hitherto unknown account of the investigations and travels of the Portuguese Manuel d'Almeida, who first came to Abyssinia in 1624 and remained there as the head of the Jesuit Mission to 1633. The three volumes that have appeared fill more than sixteen hundred pages, the bulk of which has been taken from the manuscript of the author, found in the archives of the Jesuits. The contents of Vol. III are divided into ten books, depicting the customs

and manners of the people, the history of Ethiopia on the basis of native sources, the history of the rise and fall of the Jesuit missions in Ethiopia, the religion, creed and church ceremonies of the natives, etc.

The biography of Abraham Lincoln by Carl Schurz has now appeared in a German translation, by Mary Nolte (Berlin: Georg Reimer).

The *Schwäbische Merkur* of Stuttgart reports that the late Eduard Zeller had in his last years prepared some reminiscences, "Erinnerungen eines Neunzigjährigen," which, although originally intended only for his nearest friends, are now to be printed, but not published. The veteran philosopher describes particularly his student life in the seminary and the famous *Stift* in Tübingen.

"Die literarische Gegenwart: 20 Jahre deutschen Schrifttums, 1888-1908," by Richard Urban (Leipzig: Xenien Verlag), deserves credit for thoroughness and discrimination, and, so far as is possible in criticising contemporaries, for impartiality. It was a very happy idea of the author to have his work introduced by a few words from the pen of Max Kretzer, who was the first novelist of that curious period of transition to be acclaimed by the new school, and the first to be forgotten.

Ludwig Thoma's robust Bavarian humor is so human as to appeal to a wide circle of readers, even when his subject is mainly of local interest. His latest book, "Briefwechsel eines bayrischen Landtagsabgeordneten" (Munich: Albert Langen), offers irresistibly amusing glimpses of rustic types, which he portrays as inimitably as does his illustrator, Eduard Thöny.

"Die Franzosenzeit in Deutschland 1806-15 in Wort und Bild der Mitlebenden," by Friedrich Schulze (Leipzig: R. Voigtländer Verlag), contains in its two handsome volumes an exceptional amount of new matter for the historical student. No fewer than 211 illustrations from contemporary sources are here reproduced, while citations from letters, brochures, memoirs, periodicals of all kinds, sermons, reports of ambassadors, poems, and the like, appear in their original form. The editor himself has virtually done nothing but arrange skilfully this rich material.

The "Tagebuchblätter eines deutschen Artzes aus dem Burenkriege," by Dr. Hero Tilemann (Munich: C. H. Beck), depicts the varied experiences of a young German physician, who, immediately after his graduation in Leipzig, enters the service of the Boers in the war with England. It is a posthumous volume, the author having given his life for the cause he espoused. By no means blind to the weaknesses of the Boers, he furnishes an inside view of the great struggle. There are two illustrations and one chart.

As the third volume of the scholarly "Geschichte des deutschen Volkes und seiner Kultur," by Heinrich Gerdes, we have a volume of 720 pages, with the special title, "Geschichte der Hohenstaufen und ihrer Zeit" (Leipzig: Duncker & Humblot). The inner development of that period, rather than the external events, constitutes the bulk of the author's account. The best of modern sources have been made use of; but unfortunately the index is anything but complete. The work is to be continued down to the year 1500.

The excellent work of Theodor Zielinski, "Cicero im Wandel der Jahrhunderte" (Leipzig: Teubner), which originally appeared a few years ago as a volume of one hundred pages has, in the new second edition, come to be a solid book of more than four hundred and fifty pages. In substance the work depicts the personality of Cicero and his influence on the course of history, especially on the spread of Christianity and the renaissance. Some chapters, such as that on English Deism, are entirely new.

"Delbrück-Festschrift: Gesammelte Aufsätze, Professor Hans Delbrück zu seinem 60. Geburtstag dargebracht von Freunden und Schülern" (Berlin: Stilke) is an exceptionally rich collection of investigations in the departments of theology, philosophy, history (ancient, mediæval, and modern), political science, and linguistics. Leading scholars are well represented among the eighteen contributors. Adolf Lasson, for example, writes on "Geschichtswissenschaft und Philosophie"; F. J. Schmidt on "Ranke und Maxmilian II von Bayern"; K. Lehmann on "Hannibals letzter Kriegsentwurf"; Alb. von Ruville on "Bismarck, Napoleon III und Bayern im August 1866."

G. Schreiber's new work, "Die religiöse Erziehung des Menschen im Lichte seiner religiösen Entwickelung" (Leipzig: Quelle & Meyer), is a thoughtful book on religious education, sharply opposed to the traditional methods of the church with its Bible history, catechism, and the like. The author advocates a system of religious pædegogics which shall present Jesus as the model.

"Jesu Persönlichkeit: Eine psychologische Studie," by Karl Weidel (Halle: Karl Marhold), is an effort largely along the lines of Wrede's "Messiahgeheimnis" and Schweitzer's "Von Reimarus zu Wrede," to outline in a scientific, yet a popular and compact, way a life of Christ from a modern point of view. It is the character of Jesus as portrayed by the Synoptic gospels which furnishes the material for this psychological analysis, which throughout is suggestive, even if radical at certain points. A work akin to it in spirit but differing in method and content is the "Jesus Christus" of Fritz Resa (Leipzig: B. G. Teubner), with the explanatory subtitle "Bericht und Botschaft in erster Gestalt," which has the special purpose of familiarizing pupils of secondary schools with the results of modern research on the person and work of Jesus.

A number of books on Africa have recently been published in Paris. Doubtless, President Roosevelt has already included in his preparations the book in which Guillaume Vasse describes how he killed, in three years of African hunting, 2,106 pieces of game—498 big, like antelopes, gnus, zebras, lions; 1,559 birds, 49 reptiles—"Trois années de chasse au Mozambique" (55 plates, Hachette). "La Mort de Philæ," by Pierre Loti, mingles with meditations which only Loti could write on the past of Egypt much deprecation of the ruthlessly unpoetic part which perfidious Albion is playing in the Egypt of to-day (Calmann-Lévy). Ernest Psichari, a grandson of Renan, plunges into an Africa which has no past, and where the dread sleeping sickness renders any present difficult, in "Terres de soleil et de sommeil" (Calmann-Lêvy). Edmond Doutté publishes, with a reproduction of amulets, an account of the survivals in North Africa, of underground human practices of the most hoary antiquity—"Magie et Religion dans l'Afrique du Nord" (Alger: A. Jourdan).

"La Côte d'Azur russe," by E. A. Martel, describes this diligent explorer's travels on a mission of the Russian government through southern Russia, the west Caucasus, and Transcaucasia, with thirty-four plans, and 400 illustrations after photographs taken by the author in this delightful, but little known region (Paris: Delagrave).

"Athènes couronnée de violettes," by Georges Ancey, is literature of high quality. The author's acrid plays of contemporary life are warrant for his powers of observation; but his vision of Greece is colored by classic myth and poetry far more than the late equally well written, but more modernist book of the romancer, Louis Bertrand. Like the "Sparta" of Maurice Barrès, such volumes issue forth from a high culture and philosophy peculiar to France, and embodied in Ernest Renan's prayer on the Acropolis.

Maurice de Waleffe in "Les Paradis de l'Amérique Centrale" offers the reader lively, and sometimes breath-taking, impressions of a Parisian, unbiassed by information and unembarassed by reflection, on the Antilles, Panama, Costa Rica, and Mexico (Paris: Fasquelle). On the other hand, "La Bolivie," by William Van Brabant is a carefully complete description of a republic, whose possibilities, not to speak of actualities, are wonderfully little known, 476 pages (Brussels: J. Lebègue). A small book which may open eyes to the international competition going on in this other America is "L'Amérique du Sud et l'expansion belge," by R. J. Pierre. (Paris: A. Colin.)

"Amérique et Japon," by John Spartali, with a preface by the French Admiral, Bienaimé, is not a book of travel; it compares the political and economic conditions of the two countries, gives the reasons which might bring on a conflict between them, and the present state of the armed fleets of each. It contains forty-four photographs, thirty plans of battleships, and three maps (Paris: Le Yacht).

A similar study of Old World countries, where international relations are strained, "Constantinople aux derniers jours d'Abdul Hamid," by Paul Fesch, 673 pages, with 324 photographs (Paris: M. Rivière), describes the struggle between France and Germany in the economic field. It is all the more valuable that it was written before present revolutionary uncertainties, in which inherited positions are not always perceived.

The annual report of the Public Library of the District of Columbia, for 1907-8, prepared by George F. Bowerman, contains an interesting passage on the circulation and the effect of "open" shelves:

It is gratifying to be able to report that the percentage of fiction circulated has been further reduced. In 1903-4, when no books except fiction were on open shelves for direct access, fiction formed nearly 84 per cent. of the total circulation. Gradually during the last four years more and more books from non-fiction classes have been put on open shelves, and more and more

help and guidance has been given to readers requiring assistance, with the result that the fiction percentage has been reduced to 65. The new useful arts and science room is an open-shelf room, where those classes are directly accessible to readers. . . . In spite of too frequent thefts from open shelves, the value of putting the people in direct contact with the books, instead of forcing their approach through a card catalogue, is so well attested by the gradually falling fiction percentage with the increase of such open shelves as to justify the recommendation still further to extend such facilities until it is possible to have the cream of all classes of the library directly accessible to readers. . . .

The effectiveness of the plan of having books on open shelves in stimulating circulation is strikingly shown by an experiment with a little collection of books of biography kept in one corner of the open-shelf room. The volumes of biography in the adult circulating department of the library number about 6,000. During two months 355 choice volumes of biography were kept in this special collection. From them there was a circulation of 783 volumes out of 1,538 volumes circulated from the entire subject of biography, or 45 per cent. of the circulation from the subject. The marked increase in circulation in the classes of travel, social and political sciences, and literature placed on open shelves, as shown in the report of the chief of the circulating department, argues strongly for the beneficial effects on circulation from open shelves.

At the Lenox Branch of the New York Public Library there is a Lincoln exhibition consisting of original manuscripts, books, portraits, and miscellaneous Lincolniana. The manuscripts include a legal "plea and notice," written by Lincoln when a young lawyer in Illinois; a recommendation for a negro boy, headed "Executive Mansion, Mar. 7, 1861," and a government document signed by both Lincoln and Seward. Among the books are all remarkable biographies of recent years and a few important eulogies, together with the works of Lincoln himself. There are a large number of portraits showing the President from youth to a short time before his death. These are mostly of poor quality artistically, being taken from contemporaneous magazines and papers; but they show the development of the strong, sad face so familiar in later life. The item of special interest in connection with the assassination is the large broadside issued by Stanton offering $100,000 reward for the arrest of Booth and his accomplices.

American students will find the British Museum much enlarged within the current year. The houses bought from the Duke of Bedford some years ago for £200,000, with the land on which they stood, have been cleared away, and a new building is being erected, which will be connected by passages with the main block. Two stories and the basement of the new building will be allotted to the library. In April, what is known now as the Large Room is to be broken down on the side near the new building, so that a larger room may be provided. While the alterations are going on, accommodation for students will be found in the Catalogue Room.

The City Library of Frankfurt-on-Main has issued a report of the organization of the American Department of the library, and of its development during the years 1905-1908. The collection consists now of some 3,500 volumes, half of them gifts of American universities, city and State governments, and the national government. Among the works specially mentioned in the report are complete files of the *Nation*, the *North American Review*, and the *Magazine of American History*. In the reading-room thirty-four American periodicals are available. A copy of the first German Bible printed in Germantown by Sauer is one of the treasures of the collection.

The Rev. Henry Griggs Weston, who had been president of Crozer Theological Seminary, Chester, Pa., since 1868, died February 6. He was born at Lynn, Mass., in 1820, and was graduated from Brown University in 1840. After twenty-five years' service as active pastor, he came to Crozer Seminary. Among his books are: "The Communion Lectures" (1867), "The Four Gospels," "The Epistle of James," "Constitution and Polity of the New Testament Church," "Outline of Systematic Theology" (with the Rev. E. H. Johnson), and "Matthew, the Genesis of the New Testament."

Adolf Stöcker died in Berlin, February 8, in his seventy-fourth year. At one time he was one of the favorite court preachers, but had fallen out of favor. He recently resigned his seat in the Reichstag, where for a number of years he occupied a semi-independent position as a Christian-Socialist. Among his publications are: "Predigtsammlungen," "Dreizehn Jahre Hofprediger und Politiker," "Wandelt im Geist," "Evangelienpredigt," "Eins ist not," "Salz der Erde," "Verheissung und Erfüllung," and "Evangelium, eine Gotteskraft."

From Altona comes the news of the death in his seventy-first year, of Karl Rethwisch, the Plattdeutsch poet. His best-known works are "Weihnachtsbilder" and "Knospen."

On January 20, at the age of eighty-six, died Prof. T. H. Aschehoug, the great Norwegian jurist, economist, and journalist. He wrote a number of books that have high standing.

PIONEERS OF CANADA.

The Conquest of the Northwest. By Agnes C. Laut. 2 vols. New York: Outing Publishing Co. $5, net.

The Search for the Western Sea. By Lawrence J. Burpee. New York: D Appleton & Co. $5, net.

In this commemorating age, the celebrations of centenaries, bi- and tercentenaries crowd close upon one another. The historical conscience, very much alive, and bent upon giving each past celebrity his due, sometimes lays an emphasis quite disproportionate upon characters and events of small significance. The books above named, however, mark a tercentenary at the observance of which few men will carp. The year 1609 is a critical date in the search for a waterway to the great Western sea, a quest not successful until almost three hundred years later; an incident of this quest is the opening of the Far North in America, a region by no means yet fully withdrawn from mystery, but destined plainly to be the home of millions of men. The books of Miss Laut and Mr. Burpee are both of them well-studied accounts of the same fine achievement.

In each narrative, the hero first celebrated is Henry Hudson, the inception of whose effort at Amsterdam, in 1609, bore fruit that same year in the discovery of the Hudson River, and the year following in that of Hudson's Bay. Hudson saw that the river would not lead him to the Western Sea. Cast out by his mutinous shipmates to perish in his little shallop, he did not see that the vast Northern bay which he had penetrated also afforded no practicable path to his goal; nor was that fact perceived for more than two hundred years by any one of his hardy and enterprising successors. The story of these path-finders is presented very interestingly by Miss Laut and Mr. Burpee. The pioneers were men of different strains: Radisson and La Vérendrye, the Frenchmen; Munck, the Dane; Hearne, Thompson, and Alexander Henry, men probably, like Hudson, of English blood; rugged Scotch, or Scotch-Irish, like McLoughlin, Lord Selkirk, Simon Fraser, and chief of all, perhaps, Alexander Mackenzie, discoverer of the Mississippi of the North, and first to cross the continent.

Both writers, in using their authorities, do not scruple to enhance the vividness of their recital by "reading between the lines." No doubt, an historian developing the truth from the meagre jotting of some old writer, is justified in inferring to some extent what must have been and supplying from his own imagination shading and color. But the writer who does this, risks much; he is tempted to go to unjustifiable lengths, arousing the suspicion that the account is more of fancy than of fact. Miss Laut's reading between the lines helps to picturesqueness. The ship's log is usually bare and bald to the last degree, made by fingers cramped with cold amid imminent dangers. Why not sketch in the environment that certainly existed—the crash of splitting bergs, the black lee-shore looming dangerously close by, the unending Arctic night, with its starry and auroral splendors? The Hudson's Bay trader's journal does not say that his cheek flushed and that he handled his gun nervously when he found his rival, the "Nor'wester," had anticipated him with the Indians bringing in beaver skins, but, of course, it must have been so and why not put in the touch? The explorer does not tell us that his heart stood still when his canoe plunged down the cataract, but whose heart would not, and why not quicken the reader's pleasurable thrill by supplying the suggestion? To fill out the picture is all very fine, but it is hazardous; and we think Miss Laut in particular might show more caution. In truth, an adherence to the bare words of her sources would have given often

vividness enough. Says Abacuk Prickett, the shipmate of Hudson:

> We raised land to the north, and commlng night, there hung on the easternmost coast point many ilands of floting ice, and a beare on one of them, which from one to another came toward us till she was readle to come aboord. But when she saw us looke at her she cast her head between her hinde legges and then dived under the ice, and so from one piece to another until she was out of our reach.

Mr. Burpee's practice as to reading between the lines is more restrained than Miss Laut's, comporting better with sober history, and his work, therefore, does not suffer in comparison with hers.

She appears to have consulted more authorities; the mass of manuscript material existing in England he seems to have used little. Yet he misses little that is essential, though it strikes us as strange that so important an affair as the conquests of Iberville in Hudson's Bay, near the opening of the eighteenth century, should receive almost no mention. To be sure, they were no part of the search for the Western sea, but Mr. Burpee's work is intended to be a history of the development of the Far North, as well as of the memorable search, and ought to note such episodes as this. As to geographical details, Mr. Burpee's book is admirable, the text being helped out by minute and well executed maps. He would have done his readers a favor, had he, like Miss Laut, divided his work into two volumes. His one volume is too heavy to hold in one's hand during the many hours which its perusal requires.

Both books are highly creditable to their authors—the first comprehensive records, supplemented by a profusion of beautiful illustrations, of the development of Northern British America as a home for men.

Canadian Types of the Old Régime, 1608-1698. By Charles W. Colby. New York: Henry Holt & Co. $2.75 net.

In a characteristically modest preface, Professor Colby disclaims for this series of popular lectures anything more than a new presentation of known facts. It is safe to say, however, that many of these facts will be new to the vast majority of readers; to all, indeed, who have not been close students of early Canadian history; and, moreover, they gain a novel and very real value because of the author's point of view and effective presentation. His object is to set forth certain aspects of Canadian life under the French régime; and to secure distinctness he selects a single personage as typical of each class, and places him well in the front of the stage, though not to the entire exclusion of minor figures. Thus, Champlain stands as the type of the explorer; Brébeuf of the missionary; Hébert of the colonist; D'Iberville of the soldier; Du Lhut of the *coureur de bois;* Talon of the *intendant;* Laval of the bishop; Frontenac of the governor; yet one learns at the same time a good deal about La Salle, Maisonneuve, François Hertel, Radisson, Hennepin, Nicolas Perrot, La Barre, Denonville, and other men of action of the old régime. The historical background against which these notable figures move is admirably sketched in an initial chapter; and the whole subject is rounded off by a final chapter, "The Woman," in which we are introduced to the heroine Madeleine de Verchères, and those pious and self-sacrificing ladies, Marie de l'Incarnation, Jeanne Mance, and Marguerite Bourgeoys.

The following paragraph, contrasting La Salle and Du Lhut, gives a fair idea of the simplicity and directness of Professor Colby's style:

> The vindicatlon of Du Lhut [from the charges of the mendacious Hennepin] may seem a disparagement of La Salle. But the foregolng paragraph has not been written with such lntent. Nothlng Du Lhut ever dld is so brllllant as La Salle's descent of the Mississippi to the Gulf. These two lovers of the wllderness had different gifts, and each expressed himself ln hls own way. Du Lhut had a steadiness and sagaclty which were lacking in La Salle. He could put hls talents lnto joint stock with those of other people. La Salle, in his self-centred isolatlon, his lntensity, hls *hauteur*, is more impressive, but it may be doubted whether he was more useful to his country. Du Lhut's task was to explore thoroughly the lands of the Sioux, through only a part of which Radisson and Groiseilllers had passed, to build forts among the Crees and Assiniboines, to establish the reign of peace among these western tribes, and to bring them all into cordial relations with France. Between them, he and Nicolas Perrot were worth more to their nation than a regiment of regulars.

The illustrations include reproductions of seventeenth-century engravings, such as the Habitation, at Quebec, and the Fight with the Iroquois, from Champlain's "Voyages," and the Martyrdom of the Jesuits, from Du Creux's "Historia Canadensis"; as well as portraits of the great French ministers, Richelieu and Colbert, and of Champlain, La Salle, D'Iberville, and others.

CURRENT FICTION.

The Missioner. By E. Phillips Oppenheim. Boston: Little, Brown & Co.

The temptation of St. Anthony has long been a favorite theme of many arts, and Mr. Oppenheim has cast no luminously original rays upon the subject in this his latest contribution to the moment's fiction. The Missioner is our old friend, the exponent of athletic piety, whose spiritual and physical beauty impress the weary-eyed woman of the world. In the present instance, she is so impressed, that after flouting him before her friends and denying him lodging on her estate, she gathers up her Paquin draperies and starts in pursuit of him. Her interest, however, is at first only that of the chase; and when he discovers this fact, he leaves her in a tempest of rage, and seeks oblivion in a round of somewhat unconvincing Parisian dissipation. His better self, however, regains the ascendant, and he returns to his work in London, saves the lady of his heart from the consequences of a youthful indiscretion, and the story ends in the good old way, with lovers two by two entering the matrimonial ark. The most interesting point of the book is reached in the chapter entitled "The Way of Salvation," where the Missioner abandons his evangelization of the poor to preach the gospel of responsibility to the rich. The note is not new, but can scarcely be touched too often or too decisively. The story, as a whole, leaves the impression that a more leisurely handling would have resulted in better work.

The Maison de Shine. By Helen Green. New York: B. W. Dodge & Co.

The life of the mummer has in it inextinguishable literary and dramatic value. Take the traditional situation of Harlequin laughing while his heart breaks with hidden pain, and you have ready-made tragedy. Take the contrast between the tinsel and glitter of the stage throne-room and the dingy reality of the actor's bedroom, and you have your infallible comic material at hand. That is why a book like Helen Green's "Maison de Shine," which attempts to chronicle life in a cheap boarding house for vaudeville "artists," is bound to carry a certain amount of interest. Unfortunately, our author has added nothing to the value of her rough material. The sketches move on in a succession of absurd plots and silly situations delineated in the spirit of what is known professionally as "slap-stick" humor. After a few chapters, it is largely monotony.

The Forewarners. By Giovanni Cena; translated by Olivia Agresti Rossetti; with a preface by Mrs. Humphry Ward. New York: Doubleday, Page & Co.

The stirring of new ideas among the artisans of Italy bears sombre result in this book. A proofreader in Turin, poor, intelligent, gentle, is moved by the remembered sorrows of his own childhood and the ever-present suffering around him to put into autobiographic form his griefs, his sympathies, and aspirations. To compel the attention of the King to his subjects' woes is part of his plan, and to this end he is willing to sacrifice his own life. His story is the story of the tenants of "Aëropolis," an attic tenement where are housed workers and idlers, geniuses and castaways, meeting on the common

ground of poverty. It is a tale of misery and degradation, irradiated here and there by neighborly office and the gleam of ideals. It is a cry of rebellion against the world's poverty, a wail of despair that "the hunger of some is due to the greed of the few."

The ghastliness of some of the episodes has hardly been exceeded in the literature of wretched humanity. A feature less familiar in writings of the sort is the absence of anarchism and violence from the remedial schemes of the writer. He plots against his own life only, and that to force a hearing. In his sketch of reconstruction the chief instruments are doctors and school teachers. Hereditary rights of property are to be abolished, but gradually.

The sensation produced in Italy by the book—such as to compel, it is said, a change of ending—it is not difficult to understand, particularly since, as Mrs. Humphry Ward points out in her preface, the pitiable estate of the Italian artisan has had hitherto less representation in literature than the conditions of either the peasantry, the bourgeoisie, or the cultivated middle class. It is, however, rather as a cry than a suggested cure that the book remains in the memory, and the cry is often broken, spasmodic, crudely incoherent.

The Sunny Side of the Hill. By Rosa Nouchette Carey. Philadelphia: J. B. Lippincott Co.

This story, like others of its well-known origin, is excellently adapted to feminine youth standing just a little beyond where the brook and river meet. As books for this class of readers are sometimes above them, and almost always beneath them, a welcome is due to a story which is mild, modest, interestingly eventful, and well-written. The home affairs and love affairs of an English family, district-visiting, tea-drinking, cycling, motoring, and gardening fill the days; and old-lavender stories of by-gone romances furnish a surrounding atmosphere. There is a loving, lofty mother, of Edgeworthy aloofness; a wise and merry spinster aunt; a lame hero with a motor car, several nice girls in addition to the bright-hearted, sensible little heroine, and no dabblers in malice prepense. But to give details of this simple story would be like analyzing a sugar plum; to criticise it like sitting in judgment on a kitten. Not that the story is all sweetness and frisk. There are troubles bravely met, and round pegs living cheerfully in square holes; a tale compact of good sense, healthy sentiment, and genuine highmindedness.

Dreaming River. By Barr Moses. New York: Frederick A. Stokes Co.

This little story would be negligible were it not for its underlying theme, which possesses sufficient psychologic interest to save the discussion of the work from the pettiness of breaking a butterfly. The tale is that of a young and singularly ill-balanced poet who lives hermit-wise in a lonely farmhouse called Dreaming River. To him comes for protection a girl of sixteen, a penniless orphan, who turns to him as her only kin in obedience to the last wish of her dying father. The growth of love between them, perturbed by blizzards and cyclones, both without and within, makes up the rest of the story, which ends with Dorothy's surrender, leaving the reader somewhat uncertain as to the resulting happiness. The author thus words the root of his matter:

> She had the secret at last! The self back of the deeds, and the thoughts, and the words; . . . and, after all, it was not the words nor the thoughts nor the deeds of a man that one loved, but the essence of his being, his self, his soul.

One can hardly fail to meet this statement with the oft-repeated questions: "How far can that essence be dissociated from those thoughts, acts, and deeds? Imperfect as these media may be, are they not the only ones through which the soul can declare itself? Is not the tree to be known by its fruits, the field by its mixture of wheat and tares?" Respect as we may the author's intention in this work, to these questions he gives no answer.

The Oxford Hymn Book. New York: Henry Frowde. $1.15.

This interesting addition to our hymnology was edited by Dr. Thomas Banks Strong, Dean of Christ Church, and Dr. William Sanday of Oxford. They invited the coöperation of Miss Mary Church, who edited the "Life and Letters of Dean Church," and the Rev. James M. Thompson, dean of Magdalen College. For advice in the choice of music Dr. Basil Harwood, organist of Christ Church, has been largely responsible.

In the selection of hymns the editors have been guided by principles which are at once so sound, so well expressed, and so rarely followed that we cannot do better than quote at some length from the preface:

> There are two ideals of hymn-book composition. One is, to endeavor to provide as far as possible for each several occasion that arises either out of the course of the Christian Year or out of the common vicissitudes of human life. The other is, to make a more restricted selection of those hymns which appear to satisfy a certain standard and to be content with a more approximate application of them to particular occasions. We should expressly wish to disclaim any thought of competing with the former type of hymn-book, which is already well represented. . . .
>
> The qualities that we have looked for most have been simplicity, directness, and genuineness of religious feeling. A certain sort of cheap sentiment, of conventional and rhetorical form, of weak and honeyed phrase, is what we have most sought to avoid. On the other hand, we have not been afraid of what some may think prosaic baldness, if it had the stamp of reality and if it was relieved by a few good lines. These are sometimes set off all the more by their plain surroundings.

The prime trouble with most hymnals is that they are far too large and consequently contain a vast amount of rubbish. The "Church Hymnal," now widely used by Episcopalians in this country, contains 679 pieces, of which more than half might well be spared. Some three years ago a new hymnal was prepared for the Methodists; it was an improvement on the old, in that it contained only 717 hymns instead of 1,117. "The Book of Praise," edited for the Golden Treasury Series by Roundell Palmer about forty years ago, prints in the revised edition 447. "The Oxford Hymn Book" has 332 in English and 18 in Latin; but a study of these pages serves only to strengthen our conviction that there are not more than 250 good hymns in our language.

But the significant feature of this volume is the sedulous avoidance of "cheap sentiment, of conventional and rhetorical form, of weak and honeyed phrase." No hymnal with which we are acquainted has so successfully adhered to this ideal. The key-note of the severity and directness of work is struck in the motto prefixed to Book i, from the "Sarum Primer" (1558):

> God be in my head,
> And in my understanding;
>
> God be in mine eyes,
> And in my looking;
>
> God be in my mouth,
> And in my speaking;
>
> God be in my heart,
> And in my thinking;
>
> God be at mine end,
> And at my departing.

From beginning to end there is nothing that may be condemned as soft or gushing. This austere taste is displayed as much in what is omitted as in what is put in. To take two examples of hymns with which people, both young and old, are specially familiar—Edmund H. Sears's "It came upon the midnight clear" and Phillips Brooks's "O little town of Bethlehem" are both left out. And so is Horatius Bonar's "I heard the voice of Jesus say." All of these may be excellent in their place, popular in public worship, and especially in Sunday-school, but they have no place in "The Oxford Hymn Book." There are, however, many substantial hymns for which an over-refined and sophisticated age seems to care but little. The editors themselves say:

> Our choice has gravitated toward what

may be called the Old Masters—Watts, the Wesleys, Doddridge, Cooper, Newton. We have taken excerpts rather freely from the New Version of Tate and Brady; and we have been more attracted than repelled by the archaism of some of the seventeenth-century writers.

That a compilation of this character should be accepted for congregational use, at least in this country, seems very doubtful. The members of our average congregations, the majority women, do not care for hymns of this vigorous but often somewhat rugged type; they are perplexed and perhaps repelled by the naïveté that suggests the old ballad:

A virgin unspotted, the prophet foretold,
Should bring forth a Saviour, which now we behold
To be our redeemer from death, hell, and sin,
Which Adam's transgression had wrappèd us in.

Aye and therefore be merry, set sorrow aside,
Christ Jesus our Saviour was born on this tide.

At Bethlehem city in Jewry it was
That Joseph and Mary together did pass,
All for to be taxèd with many one moe,
Great Cæsar commanded the same should be so.

But persons who are somewhat cloyed by the saccharine quality of the current hymnals and persons who care to study the history of hymn-writing and who often discover deep significance in the ancient points of view and modes of expression, will find much that will appeal to them in this scholarly collection of the Old Masters.

The music is, in the main, of the same character as the hymns—plain and dignified. "We have endeavored," say the editors, "to avoid harmony of a luxurious and chromatic type and we have not used any adaptations from modern secular melodies." This further restriction will also tend to lessen the popularity of the book, though enhancing its value for the specialist. The type in which the music is set, "based upon the fount for which punches were cut in Oxford about 1683 by Peter de Walpergen," heightens the effect of quaintness, but it is needlessly difficult to read. The indexes are excellent.

Great American Lawyers: The Lives and Influence of Judges and Lawyers who Have Acquired Permanent National Reputation, and Have Developed the Jurisprudence of the United States; a History of the Legal Profession in America. Edited by William Draper Lewis. Vols. I-IV. Philadelphia: The John C. Winston Co.

Professor Lewis, dean of the Law Department of the University of Pennsylvania, here presents a series of biographical volumes of interest, primarily, to the lawyer, but by no means devoid of interest to the intelligent layman. His definition, for his present purpose, of the "great" lawyer is a broad one. It includes, of course, judges and lawyers who have acquired permanent national reputation. It also embraces both those who have permanently impressed the jurisprudence of their respective States, and those who by their teaching or writings have produced either a distinct effect on the law, or have stimulated new methods of legal thought. This series will, when completed, contain ninety-six biographical sketches arranged roughly in chronological order, of which nearly fifty are in the four volumes already issued. The secondary title of these volumes—"A History of the Legal Profession in America"—expresses an aim of the editor which the form of the work makes impossible of full achievement. For the discussion in sketches such as these of the development of different branches of law is, of necessity, brief and fragmentary. It is, rather, in gathering together in convenient form a series of able and well-written accounts of the legal achievements of the leaders of the profession from the middle of the eighteenth century to the beginning of the present, that the success of this undertaking lies.

In the somewhat perplexing task of selecting the subjects for the sketches, the editor, on the whole, has shown excellent judgment. Yet it is a matter of regret that he has found it impossible to carry out his original plan of including in the list more names of men prominent in our history, who as statesmen rather than as judges or as lawyers have done important work in developing the theories of the Federal Constitution. It would have been better, we think, to have kept to the first plan, sacrificing if need be such minor legal lights as, for example, Chief Justice Thomas A. Marshall of Kentucky, Chancellor William Harper of South Carolina, and Judge Peter Hitchcock of Ohio, who served their States well, but whose opinions do not bear the mark of extraordinary ability, or denying a separate sketch to Judge James Gould of the Litchfield Law School. We venture to suggest, also, that of the early members of the Federal Supreme Court, Justice James Iredell, keen of mind and bold and original in reasoning, was deserving of a place in these volumes, while the long and not unimportant service of Justice Samuel Nelson on the same bench might well have led to his inclusion.

The editor has been fortunate in enlisting in this work some of the ablest legal writers in the country. Prof. James Brown Scott of George Washington University, whose authority as a writer on international law is recognized, has contributed four admirable sketches of Alexander Hamilton, Chief Justice Jay, Chancellor Livingston, and Chancellor Kent, the last including an interesting comparison of Kent and Marshall. One of the most valuable articles is that on Chief Justice Taney, by Prof. William E. Mikell of the University of Pennsylvania. Especially interesting are his comments on Taney's discussion of the merits of the case, technically *dictum*, in the Dred Scott decision, and of the fondness of other judges of that time for indulging in the same fascinating but somewhat dangerous practice. The sketch of Chief Justice Shaw, by Prof. Joseph Henry Beale, jr., of the Harvard Law School, contains a keen summing up of Shaw's service to the development of law. Judge Simeon E. Baldwin of the Yale Law School is represented by sketches of Zephaniah Swift, James Gould, and Roger Sherman Baldwin. And the learned editor himself contributes an adequate account of Chief Justice Marshall. Among other important sketches should be mentioned those of Daniel Webster, by Everett P. Wheeler of New York; of Justice Story, by Judge William Schofield of Massachusetts; of Chief Justice Gibson, by Samuel D. Matlock of Pennsylvania; of Luther Martin, by Judge Ashley M. Gould of the Supreme Court of the District of Columbia; of François Xavier Martin, who played the most important part in the early legal history of Louisiana, by William Wirt Howe of that State; of Andrew Hamilton, one of the few colonial lawyers of wide and lasting reputation, by William Henry Loyd, jr., of Philadelphia; and the article by Margaret C. Klingelsmith of the University of Pennsylvania, on Justice James Wilson of the United States Supreme Court, who deserves a higher place in legal history than that commonly accorded him.

The real importance, however, of this series lies, not in its accounts of a few of our greatest judges, lawyers, and statesmen—their fame is secure—but in the biographies of men like George Wythe, Luther Martin, and William Pinkney (to name only a few of many here represented), intellectual giants and acknowledged leaders in their day, whose fame even in the profession is now in large part a matter of tradition. To bring together, in convenient, readable shape, as Professor Lewis has done, a record by competent hands of the achievements of men like these, is a work to be commended.

It may be added that the writers have shown, in general, a commendable restraint. The enthusiasm of the biographer is tempered with the intellectual caution fostered by the study of the law. Of course, one may be unwilling in many instances to accept as final the estimates here found of legal ability and attainment. The reviewer, for example, is unable to accord to Chief Justice Ellsworth the high praise given him by his present biographer, Frank Gaylord Cook. To our mind, Ellsworth, who was

slow intellectually, but shrewd, as befitted a Connecticut Yankee, has been overrated. His success was due rather to his keenness as a politician than to his ability as a statesman or a judge. We are not willing to accept as valid even the ingenious and entertaining plea of his other able biographer, William Garrott Brown, that Ellsworth has suffered because his lot was cast in the small State of Connecticut and his praises were not sung by some writer in the literary set of Boston and Cambridge.

With a few exceptions where a picture was unobtainable, a portrait of the subject of each sketch is given. We are glad to note further that the source of each portrait is given, and we have no fear in any case of such an unfortunate blunder as seems once to have been made in a legal history of some importance, where what purports to be a portrait of a Justice of the United States Supreme Court is in reality the likeness of a worthy New York merchant bearing the same name. We are surprised to find that Chief Justice Marshall is represented by the head from the Story statue. The best portrait of Marshall is that by Jarvis, the original of which was owned by the late Mr. Justice Gray; but either the painting by Inman, the crayon profile by Saint Mémin, or the portrait, with spectacles pushed back on the forehead, owned by Washington and Lee University, seems to us to be more satisfactory than the Story statue.

A favorable word may be added concerning the mechanical excellence of these volumes. The type is large and clear, the paper good. We note the following errors chargeable to careless proof-reading: In Vol. I, near the bottom of page 266, there is a superfluous "rather," and on page 447 of the same volume "of" appears in place of "or"; while on page 283 of Vol. III is a mysterious reference to "Cook [*sic*] on Littleton." We have heard recently that a learned law professor uses in the classroom the pronunciation here indicated; but we had not expected to see so soon in print the result of his teaching.

The Story of a Street. By Frederick Trevor Hill. New York: Harper & Bros. $1.60 net.

Mr. Hill has chosen for his theme a true symbol of the career of this country. "Wall Street" means now, the world over, something that is not confined within the limits of a single thoroughfare, but shapes destinies in all parts of the globe that are untouched by any other aspect of our history or ideas. He recalls its mean origin when Gov. Kieft summoned all interested persons to appear at seven o'clock on Monday, April 4, 1644, to erect a brushwood cattle-guard along the northern boundary of the village of New Amsterdam. This cattle-guard marked roughly the future course of Wall Street. The south side was determined by Peter Stuyvesant's stockade in 1653. The street was laid out in 1685 by Gov. Dongan, who contrived to cut its width down from 100 to 36 feet, the difference being added to a strip of lots abutting on it which had been secretly acquired by the Governor himself through a "dummy" purchaser. If this transaction were not enough to give standing to the street, its character was reinforced by the fact that the first house built on the north side became the property of Capt. William Kidd. In 1699 the stockade was removed as a nuisance, and New York ceased to be a walled city. In 1729 commerce invaded the street in the shape of a building erected by the Bayards for what they termed, more wisely than they knew, "the mystery of sugar refining." And always, from 1696, the head of the street was closed by the steeple of Trinity Church.

The changing physical aspect of the street has been noted by Mr. Hill with abundance of interesting detail, but the most significant part of the record deals with the events that here took place. The trial in 1734 of Zenger for alleged defamation of government, his defence by Andrew Hamilton and acquittal was the first legal triumph of colonial sentiment. Wall Street's part in revolutionary history is well known, but is told again briefly and well, for busy men to read. It should relieve for many the monotony of the daily walk to recall, besides the pageants of occupation and evacuation, that at No. 33 (then 58) Alexander Hamilton had his office, where sixty-three of the eighty-five *Federalist* essays were written; and that Washington's last official visit to the street, in 1790, was made for the purpose of passing the pipe of peace with the Creek Indians, whose self-appointed reception committee was the Society of the Sons of St. Tammany, organized in the previous year. The later history of the street is greatly condensed, being, indeed, merely outlined for the sake of the climax. The book bears evidence of careful study beneath its regrettably journalistic style, and contributes some fresh material.

Science.

Animal Romances. By Graham Renshaw. London: Sherratt & Hughes.

The Romance of Bird Life. By John Lea. Philadelphia: J. B. Lippincott Co. $1.50.

In "Animal Romances" the author departs from his usual zoölogical and historical essays and launches into elaborate descriptions of wild creatures and their haunts—attempting "to present them as actually living and moving before the reader." Mr. Renshaw has a vivid imagination and an excellent command of language, but all this counts for nothing, because of his remarkable method of treating his facts. "Romance" with him stands for an endless succession of vivid incidents, couched in extremely short sentences, following so closely together that each essay leaves the reader mentally breathless and dazed. As literature, the work is unsuccessful, and as a truthful presentation of actual conditions the author is equally astray. Only those who have spent days and weeks in the jungles of the tropics know how secretly and slowly the furred and feathered actors move in playing their parts. In such places there are untold myriads of living beings on all sides, but to imagine these various creatures gathered near one place and to set them all roaring, dancing, fluttering, bathing, or fighting—such a Noah's Ark vaudeville is "romance" indeed!

The preface is dated from the Sahara Desert, and the author is evidently more at home in the continent of Africa than in other regions. No definite hint is given as to the country covered in each essay, this information being deducible only from the animals mentioned. Thus we place "A Passage at Arms" in South Africa, judging by the presence of sable antelope, bateleur eagles, and the Cape wagtail. To the uninstructed reader, the scene might as well be Asia or some other country. "The Hermits" is laid in some marvellous region in Canada, where everything from chipmunks and beavers to moose and mountain goats passes swiftly in review before us. The sources of the photographs are not indicated, but the reader is left to infer that the pictures are of wild animals in their native country. It is probable that most were taken on the Duke of Bedford's estate in England. The scope of the work is shown by an examination of almost any page. On page 17, for example, we find twenty-seven lines of text, purporting to represent a scene in the "swamp and jungle" probably of southern Asia. Fourteen creatures are described—silver-gray squirrel, tree shrew, black gibbon, wild pig, pangolin anteater, flying lemur, jungle fowl, oriole, bulbul, peafowl, dragon lizard, green flower snake, cicada, and sleepy butterfly. An average of two lines to each gives us a hint as to how much of real value as to their habits we may glean from these pages. After this one does not wonder that there is no index; the book itself is hardly more than an annotated catalogue.

Accuracy of statement may be tested in the chapter "The Forest People." The sun-bitterns, trumpeters, and horned screamer determine the scene as the Amazon and Orinoco region of South America. The hoatzin "flies across the marsh, hissing loud in alarm," but in

spite of such authority and that of the "Cambridge Natural History" this bird utters nothing but the most harsh and grating of cries. It is by no stretch of the imagination a "game-bird," and if Mr. Renshaw were ever compelled to taste one of these "stinking pheasants," as they are called, he would regret such a statement. He covers the shallow of a river with "multitudes of scarlet ibis, boat-billed heron, grebes, and swans," yet, if there is a swan in all this region it is still unknown to ornithologists. The "pendulum tail" with which the author has endowed the trogon is wholly fiction, and belongs by right to the motmot, while his theory of the red and green colors of the trogon simulating a flower and thus attracting insects, is rendered rather superfluous by the fact that the American trogons are fruit eaters. As the agouti is active all night and hides by day in the deepest hollow log, it is not easy to see how its "soft hide is all scarred with the bites of vampires."

Mr. Graham is at home in short and thorough historical essays on animals, in which field he has done some admirable writing; and it is because he is capable of so much better work that this volume has been thus criticised in detail.

In "The Romance of Bird Life," by John Lea (J. B. Lippincott Co.) the word "romance" may be interpreted to mean "almost anything" concerning the life of a bird. Indeed, the sub-title explains the scope of the book as "being an account of the education, courtship, sport and play, journeys, fishing, fighting, piracy, domestic and social habits, instinct, strange friendships, and other interesting aspects of the life of birds." This method of presenting the various phases of life under general headings, rather than in the course of the regular natural history description, has been used by Dixon, Bowdler Sharpe, and others. It is perfectly legitimate, and the boundless wealth of bird-life gains new interest when thus viewed. Judged as a compiler, Mr. Lea has been successful both in selecting and in grouping his material. Best of all, he has not hesitated to quote at length the original descriptions, thus offering a pleasing variety of diction and a vividness which are conspicuously absent from most compilations. His own contributions are clear and exact, but tend to become tiresome in details—the simplest facts being often explained at elaborate length. Birds from all countries are brought under notice. In such a *pot-pourri* one naturally finds errors, but fewer than would be expected; and most of these occur in the quotations from other writers. On page 307, for example, the scientific name of the black vulture is applied to the turkey vulture (the local name of which is turkey buzzard), and the misstatement is made that this latter species is the only vulturine scavenger of Charleston.

Among the scientific books to be published by the Macmillan Company this spring are "Faith and Works of Christian Science," by the author of "Confessio Medici"; "A System of Medicine," edited by Prof. Thomas Clifford Allbutt (second ed., Vol. IV.); "Concealing Coloration in the Animal Kingdom," by Abbott H. Thayer and Gerald H. Thayer; "The Physiology of Plant Production," by Dr. B. M. Duggar; "Forage Crops for the South," by S. M. Tracy; "Fruit Insects," by Prof. M. B. Slingerland; "Principles of Soil Management," by Dr. T. L. Lyon and Prof. E. O. Fippin; "Genetic Psychology," by Edwin A. Kirkpatrick; "The Psychology of Thinking," by Prof. Irving Elgar Miller; "Applied Mechanics for Engineers," by Prof. Edward L. Hancock; "Plane and Solid Coördinate Geometry," by Profs. H. B. Fine and H. D. Thompson; "Plane and Spherical Trigonometry," by Prof. D. A. Rothrock; "College Chemistry," by Prof. Louis Kahlenberg; "A Text-Book on Physical Chemistry," by Prof. Harry C. Jones; "The Elements of Light and Sound," by Profs. W. S. Franklin and Barry MacNutt.

Aided by the Russell Sage Foundation, the National Association for the Study and Prevention of Tuberculosis has issued under the title, "The Campaign against Tuberculosis in the United States" (New York: Charities Publication Committee), a comprehensive and useful directory of the sanatoria, hospitals, dispensaries, and associations which exist wholly or in part to combat this plague. Canada, Porto Rico, the Philippines, and Hawaii are included; there is no mention of Mexico, but Cuba stands perhaps prophetically between Connecticut and Delaware. In part the book, whose compilation is attributed to Philip P. Jacobs, is a revision of the directory which Miss Brandt prepared four or five years ago. About seventy pages are devoted to brief statements of the legislation of States and municipalities concerning notification, expectoration, and other matters. The estimate of the extent to which these laws are enforced is not very satisfactory, and seems to be largely guesswork, as, indeed, it must be. The copious index, in which we find Hawaii but miss Sandwich Islands, would be even better if it contained the names of all the places. Many institutions are widely known by the locality and the casual searcher is not always sure as to the State to which it belongs, and much less as to the exact title of the establishment.

Koch, in his popular lectures on dendrology, calls attention to the fact that at the dispersion of the great groups of the human race, each group carried from its ancestral home a particular kind of rose. The Aryans had their own which found its way, both east and west, under innumerable forms. In none of the descendants of these primitive peoples has love for the rose ever been lost, but it is among those who drifted westward that it is most pronounced. Other flowers have had their time of popularity and have passed out of fashion, but the rose has to-day a stronger hold than ever on all the European nations. Books on roses, even if they are not above mediocrity, find many readers, while the treatises which have real merit are on the shelves of all progressive horticulturists. To amateurs and professional cultivators who wish to inform themselves as to what is latest and best in regard to roses, we can cordially recommend a modest volume, "Roses and Rose-Growing," by Rose G. Kingsley (The Macmillan Co.). Miss Kingsley brings to her task literary skill, and a fair experience in the selection and cultivation of roses, for both of which she is indebted to the late Charles Kingsley of Eversley. She has made good use of the standard books, new and old, and has succeeded in preparing an attractive hand book such as Kingsley himself would have been delighted to use. She has also been exceedingly fortunate in her illustrations in color. In depth and delicacy, these reproductions are considerably in advance of any which have recently come to hand, and they add not merely to the attractiveness of the volume, but they may serve also as a safe guide in selecting varieties.

"Extinct Birds," by the Hon. Walter Rothschild (London: Hutchinson & Co.), is a sumptuous quarto of 244 pages, with forty-three beautifully colored plates. The work introduces us, as nearly as may be, to the birds which have become exterminated within the historical period, or, in many cases, within the past six or eight hundred years. To cover completely such a vast and difficult field in a single pioneer undertaking is, of course, impossible, and the defects, especially as to incomplete lists of specimens extant, are many; still the volume possesses great interest and value. Worthy of special note are the reproductions of the original drawings of the dodo, and the excellent restorations of the solitaire and moa. The causes of extinction are varied, but in many cases the blame must be laid to man. Examples are the great auk, dodo, moa, and the curious little tailless wren of Stephen Island, near New Zealand, of which the only thirteen ever secured were brought in by the cat of the lighthouse keeper. The edition is limited to 300 copies at the price of £25 each; and it is to be hoped that a new edition may be less expensive.

A work of especial interest at the present time is "La Science Séismologique" (Paris: A. Colin), by Comte de Montessus de Ballore, the author of several works on this "la plus jeune des sciences." The three parts into which it is divided treat of earthquakes, tremblings indicated by instruments, and their geologic results. It begins with an historical sketch of seismology, and closes with some useful practical considerations of "l'art de bâtir" in the countries subject to earthquakes. The astronomer of the Paris Observatory, G. Bigourdan, calls attention in the *Annales de Géographie* to the conclusive evidence which the Count has given in his work showing the falsity of the old theory that the great majority of earthquakes could be traced to regions of small extent. On the contrary, the records of the exceedingly sensitive instruments now in use indicate that they are largely simultaneous movements of the earth's crust. Numerous tables, charts, and illustrations add much to its value as a book of reference.

Scientific work of timely interest, often half-official and military, meets us in

"Autour de l'Afghanistan," by Commandant de Bouillane de Lacoste. The book is made up from notes taken in an expedition "along forbidden frontiers," with 120 inset plates from photographs of the author and five maps (Paris: Hachette).

Dr. Ludwig Darmstaedter's "4,000 Jahre Pionier-Arbeit in den exakten Wissenschaften," first issued in 1904, has appeared in a new edition, much enlarged in both size and scope, as indicated by the new title, "Handbuch zur Geschichte der Naturwissenschaften und der Technik." The new edition not merely records the final discoveries, but shows intermediate steps, so that the development of each discovery can be traced. Dr. Darmstaedter has been assisted by Dr. R. du Bois Reymond and Dr. Carl Schaefer, and has had the coöperation of a large number of correspondents.

Walter Morrison Allen, widely known as a designer of telescopes, died in Cleveland February 8, at the age of forty-two. He had charge of the construction of the forty-inch telescope at the Yerkes Observatory at Lake Geneva, Wis., and also of the twenty-six-inch telescope at the Naval Observatory.

Drama.

The Children of the Chapel at Blackfriars, 1597-1603: Introductory to "The Children of the Revels, Their Origin, Course, and Influences." By Charles William Wallace [University of Nebraska Studies]. Lincoln: University Book Store.

Professor Wallace's book is the most thorough study we have of an Elizabethan theatre—to be sure, for a limited period of its existence, but that the most important. He gives us a searching examination, based on the original records, of the history of the foundation and management of Blackfriars during the years indicated above, and of the influence which it exerted in various ways on the history of the drama and the stage. The choice of this particular theatre has a double recommendation—first, on account of the interest of singularity which will always attach to the Elizabethan boy-companies, and, secondly, the fact that it was undoubtedly Blackfriars, and not the great public theatres, like the Globe, which in all essentials determined what the structure and arrangements of the modern theatre were to be.

From unpublished documents in the Public Record Office Professor Wallace is able to prove that both the seating capacity and the stage of Blackfriars were much larger than has been hitherto assumed—indeed, that it was the most expensive theatre erected in England before the new Globe in 1614. He argues with some plausibility that the Elizabethan habit of selling seats on the stage originated at Blackfriars, owing to the peculiar physical conditions of that theatre. The custom, of course, extended also to the Continent; but Professor Wallace is mistaken when he implies that it died out early in England. As a matter of fact, it continued in that country down into the sixties of the eighteenth century.

Professor Wallace is also able to trace clearly and in detail the circumstances which attended the formation and maintenance of the Children of the Chapel and to unravel the intricate history of Nathaniel Gyles, who was commissioned to obtain the boys necessary, and of Henry Evans, the lessee, in their relations to the theatre.

The main thesis, however, of the book is that, during this period, Blackfriars was an official theatre maintained at the Queen's expense. The evidence on this subject, we confess, does not appear to us so conclusive as it does to the author. Indeed, the passages from all but one of the documents which he cites are too obscure to base any conclusion on. Only the entry (September 18, 1602) in the diary of Philip Julius, Duke of Stettin-Pomerania, seems to us to possess any real weight. If Professor Wallace is right in interpreting this passage as relating to Blackfriars, that would decide the question. Probabilities favor this interpretation, but there are difficulties to be considered. Queen Elizabeth had nothing to do with the erection of Blackfriars, as far as we know, and it is hard to conceive that a whole hour's musical entertainment would precede the regular performance at this theatre, if the play given was of the type usual at Blackfriars. Certain it is that Professor Wallace is mistaken in inferring from the description in the diary that the play which the Duke saw was Chapman's "Widow's Tears." Apart from the cogent reasons advanced by Fleay for dating this play in 1605, it is sufficient to point out that there is no "royal" widow among its characters, Eudora being merely a countess; nor is there any Englishwoman in the piece. Besides, the term "casta vidua" could only be applied in an ironical sense to the heroine of a plot which is recognized on all hands as modelled after the notorious Matron of Ephesus.

It is to be hoped that Professor Wallace will soon make public the documents referred to in the note on page 56—"which give the origin of 'shares' in London theatres and Shakespeare's financial interest from the first in the Globe and Blackfriars."

"The Playhouse and the Play," by Percy Mackaye will be published by the Macmillan Company this spring.

A. R. Waller's edition of Beaumont and Fletcher in the Cambridge English Classics (Putnams) progresses regularly, the sixth volume, just issued, carrying it beyond the halfway point. Five plays make the present tale: "The Queen of Corinth," "Bonduca," "The Knight of the Burning Pestle," "Love's Pilgrimage," "The Double Marriage." The scheme of editing has been given in our notices of earlier volumes, and need not be repeated.

Though Charles F. McClumpha's volume containing Otway's two masterpieces, "The Orphan" and "Venice Preserved," in the Belles-Lettres Series (D. C. Heath & Co.), does not present anything novel in the way of biography or criticism, its well-informed, competently written introduction, its text faithful to the first editions, and its up-to-date bibliography make it the best edition of the two plays obtainable. The only adverse comment to be made upon the preparatory essay is that in the attempt to recount the facts of Otway's career, to relate him to his French models and English contemporaries, to touch upon or discuss all his plays in relation to his dramatic development, and to sketch the general state of dramatic literature in the Restoration period, the various matters are somewhat congested, and penetration and thoroughness are sacrificed to comprehensiveness. Racine plus Shakespeare plus an enthusiastic temper is in the main the right formula to explain Otway's brief but striking endeavor to turn the apostate tragedy of his time back into the native English tradition; but Mr. McClumpha has given little more than the bare formula. There is still room for a searching investigation of that half-stifled counter-revolution of taste which struggled through all the years from the Restoration to the death of Dryden. To the direct imitation of French models, whether of the Cornelian or the Racinean type, the editor, in company with many other commentators, imputes rather too important influence. The tyrannies which galled the passionate Otway, as he repeatedly makes clear, were the pedantic critical theories imposed most obnoxiously by an audience of shallow criticasters, and the satirical and cynical spirit of the age. That he emancipated himself from them both, where the puissant Dryden failed, is a substantial evidence that he is entitled to the rank, which Mr. McClumpha denies him, of genius.

Julius Bab's "Deutsche Schauspieler," with sixteen full-page illustrations, is a valuable contribution to the history of the German stage, especially of Berlin and Vienna.

Adolf Müller, in "Das griechische Drama und seine Wirkungen bis zur Gegenwart," the eighteenth volume in the serles Sammlung Kösel (Munich: Kösel), discusses with scholarship and excellent literary taste the origin and character of the Greek drama; Æschylus, Sophocles, Euripides, Greek comedy; and the influence of the Greek drama down to our own day.

"The New Lady Bantock," which was presented for the first time here in Wallack's Theatre, on Monday evening, will add nothing to the reputation of Jerome K. Jerome, either as humorist or dramatist. It is founded upon an idea which is not only fresh in a theatrical sense, but is clearly capable of amusing treatment. Unfortunately Mr. Jerome has spoiled it by gross and palpable exaggeration. There would be nothing wildly improbable in the supposition that a chorus girl, married to a foolish young lord, might find herself confronted

by inconvenient relatives in the kitchen, but that these should number twenty-three, constitute her entire family, and rule the establishment is a manifestly preposterous condition. It is not made any the more reasonable by almost grotesquely farcical handling. Nor is the performance by the star, Miss Fannie Ward, in the part of the embarrassed but ultimately triumphant bride in any way remarkable. But the representation acquires a certain artistic value through an uncommonly fine impersonation of an old, tyrannical family butler—a pompous, dictatorial, hypocritical, time-serving, but thoroughly capable and respectable servant—by Charles Cartwright. This is a veritable embodiment and a really first-rate bit of eccentric comedy worthy of a far richer setting.

The London Afternoon Theatre, that began its career at least defiantly with Hauptman's "Hanncle" (see the *Nation* of December 24, 1908, p. 636), has not proved so enterprising in its second programme at His Majesty's, but has fallen back comfortably upon George Bernard Shaw as principal attraction. The play selected, "The Admirable Bashville," is one of his least good, and, though a novelty to the public, has already been produced for the few by the Stage Society. Mr. Shaw describes it as a "Masterpiece in the Elizabethan Style." What the plot is matters little, the whole thing is a parody, or burlesque, of Mr. Shaw's novel "Cashel Byron's Profession," never well enough known for its parody to be amusing as a parody. The characters are used to give expression to the opinions generally and the paradoxes especially that Mr. Shaw delivers to the public. Much of the absurdity comes from "the Elizabethan style," from the pompous verse in which modern nonsense is spoken, and from the stage setting. Two Beefeaters bring in the stage properties; they hold up a big sign to explain at the beginning of each act where it is supposed to take place, while the same scene does duty for a room in Mayfair, a hall at Islington, a room in a country castle, and a few "supers" walking undisguisedly in the same circle round and round the stage must pass for the thousands in the audience at a prize fight. All this is excellent fooling, though at times directed not so much against Elizabethan as modern scenic methods. The actors carried off the nonsense with a solemnity that was beyond compare. Ben Webster, as Cashel Byron, never relapsed a moment from his heroic pose; Henry Ainley, to the Admirable Bashville, brought the earnestness of a Romeo or a Hamlet; Miss Rosina Filippi, in her rôle of mother and actress combined, delivered her lines of twaddle with unruffled dignity. But for all this excellence, "The Admirable Bashville" is thin, its humor long drawn out. Mr. Shaw's play was followed by a commonplace one-act piece, that might serve for the curtain-raiser to which no one is expected to come, called "Tilda's New Hat," made possible only by the excellent acting of Miss Agnes Thomas and Miss Farebrother. Altogether, this second programme of the Afternoon Theatre would be discouraging were it not for the promise of the third, a new play by Henry James, an event of no small literary and dramatic importance.

Charles Frohman has secured the American rights of "An Englishman's Home," the play by Guy du Maurier, which is reported to have made so big a sensation in London. Moreover, he promises to produce it in March, so that New York playgoers will not have to wait long before they will be able to judge for themselves of the quality of the piece. Written by an army officer, it takes the view of Lord Roberts and some other military men that an invasion of Great Britain, under existing conditions, is altogether feasible, and purports to show how it might be done. A London suburban home is suddenly seized by invading Germans, and the civilian master of it, who has ventured to show fight, is shot down upon his own lawn. The utter inefficiency of the "territorial" and other supplementary forces is demonstrated to the author's entire satisfaction. The invaders, of course, are supposed to have eluded the British fleet, which is just what British naval men declare to be impossible. In the original version of the play, the Germans were triumphant all along the line, but, in the amended scheme, they are ultimately repulsed by the Highland Brigade, whose advancing pipes are heard, as in "The Relief of Lucknow."

Sir Charles Wyndham has secured the English rights to Émile Fabre's play, "Les Vainqueurs," and will appear, in due course, as the influential lawyer and deputy, Daygrand.

Ernest Alexandre Honoré Coquelin, the French actor, better known under the name of Coquelin Cadet, died at Suresnes, February 8. He was brother of Benoît-Constant Coquelin, who died January 27. The last public appearance of M. Coquelin, whose talents had won him something of the fame achieved by his more distinguished brother, was at the Comédie Française, in October, 1907. The younger Coquelin was born in 1848 at Boulogne-sur-Mer. He, too, like Constant, abandoned the paternal trade of baker in consequence of a predisposition to the footlights, studied at the feet of Régnier, and, in due course, won a first prize for comedy at the Conservatoire. In 1867 he won a series of successes at the Odéon in comic characters of the classic repertory, and in 1868 joined his brother on the stage of the Français. During the war with Germany he quit the theatre for the field, where he displayed notable bravery. When peace was reëstablished he resumed his profession of actor, but left the Français because he was not chosen *sociétaire*. For a time he acted at the Variétés, but in 1876 returned to the Français, where his reputation and popularity increased steadily. Among his chief successes in the more modern drama may be mentioned his Ulrich in "Le Sphinx," his Frippesauce in "Tabarin," his Isidore in "Le Testament de César Girardot," his Frédéric in "L'Ami Fritz," and Basile in "Le Barbier de Séville." In 1879 he was admitted a *sociétaire*. Since then he has been identified with many important parts of widely diverse character, in such plays as "Le Bourreau des cranes," "Les Trois Épiciers," "Le Chapeau de paille d'Italie," "Le Député de Bombignac," "Denise," "Un Parisien," "M. Scapin," "Francillon," "Margot," "Grisélidis," "Le Faune," "La Vie de Bohême," and "Célimare le bien aimé." The list, although far from complete, will give an idea of his range, which extended from the broadest of low comedy to the more refined and intellectual types of eccentric characterization. His work was distinguished by its fine humorous significance, its veracity, and its exquisite technical finish. Like Constant, he possessed rare powers of recitation, and was in high demand as a monologist. He was also successful as a writer of comic pieces, being a frequent contributor to the press over the nom de plume of "Pirouette." He had been ill for a long time, and it was only the other day that he was retired from the Français with a pension, with the understanding that he should be reinstated in case he recovered his health.

Music.

The fifth volume of "Grove's Dictionary of Music," revised and enlarged under the editorship of J. Fuller Maitland, will be published by the Macmillan Company this spring.

In his "Mezzotints in Modern Music," published ten years ago, James Huneker had an essay entitled "The Greater Chopin," in which he tells of the time when he echoed the opinion of George Sand, that one tiny prelude of Chopin is worth all the trumpeting of Meyerbeer; and that was when Mr. Huneker knew chiefly the popular Chopin, the melancholy dreamer, the Chopin whom schoolgirls torture and sentimentalize. Subsequently Mr. Huneker discovered that there is also a greater Chopin, more masculine, grander, deeper, more daring, and revolutionary. To this day this greater Chopin is largely music of the future. "Chopin is among the immortals, and he is, it may be frankly confessed, admired for his less admirable music." To help ending this anomalous state of affairs, Mr. Huneker has compiled and edited for The Musicians' Library a volume entitled "The Greater Chopin" (Oliver Ditson Co.), which contains two of the ballades, two of the polonaises, four preludes, nine études, three nocturnes, three scherzos, and five others of the "greater" pieces; and to these he has prefixed one of his stimulating and luminous introductory essays, together with a bibliography. To play over these pieces is to understand how Saint-Saëns could write that all modern music had its germs in Chopin.

It has been said that singers die twice, the first funeral being that of their voice. It would be a great mistake to suppose that the Sembrich Farewell to the American operatic stage last Saturday was a vocal funeral. There was a note of sadness in the ceremonies, which took up more than half an hour after the performance was over; but the prevailing opinion was that the great Polish prima donna is leaving the stage too soon. In the lesson scene from the "Barber of Seville" she was so girlish in action, appearance, and song that one could never have guessed she had been on the operatic stage thirty-four years; and she sang the "Ah, fors è lui" from "La Traviata" with a beauty and opulence of tone and a brilliancy of execution which, of the younger singers, Mme. Tetrazzini alone could have equalled. Why, then, does she retire from the operatic stage? Why not go on "farewelling" a

decade or two, after the fashion of Patti? Because she wishes to leave before people can express regrets that she did not go sooner. Moreover, she wishes to devote herself henceforth to concert work, which is less exhausting than opera, and she understands that her exquisite art is even more needed in the realm of the *Lied* than in opera. But perhaps the strongest motive in her mind is the realization of the fact that there is no new music for a singer of her type. Rossini, Donizetti, Mozart, and the young Verdi wrote for her, but they are dead long since. The only modern rôle that has appealed to her is Mimi in Puccini's "La Bohême." Wagner, Strauss, the later Puccini, and his Italian and French colleagues do not write for her. She has sung the only half-dozen of the old florid operas that the public now tolerates over and over and over again, till, as she frankly admits, she has become tired of them. But the *Lied* offers unlimited scope for the exercise of her art.

The demand for tickets for the Wagner Festival at Bayreuth exceeds all precedents. On November 3 no tickets were left for the first "Nibelung" cycle. And now, six months before the festival begins, the whole of the second "Nibelung" series is disposed of, as well as all the "Lohengrin" tickets, and also those for the "Parsifal" performances except on August 7 and 8. It is probable that the tickets for all of the twenty performances will be sold five months ahead.

Art.

THE ARCHITECTURAL LEAGUE EXHIBITION.

If the exhibitions of the New York Architectural League are to be accepted as a true indication of the estate of American architecture and the allied arts, it would appear that what was once called the "mistress art" has this year at least lost her primacy and become the mere bondmaiden of the decorative arts. Year by year the works of the painters, stained-glass designers, sculptors, bronze-workers, and other artists in the field of decoration have encroached upon the wall spaces formerly devoted to architecture; until in the present exhibition they have taken full control of the field. What corners of it they do not care for are occupied by drawings and photographs of buildings. This, at least, is the first impression made by the exhibition now in progress in the Fine Arts Building on West Fifty-seventh Street. Not only the South Gallery, which has always been devoted to the exhibits of the decorators, but the Middle Gallery, and even a considerable part of the Vanderbilt Gallery itself, are covered with their works; while there is an unusual scarcity of such large and important drawings or groups of drawings as have furnished the *clou* of many former exhibitions. Photographs of executed work constitute a considerable portion of the architectural exhibits, with the result of still further reducing the effectiveness and attractiveness of the exhibition. Their small size and dark monotone detract materially from the effect of *ensemble* of the architectural part of the show, and they lack the personal quality and interest one finds in drawings. Properly displayed, they are valuable adjuncts to drawings, but can never take their place in a large exhibition.

As one surveys the great mass of decorative works which so dominate the exhibition, comparing it mentally with the exhibitions of earlier years, the impression is likely to be one of great technical progress, but with less advance in originality and force than could be wished. The amateurish note of other days is gone; much of the work displays a sure hand and a good mastery of technic; there are evidently scores to-day where there were but a handful a few years ago, who can draw the human figure with vitality and compose with conviction. There are some vigorous canvases, some windows that one feels sure will be finely effective, not a little good sculpture, and, finally, there are the impressive displays of the work of the veteran painter and veteran sculptor to whom respectively the League has awarded its Medals of Honor this year, John La Farge and J. Q. A. Ward. These displays add a special distinction to the decorative exhibit, and with Edwin H. Blashfield's studies for the decorations of the Wisconsin State Capitol, and W. B. Van Ingen's frieze for the United States Circuit Court at Chicago, help to complete the overwhelming preponderance of the "allied arts" over architecture. One could wish that the rest of the decorative work displayed more strength and originality; but we may at least console ourselves with the reflection that the wild eccentricities of the European Secessionists of the Art Nouveau and Moderne Kunst, the cult of the bizarre and the ugly under the guise of protest against worn-out formulas and the commonplace, have not taken possession of our artists.

In the architectural section, the most noticeable exhibit is that of the competitive drawings for the new municipal buildings, with additional illustrations of the successful design by McKim, Mead & White. These might well have been given the centre of the wall opposite the entrance to the Vanderbilt Gallery. They exhibit architectural draftsmanship at its best; they are dignified, modern, American, representative. To many the Gothic pile by Howells & Stokes will appear more interesting as an architectural composition, than the accepted design in its classic dress; but whatever one's predilections, one can hardly fail to see in the very fact of this contrast of treatment, an interesting illustration of the direction which American style-eclecticism is taking in monumental architectural design. It would have been interesting to have a more adequate presentation of the design to whose authors was awarded this year the annual medal of honor in architecture, founded by the New York Chapter of the American Institute of Architects—the Phipps mansion, by Trowbridge & Livingston. It is shown by a perspective and photographs, but one might easily pass it over unnoticed, unless specially seeking it out. The same is true of the stately if somewhat frigid design for the new Post Office for this city; and of the winning design for the grounds and buildings of the Western Pennsylvania University at Pittsburgh—a vast scheme shown only by two rather small drawings in a corner of the gallery. A number of other important competitions of the past year are not represented at all; and there is a large amount of interesting and significant work projected or executed in the last year or two which would have added greatly to the attractiveness and value of the exhibition, but of which no sign appears on its walls. The presentation, even of current and projected work in New York city, is inadequate. Whether the failure to secure an adequate exhibit of work from New England and the West, as well as from our own city is due to the lack of enterprise of those in charge of the exhibition or to the apathy of those invited to contribute, the result is unfortunate. Certainly, if the object of the league exhibitions is to encourage interest in architecture, it would seem wise to offer more architecture and less mere decoration, and to secure a better and more adequate presentation of the really vital and important work being done throughout the country.

The most effective and attractive part of the purely architectural exhibits is perhaps, after all, to be found in the display of students' work, in the gallery of the Sculpture Society at the right, as one enters the building, and in the league rooms upstairs. The competitive drawings for the prize scholarship in the American Academy at Rome, and work by students in the Carnegie Technical Schools at Pittsburgh, the Massachusetts Institute of Technology, and others, are shown in the sculpture room. Why the drawings from the Columbia School of Architecture should all have been relegated to the upstairs room, which nobody visits unless by accident or on some special quest; and why so fine and serious a piece of work as Lucian Smith's McKim fellowship "envoi" from Rome should not have been allowed the honor of a place at least in some corner of the Vanderbilt

Gallery, is not easy to understand. Nor does there appear any good reason why there should be no indication, either by signs in the vestibule or by explanations in the catalogue, that a considerable part of the exhibits catalogued are to be found upstairs in the league rooms. The catalogue, indeed, furnishes no means of locating any of the exhibits, even to the extent of indicating in which gallery they are to be looked for.

The collaboration of the "Three Arts" for the special prize of $300 offered by the league, furnishes one of the most successful and attractive features of the exhibition. The subject, A Monument to a Great American Sculptor, is a rational and appealing motive, and the requirements were moderate as to scale, giving opportunity for refined decorative treatment. In most of the models submitted, the three arts are thoroughly and sympathetically blended into a harmonious composition; and they furnish interesting evidence of the realization of the purpose of the league to secure the coöperation of the sister arts of painting and sculpture with architecture.

SOROLLA Y BASTIDA.

Preceded by a heightening fame in Europe, which was accentuated by the success of exhibits of his paintings in both Paris and London, the Spanish artist, Joaquín Sorolla y Bastida, is now to be seen in New York. More than 350 of his pictures and sketches are on view at the Museum of the Hispanic Society of America, where they will remain till March 8. It is a collection extraordinary for range and brilliancy. To have produced at forty-six so great a body of mature work indicates uncommon fertility; to have attained such striking results argues genius. Sorolla's method is that of a modified impressionism, but such a seeing eye as his must be, such a rapid and sure technique, would have made him a great artist under almost any method. His painting seems absolutely direct. Critics are putting microscopes upon Velásquez's canvas, to see if they can discover anything like niggling under the broad free sweep of his brush, but it would occur to no one to apply such a test to Sorolla. His stroke is obviously as unwavering as that of a piston, the pure color being laid on in one jet. There is no fussing; all is immediate, the drawing, the modelling, being got by the swift use of the final color. He is called a triumph of the "new" school, but such great gifts as his would have glorified any school.

If definitions must be sought, Sorolla is not so much an artist of the *plein air* as of the full sun. His greatest mastery lies in rendering the highest notes of the Spanish sun. Especially powerful are his paintings of sea and sand in the brightest light, with fishing boats, and oxen to draw them up, and bathers and children playing on the beach or splashing in the water or racing into the wave or emerging from the bath—all under the sun of Valencia or San Sebastián or Biarritz. Many of the paintings dealing with these favorite subjects of Sorolla are positive *tours de force*, which simply leave the gazer astounded at the artist's extraordinary talent. It seems as if he had discovered a new way of fixing instantaneously in paint not only form and color, but motion. In such a picture as Alegría del Mar, the happy dash of the naked boys into the surf is life caught in the act, while the turned face of the youngster deepest in, with the one line of white to show where his teeth gleam in joy, is the keynote to the whole. In landscapes away from the sea, or under more sombre skies, Sorolla is not always so victorious; but flood him with sunlight, and he will flood you. Even in his portraits, he seems to desire to get his sitter out into the sun. One of his best is that of a gentleman sitting in strong light among bright flowers in his garden. The full length of the King of Spain, clad in brilliant uniform, is done out under the open sky, with an effect, as one bystander remarked, as if the King had swallowed sunshine and it was oozing from him at every pore. A much more powerful rendering of Alfonso's face is the darker one painted indoors, which for its unshrinking revelation of melancholy struggling through the mask of youth, and its air of a fatal heredity adding gloom to every feature, might well have been given the name which Sorolla has applied to his large picture of crippled children on the seashore, Triste Herencia. The portrait of Menéndez y Pelayo, done last year, is equally masterful.

The entire exhibit is a noteworthy event in this art season. Sorolla is certain to provoke wide discussion, in which admiration will be a common ground of all disputants, whatever their differences. It is said that his pictures may be shown in Boston, and possibly in other cities. If so, one can predict a new Spanish Conquest of America.

To those who desire to get a strong impression of the formality and dignity of life in the good days of Queen Anne and the neighboring periods, we recommend a volume, imported by Scribners, which, to give its full title, is called "English Houses and Gardens in the 17th and 18th centuries; A Series of Bird's-eye Views Reproduced from Contemporary Engravings by Kip, Badeslade, Harris, and Others, with Descriptive Notes by Mervyn Macartney." Some of the views are well known from the reproduction in modern biographies, but others have been for the first time rescued from old county histories and other obscure books. Together they will have some value for the architect and landscape gardener, and a great deal of interest for the student of eighteenth-century life. The notes by Mr. Macartney make no pretence to anecdotal entertainment or biographical fulness, but give the ownership, date of building, and other details of the sort.

A "Catalogue of the Collection of Casts" has been prepared for the Metropolitan Museum under the general supervision of Edward Robinson, assistant director. Brief histories are given of the originals from which the casts are taken, and references are added to the catalogue or special work in which full accounts of the originals may be found. Sources for studying in detail this great collection of models—it contains 2,607 numbers—are thus indicated to students of sculpture and architecture, while the merely curious will find about all they need in this single volume.

The third volume of the "Catalogue of the Coins in the Indian Museum, Calcutta," by H. Nelson Wright (Henry Frowde), contains the coins of the Mughal Emperors of India. There are over two thousand clear illustrations of these coins, together with descriptions, arranged according to metal and emperor, a map of Mohammedan mints, an historical introduction, and chronological appendices. The Iláhí era, established by Akbar in 1584, is shown in Appendix D to have begun on the "Nauroz" of 963 A. H., which occurred on 27th Rabi' II (not on the 5th Rabi', as claimed by Stanley Lane-Poole). The handsome volume of 350-odd pages is worthy of the Clarendon Press, and will be a boon to all those interested in Indian numismatics.

A new volume of the Kunstgeschichtliche Monographien (Leipzig: Hiersemann) is Carl Glaser's "Hans Holbein der Aeltere." It contains sixty-nine excellent reproductions. In the first part there is a critical catalogue of the pictures of the elder Holbein, beginning with 1493 and reaching to 1519. The second part is devoted to a critical estimate of the painter's art.

Spemann's Compendien is the collective title of a series of scholarly works on various branches of knowledge published in artistic form by the old Stuttgart house of Spemann. Dr. Robert Forrer, the archæologist, known not only as the author of many volumes on prehistoric man and archæological finds, but also as the owner of remarkable private collections of antiquities, has written the first volume: "Urgeschichte des Europäers von der Menschwerdung bis zum Anbruch der Geschichte," a volume of 500 pages with 1,500 illustrations. The two other volumes so far published are Bruno Bucher's "Kunstgeschichte" and Dr. Max Dressler's "Künstler-Anatomie." The work is among the importations of G. E. Stechert & Co.

In March, at the close of the Sorolla exhibition at the Hispanic Museum in this city, a collection of paintings by Zuloaga will be shown.

Among the exhibitions at the dealers' galleries in this city are paintings by G. Glenn Newell at Powell's, till February 13; paintings of dogs, Percival Rosseau, Knoedler's, February 13; etchings of Paris, Meryon, Keppel's, March 2.

In the *réserves* of the Museum at Versailles a portrait of Mme. de Sévigné by Ferdinand Elle has been discovered. It is twenty years earlier than the pastel by

Monteuil, and represents her *en buste* with a string of pearls in her hair. The hands are said to be notably beautiful. Another discovery at Versailles is a portrait of Marie Leczinska, painted in 1748.

W. Goscombe John, sculptor, and John Belcher, architect, have been elected Royal Academicians; B. Mackennal, sculptor, has been chosen A.R.A.; and Jean Paul Laurens an honorary foreign academician.

Finance.

THE PRICE OF METALS.

After rather long absorption in trivial and inconsequential affairs, the Stock Exchange has been suddenly confronted with a question of large scope, the problem of prices in the great metal markets. Present conditions are in many ways peculiar. A rather novel economic doctrine was thus set forth, on April 9, 1908, by the chairman of the United States Steel Corporation:

> Prices should at all times be reasonable and fair. The mere fact that the demand is greater than the supply—that the necessities of the purchaser are great—does not justify an increase in price, nor does the fact that the demand is less than the supply furnish an argument for lowering the price. In neither case would the quantity bought and sold be more or less.

Now the fact that a theory or policy is new does not mean that it is erroneous. The test of time, however, is likely to settle such questions, and that test has been applied. Reluctantly and under protest, the Steel Corporation made a slight reduction from $28 to $25 per ton in steel billets on June 9. This cut was declared by the average consumer to be too small to meet the requirements of the occasion. By the end of October, such effect on trade as it may have exerted had spent its force. With January, business on the basis of "official prices" came practically to a standstill; last week, it was admitted that independent mills, by means of secret cuts, were getting the bulk of the business offering.

It was inevitable that, from the manufacturers' side, the discussion of tariff revision should be insisted on as the root of trouble. But the course of events in another industry inspires skepticism as to the tariff agitation as a primary cause of sluggish trade. The dominant corporation in the copper market, the Amalgamated Copper Company, advanced the price of copper ¾ cent a pound between election day and the end of 1908. But manufacturers had their own ideas about an advance of 5 per cent. in the face of inactive trade. By the middle of last week, all the advance in copper, scored since October 30, had been lost through a steady fall in open market prices; last week, the Amalgamated's selling agency lowered its official prices.

The fact is pretty well established that in periods of depression following panic, prices must be reduced, in order to let industry get a fair start again. What has the outcome been in the past? Dun's "index number" of metal prices in this country shows that from 32.643 in the middle of 1873, the average fell to 25.254 in 1874, and continued to decline until 1879, when a sharp recovery began from the very low figure of 15.149. That year exceptional causes were at work, causing both the violence of the decline and the prolongation of depression. From the 14.030 mark in the middle of 1893—cost of manufacture and therefore prices having been greatly reduced in the twenty years preceding—average metal prices fell to 12.015 in the middle of 1894 and to 11.021 in 1895, an irregular recovery following.

The answer of the companies which are holding out for the high prices of prosperity is that this repeated lowering of prices was itself a cause of the prolonged depression; that instead of attracting buyers and stimulating trade, it upset all business plans, because nobody would venture to buy large supplies ahead, lest he meet a competitor later on, who had purchased at still lower prices. In short, prevention of the disorganization of prices is at least one factor in preventing prolonged depression. That there is force in this argument, considered from some aspects, most people agree. But most people will also make three points in their rejoinder. First, the argument against lowering prices despite reduced consumption of trade depression is, *a fortiori*, an argument against ever reducing them; the policy can only be enforced by practically monopolistic control of trade, which would make in theory always for higher and never for lower prices. Second, the experiment of stimulating trade by refusing price concessions was tried in 1908, and has, to all appearances, failed. Third, it is possible to use this very control of industry so as to make the requisite concessions in an orderly way, thus meeting consumers fairly while avoiding the demoralization of 1874 and 1894.

The third point is of high importance, not less so because the experiment was successfully tried by the dry goods trade last year, and in 1903 by the steel trade itself, under the same conditions of control as now exist. In March, 1908, when the Fall River mills discovered the conditions of consumption, they acted concertedly, cut production 25 per cent., wages 10 per cent., and, not least of all, prices 25 to 50 per cent. The outcome was an orderly resumption of trade, with demand first slow, then gradually increasing, until to-day the dry goods industry is on the most normal footing of any trade in the United States. So much for one test. The other was provided in November, 1903, when, in the face of financial unsettlement and disappearing demand from consumers, the so-called "steel billet pool," acting for the United States Steel Corporation and other great producers, cut billets from $27 to $23 per ton, and bars from $32 to $26—a very drastic reduction, in view of existing conditions. The revival in demand which followed, after the lapse of a few weeks; the recovery by April, 1906, of all the November reduction in price; and, after eight or nine months of uncertainty, a new and steady rise in the earnings of the steel trade, to a higher level than before—these are facts not without bearing on the present controversy.

Literature and the American College

Essays in Defence of the Humanities

By IRVING BABBITT

"Now and then out of a mass of books on educational topics—'words, words, words'—there emerges a volume of real value and epoch-making significance. Such is Professor Babbitt's discussion of the problem confronting the teachers of ancient and modern literature in American colleges. It is noteworthy for its insight, its good sense, its courage, and withal its wide philosophical perspective."—*South Atlantic Quarterly.*

"In the murky state of the educational atmosphere Professor Irving Babbitt's 'Literature and the American College' comes like a stroke of clear lightning. For cutting satire nothing equal to this arraignment has been produced since Lowell's day. And it not only sets forth the evil of the present system of instruction, but points the way constructively to a wholesome reform."—*The Independent.*

"To all scholarly persons the volume will be interesting, but to the graduate at large it will be much more than that. If he absorbs and understands its message, the reading of it may rank as an experience."—*Yale Alumni Weekly.*

The Nation.

NEW YORK, THURSDAY, FEBRUARY 18, 1909.

The Week.

Lincoln's English style has been long admired. Where Lincoln got it, or, rather, how he beat it out for himself, has never been fully or satisfactorily explained. But it would appear that he not only had style himself, but is sometimes able to provoke it in others. President Roosevelt's address, at the Lincoln celebration in Kentucky, strikes us as the best piece of composition that ever came from his pen. Not without some obvious blemishes, it yet utters a just sentiment in fit language. Cutting away the excesses of his customary writing, the President has, in this speech, sought the simple word for the sincere feeling. With the brevity of strength, and with an awed sense of a personality too great for expression, Mr. Roosevelt's address is worthy of its theme.

William Nelson Cromwell's protest that patriotism alone impelled him to serve his country in the Panama affair, and that he has received nothing beyond proper professional recompense, will be read with satisfaction. The country hopes that no further scandals will be disclosed in this Panama mess, if only because the canal zone itself bids fair to continue to be the graveyard of engineering reputations. But Mr. Cromwell's denial, and the violent attacks upon the New York *World* and Representative Rainey in the House of Representatives last week, merely emphasize again the necessity of thoroughly laying bare all the Panama history. Mr. Cromwell and the Roosevelt administration must not forget that they are pursued by innuendo partly because the establishment of the Panama republic was so indefensible in law and morals, so obviously a fraudulent dismembering of a sister nation by a bogus rebellion, as to make suspicion certain. Therefore, the country is entitled to know the whole truth. It has been asked for at least twice the amount of money that was at first named as ample to build the canal; the progress of the enterprise has not been what was promised; the plans have been changed; and an impression of uncertainty given. Under such circumstances, inquirers must not be arraigned as slanderers or critics as traitors.

It is a fact open to sardonic comment that two such distinguished Constitutional lawyers as Judge Taft and Senator Knox should have forgotten that a clause in the Constitution made the latter's appointment in the former's Cabinet illegal. According to our organic law,

> No Senator . . . shall, during the time for which he is elected, be appointed to any civil office . . . which shall have been created, or the emoluments whereof shall have been increased, during such time.

Now, the emoluments of the Secretary of State had been increased during Mr. Knox's term as Senator: therefore, he was ineligible to hold that office until Congress put back the salary of the Secretary of State to its old figure. His appointment, when clearly ineligible, cannot fairly be said to argue a growing disregard of the Constitution. No one thought of the inhibitory clause, for the reason that there has been for so many years no occasion to invoke it. Its purpose was, clearly, to prevent corrupt agreements between the Executive and members of Congress. Judge Story declared the object of the provision to be "manifest." "It is to secure the Legislature against undue influence, and indirect corruption, on the part of the Executive." The idea was, plainly, to prevent log-rolling combinations, whereby the President might get what legislation he desired by means of promises to put certain law-makers in fat offices. But such practices have so long ceased to be thought of as possible that the law forbidding them has been entirely forgotten.

There is, of course, no likelihood that Congress will heed the President's plea for a Federal children's bureau. Nothing is now likely to pass except the great appropriation bills. As a matter of fact, however, the proposal is harmless enough, for the children's bureau would have no functions beyond collecting and disseminating information. Today, if any one wishes to find out about child-labor laws, the number of juvenile courts, the growth of the probationary system, he has no general source of information. Desertion, juvenile illiteracy, illegitimacy—these are matters of vital interest to the nation, yet no one commands the exact facts as to their prevalence. Even the Conference on Dependent Children, the admirable results of whose sessions the President transmitted to Congress on Monday, began its statement of findings with the confession that it did not know how many dependent children there were. Obviously, every intelligent worker in this field is handicapped by this ignorance, intensified as it is by the attitude of State governments, some of which will answer an individual inquiry, and some of which will not. Much of the money now wasted on battleships might better be devoted to undertakings of this kind.

Trial by jury reaches its acme of absurdity in the case of the murderers of Senator Carmack, now proceeding at Nashville. After more than three weeks of elimination of the intelligent, a jury was found on Saturday which contains four absolute illiterates, two others who can barely read, while all twelve swear that they have not read a newspaper since the shooting, some adding, with a fine superiority like that of Mr. Balfour, that they had not read a paper for ten years. So much for the ridiculous laws in America, ostensibly aiming to secure impartiality in a jury, but really obtaining stupidity. Better openly fill the box from the idiot-asylums and the ranks of the defective. We sincerely hope that the Nashville jury will be capable of following the evidence and doing its duty; but certainly the law of Tennessee has done its best, not only to prove that it is an ass, but to make sure that the really competent men shall be barred from trying an issue, not only of life and death, but of civilization itself. Perhaps we needed such a ghastly exhibition in order to induce lawyers and judges to set about the long delayed reform of our jury-laws.

The decision of the Irish Nationalists not to sever their Parliamentary alliance with the Liberals, leaves the Asquith government in possession of that

dwindled majority of over 250 to which Winston Churchill recently alluded. The Liberal Cabinet seems in a condition to live out its appointed days, if it so wills. Its troubles, and these, of course, are bound to come, will arise less from the depletion of the government majority than from the serious problems of finance and administration that grow more difficult with the passing months. The Dreadnought mania is spreading. The strengthening of the land forces is, according to last reports, being feverishly prosecuted. Old-age pensions are eating up over £8,000,000 a year. Ireland calls for the emission of a huge loan to complete the land-purchase programme. Where all the needed money is to come from, Mr. Lloyd-George will have to show when Parliament reassembles in the course of a few days. And the English voter has this Hobson's choice: that if he turns out the Liberals and their financial plans, he must bring in the Unionists, who likewise stand for Dreadnoughts, increased land forces, and old-age pensions, and, in addition, father a fiscal policy which may set English revenues topsy-turvy.

It is reasonable to connect King Edward's visit to Berlin with the announcement that France and Germany have settled their differences with regard to Morocco. The meeting between King and Kaiser was received by a skeptical world as betokening no particular change in the tenor of Anglo-German relations. True, the King and Kaiser kissed when they met, but in London "An Englishman's Home" was playing to frenzied audiences. Yet it is difficult to see just what King Edward and the Kaiser could do to convince an unbelieving world of their sincere desire for peace between the nations. Germany and England have no concrete quarrels on hand, and therefore have nothing to make peace over. It is different with Germany and France. Between them the question of Morocco has hovered as a constant source of irritation. To have removed Morocco from the sphere of international contentions is to have done away with the most serious danger to European peace that has arisen in the last half-decade, not excepting even this winter's Balkan crisis. Nor is it conceivable that Great Britain, which has consistently been backing France in her Moroccan policy, should have nothing to do with the new arrangement with Germany. Thus King Edward, precluded from extending an olive branch on behalf of his own country, has spoken a word of good will to Germany through Britain's friend.

The French statesman whose reputation will most profit by the Franco-German agreement concerning Morocco is neither M. Clemenceau nor Foreign Minister Pichon, creditable though the arrangement is to them, but M. Jaurès. Ever since the appearance of the Moroccan question in acute form in the spring of 1905, the Socialist orator has fought, with tremendous persistence, against a policy of adventure in Morocco and in favor of a thorough understanding with Germany. M. Jaurès's demand that the French evacuate Morocco unconditionally, a responsible government could not, of course, entertain. But there can be little doubt that his incessant pleading for friendship with Germany has markedly influenced the course of the Clemenceau Ministry. The fact that in domestic matters M. Jaurès stands close to the revolutionary Socialists should not obscure his services to the cause of European peace. His confidence in the pacific intentions of the European masses when immune from Jingo agitation, might well be emulated by non-Socialistic politicians. It is a faith which the course of events on the Continent increasingly justifies. Whether statesmen have grown smaller or democracy bigger, it is no longer easy for a single diplomat to bring the war clouds over Europe. This was shown in the Balkan trouble. In spite of editors trying to lash themselves into a fury, in spite of diplomatic notes, rejoinders, deadlocks, crises, mobilizations, what Aehrenthal said, what Isvolski said, what Milovanovitch said, and what the Servians and Montenegrins were bound to do, the inclination towards a pacific settlement was manifest from the beginning. Europe does not play with the idea of war as it did in earlier days.

We may regret that differences should have appeared so soon within the ranks of the Turkish Constitutional party; yet there is reason for congratulation that the first crisis of the kind should have been settled in the proper way by a vote in Parliament and the retirement of the defeated Ministry. Dispatches from Constantinople have been meagre. Apparently, however, the Committee of Union and Progress, which engineered last summer's successful revolution and holds control of a majority in Parliament, has grown dissatisfied with the policy of the grand vizier, Kiamil Pasha, as needlessly timid and conservative. The committee leaders have felt that negotiations with Bulgaria and Austria should have been carried on more aggressively. For some time the organ of the Committee of Union and Progress has been vigorously attacking the Kiamil Cabinet. Its editor was ostensibly disciplined a few weeks ago, but that was evidently because the committee leaders were not quite ready to join issue. That they were not wasting their time, however, is shown by the almost unanimous vote of the Chamber against the Prime Minister. The crisis was precipitated when Kiamil, a few days ago, dismissed his Ministers of War and Marine, who were actively in sympathy with the Committee of Union and Progress.

But in the overturn at Constantinople there was clearly involved something more than a difference between the zealous reformers and cautious among the Young Turks. The difficult problem of the nationalities is now coming to the front, as was inevitable. The Young Turks who carried out the revolution, it will be remembered, were actuated in very large measure by a strong Ottoman patriotism. There was to be not only a constitutionalized Turkey, but a reinvigorated and consolidated empire, within which fair treatment should be accorded to every nationality, but predominance should go to the Turks proper, who, after all, were the masters and the majority. Hence the Committee of Union and Progress is anxious that Parliament shall not be turned into a device for dismembering the Empire under some such name as local self-government or national autonomy. The fact that Kiamil Pasha had his support among the Greek, Arab, and Albanian Deputies shows how the lines of nationality were being drawn. The downfall of Kiamil apparently means that the centralizing, patriotic policy of the original Young Turks will prevail for the time. Only on this ground can we understand why the new Premier should

be Hilmi Pasha, who, during his long term as inspector-general of reforms in Macedonia, made these reforms a farce and a tragedy. Hilmi was constantly referred to as the Sultan's *âme damnée*, his jackal. Surely, the Young Turks would not choose him as vizier if it were the Sultan alone they were afraid of.

The reorganization of the Austrian Cabinet has followed upon the recent adjournment of the Reichsrath amidst a glory of flying inkstands, fisticuffs, and objurgations unusual even for the Parliament of Cisleithania. Baron von Bienerth remains Prime Minister and keeps his Ministers of Interior and Defence. All the other portfolios have been distributed among representatives of the pacific nationalities and parties. The conditions offer a striking commentary on the measure of Austria's sincerity in her supposedly bellicose attitude on the Balkan question. Already rent apart by racial feuds, Austria would be playing with dynamite if she lightheartedly proceeded to an attack on the Slavs of Servia and Montenegro. The assimilation of the Bosnians will be a difficult task as it is. It would be rendered all the harder if war came first to leave behind it memories of hatred and bitter loss.

OUR RELATIONS WITH SOUTH AMERICA.

The settlement of our quarrel with Venezuela will doubtless be received in this country with mixed feelings. There will be general satisfaction, not altogether selfish, that Venezuela has entered once more into the circle of civilized nations from which Castro practically excommunicated her. There will be satisfaction, too, that the deadlock between the Venezuelan government and foreign enterprise, a deadlock by which both sides were likely to lose, should be removed, and that commercial intercourse is to be resumed. Finally, there will be satisfaction at the mode by which the agreement was reached. The various questions in dispute have either been compromised or relegated to the Hague Tribunal for adjudication, the latter procedure being a happy instance of the growing habit of peace among the world's diplomats. Criticism of the new arrangement will come from those who believe that on the most important of the issues the attitude of Castro was completely justified —namely, in the affair of the Bermudez Asphalt Company. The company's complicity in the Matos revolution has been established, and one may well ask whether under the circumstances any other government would have acted more leniently than Castro did. President Gomez now consents to restore the asphalt company's property and permit it to resume business on the payment of the comparatively trifling fine of $60,000.

Whether foreign residents in Venezuela will assume quite the haughty air of former days, whether foreign capital will go back to playing politics in the old unscrupulous ways, time alone will show. South America is dangerous ground for the prophet. Yet certain signs point towards better things. Castro has not lived and noisily wrought mischief in vain. He has served his country well by drawing notice to its wrongs, as well as to its shortcomings. The very conditions that made Castro's long reign possible were an indictment of the methods pursued by foreigners in Venezuela. It is scarcely conceivable that the country would have remained so long in a state of comparative content under the rule of a despot and a grafter, if Castro had not also played the rôle of champion of Venezuela against foreign exploitation. The American business corporation that organized and paid for revolutions for the sake of gain, the French citizen who behaved as if the police laws of Venezuela did not apply to him, the German citizen who lost a mule in a street riot and put in a claim for damages to the amount of ten thousand dollars—all this combined to mitigate the odium of Castro's tyrannies and embezzlements. If he finally fell, it was because even he went too far. He had "restored" his country by restoring it almost to that blissful state of isolation which brooded over Venezuela before Columbus touched its shores. Thus it was that Venezuela had to get back to normal relations with the outside world, and compromise was the only way. Still, if Gomez has yielded too much, there will always be the possibility of a Castro to keep the unscrupulous foreigner within bounds.

But more than by fear of vengeful dictators, the foreign trouble-maker in Venezuela and elsewhere in South America must be held back by the growth in Europe and North America of a healthy public opinion regarding the rights and duties of foreigners in these troubled southern republics. The time is, we trust, fast passing when the subject of a foreign Power may wrap his country's flag about some particularly nasty transaction, and have his country invariably back him up, unquestioning and unafraid. On this point the government of the United States has some reason to congratulate itself. We have made no concealment of the weakness of our cause where it has been weak. The press and the administration have shown no desire to excuse the misdeeds of the Bermudez Asphalt Company, and such general recognition of Venezuela's rights, even when defended by a Castro, is guarantee of a continued fair dealing with Venezuela on the part of the American people. If the Bermudez Company has been let off easily, it is partly because of a desire of both our government and the new régime in Venezuela to clean all troubles away and make a fresh start. It is doubtful whether the Bermudez Company or any other will care to appeal to Washington a second time with a story of "unjust" confiscation.

The shifting of our attitude towards Venezuela is typical of our changing view of Spanish and Portuguese America in general. The tendency now is to look upon that more than baker's dozen of republics as something beside the breeding place of comic-opera revolutions. The increasing prosperity of the southernmost republics, their growing prominence at international conferences, the closer intellectual intercourse between the two Americas—all this means fuller knowledge and completer sympathy. The old conception of South America as a continent inhabited by "greasers" who like to fight and hate to work, is, we regret to confess, still strong. It was formulated only a few days ago by that eminent authority on anthropology and student of alien races, Assemblyman Drew of California, when he pointed to South America as the home of "a shiftless, worthless, mongrel race, that the world does not want, the most worthless in the world." To that view there will be fewer and fewer subscribers as the years go by.

THE NEGRO PROBLEM IN FOREIGN EYES.

Although Lincoln the Emancipator is now less spoken of than Lincoln the man of the people, the statesman, and the President, there must be many thousands of people whose minds have turned to the extraordinary progress of the American negro since Lincoln struck the shackles from his limbs. An illiteracy cut from the 95 per cent. of 1865 to 87 in 1870, and in the three decades between 1870 and 1900 to something over 40; the ownership of vast tracts of land, the invasion of the industries and the professions—these things would strike with amazement those who gave their lives for the liberty of the slave, could they but see the results of that great sacrifice. For to most Northerners in 1860 the negro was a mere beast of burden, often, as in the case of the Sea Islands blacks, among whom the first negro regiment was formed, but little changed from African habits of thought and life; always pitifully ignorant and ragged; and, often enough, with lash-torn flesh and mutilated face.

That there are discouragements enough in our national attitude toward the negro forty-four years after Lincoln's death, cannot be denied. No one who took part in the celebration at Springfield, Illinois, last week can forget that but a year ago innocent negroes were butchered in the streets there because they were negroes. In the steady filching of the negro's political rights, we tend to revert to that condition of half-slave, half-free which Lincoln declared to be intolerable. He would, we believe, be the first to say that a native-born, educated—and often property-owning—American who is deprived of the ballot is defenceless before his enemies; and he would find illustrations without number to prove his contention. For Lincoln to see those same poor black creatures who swarmed about him when he reached Richmond after its fall, whose pathetic, hysterical joy over their saviour from slavery he curbed with such wise and kindly advice—to see these fellow-citizens now set apart in trains, street cars, and all public places, by an iron caste, would appall the greatest apostle of democracy. Appall, but not discourage. When to his disappointment in 1856 but two persons came to the mass-meeting he had called at Springfield to ratify the Illinois anti-Nebraska Convention of 1856, he heartened himself, his partner Herndon, and John Pain, by saying:

> Under all this seeming want of life and motion the world does move, nevertheless. Be hopeful and now let us adjourn and appeal to the people.

So must those who to-day work in his spirit, so must the negroes themselves, appeal to the people in whose hearts still resides that sense of justice in which Lincoln never lost faith.

Not even Lincoln himself, however, would be so optimistic as the latest student of our negro problem, Sir Harry Johnston, the African traveller and historian of African colonization, who has just contributed six articles on "The Negro in America" to the London *Times*. In his summary of our perplexities, he says, *solvitur ambulando:*

> While we are theorizing on this side and on that, predicting one extreme solution or another, in all probability the difficulty is gradually thinning out. In twenty years' time, there may be no more need to discuss the color question in the United States.

If this view seems almost fantastic, the standing of the writer and the fact that many of the most truthful pictures of the underlying evils of slavery came in antebellum days from the pens of such gifted foreigners as Harriet Martineau, Fanny Kemble, and George Thompson, forbid the curt dismissal of his hopes, and of his opinion as to the unique Southern attempt to carry on a democratic government and an industrial system with two groups of people wholly set apart. To Sir Harry Johnston, even with his wide knowledge of Africa, the segregation of "the educated and colored people of good standing" is simply "nonsense" that is bound, with time, to be abated. He does not believe that the recognition and humane treatment of these worthy people will either stimulate intermarriage of the races or lead to increased crimes against the whites.

Indeed, as to the "last excuse on the part of Southern politicians, mob orators, and ill-regulated journalists for slandering and oppressing the colored people," namely, the crimes against women, Sir Harry Johnston declares, with refreshing vigor: "The world, the educated world outside of the eleven Southern States, has had about enough of this bogey." While he was able to find twenty-four cases of attacks by black men on white women in the year 1907, he has learned, on good authority, that the charges of rape of white and black women by white men in the Southern States would "double the misdeeds of the negroes."

The white South will be still less pleased with Sir Harry Johnston's assertion that it needs education more than the negro, and that he is astonished at the childish ignorance of press and pulpit in the South and Central West, concerning everything, save the immediate interests of plantation or borough. "A self-satisfied ignorance," he calls it; and this "narrow, eminently provincial intellect" he blames for "all the trouble and exacerbation over the negro question." Finally he adds:

> When the South closes down all State discussion of that indefensible Civil War, and matches the physical beauty and vigor of its white population with an equally high mental development, the negro problem in the United States will be finally solved and kept in a state of solution.

That the white South is sorely in need of that enlarged vision, of which slavery and subsequent evils have hitherto deprived it, is indisputable. Fortunately, as Sir Harry Johnston sees, the change is at hand; the white South is beginning to get a higher and broader education.

Nevertheless, we wish the Lincoln celebration might have been marked by some great step forward for the colored people, not merely the endowment of this college or that hospital, but the creation by some of our philanthropists of a great fund, the income of which might be used for the intelligent help and guidance of the race. The negro needs to be studied, to be better equipped for all the duties of citizenship. The complicated question of providing for his education, in the rudiments of letters and sciences, in agriculture and the industries, and also in the professions, must be attacked with constructive intelligence working upon a large mass of carefully gathered facts. In this field of training the negro we still grope and stumble in the dark. Why build a Lincoln boulevard from Washington to Gettysburg when money might be spent in ways far more useful and more grateful to the spirit of Abraham Lincoln?

CONSERVING LABOR.

Nothing could be more hopeful or commendable than the recently awakened interest in the preservation of our natural resources. It is high time this awakening came, and nothing ought to

be said to discredit it; but it may be pertinent to ask whether we understand what our real resources are, and whether we are not overlooking our most destructive forms of waste. Corresponding to the economist's three factors of production, there are three conspicuous forms of waste—waste labor, waste land, and waste capital. The greatest of these is waste labor, but it is the form of waste which is least understood and appreciated. It is the most important because it is the human factor which is being wasted, and the human factor has always and everywhere been the greatest factor in the production of wealth. Communities have grown rich in poor environments, and poor in rich environments, but no community ever grew rich while lavishly wasting its human energy; and it is doubtful if any community ever remained poor which utilized and conserved its labor-power. The term, of course, includes mental as well as physical energy. That waste labor-power is the form of waste which is least understood and appreciated is shown by the fact that a great many people, perhaps a majority, not only do not deprecate it, but actually think it a good thing. A leisure class to consume the products of the workers is thought by many to be an economic necessity. Of waste labor there are four principal kinds: the unemployed, the improperly employed, the imperfectly employed, and the voluntarily idle. In the elimination of these four forms of waste lie greater opportunities for the constructive economist than in any other direction.

Of these four the least important—from the point of view of the economist—is the unemployed, and yet it is almost the only form which has received any attention. It is the least important because: first, it is normally and on the average the least efficient labor which remains unemployed; second, because the utilization of the labor-power which is now going to waste at the upper end of the social scale will go a long way toward solving the problem of unemployment at the lower end of the scale.

By improperly employed labor is meant that which is engaged in acquiring rather than producing wealth. Enterprises whose sole purpose is to cause two dollars to emerge from the pockets of other men where one had emerged before absorb a considerable fund of energy which ought to be concerned with blades of grass and similar things. It is unnecessary to mention the thief, the counterfeiter, the confidence man, and the blackmailer. Their activities are already regarded as predatory rather than productive, and the law is doing what it can to stop them. From the economic point of view, however, there is no great difference between the counterfeiter and the adulterator of food and drugs, or the manufacturer of shoddy; between the confidence man and the promoter of over-capitalized corporations; or between the blackmailer and a certain type of advertising agent who persuades you to advertise with him, not because it will do you any good, but because it will save you from harm. A really productive enterprise carried on by purely productive methods increases the wealth in the hands not only of those directly interested in it, but also of other people in proportion as it is successful; and the richer a man grows in such an enterprise by such methods, the richer he makes the country. The law-giver who can turn all our labor-power, mental and physical, into such channels will make the country so productive that nothing short of a foreign invasion or a geological catastrophe could prevent us from becoming rich, even if our material resources were as meagre as those of New England.

By imperfectly employed labor is meant that which is employed productively, but less productively than it might be. Wherever there is a man doing unskilled work who might, had he received the proper training, be doing skilled work, or doing skilled manual work who might be doing the more highly skilled and more needed work of managing and directing, there is a case of imperfectly employed labor. It is as great a waste of productive energy as it would be to have good garden land used for pasturing long-horned steers. Here, again, is a statesman's opportunity for enriching his nation, by providing the means for economizing to the greatest degree the labor power of the people. Much of it is now going to waste, in the sense that it has to be utilized in ways which are of little value, merely because of its over-supply, while other kinds of work are suffering because of the scarcity of competent men. As a chain is only as strong as its weakest link, so an industry can expand only so far as its scarcest factor will permit. The scarcest factor is managing ability, and any policy, educational or moral, which will increase the supply of managing ability will enable industry to expand and to absorb greater numbers of the unemployed. Incidentally, this would do more than anything else to equalize the distribution of wealth.

The voluntarily idle are of two classes—those who have retired on a well-earned competence, and those who live on wealth which they themselves have never earned. The first class is not very large in America, though it is increasing. The American business man's habit of continuing to work after having accumulated enough to provide for all his possible wants is singularly economical of human energy, provided, of course, that his is a productive or really useful business. The longer he remains active, the greater the fund of productive energy at work in the community and the richer the community will grow. It is, of course, unnecessary to say that no one is idle who is fully occupied with some useful work, even though he be not actually earning his living by it; and that we are here considering only the economic results, and not the benefits which the individual, and through him society, may derive from leisure, travel, and intellectual recreations. With the second class of the voluntary idle we have not until recently been very much troubled, but our own prosperity is creating it, and we need to look to the future. Those who live on inherited wealth, and on wealth accruing from a rise in land values, make up the greater part of this class. Here are other conditions which challenge the constructive statesman. The loss of this kind of labor-power is especially regrettable, because it might often be labor-power of the highest type, which, if set to work, might increase the supply of the scarcest factor in the creation of wealth, both material and immaterial, and which might, therefore, strengthen society precisely where it is now weakest, and contribute most to our national prosperity. If a man of genuine capacity lives in idleness as a result of his fortune, all that capacity goes to waste. The effect of this is much like that of allowing our best land to run to weeds.

While we are devising ways and

means, therefore, for conserving our material resources, let us not overlook the enormous waste of human energy which is now going on, lest we be guilty of saving at the spigot and wasting at the bung-hole.

THOMAS TRAHERNE.

I.

It is no slight thing to have discovered a new companion to Henry Vaughan and Sir Thomas Browne. If there was any doubt of the claims of Bertram Dobell to such an honor when, two years ago, he printed Traherne's "Poetical Works," it must be removed by the present publication of the "Centuries of Meditations."* Mr. Dobell has pieced together all the information —little enough—apparently to be found in regard to his hero's life. Thomas Traherne was born about the year 1636. His family was presumably of Welsh origin, so that we may conjecture a relation of race as well as of temperament with Henry Vaughan of Breconshire and with George Herbert of Montgomery. His father was a shoemaker of Hereford, where the poet was probably born, and where a certain Philip Traherne, a kinsman one supposes, was twice Mayor and lies commended in his epitaph "for his fervent zeal for the Established Church and clergy, and friendly and affectionate behavior in conversation, which rendered him highly valuable to all the royal party." Thomas attended the local grammar school, and thence proceeded to Oxford. Here he received the degree of Bachelor of Arts in 1656; Master of Arts, 1661; Bachelor of Divinity, 1669; and was admitted by the Commissioners for the Approbation of Public Preachers to the Rectory of Crednell, alias Credden-hill, Co. Hereford, in 1657.

The only lifelike picture we get of him at college is from the preface to his own "Roman Forgeries":

> One evening, as I came out of the Bodleian Library, which is the glory of Oxford, and this nation, at the stairs-foot I was saluted by a person that has deserved well of scholars and learning, who being an intimate friend of mine, told me there was a gentleman, his cousin, pointing to a grave person, in the quadrangle, a man that had spent many thousand pounds in promoting Popery, and that he had a desire to speak with me. The gentleman came up to us of his own accord: we agreed, for the greater liberty and privacy, to walk abroad into the New Parks. He was a notable man, of an eloquent tongue, and competent reading, bold, forward, talkative enough; he told me. . . .

It is a neat vignette from the religious life of the day, with something about it of that mingled air of zeal and courtesy which Mr. Shorthouse reproduced so magically in "John Inglesant." And it forms a pleasant prelude to the quiet years of study and reflection that Traherne chose for himself after leaving the university. The literature of the seventeenth century is rich in the confessions of those who through all the turbulence of the times, in large part because of that turbulence, remembered, like Falkland, "that Truth in likelihood is where her author God was, in the *still voice*, and not the *loud wind*"; but the age contains no more beautiful expression of that choice, I think, than this Meditation of Thomas Traherne:

> When I came into the country, and being seated among silent trees and woods and hills, had all my time in mine own hands, I resolved to spend it all, whatever it cost me, in the search of Happiness, and to satiate the burning thirst which Nature had enkindled in me from my youth. In which I was so resolute that I chose rather to live upon ten pounds a year, and to go in leather clothes and to feed upon bread and water, so that I might have all my time clearly to myself, than to keep many thousands per annum in an estate of life where my time would be devoured in care and labor. And God was so pleased to accept of that desire that from that time to this I have had all things plentifully provided for me without any care at all, my very study of Felicity making me more to prosper than all the care in the whole world. So that through His blessing, I live a free and a kingly life, as if the world were turned again into Eden, or, much more, as it is at this day.

It is the modesty and moral prudence of such passages as this that by comparison take off the relish of the more self-assertive manner of Thoreau and the other moderns who make a profession of the free life in nature. Traherne, it should seem, set down his Meditation at the close of his career while living as a private chaplain with Sir Orlando Bridgman. That "mighty able man," as Pepys calls him, had apparently summoned Traherne to London from Creddenhill when, in 1667, he had been created Lord Keeper of the Seal. Five years later, on being deprived of the seal, he had retired to Teddington, a fair spot on the Thames three miles above Richmond, and taken his chaplain with him. He was, as we gather from contemporary chroniclers, of a precise legal habit and given to balancing and weighing all questions, "a man of great integrity," as Burnet says, "and had very serious impressions of religion in his mind." It is fair to believe that in the woods and hills of Teddington he was a companion of Traherne in his "study of Felicity." They both died in 1674, the servant three months after the master.

II.

Though Traherne is said to have written much, he published little. His "Roman Forgeries," the outcome of his discussion with the Papist at Oxford, appeared in 1673. Just before his death, he had sent a volume of "Christian Ethicks" to the press, but he himself never saw it in print. Twenty-five years afterward an anonymous work, "A Serious and Patheticall Contemplation of the Mercies of God," was brought out by the Reverend Doctor Hickes, "at the request of a friend of the author's." And at last, Mr. Dobell, from two manuscripts whose history reads like a fairy-tale of letters, gives to the world the "Poetical Works" and "Centuries of Meditations."

Of the two books now so miraculously given to the world, the prose "Meditations" is the more perfect accomplishment, more poetical really than the verse. It consists of four sections of a hundred paragraphs each, with the beginning of a fifth century left incomplete, one conjectures, by the author's death. There is a touch of pleasant mystery about the origin of the work. The manuscript is in a book given him, as we learn from the first Meditation, by a friend. "I have a mind to fill this with profitable wonders," he writes. "And since Love made you put it into my hands, I will fill it with those Truths you love without knowing them: with those things which, if it be possible, shall show my Love; to you in communicating most enriching Truths: to Truth in exalting her beauties in such a Soul." There is no clue to the lady's name, who inspired these fragments of truth; nothing known of her save that she was, as Traherne says, in an inscription on the first leaf of the manuscript, "the friend of my best friend." It should appear from certain notices in the fourth century that the work was to be a memorial of one to whom Traherne had looked as to an exemplar of wisdom—"he from whom I received these things," and who "always thought that to be happy in the midst of a generation of vipers was become his duty"—and at the same time a record for the lady of a secret life which that friend could not himself proclaim "because of modesty." She may have belonged to the family named Skipp, of Ledbury, Herefordshire, into whose hands the poet's manuscripts passed from his brother Philip, and who, it seems, kept possession of them down to 1888. Did she play a part in Traherne's life like that of Anne Finch, Lady Conway, to Henry More, who used to go to her place at Ragley and its woods for rest and inspiration?

III.

At least it is no idle thought to bring together the names of our Teddington chaplain and the mystical doctor of Cambridge. They were products of the same Platonizing tendency that sought peace and the beauty of holiness in the

**The Poetical Works of Thomas Traherne.* From the original manuscripts. Edited by Bertram Dobell. London: Published by the Editor. Second edition, 1906.

Centuries of Meditations. By Thomas Traherne. Now first printed from the author's manuscript. Edited by Bertram Dobell. 1908.

midst of a people who were running after the bitterest fruit of zeal. To both religion was known by the spirit of gladness. Dr. More, we are told by his biographer, declared in his last sickness "that he did *gaudere gaudium Animæ Universi*, he joyed, as it were, the joy of the Soul of the Universe"; and that in a word is the very essence of Traherne's philosophy. He has almost nothing of theology, as it was practised in those days, or of the church. Far from that, Traherne's religion may almost be reduced to the simple belief that by the recollection of his innocent childhood the Christian can recreate about himself the happy childhood of the world. He was not the only man of that age who believed, as Wordsworth was to say later, that "heaven lies about us in our infancy." Wordsworth's great ode in fact was probably suggested by the exquisite lines of Vaughan's "Retreat":

Happy those early days, when I
Shined in my angel-infancy!
Before I understood this place
Appointed for my second race,
Or taught my soul to fancy aught
But a white, celestial thought; . . .
When on some gilded cloud, or flow'r,
My gazing soul would dwell an hour,
And in those weaker glories spy
Some shadows of eternity.

The idea to these poets of the renaissance seemed a pure piece of Platonism; it was in reality one of those ambiguous products that spring from the union of Platonism and Christianity, neither quite one nor the other. Plato had taught that we carried with us into the world visions of celestial things, and that learning was a kind of reminiscence, or rediscovery, of what was already ours. But he taught also that this recollection was to be attained by slow search and experience, and he would have been the first to repudiate Wordsworth's child philosopher and Vaughan's "bright shoots of everlastingness." That is Platonism interpreted through the Gospel: "Except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven." These doubtful amalgamations were in the air that men breathed, but I do not recall any other who accepted the splendid vision of childhood as seriously as did Traherne or reasoned out his faith upon it so explicitly. His poetry is a variation on the single theme,

The first impressions are Immortal all,

which he repeats with endless gusto. There is more of Blake than of Wordsworth in such a poem as "Wonder," which, as his work is still so little known, may be quoted almost at length:

How like an angel came I down!
How bright are all things here!
When first among His works I did appear
O how their Glory me did crown!
The world resembled His Eternity,
In which my soul did walk;
And every thing that I did see
Did with me talk.

The skies in their magnificence,
The lively, lovely air;
Oh, how divine, how soft, how sweet, how fair!
The stars did entertain my sense,
And all the works of God, so bright and pure,
So rich and great did seem,
As if they ever must endure
In my esteem.

. . . . . .

The streets were paved with golden stones,
The boys and girls were mine,
Oh how did all their lovely faces shine!
The sons of men were holy ones,
In joy and beauty they appeared to me,
And every thing which here I found,
While like an angel I did see,
Adorned the ground.

Rich diamond and pearl and gold
In every place was seen;
Rare splendors, yellow, blue, red, white and green,
Mine eyes did everywhere behold.
Great Wonders clothed with glory did appear,
Amazement was my bliss,
That and my wealth was everywhere;
No joy to this!

Cursed and devised proprieties,
With envy, avarice
And fraud, those fiends that spoil even Paradise,
Flew from the splendor of mine eyes,
And so did hedges, ditches, limits, bounds,
I dreamed not aught of those,
But wandered over all men's grounds,
And found repose.

Proprieties themselves were mine
And hedges ornaments,
Walls, boxes, coffers, and their rich contents
Did not divide my joys, but all combine.
Clothes, ribbons, jewels, laces, I esteemed
My joys by others worn;
For me they all to wear them seemed
When I was born.

That is nearer to Blake, perhaps, than anything else you will find in the seventeenth century—yet with a difference. It has not the artful naïveté of the later poet; we are still in the generation of Cowley and the other metaphysical writers who lead on to Dryden, whereas in Blake one seems to feel the stirring under ground of powers that will bring in the new romance. Its rhythm is stiff, with none of that pretty lilt that gives to Blake at his best a music like "the earliest pipe of half-awakened birds." Indeed, Traherne was never quite a poet. But if he misses the melody of Blake, he also lacks the spirit of revolt that came with the later generation. He would never have admitted with Blake that the moral law belongs to the deadening experience which kills the innocent joy of childhood, or that formal religion is part of "the golden net" which keeps us out of Paradise. And, again, if his "cursed and devised proprieties" (properties) look forward to Rousseau's theory that the fall from innocence occurred when the first man fenced in a bit of land and called it "mine," he is still further from the bitterness of Rousseau than from the petulance of Blake. His wealth is in the power of enjoyment and not in possession; the riches he beholds are "my joys by others worn."

IV.

But to get the full measure of Traherne's force as one of those to whose imagination the gates of childhood have never closed, we must turn to the opening paragraphs of his third Century. It is probable that the "Meditations" were written later than the poems, and that, contrary to the custom of most poets, some of these reflections are really paraphrases of his verse, written over into more numerous prose. Compare, for instance, the stranzas just quoted with their counterpart in the "Meditations":

Certainly Adam in Paradise had not more sweet and curious apprehensions of the world, than I when I was a child. . . . The corn was orient and immortal wheat, which never should be reaped, nor was ever sown. I thought it had stood from everlasting to everlasting. The dust and stones of the street were as precious as gold: the gates were at first the end of the world. The green trees, when I saw them first, through one of the gates, transported and ravished me, their sweetness and unusual beauty made my heart to leap, and almost mad with ecstasy, they were such strange and wonderful things. The Men! O what venerable and reverend creatures did the aged seem! Immortal Cherubims! And young men glittering and sparkling Angels, and maids strange seraphic pieces of life and beauty! Boys and girls tumbling in the street, and playing, were moving jewels. I knew not that they were born or should die; But all things abided eternally as they were in their proper places. Eternity was manifest in the Light of Day, and something infinite behind everything appeared: which talked with my expectation and moved my desire. The city seemed to stand in Eden, or to be built in Heaven. The streets were mine, the temple was mine, the people were mine, their clothes and gold and silver were mine, as much as their sparkling eyes, fair skins and ruddy faces. The skies were mine, and so were the sun and moon and stars, and all the World was mine; and I the only spectator and enjoyer of it. I knew no churlish proprieties, nor bounds, nor divisions: but all proprieties and divisions were mine: all treasures and the possessors of them. So that with much ado I was corrupted, and made to learn the dirty devices of this world. Which now I unlearn, and become, as it were, a little child again that I may enter into the Kingdom of God.

That, I am not afraid to say, does in its own romantic kind take a place among the superbest passages of English prose, and, indeed, the whole book of "Meditations" is of an almost ineffable fascination. For those who de-

sire a companion in their excursions into the country, there is no volume of prose within my knowledge more desirable than this of Traherne's. It will bring enlightenment also to those who have imbibed the odd belief that the real love of nature came in with Rousseau or with the romantic writers of the early nineteenth century. Nor does Traherne, in this trust in the restorative beauty of nature, stand alone. You will find it in the lyrical poems of the age, and in the sermons of men like Jeremy Taylor. It forms the splendid heart of "Paradise Lost," as displayed in the description of Eden. It is the substance also of the finer philosophy of the day, and Henry More was indulging in no mere rhetorical ornament when he brought the persons of his "Divine Dialogues" to an arbor in a pleasant spot amid the beds and alleys of a garden, in the cool of the evening. For it was just the office of the principal speaker to give "such a definition of the Kingdom of God as takes in the Kingdom of Nature also." In all these things Traherne was but a voice of the times, except for the precision and consistency with which he joined the love of nature to the innocence of childhood and found through a return to these the only path of salvation.

V.

We are here close to Rousseau's gospel of the natural man, and, indeed, these English writers are the chief source of that revolutionary creed. Yet, again, the difference is as important as the resemblance. Traherne has, like Rousseau, much to say of the corrupting influence of the world, but he is still far from instituting a sharp dualism between the individual and society. Men are rather divided by responsibility of their own choice into those who have kept or recovered the key to Paradise through a divine love, which is but another name for child-like openness of sight, and those who have lost the key. "There are many glorious excellencies in the material World," he says, "but without Love they are all abortive"; and with a sharper intonation of dualism: "That while others live in a Golgotha or Prison, we should be in Eden, is a very great Mystery." Nature is thus both a blessing and a curse; but this division—and here lies the very gist of the matter—arises from no belief in the loss, irremediable for us, of a divine state by some mythological Fall in the past, or of a perfect natural state by the institution of society, but depends upon the eyes of each man who looks out here and now upon visible phenomena. If a darkness came over the light of nature by man's first sin, yet even to-day, "O Lord," as he exclaims, "Heaven and earth are infinitely more valuable than they were before, being bought with Thy Precious Blood." There is no flaw in the world as it actually lies about us; here as you move in these streets and beneath these trees, as to Adam in Paradise, "the Omnipresence and Eternity of God are your fellows and companions," speaking to you in the splendor of material things, and becoming one with you by an absolute communion of the soul and nature. The perception of these privileges is by your own choice:

> Your enjoyment of the world is never right, till every morning you awake in Heaven; see yourself in your Father's Palace; and look upon the skies, the earth, and the air as Celestial Joys: having such a reverent esteem of all, as if you were among Angels. The bride of a monarch, in her husband's chamber, hath no such causes of delight as you.
>
> You never enjoy the world aright, till the Sea itself floweth in your veins, till you are clothed with the heavens, and crowned with the stars: and perceive yourself to be the sole heir of the whole world.

And again:

> It [the world] is a glorious mirror wherein you may see the verity of all religion: enjoy the remainders of Paradise, and talk with the Deity. Apply yourself vigorously to the enjoyment of it, for in it you shall see the face of God, and by enjoying it, be wholly converted to Him.

VI.

The worship and glorification of nature have never gone, can never go, further than this; nor is any one who has read these "Meditations" likely ever to forget them; they will return to him in certain moods to add a zest to his joy; but—alas, for these inevitable questionings—but do they contain quite the whole truth? Is there not, after all, something still wanting, something, perhaps, forgotten? As I read these golden sentences that conjure up the fabric of the world before us, I seem to be watching a child, who, on a strip of beach left bare by the tide, is intent on building a palace of sand for his amusement, rearing arch and dome higher and higher, adorning them with glittering shells and pebbles, lending to it in imagination the spell and inhabitants of fairyland. And all the while, the returning tide rolls inward, stealthily, slowly, and then a longer-reaching wave—and all is sand and shells and pebbles. And so it is with this transfigured world of the poets. We are entranced and lifted up, while the reality is withdrawn. But how is it when the tedium of life rolls in upon us; when the ambition for which we have striven fails and we are taught the deceitfulness of hope, or is achieved and we find to our dismay that we have no more capacity of enjoyment than before; or when a great loss by death or evil alienation darkens our ways—how is it then with this Paradise of the innocent? While reading the "Meditations," there came into my hands the volume containing the "Selected Poems" of Francis Thompson, published about the same time, and I was struck by the application of a few lines of "The Hound of Heaven" to Traherne's nature-cult. That poem, it will be remembered, represents the soul of man as pursued by a spirit which is utterly not of this world. The hearer of the call seeks a refuge from its unrelenting insistence in all the varied interests and ties of life—in family and friendship and love and science, and in the fellowship of nature:

> Across the margent of the world I fled,
> And troubled the gold gateways of the stars,
> Smiting for shelter on their clangèd bars;
> Fretted to dulcet jars
> And silvern chatter the pale ports o' the moon.
> I said to dawn, Be sudden; to eve, Be soon;
> With thy young skiey blossoms heap me over
> From this tremendous Lover! . . .
> Still with unhurrying chase,
> And unperturbèd pace,
> Deliberate speed, majestic instancy,
> Came on the following Feet,
> And a Voice above their beat—
> "Naught shelters thee, who wilt not shelter Me."

In all this worship of nature, and Traherne belongs to a school whose influence can be traced in a score of varying forms down to the present day—in all this fair symbolism there is a strain of illusion which melts away at the touch of the greater realities, leaving the worshipper naked and bewildered. *Ita magnam in animis cœlesti doctrina carentibus vim habuit natura rerum*, said a wise Pope. Nature is indeed a great and, it may be, a healing power; but its unquestioned domination is still in the heart of those who have missed the celestial doctrine, and there are evils against which its seduction is of no avail.

P. E. M.

NEWS FOR BIBLIOPHILES.

The members of the Bibliographical Society have just received Vol. IX of the transactions of the society, containing several interesting papers. Alfred W. Pollard, W. W. Greg, and Falconer Madan discuss the subject of bibliographical descriptions, and Mr. Pollard presents a scheme of rules and models which, if they could be adopted, would bring about greater uniformity in catalogues. In an article on "Books and Bookmaking in Early Chronicles and Accounts," the Abbot Gasquet has gathered from scattered sources a series of interesting notes as to the cost of books before the introduction of printing. An indenture dated August 26, 1346, shows that one Robert Brekeling, a scribe, undertook to write a Psalter, with the Calendar, for 5s. 6d., and the Office for the Dead, with a collection of hymns and collects, for an additional 4s. 3d. It is probable that the vellum upon which the writing was done was furnished by the monastery. For the illumination of the capitals an extra 5s. 6d. was paid, over and above 18d., which was allowed for the gold and 2s.

for the colors. Henry B. Wheatley writes on the signs of booksellers in St. Paul's Churchyard, and gives a "provisional list" of 175 "signs," mostly gathered from the imprints of books. A Bibliography of Richard Bentley, compiled by A. T. Bartholomew, with an introduction by J. W. Clark, although not printed for the society, has been distributed to the members. It is a volume of 125 pages, with three portraits and a facsimile letter. In an appendix is reprinted Bentley's "Proposal for Building a Royal Library" (1697) of which the only known copy is in the British Museum.

Part iv of the Henry W. Poor library will be sold by the Anderson Auction Company of this city on February 23, 24, and 25. This section is made up largely of books of special or private presses. There are seventeen lots from the Kelmscott Press, including one ("The Tale of the Emperor Coustans") on vellum, of which twenty copies only were printed; twenty-six lots from the Vale Press; thirty-eight from the Daniel Press, including some of the scarcer items; a nearly complete set of the Humphreys Press publications; publications of the Bibliophile Society; a large number of Mosher's books, several on vellum; and some of William Loring Andrews's issues, including "Among My Books," of which fifty copies only were printed. Among first editions of English authors, the most notable is a series of Robert Louis Stevenson's books, including "The Pentland Rising" (1866), his first book; the rare *Edinburgh University Magazine* (1871), four numbers, all issued; and the original Sydney edition of "Father Damien" (1890). Among other English authors are first editions of Swinburne, Charles Lever, Andrew Lang, Tennyson, and Oscar Wilde. There is a complete set of Thoreau, and a long series of first editions of Whittier, including "Mogg Megone" (1836) and "Moll Pitcher and the Minstrel Girl" (1840); and minor books of Holmes, Longfellow, Emerson, and Lowell. Several of Surtees's books with illustrations by "Phiz" and Leech are listed, among them the first edition of "Jorrocks's Jaunts and Jollities" (1838). The most interesting of the older books is Walton's "Angler," second edition (1655), with manuscript notes in Walton's autograph on four of the fly leaves. As with the other parts of the library, there are many volumes in specimen bindings by the Club Bindery, Bradstreet's, and others.

On February 23, 24, 25, and 26, the Merwin-Clayton Sales Company of this city will offer a collection, largely Americana, including books on the American Revolution, the War of 1812, the Civil War, and local histories.

On February 25 and 26, C. F. Libbie & Co. of Boston will sell the autograph collection of the late Edward Abbott, with which is incorporated the correspondence of the Rev. William B. Sprague, one of the earliest of American autograph collectors. Among the more interesting items are several letters and manuscripts of Thoreau and letters to him from William Ellery Channing, Horace Greeley, and others. Manuscripts of Richard, Increase, and Cotton Mather, an A.L.S. of John Brown to his son, documents signed by several of the Presidents and signers of the Declaration of Independence, and a number of deeds and other documents relating to slavery are included.

Correspondence.

"WIT, WHITHER WILT?" AND OTHER SHAKESPEAREAN NOTES.

To the Editor of The Nation:

Sir: Some of the most perplexing of the minor problems of Shakespearean interpretation are those that have to do with popular sayings, quotations from old songs or ballads, allusions to familiar stories, jokes or quibbles, and the like. One of these is "Wit, whither wilt?" in "As You Like It" (iv, 1, 168), also referred to by Rosalind in the same play (i, 2, 59), when Touchstone enters. Its frequent occurrence in the literature of the time shows that it had become proverbial, but its origin and precise meaning have been a standing puzzle for editors and critics. Professor Dowden, however, has solved the enigma. In a letter received from him, a fortnight ago, he says:

> As the least iittle crumb of Shakespeare knowledge will be cared for by you, I may say that I think I can throw some light on "Wit, whither wilt?" Malone, you will remember, believed the words to belong to some song or madrigal. So it is. In that eloquent Puritan Thomas Adams's sermon, published in the same year with the same title as Webster's play (at least, published in 1612—my copy is 1613, second edition), "The White Devill," p. 39, he writes: "Many a Pope sings that common ballad of hell:
>
> Wit, whither wilt thou? Woe is me,
> My wit hath wrought my misery."

These rhymed lines suit the drift of Orlando's speech in "As You Like It," iv, 1, perfectly, I think.

Dowden had apparently forgotten, as I am sure I had, a quotation in Steevens's note ("Variorum" of 1821, vi, 472) from the preface to Greene's "Groatsworth of Wit" (ed. 1621):

> Wit, whither wilt thou? Woe is me,
> Thou hast brought me to this miserie.

Steevens evidently assumed that the lines (except the "Wit, whither wilt?") were Greene's, or he would have seen that they were from a song or ballad; and the problem would have been solved nearly a century ago. He merely remarked that the question was "an exclamation much in use when any one was either talking nonsense, or usurping a greater share in conversation than justly belonged to him." He cites examples of it from Dekker and Heywood, refers to others in Taylor the Water-Poet, and adds that the expression "seems to have been the title of some ludicrous performance." Johnson thought it "must be some allusion to a story well known at that time, though now perhaps irretrievable." Malone says: "If I remember right, these are the first words of an old madrigal." Dr. Furness thinks they were probably from a ballad, and I have expressed the same opinion in my revised edition of the play.

Of jokes or plays upon words that have posed all the critics, in spite of the amusing "tricks of desperation" by which they have endeavored to explain them, many examples might be given, but one or two must suffice here. In "The Tempest" (ii, 1, 65), when Gonzalo refers to the fact that the garments of the shipwrecked company, after being "drenched in the sea," nevertheless seem "rather new-dyed than stained with salt water," Antonio replies: "If but one of his pockets could speak, would it not say he lies?" None of the early editors attempt to explain this; but a recent critic thinks that the opening of the pocket looked like a mouth; and another says that "the pocket would be so full of mud that it would give the lie" to Gonzalo's assertion. Furness quotes these suggestions, but accepts neither of them. He might have reminded the author of the second one, that the magic which had made the garments as good as new would not have left mud in the pockets, if indeed any would have been there. The Clown's remark in "Twelfth Night" (iii, 1, 25) that "words are very rascals since bonds disgraced them," gets half a page of comment from six or seven critics in Furness's edition; but he adds that "none of them affords me [him] a ray of light." He suggests an explanation of his own which he "fears is quite as far-fetched as any of the others." It certainly is, and I will not be so unkind as to quote it.

The old story alluded to in "Hamlet" (iii, 4, 191) of the ape that unpegged the basket on the housetop and "let the birds fly" has eluded all critical research; like that in "Pericles" (iii, 2, 84) of the Egyptian who "had nine hours lien dead" (apparently), but was "by good appliance recovered"; and many another that was doubtless familiar to the theatre-goers of Shakespeare's day, but is now hopelessly lost.

The eighteenth-century editors were sometimes puzzled by allusions in the plays to old customs that had changed and been generally forgotten. In "King John" (iv, 2, 198) they were mystified by the reference to the tailor:

> Standing on slippers which his nimble haste
> Had falsely thrust upon contrary feet.

A full page is devoted to the passage in the "Variorum" of 1821. Good old Doctor Johnson remarks:

> Shakespeare seems to have confounded the man's shoes with his gloves. He that is frighted or hurried may put his hand into the wrong glove, but either shoe will equally admit either foot. The author seems to be disturbed by the disorder which he describes.

Farmer suggests that "ancient slippers might possibly be very different from modern ones"; and Steevens, Tollet, and Malone quote from writers between 1580 and 1797 to prove that shoes in former times were often "rights and lefts." The fashion was revived in the earlier half of the nineteenth century, but shoes of the other style were made, at least for boys, seventy years ago, because (as I remember that I was told) they were supposed to wear better than "rights and lefts."

Some ancient customs have bothered the commentators down to our own day; like that alluded to in the "Merchant of Venice" (iv., 1, 129), where Gratiano tells Shylock that his "currish spirit" must originally have

> Govern'd a wolf, who, hang'd for human slaughter,
> Even from the gallows did his fell soul fleet,
> And, whilst thou lay'st in thy unhallow'd dam,
> Infus'd itself in thee; for thy desires
> Are wolvish, bloody, starv'd, and ravenous.

When I first edited the play (1870) I felt sure that I had somewhere met with a reference to old-time trial and execution of beasts for killing human beings; but as I could not then trace it I hesitated to mention it in my notes. The only comment upon it in the editions of Shakespeare that I

could find was an absurdly irrelevant one by Steevens in the "Variorum" of 1821, which Furness ridicules in his edition of 1888. It was the only one he had discovered, and he adds no explanation of his own. He suggests that the passage may possibly be "one of those actor's additions which Hamlet denounces," and that "this would measurably account for its grammatical awkwardness." He adds that "the whole passage, from 'Thy currish spirit,' to 'Infus'd itself in thee,' can be omitted without injury either to the sense or the rhythm." This is true; and I might be inclined to agree with him as to the possible spuriousness of the passage, if the "confusion of construction" were markedly worse than many examples cited by Abbott ("Grammar," § 409-417), or if I had not, before re-editing the play, in 1903, found abundant evidence of animals "hang'd for human slaughter." Many cases of such judicial proceedings in the fourteenth and fifteenth centuries are mentioned by Baring-Gould, in his "Curiosities of Olden Times" (1896). In 1386, for instance, a sow was hanged at Falaise for killing a child. In 1389 a horse was tried and condemned for killing a man; and in 1499 a bull was similarly sentenced for causing the death of a boy. The trials were conducted with all the formalities, either before the ordinary or the ecclesiastical courts; and in some cases appeals were made to a higher court, and decided in due form. It is said that during the witch persecutions in Salem dogs were hanged for supposed complicity with persons accused. The Jewish law (Exodus, xxi, 28) concerning an ox that had gored a man, may have been cited as a precedent. I must have learned some of these facts—I do not yet know from what source—before 1870.

By the way, in the passage in the "Merchant" the folios read "sterv'd"; and Furness (he cites my note of 1870 on the origin of this old form) asks how Pope pronounced "starve" in the "Epistle to Dr. Arbuthnot":

> But still the *Great* have kindness in reserve.
> He help'd to bury whom he help'd to starve.

He pronounced it as we do, but he pronounced "reserve" as "resarve"; just as he did in the rhyme with "observe" in "Epistle III." So elsewhere he pronounced "desert," rhyming with "heart," "convert" with "art"; and there are not a few similar rhymes in Shakespeare's Sonnets and other poems.

Apropos of puzzles in Shakespeare, there is one that has perplexed me for thirty years or more. Can any reader of the *Nation* throw any light upon it? The dramatist has two allusions to *schoolgirls*. One is in "A Midsummer Night's Dream" (iii, 2, 202), where Helena says to Hermia:

> Is all the counsel that we two have shar'd
> The sisters' vows, the hours that we have spent,
> When we have chid the hasty-footed time
> For parting us—O, is all forgot?
> All school-days' friendship, childhood innocence?
> We, Hermia, like two artificial gods,
> Have with our needles created both one flower,
> Both on one sampler, sitting on one cushion,
> Both warbling of one song, both in one key,
> As if our hands, our sides, voices, and minds,
> Had been incorporate.

The other is in "Measure for Measure" (i, 4, 47):

> *Lucio*—Is she your cousin?
> *Isabella*—Adoptedly; as school-maids change their names
> By vain though apt affection.

That girls of royal or noble rank were often highly educated under private tutors we all know, but what *schools* in which girls were taught together existed in that day? I have been unable to find any mention of such in any historical or other book on education, and no scholar or critic to whom I have put the question could answer it. All that Dr. Furnivall, who ought to know if anybody on earth does, could say was that "legally girls could attend the grammar schools" of that day; but I can find no evidence that they ever did, and all the probabilities are decidedly against it. No editor, commentator, or critic, so far as I can find, has anything to say about either passage; and nobody that I have consulted assumes that private tutors rather than schools are meant. To my thinking, there can be no reasonable doubt on that point. If there are similar allusions to schoolgirls in other writers of the time, I do not recall them. Can any of your readers cite any such?

W. J. Rolfe.

Cambridge, Mass., February 4.

A POINT IN SIDNEY'S VERSIFICATION.

To the Editor of The Nation:

Sir: Reading the second volume of Professor Saintsbury's "History of English Prosody," I rubbed my eyes at finding (in a foot-note to page 149) this statement concerning the first sonnet of Sidney's "Astrophel and Stella":

> It is most noteworthy that the famous final line——
>
> "Fool!" said my Muse, "look in thy heart and write,"
>
> discards the lumbering top-hamper [twelve syllables] of the other thirteen, as if the Muse had applied the uncomplimentary epithet to them also.

Surely, said I, there is no such famous final line as that. Turning, however, to the reprint of the sequence in Arber's "English Garner," I found the same ten-syllable conclusion. In Grosart's edition of Sidney, on the other hand, I soon discovered the complete line,

> "Fool!" said my Muse to me, "look in thy heart and write!"

This is the form of the text in the "Arcadia" edition of 1598; and evidently also that of all the quartos of 1591 (these are not now accessible to me, but there is no hint of a variant reading either in Grosart's edition or the far more accurate one of Dr. Flügel). It would seem, then, that the decasyllabic form of the line is a mere error of Arber's transcript, which Professor Saintsbury has not only perpetuated, but made the basis of a critical dictum—a dictum very doubtful, even if the text were itself doubtful, since an Alexandrine sonnet ending with a shortened line would seem more like the result of accident than intention.

The mistaken text is repeated, unfortunately, in the new edition of the sonnets of the "Garner"—Sidney Lee's "Elizabethan Sonnets"—perhaps printed from the old plates; but the correct form appears in Ward's "English Poets" and in all other anthologies where I have found it. Finally I note that the erroneous form was quoted in Mr. Saintsbury's "Elizabethan Literature," where it led him (page 101) to describe the sonnet as "oddly compounded" of "thirteen Alexandrines and a final heroic." An error made so conspicuously, and so long ago, has very possibly been noted in print before this; but since it has reappeared in the new volume, and since the line in question is so deservedly famous, the matter evidently needs attention still.

AN ANCIENT VIEW OF DESTRUCTIVE NATURAL PHENOMENA.

To the Editor of The Nation:

Sir: The editorial in the *Nation* of February 4, "Earthquakes Then and Now," suggests the appropriateness of a reference to the discussions prevalent among Greek and Roman writers as to the question whether lightning was Jove's bolt of wrath or merely a natural force. Epicureans, Academicians, and perhaps also Cynics, with arguments probably derived from Pericles's friend Anaxagoras, were united in their attacks upon the Stoics, who defended the popular religious belief. Out of this controversy emerged a view with a decidedly modern ring. In Seneca's "Naturales Quæstiones," ii, 46, we read: "At quare Juppiter aut ferienda transit aut innoxia ferit?" To which the answer is given:

> Sic omnia esse disposita, ut etiam quæ ab illo non fiunt, tamen sine ratione non fiant, quæ illius est. Nam etiamsi Juppiter illa non facit nunc, Juppiter fecit ut fierent. Singulis non adest, et tamen vim et causam et manum omnibus dedit.

PAPERS RELATING TO LEIBNITZ—AN APPEAL.

To the Editor of The Nation:

Sir: Several years ago the International Association of Academies commissioned the Academies of Paris and Berlin to prepare a complete edition of the works of that "mathematician, philosopher, and universal genius, Leibnitz." At that time the academies issued an appeal to the possessors or administrators of the public and private archives, libraries, and collections of Europe, with the request that they would search out and calendar and describe all the material in their hands which might prove to be of value for the projected edition. It either did not then occur to the scholars concerned that there might well be hidden in the public and private collections of the United States a very considerable amount of such material; or else they assumed that there was none.

During a long experience as secretary of the American Oriental Society, I had abundant opportunity to learn that the number of scattered Oriental manuscripts in the United States was so large as to be well worth cataloguing, and this wholly apart from the very important collection of Arabic manuscripts at Yale, and of Sanskrit and Prakrit manuscripts at Harvard. Considering all this, and also the American habit of travel, and the readiness and ability of Americans abroad to buy things of historic interest, it is much more than probable that well-directed inquiries among American collectors and librarians would not be unfruitful, if duly made on behalf of the Leibnitz project.

Several days ago there came to me a let-

ter from the secretary of the Royal Prussian Academy, Prof. Hermann Diels, requesting that inquiries of the kind just indicated might be set afoot by me. In bis name, accordingly, and on behalf of the academies concerned, I beg that you will give due publicity to this letter, which recites their wishes. The appended list specifies the things that will be useful. Information concerning their existence and whereabouts is what is in the first instance asked for, and such information may be sent to me, or, if the sender prefers, to the secretary of the Academy, Professor Diels, No. 120 Potsdamerstrasse, Berlin, W. 35.

CHARLES R. LANMAN.

Harvard University, February 5.

LIST OF PAPERS AND PRINTS RELATING TO LEIBNITZ.

(1.) Manuscript works (essays, memoranda of any kind) which are known or supposed to be from the hand of Leibnitz. Manuscript letters known or supposed to be from or to Leibnitz. Manuscript works or letters by or to or from persons who stood in personal relations with Leibnitz.

(2.) Collections of manuscripts of the period 1664-1716, not yet properly examined or calendared, among which there might well be pieces falling under head 1.

(3.) Printed books in which are found manuscript notes or dedications or the like from the hand of Leibnitz.

(4.) Other printed matter of the period 1664-1716, whether (a) works of which Leibnitz is the known or supposed author, or (b) letters of which Leibnitz is the known or supposed sender or receiver (such as those "De la Tolérance des religions" or the like).

(5.) Broadsides or pamphlets of the period 1664-1716.

HETCH HETCHY VALLEY AGAIN.

TO THE EDITOR OF THE NATION:

SIR: The letter of Edmund A. Whitman of Cambridge, Mass., in your issue of February 4, in answer to mine relating to the use of Hetch Hetchy Valley as a storage reservoir to supply the cities about the Bay of San Francisco with water, is so misleading that I beg space to reply.

(1.) There is no sufficient available water for the uses, in the immediate future, of the people about the Bay of San Francisco nearer than the Sierra Nevada Mountains. This is a fact and not disputed, so far as I know, by any disinterested person who has knowledge of the local situation. The answer by parties interested in the local supply, and taken up by people who do not know the actual situation, is that a supply of 100,000,000 gallons per day can be developed locally, mostly from Alameda Creek, in Alameda County. This is an extravagant estimate, though it is possible to obtain a much larger supply than the 16,000,000 gallons per day that are now and for many years have been diverted to San Francisco from Alameda Creek. But if an attempt is made to withdraw more than 16,000,000 gallons per day from Alameda Creek the courts, at the suit of landowners in the Livermore, Pleasanton, Sunol, and Niles valleys, will certainly enjoin the diversion. That question has already been decided in exactly similar cases in our courts. The reason the owners of these exceedingly valuable lands in the valleys named will resort to injunction suits is that their lands are sub-irrigated by means of Alameda Creek and its tributaries through strata of gravel and sand. Large towns and prosperous communities are situate on these lands. Either to store the flood waters in reservoirs or to pump from the gravel beds, as the local water company has begun to do, will be of such injury to large communities and great orchard interests that the courts will, as has been done in similar cases in the Santa Clara Valley and San Bernardino, enjoin the diversion. If the courts shall fail to follow precedent, then the question of public policy would come in—shall these great communities be permanently injured in order to get water for the cities about the bay when there are other sources from which water may be obtained?

(2.) The large and growing cities of Oakland, Berkeley, Alameda, and Richmond on the east side of the bay, are acting in concert with San Francisco in this matter. The same main pipe line can supply all. These east shore cities are really in greater need of the Sierra supply than San Francisco. It is safe to say that a succession of dry years, such as are not uncommon in this climate, will bring on a water famine for all the bay cities.

(3.) All competent authorities conversant with the subject being agreed that the Sierra Nevada Mountains must ere long furnish the greater part of water for the bay cities, to what part of the Sierras shall those cities go? The nearest and most abundant supply is furnished by the Tuolumne River. Enough water comes from that watershed to meet the wants of all the bay cities, and also of all the landowners whose lands can be irrigated from it. The waters of all other streams flowing from the Sierras are already monopolized for power, or for mining, or for irrigating, and are actually needed for the irrigation of the lands that have the first claim upon them in order to build up prosperous communities thereon. To condemn the water rights on these streams will necessitate an outlay absolutely prohibitive. It is simply an impossibility. Nor should the water be taken from the landowners. It is to the interest of all that those lands should be made as productive as possible.

(4.) Before Hetch Hetchy Valley can be utilized as a reservoir, San Francisco is bound by its agreement with the Roosevelt administration to utilize the waters of Lake Eleanor. The outlet of Lake Eleanor flows into the Tuolumne River below Hetch Hetchy. This lake and our local sources of supply will be sufficient for the bay cities for many years to come, but ultimately Hetch Hetchy must be used to confer the greatest good upon the greatest number of people—that is to say, as an artificial lake to store water for the bay cities.

(5.) The United States many years ago parted with its title to all of the land on which are the meadows of Hetch Hetchy Valley. These are at the lower end of the valley. San Francisco has purchased those lands, and now has them in private ownership, and can do what she likes with them. What she asks is that the United States give her the right to overflow the lands still owned by the government in the upper end of the valley. In exchange for this she will convey an equal amount of land also owned by her in other portions of the park; she will also make roads to the valley and around the lake that will be created.

(6.) I know the feeling is very strong and controlling in San Francisco that the property of the local water company must be purchased, whenever it can be done at a price not excessively above what it is actually worth. But we do not wish to be placed in a position where the local company can say: "You cannot get water elsewhere, therefore you must pay the price asked." Mr. Whitman and his friends would put us in that position. They would have the United States say to us: "You shall not have the water from the Tuolumne River now going to waste, for we will not permit you to impound it, even on your own land, because in doing so you will necessarily flood land belonging to the United States, land that will be visited and camped on by perhaps as many as two hundred nature lovers every year." But it is said the city may resort to condemnation. Theoretically, yes, but practically, no. Besides, the court would instruct the jury to take into consideration lack of any other supply in fixing value of the supply to be condemned.

I beg your readers to consider the foregoing facts when discussing the question whether or not the government should permit San Francisco to flood the floor of Hetch Hetchy Valley. Under all the circumstances, is this request of San Francisco, acting for herself and the other bay cities, unreasonable? She is desirous of providing water for a great population from the only available and practicable source of supply. I submit to all candid and fair-minded men that to characterize her efforts as "an attempt to secure a license to steal," and as an indication of hysteria, is without justification. There have been plenty of exhibitions of hysteria in this matter, but not by the friends of San Francisco and the other bay cities.

WARREN OLNEY.

San Francisco, February 10.

Notes.

D. C. Heath & Co. announce for immediate publication Dante's "Inferno," edited, with notes, by Prof. C. H. Grandgent of Harvard. It is designed for the general reader as well as for college students.

Charles Scribner's Sons have about ready for publication a volume of essays, "Egoists," by James Huneker; a book on Siena, by Prof. Ferdinand Schevill of the University of Chicago, and a translation of Rudolph Eucken's "Poblems of Human Life."

In March Duffield & Co., in publishing a volume of stories by Helen Mackay, will make the experiment of issuing a new book in paper covers and quite in the common French form.

Robert Bridges has edited a selection of the "Poems by the Late Rev. Dr. Richard Watson Dixon," which is published by Smith & Elder of London. From the same firm is coming the Rev. W. Tuckwell's "Pre-Tractarian Oxford: A Reminiscence of the Oriel Noetics," which contains sketches of Provost Eveleigh, Copleston, Whately, Dr. Arnold, Hampden, and others of that group.

To Routledge's series of Golden Anthologies (E. P. Dutton & Co.), the latest addition is "The Hundred Best Hymns in the English Language," selected and arranged by the Rev. John Cullen, vicar of Radcliffe-on-Trent. The editor tells us that there are about three hundred good Eng-

lish hymns. From these he has chosen not merely the stipulated hundred, but thirty-three more for an appendix. These he has arranged "according to the Christian seasons and other occasions, for the convenience of those who may wish to use the book in family or social worship." That a majority of the hymns are wisely selected there can be no doubt; but Dr. Cullen has a decided leaning toward the sweetly sentimental, which the compilers of "The Oxford Hymn Book," as we noted in our issue of last week, so successfully avolded. His "foreword" closes with this sentence:

> May these hymns prove a consolation and comfort to all who read or sing them, and may we all at last sing in the holy choir of heaven.

After this we are not surprised to find E. Codner's "Lord, I Hear of Showers of Blessing," with the refrain "Even me"; C. Elliott's "Just as I Am, without One Plea"; P. P. Bliss's "Sowing the Seed," and Miss F. J. Crosby's "Safe in the Arms of Jesus." Kipling's "Recessional" also appears.

Most devout Arnoldians would probably say, if asked for suggestions with reference to a volume of select poems from Arnold, "Omit 'Merope,' and include all the rest." Prof. Edward Everett Hale, in his "Select Poems of Arnold," in the Belles-Lettres Series (D. C. Heath & Co.), has not followed this simple principle, but a subtler one of his own devising. He has chosen his specimens to illustrate five different divisions of Arnold's poetical work, as follows: "Poems of the Personal Life," "Poems of Nature and Thought," "Poems Chiefly of Thought," "Elegiac Poems," "Narrative and Dramatic Poems." In making the first three divisions, he has done exactly what Arnold himself found fault with Wordsworth for doing. Wordsworth classified his works as "poems of the fancy, poems of sentiment and reflection, and so on." These categories, said Arnold, are "ingenious, but far-fetched, and the result of his employment of them is unsatisfactory." If unsatisfactory when the poet does his own grouping, it is much more so when done by an outsider. In the first place, the five classes noted above are obviously not mutually exclusive. On closer inspection, the dividing lines of the first three seem in many cases absolutely without meaning. For example, by what scheme of "mental physiology" can the "New Sirens" be included among the poems of the "personal life," while "Resignation" and "Dover Beach" are excluded? The fact is, "poems of the personal life" is a misnomer. What Professor Hale meant, or should have meant, was poems connected with an early love affair, real or imaginary, of an unhappy termination. We should not insist upon this confusion, if the entire point of the introductory essay did not depend upon it. At the close of his discussion, attempting to define the particular power of Arnold, the editor says, "He is not great as a poet of the personal life, in spite of the charm of some of the poems of 'Faded Leaves' and 'Switzerland.'" There, again, he should mean simply that Arnold was not a great singer of the love of man for woman. But the personal life of a man like Arnold includes other passions than love, and it is the poignant individual note with which Arnold voices these other passions—baffled passions for creative power, for religious faith, for inner peace—that is drawing the younger generation of readers away from the "Ring and the Book" and the "Idylls of the King" to "Empedocles" and a "Summer Night." Arnold's lyrical poems are the record of a soul out of joint with the age, and they are scarcely less personal than the diary of Marcus Aurelius or the journal of Amiel. Nor can we concur with Professor Hale when he says:

> We certainly do not find in the subject, at least, of the narrative poems, anything that particularly reminds us of the view of life that has been seen in the lyric poems.

The blind slaying of the son by the father in "Sohrab and Rustum," to mention only one of many instances, is a manifest exemplification of the "view of life" expressed in these lines from "Dover Beach":

> And we are here as on a darkling plain
> Swept with confused alarms of struggle and flight,
> Where ignorant armies clash by night.

In the narrative and lyrical poems alike the plangent iteration of desires infinite and hopes impossible, subdued by stoical discipline and solaced by a certain loveliness in the natural world—this largely constitutes the power of Arnold.

The Lincoln centenary inevitably bears books on its flood. Among them are reprints of two long poems: "A Man of Destiny" (Lincoln Publishing Company, Springfield, Mass.), by Ernest Linwood Staples; and "Abraham Lincoln, a Poem" (Putnams), by Lyman Whitney Allen. The first is in blank and very flat verse; the second is a series of lyrics, with higher flights but deeper falls. More ambitious, but scarcely more successful, is "The Burden Bearer: An Epic of Lincoln," by F. H. Williams (George W. Jacobs & Co.). In spite of a long succession of failure, it would be rash to assert that the civil war and Abraham Lincoln are unsusceptible of heroic treatment. From the unpoetic accidents, no doubt the fundamental heroism of the man and his age will be finally disengaged. Perhaps his legend is already forming in certain hardy imaginations. In the meanwhile, it is just the unpoetic elements that the popular fancy has seized upon and delights in, as characteristic—the homely, the racy, even the grotesque. And it is the peculiarity of Mr. Williams's poem to identify him with the circumstantial even more closely—to fuse and confound the two indistinguishably. It is in large part a political epic. Its author has felt himself impelled to trace not only the military, but the political, history of the period. In this way his poem resembles now a rhymed—or at least a metrical—gazette, and anon a rhymed or metrical newspaper. Something of the same criticism must fall to Percy Mackaye's "Ode on the Centenary of Abraham Lincoln" (The Macmillan Co.), though his task was as much easier as it was shorter.

> Who shall distil in song those epic years?
> Only the sibyl of simplicity—

writes Mr. Mackaye, and, despite the stirring swing of the lines here and there, it must be said that as a whole he has not succeeded in fusing the humbler details of Lincoln's life with the elevation of his general theme.

Turning from verse to prose, we find two little volumes that deal with the religious side: "Lincoln's Use of the Bible" (Eaton & Mains), by S. Trevena Jackson; and "Abraham Lincoln's Religion" (Boston: Badger), by Madison C. Peters. Stripped of homiletic embroidery, the facts appear to be that Lincoln was a free-thinker, in the stress of the nation's agony a devout theist, but never an orthodox or even professing Christian. His untimely taking off is the theme of two books, "The Death of Lincoln" (Doubelday, Page & Co.), by Clara E. Laughlin; and "The Assassination of Abraham Lincoln" (The Macmillan Co.), by David Miller Dewitt. Both follow official documents, and the records of court trials, though not always agreeing as to what is the weight of evidence. Of more general interest is "Abraham Lincoln: Tributes from His Associates" (T. Y. Crowell & Co.), with an introduction by William Hayes Ward. These collected reminiscences appeared in the *Independent* in 1895, and are well worth preserving in book form. A companion to this is "Lincoln's Birthday," edited by R. H. Schauffler (Moffat, Yard & Co.), which gives a selection of the more notable essays and poems on the man, with extracts from his own speeches. Of all these occasional books the most interesting is the Life in the Beacon Biographies, by Brand Whitlock (Small, Maynard & Co.), which, despite one or two lapses in grammar and an occasional straining at heroics, tells the story of Lincoln's career concisely and entertainingly.

When the Professor of Things in General comes to his chair, he will find the Columbia University Press ready with a textbook. "Lectures on Science, Philosophy, and Art" contains twenty-one discourses, by as many specialists, who endeavor to describe in non-technical language "the achievements and the present status of these subjects as concepts of human knowledge." With but one or two exceptions, lucidity, directness, and calm impartiality mark the accomplishment of this difficult task. The contributors have wrecked the academic tradition which, as Prof. C. J. Keyser puts it in the opening lecture, regards special subjects as "so intricate, mysterious, and high that in all their sublimer parts they are absolutely inaccessible to the profane man." Even more admirable than clarity, however, is the humility, most noticeable where least expected—in the lectures on physics, biology, anthropology, and economics. The physicist calls his electron theory a "confession of faith." The biologist is positive that the whole truth about organic evolution can never be known; his explanation of no ultimate problem of life, he says, will ever be complete. The anthropologist's science "is only beginning to find its own bearings"—let alone reaching its last conclusions. And the economist admits, but without regret, that his clan still talks about what it doesn't know. Following are the topics covered and the lecturers; Mathematics, C. J. Keyser; Physics, E. F. Nichols; Astronomy, Harold Jacoby; Geology, J. F. Kemp; Biology, E. B. Wilson; Physiology, F. S. Lee; Botany, H. M. Richards; Zoölogy, H. E. Crampton; Anthropology, Franz Boas; Archæology, J. R. Wheeler; History, J. H. Robinson; Economics, H. R. Seager; Politics, C. A. Beard; Jurisprudence, Munroe Smith; Sociology, F. H. Giddings; Philosophy, President N. M. Butler; Psychology, R. S. Woodworth; Metaphysics, Frederick J. E. Woodbridge; Ethics, John Dewey; Philology, A. V. W. Jackson; Literature, H. T. Peck.

There is little of special sallence in J. Comyns Carr's chapters on "Some Eminent Victorians" (Scribners); they run on from character to character, taking in poets and painters and statesmen, showing them for the most part in the usual light, but always clearly and agreeably. Here and there a more pungent anecdote or hit of characterization makes a ripple in the current. Rossetti was one of his early friends, and here, as in all the memoirs of the age, we feel the mysterious power of the man's personality. One emphatic dictum of his, Mr. Carr quotes: "A picture is a painted poem, and those who deny it have simply no poetry in their nature." Not less quotable is Mr. Carr's own saying, which Rossetti called the finest criticism ever made on Landor: "It seems to me through all his poetry that his genius is impersonal without being dramatic." Tennyson also impressed the writer with a force like Rossetti's, although nothing new is brought out about him, save his facial resemblance to Dickens—a resemblance confirmed by the portraits in the present volume. The oratory of Bright and Gladstone is compared to the detriment of the latter, and among the other statesmen the strength and charlatanry of Disraeli are noted with clever precision. "He looked out upon the present," says Mr. Carr of the Tory leader, "as though from the recesses of a buried past, and of all the representatives of his nation whom I have known, he appeared to me the only one who possessed in any preëminent degree the quality of self-possession in manner and bearing." The most astonishing anecdote is the story of Lord Randolph Churchill hearing Irving in "Hamlet," and, as he was obliged to leave early, going back to the actor to inquire how the play ended. On next meeting Irving he reported that he had read "Hamlet" and several other plays by Shakespeare—"and do you know, Mr. Irving," he said, "I find them enormously interesting." Mr. Carr tells something also of his own life, and the pages on his life as a newspaper man in the old Bohemian days are the most entertaining in the book.

The latest of the publications of the Folk-lore Society (London: David Nutt) is a more than usually interesting monograph, "The Grateful Dead," by Prof. G. H. Gerould of Princeton. This story, which starts with the ransom by the hero of an unburied corpse, Professor Gerould believes to be based on primitive beliefs as to the duty of interment, and to have arisen in the region of western Asia, inhabited by Semites at some period prior to the composition of the Book of Tobit (76-135 A. D.?), which contains the motive in a compound form. From its original home the story appears to have spread to other parts of Asia, and over the whole of Europe; for variants of it in conjunction with other well-known themes are found in lands as far apart as Siberia and Brittany, as Spain and Armenia. The most important of these are compounded with "The Poison Maiden" with a Lamia for heroine; "The Ransomed Woman"; or certain types connected with "The Water of Life." The combination with "The Poison Maiden" (*e. g.* the story of Tobit) was probably the earliest and was Asiatic in origin; that with "The Ransomed Woman," on the other hand, though seemingly Asiatic in character, is found only in Europe, so that its provenance is as yet uncertain. It is perhaps needless to add that these simple compounds do not exhaust the tale. Each when formed developed on its own lines, absorbing traits or often entire themes from other sources. These complicated types are discussed at length, and the mode of their amalgamation made clear.

Vol. II of the third edition of Sir William Anson's "The Law and Custom of the Constitution" (Henry Frowde) continues the analysis of the powers of the Crown, with their working out in colonial government, conduct of foreign relations, the collection of revenue, the control of army and navy, establishment of religion and erection of the courts. The author pursues his well-known method of minute logical division, with rigorous citation of authority. All the recent statutory changes and leanings of practice are duly noted. The result is the accumulation of a vast amount of rather desiccated knowledge. Sir William refers in his introduction to the publication of Prof. A. Lawrence Lowell's book, "Government of England," to which he, like other English writers, gives high praise. The Briton, like the American, makes the chief cause of the success of English administration to be the extraordinary way in which a highly skilled and permanent civil service is put at the disposal of those who direct public policy. Party government, observes Sir William, is necessarily to a great extent "government by amateurs." It can be made compatible with efficient government only by the best possible civil service.

"The Mystery of Golf" (Houghton Mifflin Co.), by Arnold Haultain, recalls *Punch's* jest about "The Mystery of Edwin Drood" —"how it sells." The enemies of the game would say that its mystery lies in the necessity of having so much talk and so many books about golf. This venture of Mr. Haultain's however, does justify itself. We refer not to the fine paper and printing of his little book, nor its brave assumption of antique speech in red-ink marginal notes, nor to the philosophizings more old than new which he draws out of his treasure-house; but to the novel and convincing pages which he devotes to the psycho-physiology of golf. It differs from most other games in eliminating reflex action. Nothing flies at you to provoke the instinctive reflex: only that passive little ball lies there waiting your initiative. Hence the need of summoning all your greatness of soul to secure that the stroke be perfect.

"Camp Fires on Desert and Lava" is the tempting title of a volume by William T. Hornaday (Charles Scribner's Sons), which takes the reader to an unexplored part of the Sonoran desert, between Tucson and the Gulf of California, known as the Pinacate region. Concerning this region the author and his three companions—a zoologist, a sportsman, and a geographer—could not even get enough information, written or oral, to tell them it was a lava country, although, when they got there, they concluded there must be nearly five hundred extinct volcanoes seen around Pinacate. "Doré would have revelled in this scowling, contorted, wholly blasted spot"; and here, amid unearthly and nether-world surroundings, the party hunted mountain sheep, which were quite abundant, although it seemed strange that these animals should have strayed from the Rockies to a region where the heat registers in summer 130 degrees in the shade. As a matter of course, this expedition was not undertaken in summer, but in November, a month when Arizona and northwestern Mexico are a paradise, except for the facts that water is sometimes hard to procure and the temperature towards morning gets so low that one wants two blankets. The party started from Tucson, queen city of cactus-land, and, after visiting the Desert Botanical Laboratory, established by the Carnegie Institution, plunged into the wilderness, which proved to be, not a sandy waste, but a region green with its own peculiar but economically valueless desert flora, which is destined ere long to be replaced by a useful vegetation that can thrive without water. It is to be feared that this vegetation will be infinitely less picturesque than the endless varieties of cacti, which Mr. Hornaday describes with the ardor of an enthusiast. To him the whole desert is an oasis. His volume is superbly illustrated, some of the pictures being in colors. There is considerable scientific information about the flora and fauna, but the work is chiefly interesting as a volume of travel and adventure.

Prof. Adolfo Posada, of the University of Oviedo, a prominent Spanish publicist in the field of the social sciences, has completed the introductory volume ("Introducción") to his projected "Principios de Sociologia." The book is one of that class which lays stress upon conceptions and methods, and affords a wide perspective of the literature, chiefly recent, of sociology. In following this modern sociology, it is noteworthy that Posada derives his points of view mainly from treatises by Americans—above all, perhaps, from Profs. Lester F. Ward of Brown and Albion W. Small of Chicago. It is clear enough from any serious work of this order that the science of sociology is still in the trial-stage; indeed, it sometimes seems as if the later sociological writers had deserted the line of development to which the works of Spencer lent something better than respectability, and are now applying the term sociology to a much more shaky and non-scientific mass of ideas and projects. Nothing was clearer, for example, in the last meetings of the American Sociological Society at Atlantic City than that, with the exception of Prof. W. G. Sumner of Yale and a few others, the bulk of sociologists—where they do no worse—are running out into a species of "practicality" and are even indulging in rash forecasts of the future; a number of the papers discussed what was likely to happen to the family, and so on. And now the collection of excerpts and condensed views put together by Professor Posada betrays something of the same general tendency in the literature he covers. There is much whittling of fine points, more or less speculative and metaphysical, and there is not a little about methodology; but there is in the survey a conspicuous absence of works based upon induction from copious materials of ethnography and history. In some ways we can see ourselves better in the book of this Spanish scholar than in that of any one nearer the centre of sociological enterprise; the German, French, or English au-

thor does not impress one as being so detached and so likely to attain perspective. Hence Señor Posada's work has perhaps a special value in indicating tendencies. If, then, we find him, as it were from the outside, listing as sociology and sociological principle a series of considerations as to whether sociology is a science, as to its place in the hierarchy of sciences, as to "sociology as philosophy," etc., it would appear that little has been done since Spencer's time except to rearrange and to move into this or that connection the concepts to which Spencer, through his toilsome case-gathering, and analysis, once gave vitality. To a natural scientist, at least, judging from the collection made by Posada, sociology must look very little like science.

Two books which may be grouped together are "Washington och dess svenska befolkning," by Ernst Skarstedt (Seattle), and "History of the Swedes in Illinois," edited by Ernst Olson in collaboration with Anders Schön and Martin J. Engberg, 2 vols. (Chicago: The Engberg-Holmberg Publishing Co.). Works of this kind are welcome contributions to a field of American history that has not yet been fully explored, the story of the immigrants and the part they have played in building up the country. Even the biographical portions, often much decried, are not without their value in showing by concrete examples what individuals have accomplished. Mr. Skarstedt asserts, in his preface, that "the biographical part that closes the book, certainly is the richest and most impartial which has hitherto appeared in any Swedish-American work." Mr. Skarstedt has himself lived in Washington and Oregon and knows the country and its people intimately. He is therefore able to relate much from first-hand knowledge. His descriptions of the natural features and resources, industry, and commerce are intended as information for prospective settlers. Many of the illustrations are from photographs taken by the author. The volumes on Illinois are planned on a much larger scale. One is confined to biographies with portraits of nearly nine hundred Swedish-American men and women. The second volume, 900 pages, contains chapters on Churches (including the educational institutions controlled by them), Press and Literature, Early Settlers, the Bishop Hill Colony, the Swedes in the Civil War, etc. The three last-named chapters contain much new material. The whole account of the Swedes in the civil war represents much laborious research among the war records and other sources; being pioneer work, it is rather a collection of material for history than finished history. This volume contains several sketches of men not included in the biographical volume, such as, Raphael Widén, the first Swedish pioneer in Illinois; Jonas Hedström, the first Swedish clergyman in the State; Erik Jansson, founder of Bishop Hill; L. P. Esbjörn, founder of the Swedish Luheran Church in America; Gen. C. J. Stolbrand, chief of artillery under Logan, and Col. O. Malmborg. The introductory chapters on Illinois and on Chicago seem unnecessarily long. Many of the illustrations are from rare and curious cuts and photographs.

Dr. Ricarda Huch, who has written fiction and verse of distinction, has now published a volume of historical portraits from a most dramatic period of modern Italian history, "Das Risorgimento" (Leipzig: Insel-Verlag). The book traces the fate of some of the famous prisoners of the dreaded Spielberg, among them Federico Confalonieri, Silvio Pellico, Piero Maroncelli, Antonio Salvotti, and Giorgio Pallavicino. The author's power of characterization is evident in the portrayal of these men; also of the Emperor Francis, whose sketch closes with the words of Dante: "Speak not of him; look at him and go by"; and of Charles Albert of Savoy, whom she does not regard as worthy to be called the Hamlet of Italy, though she writes with sympathy of his weakness and his misfortunes.

One of the most interesting of recent German autobiographies is the volume of "Memoiren," by Baroness Bertha von Suttner (Stuttgart: Deutsche Verlagsanstalt), well known as a writer, as the founder and president of the Austrian Friedensgesellschaft, and an enthusiastic and eloquent advocate of international peace. Certainly the hereditary influences, under which she grew up, could not have been the cause of her ardent devotion to this pacific mission. Her father, Count Kinsky, and both his brothers, were generals, and her mother was the grandniece of the poet Theodor Körner, famous for his *Schwertlieder*. Entirely opposed to the military spirit pervading these poems, and fostered by both branches of her family, is her novel, "Die Waffen nieder!" published in 1889, and soon translated into all European languages. Born in Prague, in 1843, she was remarkably precocious, and soon learned to speak fluently English and French. She was an excellent singer and pianist, and devoted herself also to intellectual pursuits in connection with her cousin, Elvira Büschel, who, when twelve years old, composed a drama which elicited the praise of Grillparzer. When she was eighteen she received an offer of marriage from a millionaire of fifty-two, whose suit was favored by her mother; she herself was dazzled by the prospect of villas, castles, palaces, and other splendors, and consented to the betrothal; but the first and only kiss he gave her caused her to recognize the impossibility of becoming his wife. "I cannot, *cannot*, and would rather die!" she exclaimed, and in spite of all protests broke off the engagement. Quite romantic is the account of the manner in which she was wooed and wedded by Baron von Suttner, revealing on her part fine feeling, rare discretion, and real force of character. It was due to her influence that Alfred Nobel of Sweden became so deeply interested in the cause of international peace as to establish the annual prize for the most efficient promoters of it. In 1905 this prize was justly awarded to Bertha von Suttner. Without entering into further details, it will suffice to characterize this work by stating that it deserves to rank in German autobiographic literature with Fanny Lewald's "Meine Lebensgeschichte," Karoline Bauer's "Erinnerungen," and Malwida von Meysenbug's "Memoiren einer Idealistin."

A charmingly written book of travels in Sicily, Italy, Greece, Turkey, Egypt, and India is Cattina von Seybold's "Aus warmen bunten Ländern," presented in an attractive little volume by C. H. Beck of Munich.

Gustav Dalman's "Petra und seine Felsheiligtümer," with 347 views, plans, maps, and panoramas (Leipzig: J. C. Hinrichs), is the fruit of the studies of an exceptionally well equipped Orientalist. The author, who is a member of the theological faculty in Leipzig, has been for several years on leave of absence, as leader of the German Archæological Institute in Jerusalem. He has made four separate scientific journeys to the famous rock city, Petra, in Southern Palestine, once the metropolis of a people related to the Edomites. Many of the archæological finds here pictured and described are new discoveries of the author, and the great majority are specimens of religious antiquities, such as 160 statue idols, 29 altars, 68 sacrificial feast tables, and 144 lustration vessels. Petra was the meeting place of Oriental and Occidental culture and religious institutions and creeds; this and its nearness to Israel make the work appeal to the Biblical student as well as to the classical archæologist.

In the Bulletin of the St. Petersburg Academy of Sciences Professor Beneshewitz reports the results of his recent investigation in the St. Catharine cloister on Mt. Sinai. Of special interest is the fact that he has found no fewer than 926 manuscripts which Gardthausen has not mentioned in his catalogue of Mt. Sinai manuscripts, and that there are still many other manuscripts in this historic cloister. These deal chiefly with the lives of saints, liturgies, church polity, medicine, and a number of the most valuable of all with the history of church music. Professor Beneshewitz has also reëxamined a large number of the documents, which Gardthausen described. Among the many photographs which he took of these manuscripts there is also a reproduction of the important Apophthegma (ἀποφθέγματα τῶν ἁγίων γερόντων) of the year 1064. An edition of this is announced, to be prepared by Dr. Nitikin, who is also a member of the St. Petersburg Academy. He will compare the two manuscripts of the Apophthegma text found in the Moscow Synodical Library.

It is now about a decade since the graduates of all three types of secondary schools in Germany, each with a nine-years' course (namely, the classical gymnasium, the semi-classical realgymnasium, and the purely scientific oberrealschule), have been admitted practically to all the departments of the universities on equal terms. Statistics now show that the classical course still has an overwhelmingly strong hold. During the past summer term there were 1,075 Protestant and 931 Catholic theological students in the ten universities of Prussia; all of them were graduates of the gymnasium. Of the 5,441 in the law departments, 4,569 were classical, 642 semi-classical, and 230 scientific. Of the 2,586 in the medical department, 2,179 were classical, 320 semi-classical, and 87 scientific. Of the 8,612 in the philosophical faculties, 6,085 were classical, 1,439 semi-classical, and 1,088 scientific. In eight non-Prussian universities, the proportions were about the same. Thus out of a total of 31,622 students in eighteen out of the twenty-one German universities (the Bavarian universities of Munich, Erlangen, and Würzburg not reporting), 24,876, or 78+ per cent., were classical; 4,417, or 14+ per cent., semi-classical, and 2,331, or 7.4 per cent., scientific. These statistics were compiled and

publlshed by Dr. Tilmann of the Prussian Ministry of Education in the *Monatsschrift für höhere Schulen.*

Any person who is interested in the growth of Western State universities will find much matter of significance in the thirteenth biennial report of the Regents of the University of Texas. The attendance in 1883-4 was 221; in 1903-4, 1,393; in 1907-8, 2,501. In the period from 1901 to 1907, the number of books in the library increased from 36,227 to 58,759. We quote a passage from the section of the report which treats the organization of graduate work:

The university has been conservative in the work which it has offered. It has preferred to undertake nothing that it could not do with reasonable credit and distinction. It has heretofore not offered any degree higher than the master of arts. In this respect, it has stood almost alone among the universities of America. Hardly another institution of its grade has failed to offer the doctor's degree. The faculty and regents recognize that only the preliminary work toward this degree can be done with our present resources, but they confidently count upon the Legislature and the people of the State for making adequate provisions for thls work in a large way.

At the seventeenth annual meeting of the American Jewish Historical Society, in Philadelphia, February 21 and 22, papers will be read by Samuel P. Abelow, Brooklyn; the Rev. Henry Cohen, Galveston, Tex.; Albert M. Friedenberg, Dr. Herbert Friedenwald, Leon Hühner, Mark J. Kätz, Max J. Kohler, Isaac Markens, the Rev. Dr. H. Pereira Mendes, and Samuel Oppenhelm of New York; Dr. Abraham S. Wolf Rosenbach, Philadelphia; and Israel Solomons, London, Eng.

A summer school of theology will be held at Oxford from September 13 to 24. Scholars representing various churches and phases of thought will lecture.

The National Library of Wales, at Aberystwith, chartered in 1907, has become a reality by the transference thither of Sir John Williams's collections, numbering about 20,000 items. Besides the specifically Welsh books the library contains much pertaining to Gaelic, Irish, Cornish, and Breton philology.

On February 14 Prof. William Mathews, the oldest living graduate of Colby University, died in Boston at the age of ninety. In 1862 he was appointed professor of rhetoric and English in the University of Chicago, but gave up his place in 1875. He has written a number of books, including "Getting On In the World" (1873), "The Great Conversers, and Other Essays" (1874), etc.

Miss Emily Virginia Mason, known for her activities in behalf of Southern soldiers in the civil war, died at Georgetown, D. C., February 16. She was born in Lexington, Ky., in 1815. She wrote a "Life of General Robert E. Lee" (1871), and edited "Southern Poems of the War" (1867) and "Journal of a Young Lady of Virginia in 1798" (1871).

Oswald Crawfurd, a well-known figure in London literary life, has died at the age of seventy-four. From 1867 to 1891 he had been consul at Oporto, and had rendered valuable service to the government during the Portuguese disaffections of 1889-90. As a writer he contributed largely to the magazines under such signatures as "John Dangerfield," "Joseph Strange," etc. Besides two volumes of verse and several novels, he published "Travels in Portugal" (under the pseudonym of "John Latouche"), "Round the Calendar in Portugal," "Portugal, Old and New," "British Comic Dramatists," "Lyrical Verse from Elizabeth to Victoria," and "Four Poets."

Marquis Marie-Charles-Albert Costa de Beauregard, historian and, since 1896, member of the French Academy, has died in Paris at the age of seventy-three. His published works include: "Un Homme d'autrefois," "La Jeunesse du roi Charles-Albert," "Les Dernières Années du roi Charles-Albert," "Le Roman d'un royaliste sous la Révolution," and "Souvenirs tirés des papiers du comte A. de La Ferronnays."

Marquis Emmanuel-Henri-Victurnien de Noailles died in Paris, February 16, at the age of seventy-eight. He had been the ambassador of his country at Washington, Rome, Constantinople, and Berlin; and he was author of "La Pologne et ses frontières" (1863), "La Poésie polonaise" (1867), and "Henri de Valois et la Pologne en 1572" (1867), a work in three volumes, crowned by the French Academy.

Dr. Wladislaus Nehring, professor of slavic philology at the University of Breslau, has died in his seventy-ninth year. Besides works in the Polish language, he published "Iter Florianense" and "Altpolnische Sprachdenkmäler."

TWO WOMEN OF HISTORY.

The Maid of France. By Andrew Lang. New York: Longmans, Green & Co.

Jeanne d'Arc is about to become officially beatified after a term of candidature that makes Mr. Bryan's seem as but a watch in the night. Her appeal from her judges at Rouen to the Pope, by them cruelly and unlawfully disregarded, has at last been argued and decided in her favor. At the same moment, the story of her life is told again by a man whose countrymen enjoy a unique relation to her:

The Scots did not buy, or sell, or try, or condemn, or persecute, or burn, or—most shameful of all—bear witness against and desert the maid. The Scots stood for her always, with pen as with sword.

Mr. Lang's book is not written in the soothing spirit of leisurely research. It has a vivacity inspired by the two master passions of literature, love of the subject as a vital issue, and a strong objection, both temperamental and reasoned, to the author who has most lately treated it. What Plato is to Aristotle's "Politics," what Mommsen is to Ferrero's history of Rome, that is Anatole France to Mr. Lang's life of the Maid of Orleans. Mr. Lang's own conception of Jeanne is very simple and uncompromising: she was gifted with "genius which should be the marvel of the world while the world stands"; she was not only saintly, brave, and a natural leader of men, but of a high intelligence; her "voices" count for relatively little, since, but for her exceptional endowment, they would have been of no avail in saving France. It will be seen that battle is here offered to M. France all along the line.

Mr. Lang's criticisms of M. France are of two very different sorts, disagreement with his conclusions, and a much more damaging scrutiny of his premises. Under the latter head, he charges him not only with an exceptional clerical carelessness, but with the citation of passages which often do not support the text and sometimes contradict it. Two or three instances will show the character of these contentions, and their bearing on the general thesis of M. France. In speaking of Jeanne's visits to Robert de Baudricourt, M. France says:

Le mépris du capitaine *et les outrages de la garnison* ne l'avaient ni humiliée, ni découragée; elles les tenaient au contraire comme des preuves de la vérité de sa mission, s'imaginant que ses Voix les lui avaient annoncées.

A footnote bases this statement on "procès," t. II, p. 53 (an obvious mistake for I, 53). The passage runs:

Ipse autem Robertus bina vice recusavit et repulit eam, et in tertia vice ipsam recepit, et tradldit sibi homines; et ita etiam dixerat vox sibi quod eveniret.

It is clear that the "outrages of the garrison" are either a gratuitous addition or a careless reading of "tradidit sibi homines," with the cases transposed, and it is open to question whether the Voice referred to anything but the final success of Jeanne's application. M. France speaks twice of the scene in which the king and his advisers urged Jeanne to make clear to them the nature of her "council." In disparaging the value of the evidence of Dunois (I, xxiii.) M. France says:

By a strange awkwardness, to prove that Jeanne had visions, he [Dunois] tells a story that, on the contrary, would lead us to believe that the young peasant girl was a clever impostor, and gave, at the request of the lords, an exhibition of ecstasy, like the Esther of the lamented Dr. Luys.

This passage supports the opinion that Dunois's testimony has been a good deal mishandled by the translator (who put the French evidence into Latin under direction of the court) and the clerks. But, later (I, 391), the story is quoted by M. France without warning of its suspicious nature as bearing on the character of Jeanne.

The lords present were struck by the heavenly expression of the young girl's gaze. But those tearful eyes, that ravished air, which astonished the Lord Bastard, were not an ecstasy, but the imitation of an ecstasy. It was a scene full at the same time of artifice and of simplicity.

Now the passage upon which all this

rests ("Procès," III, 12) states simply that while Jeanne, blushing somewhat, told the King in quite unemotional terms how her Voice addressed her, "she was wonderfully happy and raised her eyes to heaven"—"ipsa miro modo exsultabat, levando suos oculos ad cœlum." There is no more "ecstasy" in question than this, and if this be ecstasy, it is plain that the story cannot be used both as good evidence, and as proving that the testator's words had been tampered with. In describing Jeanne's retinue, M. France declares that her equerry, d'Aulon, belonged body and soul to La Trémoïlle, to whom he owed money. "Jeanne was in the hands of d'Aulon, and d'Aulon was in the hands of La Trémoïlle." According to Mr. Lang, the document on which this statement is based states explicitly that d'Aulon borrowed 500 gold crowns of La Trémoïlle for two months in March, 1432, having been obliged to pay a heavy ransom when captured with Jeanne. There is no evidence whatever that he owed money to La Trémoïlle in the lifetime of the Maid. These are but specimens chosen from a long list. The reviewer has verified the references in a number of instances, and in each case examined Mr. Lang has been in the right. His charges form a heavy indictment and an extraordinary commentary on the way in which history is written.

Apart from the question of the sources, Mr. Lang's main objection to M. France's picture of the Maid is that it underestimates her intelligence. He will have nothing to do with the theory of clerical inspiration; he holds that Jeanne was a military genius and the shrewdest politician about the King when the others were deceived by Burgundy; that her two examinations show a keen and strong mind, and that she was as far as possible from the ordinary type of mystic or hysteric. This is not the place to review M. France's book, but it should be noted that many readers of it have received a more favorable impression than Mr. Lang believes was intended. It has been pointed out before, notably by Gabriel Monod in the *Revue Historique*, that, while M. France does not do justice to Jeanne's wits in his own commentary, he nevertheless develops her objectively in his narrative in a far more favorable sense. He gives the reader material for the manufacture of as much enthusiasm as his temperament demands, and the weaknesses he allows her do but give a touching human verisimilitude to the picture.

Mr. Lang's book naturally suffers somewhat in form from its polemic character, and, fighting as it marches, confuses its two objects so as to leave on the reader an impression that M. France was one of the false-witnesses of Rouen. It is, however, a strong, clear, well-ordered brief, and will be an invaluable document for the next biographer of the Maid.

The First Governess of the Netherlands, Margaret of Austria. By Eleanor E. Tremayne. Pp. xxxi+346. New York: G. P. Putnam's Sons.

Of the various princesses of the sixteenth and seventeenth centuries who answered to the name of Margaret of Austria, the subject of the present biography is probably the most attractive, and certainly the most cosmopolitan. The story of her various courtships and marriages carries the reader into almost every country of Western Europe. Wedded successively before she had attained the age of twenty-two to Charles VIII of France (the marriage ceremony was actually performed, though the bride was less than four years old), to John, the only son of Ferdinand and Isabella of Spain, and to Philibert Emmanuel of Savoy, she refused Henry VII of England and Louis of Hungary, and was loved by Charles Brandon, Duke of Suffolk, and by Antoine de Lalaing, Count of Hoogstraten. And we hasten to add that she preserved her dignity and womanliness through it all, with far better success than most of her contemporaries in that very marrying age. Moreover, unlike the majority of them, she was something more than a mere matrimonial commodity. As regent of the Netherlands for her nephew, the Emperor Charles V, she was able and successful, especially in her attempts to centralize the government, and to gain advantageous commercial relations with England, though her fame as an administrator must necessarily suffer from the fact that the Inquisition found its first victims in the Low Countries during her rule. The "Ladies Peace" of Cambray, in the negotiations for which she on the whole got the better of her antagonist, Louise de Savoie, attests her ability as a diplomatist; the church of Brou, near Bourg en Bresse, her skill as an architect; her patronage of Erasmus and the eulogies of Jean Lemaire de Belges, her literary appreciation and skill as a poet.

Margaret of Austria's career is one which is sure to appeal to the imagination of the historian who likes to reflect on the interminable problem of "what might have been." It contains passages in which the very slightest change would have profoundly affected the destinies of Europe. The tragic ending of her Spanish marriage is one of these. Had the Prince of the Asturias survived, or had he left issue behind him, Spain would have escaped the dire misfortune that dogged her footsteps for the next fifty years—the curse of a foreign ruler with whose outside responsibilities she had nothing in common, who used her for his dynastic purposes, and made little or no return. Disburdened of the Empire under the rule of sovereigns such as John and Margaret promised to become, Spain's lot would have been far happier, and the whole history of sixteenth-century Europe profoundly changed The life of Margaret of Austria witnesses many turning-points like this, and its interest is thereby materially enhanced.

Mrs. Tremayne's book is a welcome addition to the lighter biographical literature of the sixteenth century. It is not free from errors of fact and judgment, which betoken hasty composition and lack of background. How Margaret could have promised "to preserve the rights and privileges of the seventeen provinces" of the Netherlands (p. 77) in 1507, for instance, it is difficult to conceive, in view of the fact that at least five of these seventeen provinces were not in Hapsburg hands at all at this date. Misprints of proper names are frequent. The name of Jean Lemaire de Belges is given in three different ways; and the poet Marot would scarcely have recognized his prenomen under the spelling "Clémont." And Mrs. Tremayne has a wofully unhistorical faculty for passing over the shadier sides of her subject's life without comment, so that the whole impression is considerably more favorable than Margaret deserves. But her account is vivid and interesting; Major Hume's unrivalled knowledge of unpublished material enables him to preface it with a very useful introduction; and the book as a whole is well worth perusal. If the present standard is maintained, the Romantic History Series, of which it forms a part, will be an unquestioned success. For the purpose of furnishing romantic biographies the early sixteenth century is an age that cannot be surpassed.

CURRENT FICTION.

Tono-Bungay. By H. G. Wells. New York: Duffield & Co.

This fresh lapse into mere fiction on the part of our, as it were, leading fancy scientist and millennial forecaster, is of more than common interest. In general method it is rather frankly modelled on "Joseph Vance"; that is, it is composed with skill, though with some appearance of inconsecutiveness and even incoherence. And there is a similar suggestion of recurrence to the Victorian manner, although the substance of the story is of to-day. "Tono-Bungay" is a patent medicine, contrived by a provincial English apothecary, Ponderevo, and made the basis of a great fortune. Unlike that panacea of Mr. Locke's Clem Sypher, it is not believed in by its promoter, who is a born charlatan. But he has the charlatan's faith in his star, and a quack philosophy of a comfortable sort which sounds, to be sure, uncom-

fortably like a familiar theory of "business." He has his authorities to quote:

I suppose you must respect Carlyle? Well, take Carlyle's test—solvency. (Lord! what a book that "French Revolution" of his is!) See what the world pays teachers and discoverers, and what it pays business men! That shows the ones it really wants. There's a justice in these big things, George, over and above the apparent injustice. I tell you it wants trade. It's trade that makes the world go round! Argosies! Venice! Empire!

Our apothecary is a great admirer of America.

The Ponderevo philosophy has no illusions for the Ponderevo nephew, and present autobiographer. But he is miserably in love with a girl who, he knows, will marry him at a certain figure of yearly income. So he gives up his scientific studies, in which he has made a singularly successful start, and devotes himself to "making Tono-Bungay hum." It hums. But George's marriage turns out a wretched fiasco, and in the end the firm of Ponderevo fails to meet the test of Carlyle; for in time the nephew neglects the humming process in favor of airships, and Tono-Bungay goes to smash. The escape of the insolvent pair across the channel in a machine which is a combination of aeroplane and dirigible puts the Wells seal upon the plot.

But the persons in the book are of more importance than the plot. The originator of Tono-Bungay is a notable portrait of amiable rascality; and his wife is a sweet and humorous woman worthy to rank with Mr. De Morgan's Lossie and Sally. She (though there is little enough romance in her life as we see it) is the heroine of the story rather than George's unfit wife or equally unfit sweetheart. The culmination of his affair with Beatrice is cynical and disheartening, though it can—or because it can—hardly be called untrue to life on a certain plane.

The Three Miss Graemes. By S. Macnaughtan. New York: E. P. Dutton & Co.

Though it lacks the directness and artistic finish of "The Expensive Miss Du Cane," this story has the quaint daintiness of its own heroines and is a pleasant companion for an idle hour, its very gentle verbosity having a certain soothing quality. The theme is of the simplest. Three young girls have been reared by the father in cloistral seclusion on a Scotch island. His sudden death, after disastrous ventures on the turf, leaves them poor and unprotected, and they set forth attended by a faithful piper, to make their home with a distant relative in London. Their unsophistication is sorely out of place there, but after divers trials and wearinesses fate smiles upon them. The two elder find the nearest approaches to the Fairy Prince that prosaic modernity affords, and the writer leaves them to live happy ever after.

Helen Graeme is real and attractive. One will not readily forget the picture of her kneeling at family prayers to give thanks for "Thy generous favor in giving victory to the horse St. Cuthbert." She carries this simple directness of faith into all her dealings with the world. In the hands of a harsher author, what might not have been her fate? But Miss Macnaughtan is content to let her incredibly ingenuous beauty simply adorn a tale, instead of pointing a strenuous moral, and herein lies the reader's good fortune.

The Supreme Test. By Mrs. Baillie Reynolds. New York: Brentano's.

The visit of the captivating Kythe West to the household of Wilmot Cuncliffe, churchwarden, produced a very extraordinary effect upon him. He is at the outset, in Kythe's expressive paraphrase, "a widower, a preposterous, narrow-minded, impossible person, with three hideous, ill-conditioned children," riding two hobbies, "the iniquities of the High Church party" and "the deplorable spread of what he called 'modern ideas.'" He ends by being a *preux chevalier*, a champion of slandered girlhood, a father to unprotected youth, combining the shrewdness of Sherlock Holmes with the loftiness of Don Quixote and the self-immolating quality of a Knight of the Grail. And this happens in less than two months. In February, he is talking like a sanctimonious sniveller. In April he plucks a girl from the consequences of silliness, adroitly hoodwinks her world in order to shield her, and meantime divines her mind as never yet did prig, of all persons, divine the mind of woman. That the girl who changed his life and made a self-sacrificing lover and hero of him is utterly and absolutely a minx does not heighten the improbability of the apotheosis. If a man's soul is to widen out of all recognition in six weeks, a minx is quite as likely as another to do the deed.

The story moves at a lively pace in and out among the pranks of Kythe, but her champion's transmutation is hard to follow. Nor is the reader greatly helped by the explanation in the publisher's note—that "the hard shell of his religious teaching dissolves in the liquid joy of his exquisite visitor."

The Bishop and the Boogerman. By Joel Chandler Harris. New York: Doubleday, Page & Co.

Being the story of a little Truly-girl, who grew up; her mysterious companion; her crabbed old uncle; the Whish-Whish Woods; a very civil engineer, and Mr. Billy Sanders the Sage of Shady Dale—

So runs the instructive sub-title. In this sunny book, appropriately illustrated by Charlotte Harding, the lamented creator of the Tar Baby worked out after his own fashion the leading motive of "Silas Marner." A little girl bereft of her parents but happy in the possession of a wholly imaginary playmate, Cally-Lou, enters the home of her "crabbed old uncle," and humanizes him and every one else that comes near her. This theme is developed with a hearty garrulity which seems rather the effect of rapid improvisation than of premeditated art. One feels also the lack of structural symmetry in the patched-up and haphazard concluding chapters, in which the fantastic Adelaide shoots suddenly into womanhood, and marries, merely, it would appear, that the tale may have an ending as well as a middle and a beginning. But perhaps it is hypercritical to complain of the structure of a book which exists only for the sake of its characters. To any one at all interested in the soft, fluent speech and the mental markings of Southern types, this oddly assorted group will be charming. The crabbed uncle has a young spot in his heart; the old black mammy adores children; her runaway son studying to be a bishop is himself a child in heart and head; Adelaide is an irresistible sprite; and the Sage of Shady Dale is fit to be her comrade. No writer of his time entered more sympathetically than Joel Chandler Harris into the playful imagination of the "folk" and into the creative fancies of children. This story is effective because it revives in the reader the innocent emotions of childhood from which it springs.

In Morocco with General d'Amade. By Reginald Rankin. New York: Longmans, Green, & Co. $2.50.

When Gen. d'Amade succeeded Gen. Drude in command of the French forces at Casablanca towards the end of 1907, and commenced active operations against the Moors of the *hinterland*, many persons believed that his work marked the beginning of a conquest. Later, when the war between the Sultans went against the man to whom France had thrown its support, and German diplomacy spun additional difficulties in the way of the French, it looked as if Gen. d'Amade's campaign had marked the beginning of a failure. Now that France and Germany have come to terms about Morocco, it appears plainly that the fortunes of the French are to fall midway between failure and conquest. French domination in Morocco is now out of the question; but it is certain that France will be henceforth an active agent in the opening up of Morocco and will hold something of the privileged position accorded it by the Conference of Algeciras. To this extent our author is justified in saying

that "the historian of the future will recognize in Gen. d'Amade's work another link in the chain of destiny first forged by Charles Martel on the plains of Tours."

Mr. Rankin was correspondent for the London *Times* with the troops of Gen. d'Amade, and took part in most of the marching, counter-marching, and fighting which resulted in the subjection of the tribes of Chaouiya—that "colossal cornfield" stretching some thirty-five miles to the north and south of Casablanca and fifty miles inland. About this marching and fighting there was, on the whole, an uneventful sameness which affords Mr. Rankin ample opportunity for side-studies of the nature of the country, its inhabitants, its resources, and its promise for the future. For the military student there is much detailed material on the theory and methods of African campaigning, and on the showing made by the French troops, for whom the writer has little but praise. Mr. Rankin writes with the learning and authority we readily associate with the great journal he represented. Naturally, he voices the political opinions of that paper, which are solidly on the side of the French and strong for the necessity of a prolonged occupation of the Chaouiya region. As a matter of fact, the French are still in Casablanca; but the agreement with Germany to which we have referred makes it improbable that they will remain there in the capacity of conquerors.

More than once in the course of Gen. d'Amade's campaign, the charge of unnecessary severity was brought against the French. Whether unnecessary or not, hard blows were undoubtedly struck and the Chaouiya tribesmen, at times brave to the point of fanaticism, suffered heavily. The natives of Western Morocco are not the nomads of popular fancy. The rich Chaouiya grainlands are occupied by an industrious population of whose means of livelihood the French expeditionary columns made a sad business. Whatever may have been the initial rights and wrongs of the affray at Casablanca that led to the French invasion, Mr. Rankin's account does not quite succeed in giving us the impression that Gen. d'Amade's troops had sound reasons for carrying war among a people tbat only asks to be let alone. Burning villages and farms was part of the French programme. In the fighting which was, on more than one occasion, hand to hand, there was no giving and asking of quarter. Prisoners were not taken on either side. The writer's extremely British imperturbability enhances our sense of the distressing nature of tbe conflict. He is very sensitive to the beauties of Moroccan wildflowers, and rather indifferent to the value of life, human or animal. In the following passage we are reminded almost of the Englishman who said, "What a beautiful morning! Let us go kill something":

> The friend raised his mighty hand and smote the hare behind the ear, at the junction of the neck, even as gamekeepers are wont to smite rabbits, and so great was the force of the blow that the head of the hare fell from its body and rolled away under the shade of the ground-orchids beneath the cork tree.
>
> It was one of those delicious mornings when the heat of the sun is tempered by a little breeze, and the larks are singing in the blue for joy.

On the whole, a readable and useful volume.

An Irish Precursor of Dante: A Study on the Vision of Heaven and Hell Ascribed to the Eighth-Century Irish Saint Adamnán, with Translation of the Irish Text. By C. S. Boswell. London: Nutt.

We are tempted to apply to this book a phrase that is used frequently in its pages with reference to the classification of departed spirits, *bonus sed non valde*. It contributes very little that is new to the history of the vision literature with which it deals; and much of the discussion, which ranges widely from Ireland to the Orient, is of a decidedly second-hand character. Even within the limits of Irish the author does not show thorough mastery of his subject. He fails to mention one version of the "Fís Adamnáin" itself, the abbreviated form of it which is embedded in the later prose text of the "Voyage of Snegdus and Mac Riagla" (published by Thurneysen in a Freiburg programme, 1904, and again by Stokes in the *Revue celtique*, XXVI, 130 pp.); and what is stranger still, he states, by way of introducing his own translation of the "Fís," that Dr. Stokes's rendering is accessible only in the limited Simla edition, whereas it was reprinted both in *Frazer's Magazine* for 1871, and in Miss Stokes's "Three Months in the Forests of France" (1895). Regarded merely as details of bibliography, omissions like these are, perhaps, unimportant, but they sometimes involve ignorance of matters that are essential. If Mr. Boswell had known Professor Thurneysen's edition of the Snegdus texts, he would probably have modified the statements made on page 162, with regard to the date of the tale; and if he had read Dr. Stokes's edition of the poem ascribed to St. Cuimmin (in the *Zeitschrift für celtische Philologie*, I, 61), he would hardly have followed Father Denis O'Donoghue so implicitly in assigning the piece to the seventh century (see page 208, n.). To cite only one more example of his lack of thoroughness, he makes on page 114, the extraordinary statement that the apocryphal "Book of Adam and Eve" was an Egyptian work of the fifth or sixth century, of which no mention is known outside of Ireland. The use of it in the "Saltair na Rann" is apparently cited as evidence of early contact between Ireland and Egypt. But Dr. Stokes's edition of the "Saltair," to which Mr. Boswell refers in his footnote, should have guided him to Professor Wilhelm Meyer's article, containing early Latin texts of the "Vita Adae et Evae," and an account of numerous versions in the vernacular languages of Europe. As to the Irish knowledge of Egypt, there are other indications of it, some of them cited by Mr. Boswell, which we do not mean to question.

Serious as seem the defects in Mr. Boswell's Celtic scholarship, his book is, nevertheless, of considerable value, as being the only extensive collection of early Irish visions of the world to come. It brings together most of the important documents of this class, analyzes them at length, and compares them with one another, and with the accounts of the happy other-world in secular Irish saga. The chapters on the relation of the Christian visions to native Celtic tradition, though greatly indebted to Alfred Nutt's well-known essay (published with the "Voyage of Bran"), add some new material which has become recently accessible, and they ought not to be overlooked by students of the "Celtic paradise." On the whole, the book exhibits better than any other the part the Irish took in developing the literary type which derives its chief interest from the "Divine Comedy," and it does this without losing sight of literary values or making untenable claims of Dante's indebtedness to Celtic sources.

Baldassare Castiglione, the Perfect Courtier: His Life and Letters. 1478-1529. By Julia Cartwright (Mrs. Ady). 2 vols. New York: E. P. Dutton & Co. $7.50 net.

That a single season should produce two elaborate English works on Castiglione ought to signify the remarkable vitality of his reputation; for of how many men or women who flourished four centuries ago can as much be said? When we examine Christopher Hare's book, "Courts and Camps of the Renaissance," (see the *Nation*, December 3, 1908, p. 548), and these even more sumptuous volumes, we see that other considerations besides Castiglione's personal merits have combined to make him a favorite subject. He has so much background! and this background lends itself so wonderfully for modern illustrations! So we suspect that it is the renaissance and the paintings and buildings of tbe renaissance, quite as much as the character and deeds of Baldassare himself that explain these recent works.

Mrs. Ady virtually confesses this by

writing a history of the times, through which Castiglione's biography flows, often no broader than a rill; occasionally, indeed, it disappears altogether. We do not object to this method—the whole question being one of proportion. By showing the wild crimes, the national and international brigandage, the mingling of moral depravity with artistic sensitiveness, of the age in which he flourished, she brings out all the more clearly his virtues, his honorable conduct, his ideals of courtesy. He had an interesting career, and he displayed talents of various sorts, but it is, after all, his authorship of "The Courtier" that chiefly attracts us.

That book is still a model on which gentlemen of the highest type may be formed. Its province is manners; but whoever reads it attentively will discover that the manners Castiglione teaches spring from character—they are not the mere veneer which a dancing-master can impart. This is, perhaps, unexpected, and leads us to ask how far the ideal courtier (that is, gentleman) is the creature of Castiglione's imagination, and how far he had flesh-and-blood counterparts at the Italian courts of the renaissance. They abounded, we know, in guile, hypocrisy, cruelty and deceit: how then did it happen that from such an environment such an ideal arose?

The readers of Mrs. Ady's books will not find this question answered directly, or even broached; but if they are curious, they can disentangle the answer for themselves from her great mass of material. We think that Castiglione's biography might easily be written in one-fourth of the space which she has filled, and he would probably stand out more vividly in the briefer study; but there is so much of interest in her volumes that we do not complain of their bulk. She is a pleasant writer, a fair popularizer of more learned investigators, and a wholesome judge of deeds and events. The beauty of her book, in binding, type and illustrations, deserves special mention.

Encyclopædia of Religion and Ethics. Edited by James Hastings. Vol. I: A—Art. Pp. xxii+903. New York: Charles Scribner's Sons. $7.

The numerous works of reference that have appeared recently in response to the demand for summary statements of the latest results of research are of various grades of excellence. Some are popular compilations and have only a secondary value; in others the articles are prepared by independent investigators, specialists of good standing, and are valuable for scholars as well as for the unlearned. It is in this last class that the new encyclopædia edited by Dr. Hastings and his assistants professes to belong, and, to judge from the first volume, the profession is fairly well justified. The list of contributors includes a good number of well-known names, among them W. Bousset (on Antichrist), A. E. Crawley (Hindu Anointing), W. Crooke (many Hindu subjects), F. Cumont (Anahita), G. d'Alviella (Animism), Rhys Davids (Buddhist topics), P. Ehrenreich (South American Indian Cults), De Groot (Chinese Adoption), D. G. Hogarth (Ægean Religion), M. Lidzbarski (Ahiqar), E. Littmann (Abyssinian Religions), Sir Clements Markham (South American Andean Cults), Th. Nöldeke (Ancient Arabian Religion), A. C. McGiffert (Apostolic Age), Louis de la Vallée Poussin (Buddhist topics), A. H. Sayce (Early Vannic Armenian Religion), N. W. Thomas (Animal Cults). The plan adopted of describing a subject generally in one article and then having particular aspects of the subject treated in separate articles by different persons (as in Absolute, Adoption, Alchemy, Altar, Ancestor-worship, Architecture, Art), though it involves some repetition, has the advantage of presenting the topic from various points of view. The field to be covered by the work (in about ten volumes) is very wide: it is to describe all religious and ethical systems, movements, customs, and ideas, and, the preface adds, every philosophical idea, from which it would appear that it is to be an encyclopædia of philosophy as well as of religion and ethics —a commendable recognition of the intimate relations existing between the three departments of thought. The editors have been embarrassed by the wealth of material that presented itself, and, not content with religion, ethics, and philosophy, have entered the fields of biology (Adaptation) and hygienics (Adulteration); and the article on Agriculture, in which we should expect to find a statement of the close connection between agriculture and various religious customs and ideas, is a description of ancient methods of tillage, with only two or three passing references to mythological facts. In general, however, the selection of subjects is good. The location of subjects is sometimes arbitrary; it is not clear, for example, why Abelard should have a separate article and Albertus Magnus be referred to the article Scholasticism. But allowance must be made for the accidents of editorial arrangements.

There is not much in the contents of the articles that calls for adverse criticism. The helpful description of the Ægean religion appears to be overbold in its constructions. The assertion (in the article Ainu) that the Ainu religion was originally monotheistic, and was debased by the rise of animism, is wholly without support in Ainu material, and is contradicted by what we know of the history of savage cults. The conception of Satan's ambition (p. 372) is to be traced not to Ezekiel xxviii (for, in all probability, the Satan figure had not been constructed in Ezekiel's time), but to the story in "Secrets of Enoch," xxix, 4. In so large a mass of material there will necessarily be points on which specialists differ, but the articles have all been carefully prepared, and in most of them the conclusions are well supported. The lists of books of reference appended to the various articles are well selected and sufficiently full. The proof-reading is good; there are a few obvious typographical errors. It is strange to find (p. 147) the spelling "Ashtaroth" (a plural form) for the name of the goddess Ashtart (Astarte).

Buddhist Essays. By Paul Dahlke; translated from the German by Bhikkhu Silacara. New York: The Macmillan Co. $3 net.

It is five years since Dahlke's "Aufsätze zum Verständniss des Buddhismus" appeared in Germany, time enough for a translation to be out of date had the original been concerned with the historical questions now most discussed by Buddhist scholars. Fortunately for the translator, neither the time of the Buddhist councils nor the problem of their historical reality formed the subject of Dahlke's studies, but the inner meaning and worth of the religion as traditionally received. So far as we have compared the translation with the original, the English version is idiomatic and satisfactory; but in this first English presentation of a work that has had a large circulation in Germany we are chiefly concerned with an appraisement of the subject-matter, since the volume represents a school of anti-Christian thought in Germany which has led to the production of a number of manuals and text-books of similar character.

At the outset let it be said that Dahlke's is by far the best of this group of tracts—for such in reality they are —notably better than the work of Freydank, which appeared at the same time, in that it is free from the exaggerated disapproval of all things Christian displayed by many of the "modern Buddhists." Dahlke, while not a Sanskrit or Pāli scholar, is a thinker, and his writing is the result not of dislike, but of conviction. He believes that Buddhism is a more satisfactory religion than Christianity, but he does not waste time by recounting the horrors of the Middle Ages done for Christ's sake. His "Essays" are a fair presentation of the religion of his Master; for the most part they give a presentation of the texts themselves, taken from the Middle Collection of the Second Book of the Pāli canon. They deal with Buddha's life and with the teaching in regard to life, sorrow, Nirvāna, God, morality, asceticism, etc. To these the author adds his own exegesis and conclusions.

In the main these conclusions are just. The religion of Buddha is of value only for those who feel life to be sorrow; it is a religion of renunciation and consequently differs from the religion of the poor, "which must be a religion of promises." Dahlke sees too clearly into the heart of Buddhism to indulge in that shallow sentimentalism which clothes Buddhism with the modern garment thrown about it by such writers as H. Fielding Hall, author of "The Soul of a People." It is a religion for thinkers, with its "clear, cold, steel-like atmosphere," as opposed to the "sickly-sentimental, sweetly languishing." To the true Buddhist, woman is merely "the object of cool reflection," and Buddhism has put back love "into its proper place." And so it is with life, as with love. "The teaching of the Buddha is not for him who desires life; at any time it is suited only to a few." Herein to Dahlke lies the superlative satisfaction of Buddhism to the wise man. In Buddha's system, love, either in the Christian sense of love for our neighbor, or for God, is non-existent. There is no God. Our neighbor must look out for himself. We, too, live only to get rid of life, which as philosophers we condemn. In a word, there is more true Buddhism in a page of Dahlke than in a volume of Mr. Hall, and if only as an antidote to the pernicious *mischmasch* so often offered to the general public as Buddhism this volume would be heartily welcome.

Nevertheless, it is not without grave defects; and if space permitted it would be worth while enlarging on these, for they are the defects of the school to which Dahlke belongs. But at least this much must be said. The claim is made by Dahlke and others of the modern Buddhists, that Buddhism is a satisfactory religion because it is not sentimental, but rational. In this particular Buddhism no doubt attracts many whom Christianity repels. But the further assertion that Buddhism is wholly rational, that it is not based on hypothesis at all, that "alone among all the founders of world-religions, the Buddha only speaks of things which he can prove"—all this is untrue. For the whole system of Buddha roots in the theory of Karma, that is, not only in the theory of metempsychosis (which is itself undemonstrable), but also in the theory that man lives his weary round of millions of births weighed down by the moral product of former births. If it were not for this theory there would have been no occasion for Buddhism. It is not this one life that is the burden: any brave man might endure it. It is the ceaseless flow of lives which the individual has to undergo that makes life an endless sorrow and gives occasion for the need of some Path of Salvation. But this whole doctrine was and is accepted as a matter of faith. It was not proved by Buddha; it was simply the current belief of his day, unscientifically, unphilosophically, accepted, much as the "soul-belief" is accepted by Christians. To say that Buddhism (in distinction from Buddha) is without dogma is also an error. The belief of the Buddhist Church is built up not upon a rational system, but upon "the word of the Buddha." What Buddha said is definitive; it must not be an object of discussion. In this regard there is no difference between the faith of a Christian in his Word of God, the belief of a Brahman in his Revealed Veda, and the belief of a Buddhist in his "so said the Master." It is a veritable *ipse dixit* religion, not only in the later form of the Great Vehicle, but from the beginning, in the earliest Pāli texts.

Science.

The California Earthquake of April 18, 1906: Report of the State Earthquake Commission, Andrew C. Lawson, Chairman. Vol. I, Parts 1 and 2, and Atlas. [Vol. II to appear later.] Washington, D. C.: Published by the Carnegie Institution.

The Physics of Earthquake Phenomena. By Cargill Gilston Knott. Pp. x+283; figures 44. New York: Henry Frowde.

The famous shock, now generally known as the San Francisco earthquake, took place April 18. Despite the thousand distractions of this period of ruin and fire, the Governor of California was mindful of the great scientific importance of the opportunity, and on April 21 appointed a State Earthquake Commission, consisting of A. C. Lawson, G. K. Gilbert, H. F. Reid, J. C. Branner, A. O. Leuschner, George Davidson, Charles Burkhalter, and W. W. Campbell. This distinguished group of geologists, physicists, and engineers also associated with themselves fifteen or more additional well-qualified observers, and began the work of recording carefully all important phenomena bearing on the shock. The Governor had no funds upon which to draw, and the Carnegie Institution came to the aid of the commission. The main work of composition has been done by Professor Lawson, but special chapters have been prepared by collaborators; and the volume yet to be issued will be a discussion of the instruments employed for recording shocks.

The two parts now available contain chiefly the carefully assembled details of the effects produced by the earthquake. As all the world now knows, the cause was a faulting movement along an old northwest and southeast rift or line of disturbance. The movement was chiefly horizontal, the southwestern side appearing to have moved northwest to a somewhat greater degree than the northeastern one moved southeast. The displacement ranges from 10 to 15 feet, reaching a maximum of 21. In the northwest there was a slight vertical displacement also, but it involved only two or three feet. The identified, continuous length of the faulted zone is 190 miles, but if to this is added an additional rift, separated from the other by a stretch of ocean, the total distance is 270 miles. The rift itself is prolonged to the south some hundreds of miles farther than the distance just given, but in the extension no movement seems to have taken place at the time of the recent earthquake. The shock, however, was felt for more than 700 miles along the line of the rift, and for 300 miles to the east of it. There must have been a grinding slip and drag, lasting for about a minute, but with diminishing after-shocks for months. The rift runs off the peninsula on which is situated San Francisco, just to the southwest of the city, but it strikes the mainland again a few miles to the north. The rift is called the San Andreas. It is not a single fissure, but a series of rather closely spaced, parallel ones. Throughout its course it is marked by displaced fences, roads, bridges, etc., and by cracks, pools, craterlets, and on the north by slight escarpments. Earlier movements have left a pronounced valley along its line. All of these phenomena are profusely illustrated in the report.

The areas of maximum destruction have been carefully studied and mapped in the atlas. They are long, narrow belts next the rift itself, but with some outlying points, depending on the local geology. The report brings out most clearly the relative security of buildings on solid rock and the extreme damage done to those on loose sand or made ground. The areas of maximum destruction have therefore a geological factor as well as one of geographical location. Sea-quakes receive a chapter. The shock was felt by vessels, but as there was so little vertical displacement no sea-wave rolled in on the shore. The sounds that accompanied the shock are shown to be deep in pitch and widespread. Some curious effects on animals are recorded. Horses, cats, dogs, and cattle seem to have felt preliminary tremors appreciable periods of time before the men who were watching them. The after-shocks are also discussed, but the records are believed to be incomplete, largely because earthquake news of this sort was not specially welcome, nor was its publication encouraged. Comparisons are also given with earlier Californian shocks.

The maps, which are beautifully prepared, afford valuable illustrative material. In the atlas are also printed

seismograms from all over the world. The discussion of them will be one of the chief topics of Volume II, which is being prepared by H. F. Reid.

A call to be the Thomson lecturer in the United Free Church College in Aberdeen was the immediate cause of the preparation of "The Physics of Earthquake Phenomena." In the session of 1905-6, the author presented the material which he subsequently developed into a volume. Eight years as professor of physics in the University of Tokio, 1883-91, had placed Dr. Knott in close association with John Milne and his Japanese colleagues in the formative period of earthquake study; and during subsequent years, as a lecturer on applied mathematics in Edinburgh, he had continued to follow the subject with interest. The work is a condensed but very clear review and discussion of the phenomena and causes of earthquakes. The earth is consistently viewed from the standpoint of physics and of the physicist, who regards the rocky crust as a medium of greater or less elasticity in which vibrations are produced and through which they are propagated. In this discussion the larger features of the shocks, such as their distribution and periodicity, are explained; the means of detection and measurement are analyzed in a general way, and the more prominent instruments are described. Although doubtless often tempted to use the higher mathematics, Dr. Knott rather strictly adheres to simple treatment well within the grasp of those whose training is fairly elementary. The book presents a timely and excellent statement of the subject.

"Some Nature Biographies," by John J. Ward (John Lane Co.), may be regarded as a pioneer in a field which may soon become important, both in teaching in schools and in scientific investigation. We have on the one hand the single photograph—dominant up to this time—and the moving-picture machine, which is just entering the field of natural science. Midway stands Mr. Ward's work—isolated photographs taken in more or less rapid succession, to show the emerging of a butterfly from its chrysalis or the unfolding of a horse-chestnut bud in water. The eighteen chapters include plants, insects, jellyfish, and coal. The photographs are excellent and interesting, but the text leaves much to be desired. The facts are well-nigh drowned in verbiage. There is a heaviness of diction which makes the reading far from easy. The last chapter is delightful; it consists of twelve photographs of Finham Bridge, near Stoneleigh, Warwickshire, taken from the same point of view in every month of the year. The various seasons are beautifully pictured, and the author is to be congratulated on his success.

"The Fresh-Water Aquarium and Its Inhabitants," by Otto Eggeling and Frederick Ehrenberg (Henry Holt & Co.), the second volume of Group IV of the American Nature Series, is a well-balanced, clearly written account of the more common species of plants, insects, amphibians, and fishes which are adapted for living in aquaria of moderate size. The major part of the book is devoted to brief descriptions of plants and animals, with suggestions as to special use and function—in the case of the plants, whether submerged, rooted, swampy, or free floating; and of the animals, hints as to which species will tolerate others in the same aquarium. The chapter on fish-hatching is of especial interest, as showing what may be accomplished in this unusual field in one's own room in a balanced aquarium. The illustrations, photographs from life by E. F. Keller and E. R. Sanborn, are some of the finest in this difficult field. It is a pity that these illustrations could not have been utilized in some general natural history as well as in this volume of more circumscribed interest.

The German Society for Anthropology and Ethnology has decided to publish a new journal, *Prähistorische Zeitschrift*. The editors will be Dr. Karl Schuchhardt of the Berlin Museum, Dr. Karl Schumacher of the Mainz Museum, and Dr. Hans Seger of the Breslau Museum.

The rigorously scientific publications of the French government mission to Mexico and Central America continue, with the third part of the "Recherches zoölogiques," under the general direction of H. Milne Edwards and Léon Vaillant: the present number, quarto with five plates, is devoted to the study of the reptiles by A. Duméril, Bocourt, and Mocquard.

The results of scientific exploration of Africa are embodied in three works recently published in Paris. Commandant Eugène-Armand Lenfant, government explorer, has a new volume, with 115 illustrations and a map of the "rivers of life and rivers of death"—Nana, Ouam, Penndé—"La Découverte des grandes sources du centre de l'Afrique" (Hachette). "Résultats scientifiques des voyages en Afrique (1886-1897)" is a severer and more costly summary of the lifework of the really great explorer and mighty hunter Édouard Foa, who went over and observed more than 300 itineraries from the Indian Ocean to the Atlantic, from Dahomey to the Cape, up the Zambesi and its affluents and to the true sources of the Congo (Plon-Nourrit). "L'Afrique du Nord," by Henri Lorin, professor of colonial geography in the University of Bordeaux, popularizes the scientific knowledge of Tunis, Algiers, and Morocco.

The fifth congress of the Société Préhistorique de France will open at Beauvais (Oise), July 26. Three days will be given to discussions, including the following subjects: "Points d'extraction de Silex dans l'Oise"; "Architectonique des monuments mégalithiques du bassin de la Seine"; "Les Tourbières (géologie et préhistoire)." The rest of the week will be devoted to excursions to the dolmens of Trie-Château, Boury, Sérifontaine, and Champignolles; to the Camp of Cæsar at Hermes, the Quarternary stations of Mont-Sainte-Geneviève, to Compiègne, etc. Under the auspices of the Ministry of Education and Fine Arts, a special exhibition of prehistoric objects will be held at Beauvais during this congress.

The Royal Academy of Science, at Turin, announces a prize of 3,000 lire to be awarded in 1910 to the person who has made the most striking invention or published the most important book in one of the physical sciences.

Wilfrid H. Hudleston, F.R.S., a distinguished British geologist, has died at the age of eighty. In his earlier years he travelled much as an ornithologist, but later turned his attention to geological subjects, publishing numerous papers in the magazines. He had been president of the Geological Society, Wollaston medallist, and president of the Geological Section of the British Association. His first work was done under the name of Simpson, which he changed for that of Hudleston in 1867.

The death in his eighty-ninth year is reported of John Duns, emeritus professor of natural science in the Free Church New College of Edinburgh. His published books are: "Memoir of Professor Fleming," "Things New and Old," "Biblical Natural Science," "Science and Christian Thought," "Memoir of Sir James Simpson," and "Memoir of Rev. Samuel Martin."

Drama.

The Faith Healer. By William Vaughn Moody. Boston: Houghton Mifflin Co.

"The Faith Healer," the new play by William Vaughn Moody, is a prose work of very different character from "The Great Divide," resembling it only in its use of symbolism, its contemporaneous significance, its compact, pregnant, and occasionally eloquent dialogue, and its dramatic interest. As the title implies, it deals with spiritual and pathological phenomena associated with the newest creeds as well as the oldest faiths. Michaelis, the hero, is an ecstatic—son of a missionary to the Indians in Mexico—who, after years of sheep-tending in the wilderness, sees a vision of the Living Christ, and, thereafter, himself begins to work miracles of healing. He even raises a boy, Lazarus, from the dead, after the fashion of Elisha with the Shunamite's son. Scriptural parallelisms are frequent throughout the piece.

When the curtain rises he is visiting a farm in the Middle West. The proprietor, Matthew Beeler, has been a student, in a small way, of Darwin and Spencer; his wife, Mary, a rhapsodical religionist, has been a helpless paralytic for five years. Neither he nor his sister, the bustling housewife, Martha, has any faith in Michaelis's ministrations. The latter, however, has a disciple in Mrs. Beeler's niece, Rhoda, a repentant Magdalen. Mary Beeler, it should be added, as an indication of character, receives communications from the spirit of her dead brother Seth. Michaelis is a creature of varying moods. Generally an enthusiast, he is often inclined to doubt his own powers, and he is especially perturbed by the presence of

Rhoda, who strongly attracts him. Nevertheless, he succeeds in curing Mrs. Beeler, who arises from her bed and walks. The Rev. Mr. Culpepper, representing the orthodox clerical spirit, denounces the healer as a blasphemous mountebank. Dr. Littlefield, the family physician, embodying modern science, says that he works by a natural force, which threatens equally the old schools of divinity and medicine, but that fortunately he will not be able to keep up his practice, as he can only cure at the expense of his own vitality. Later on, the doctor appears to prove his case, for Michaelis, in a notably fine, passionate, and eloquent scene, declares his love for Rhoda and his willingness to sacrifice everything for her sake. Straightway Mrs. Beeler relapses into immobility, and an infant, whom he had been trying to cure, dies. But, then, Rhoda confesses that she has been a sinner, whereupon Michaelis, finding that she is not what he had supposed her to be—one specially sent to tempt him with the spirit of earthly joy, but simply a poor, sick girl in need of redemption and healing—sees a yet higher destiny unfolding before her and himself "with depths of life and heights of love" of which he had never before dreamed. With this access of spiritual devotion, his healing powers return to him in doubled force, and as he leaves the scene in fulfilment of his mission, the dead babe breathes again and Mrs. Beeler, with strength restored, walks forth to bear her testimony before a crowd of waiting pilgrims.

The play would be stronger if it were clearer in meaning and purpose, more definite in argument and declaration. It is difficult in reading it to determine whether it is a profession of faith, a spiritual romance, or a mere dramatic study of existing conditions. The future relations between Michaelis and Rhoda might well have been much plainer. Perhaps Mr. Moody sought to illustrate a problem, rather than to solve it. Possibly, a cue to his meaning may be found in the suggestion of Michaelis that "these lives of ours may be poured like a jelly from one mould into another, until God himself cannot remember what they were two years ago, or two hours ago." At all events, Mr. Moody has written a thoughtful and suggestive work, which, whether it wins success upon the stage or not, will make a strong appeal to the imagination of all intelligent readers. In literary expression, it is exceedingly felicitous, not only in the appropriateness of the dialogue to the personages concerned, but in the melody of the more oratorical passages.

Charles Scribner's Sons are bringing out "Semiramis and Other Plays," by Ollve Tilford Dargan, containing work earlier than the "Lords and Lovers," but said to be remarkable for the same power and variety of expression.

The latest issue of John S. Farmer's Tudor Facsimile Texts (London: T. C. & E. C. Jack) gives us two more plays of John Heywood, for whose biography the editor has collected material which is said to show the man to have been in no wise the sort of court fool commonly supposed. One of these new volumes, a folio, contains fragments of "Witty and Witless" reproduced from the manuscript in the British Museum, probably a clean draft made by the author himself. If this is so, it is the only specimen of Heywood's writing in the Museum. The other volume, a quarto, reproduces "Of Gentleness and Nobility" from the black-letter copy in the Museum. It gives the portrait of Heywood from the engraving pasted on a blank fly-leaf opposite the title-page of the original. Two more volumes of the series contain respectively "The Play of Wit and Science," by John Redford, from the original manuscript, probably the author's, and "A Comedy Concerning Three Laws of Nature, Moses, and Christ," by John Bale.

Prof. Edgar C. Morris in his edition of Middleton and Rowley's "Spanish Gipsie," and "All's Lost by Lust," in the Belles-Lettres Series (D. C. Heath & Co.), attacks one of the most difficult of the problems which confront the student of the old drama. He has attempted accurately to distinguish the lines in the "Spanish Gipsie" written by each of two close collaborators. It is an admirable literary exercise to undertake, for it demands a keen literary sense and an intimate acquaintance with the works of the two writers to get results at all worth while. But in such cases even the most proficient dramatic scholars must hesitate to commit themselves beyond the roughest generalizations. Prof. Morris has tried to demonstrate decidedly more than is susceptible of proof. He asserts in the first place that Middleton and Rowley "were able to fuse their work to an unusual degree," that they "seem usually not to have set apart certain acts and scenes for each, but to have worked on the same act together"; and then he proceeds to assign their parts scene by scene, and line by line—not even hesitating to say who wrote first and specifically how the work was revised. This is a very pretty piece of speculation, but the results are exceedingly flimsy. Furthermore, one's faith in this investigator's judgment is shaken by his general estimate of the character and literary talent of Middleton. "Formality, artificiality, refined humor, and self-restraint" are the last qualities in the world which a judicious critic would attribute to the author of the "Chaste Maid in Cheapside." "Flexibility, naturalness, broad humor, and rapid movement," the qualities which Professor Morris attributes to Rowley, are precisely the qualities which characterize the comedies acknowledged as Middleton's. With such a set of touchstones, we shall never solve the Middleton-Rowley problem. But here are the two plays, and the puzzle may be tried again. The fact that the "All's Lost by Lust" is accessible elsewhere only in the quarto of 1633 gives to this volume a value which it would not otherwise possess.

With the beginning of the new year the Deutsche Bühnenverein has launched its own magazine, *Die deutsche Bühne,* with Dr. Raphael Löwenfeld as editor.

"Gerhart Hauptmann von dem Forum der Kriminalpsychologie und Psychiatrie" (imported by G. E. Stechert & Co.) sounds like a formidable arraignment of the poet, but is in reality a serious and sympathetic interpretation of his work by Dr. Erich Wulffen, an attorney in Dresden. The author points to the influence which modern science and intimate association with students of psychology and psychiatry, pupils of August Forel, had upon Hauptmann during his sojourn in Zurich. The problem of alcoholism which was being studied by them furnished the theme for "Vor Sonnenaufgang," and entered largely into "Das Friedensfest" and "College Crampton." "Einsame Menschen" is to Dr. Wulffen the drama of sexual affinity. In "Hannele" he admires the poet's art in making use of pathological phases of adolescence. In "Michael Kramer" the psychology of creative work is treated with insight. Some of Hauptmann's works directly bear upon criminal psychology, as "Der Biberpelz," which is a comedy of larceny, and "Die Weber" and "Florian Geyer" which, beside their social meaning, contain touches of political criminology. The most interesting interpretation is that of the figure of Rautendelein in "Die versunkene Glocke." To Dr. Wulffen she is typical of woman, striving to rise above her elemental nature and to spiritualize her physical life, an attempt counteracted by man, even as Heinrich the bellfounder hinders the development of Rautendelein. The little book is an illuminating commentary upon the earlier work of the poet.

Some of our most influential theatrical managers declare that they are not blind to the inevitable consequences of the unscrupulous conduct of some of their associates in pandering to the lower instincts of the mob. This utterance affords ground for hope that some measures may be devised to act as a dam against the rising flood of indecency. The responsibility for at least the immediate future rests largely upon the shoulders of the managers. The syndicate system, which, in many ways, has proved so mischievous to the best interests of the stage, has this merit, at all events, that it invests the men at the head of it with a summary power to say what sort of show shall or shall not be permitted to enter any of the houses under their control. Should they agree—as two or three of them seem inclined to agree, that some sort of a censorship might be even more beneficial to their interests than to those of public morality—they could put one into effectual operation at almost a moment's notice. They could not, of course, instantly suppress all indecent shows, but they could relegate them to fifth-rate houses, where they would attract far less notice.

Miss Julia Marlowe produced Mary Johnston's poetic play, "The Goddess of Reason," in Daly's Theatre on Monday evening, with a considerable measure of success. Both the virtues and weaknesses of the piece, which has been reviewed already (see the *Nation*, May 16, 1907, p. 460), were manifest in representation. Among the former may be enumerated some effective theatrical scenes—including one of genuine dramatic power in the third act—several passages of marked literary eloquence and poetic charm, an interesting story, and

three or four well-drawn characters. Confused and arbitrary construction—especially in the opening acts—and an abundance of halting and prosaic lines constitute the main defects. Whether considered as literature or drama it is a work of very uneven quality, but bearing many marks of conspicuous if undeveloped and untrained ability. The central character, that of a peasant girl, who, becoming a local leader of the French Revolution, denounces her lover in a fit of jealousy and afterwards, failing to save him, proclaims herself an aristocrat and royalist in order to share his fate, proves to be well suited to the personality and artistic methods of Miss Marlowe, who enacts it with unfailing charm, sympathetic intelligence, and occasional outbursts, as in the denunciation scene, of genuinely tragic emotion. On the whole her impersonation is one of the best which she has recently exhibited, being rich in those emotional flashes by which she has long been distinguished, and also in that quiet and unaffected pathos which is, perhaps, more artistically precious.

It is announced that Charles Frohman is to become the manager of the Sicilian actress, Mimi Aguglia, for a term of years, and that he will present her in English plays, so soon as she shall have learned the language. Some of her pieces are to be translated and others of English origin will be added to her repertory. It appears that Sardou esteemed her abilities highly and began a play for her, of which the unfinished draft is in Mr. Frohman's possession.

Wilfred T. Coleby's new comedy, "The Truants," Miss Lena Ashwell's latest production at the London Kingsway Theatre, deals with the adventures of an impetuous young couple who deliberately resolve to defy social conventions. They are brought to a sense of their folly in the nick of time by the intervention of a woman who is a distinguished author and traveller, a part played by Miss Ashwell, and said to be rich in dramatic possibilities.

H. B. Irving's lease of the Shaftesbury Theatre in London will expire at the end of this month and he will then bring to a close an exceedingly successful season. Under the circumstances he has decided to postpone the production of Justin Huntly McCarthy's "Cæsar Borgia" until the autumn. During his closing weeks, he has been appearing as Hamlet, Charles I, and Louis XI, thus challenging comparisons with his father in three of the latter's most brilliant successes. His Hamlet has been highly praised in the provinces, and his Charles I, which he exhibited here, is a fine performance which need fear no comparisons. Louis XI is, perhaps, a more dangerous experiment. But he appears to furnish one of the rare instances—especially rare upon the stage—in which the mantle of the father has fallen upon a son worthy to bear it.

Miss Evelyn Millard expects to produce Robert Hichens's new play, "The Real Woman," in the London Criterion Theatre, on February 23. The heroine is a young girl who has not yet awakened to the serious responsibilities of life. A visit to the East End, in which the action of an entire act is laid, opens her eyes to the misery, the squalor, and the suffering that form the daily round of so many unfortunate people. This brief, but poignant, experience brings to the surface all that is best and noblest in her nature. From a butterfly, she changes into a real woman. Mr. Hichens also is making a stage version for Miss Millard, of his story, "The Garden of Allah."

A review of the plays performed in German theatres during the season 1907-1908, just published by Breitkopf & Härtel of Leipzig, shows that Schiller has been played 1,441 times, "Wilhelm Tell" alone having reached 292 performances. Next in order come Sudermann with 1,202; Oscar Blumenthal, 1,021; Shakespeare, 945; Wildenbruch, 938, among them preëminently "Die Rabensteinerin"; Franz von Schönthan, 931; Ibsen, 876; Goethe, 705; "Faust," Part i, 213; L'Arronge, 684; Kadelburg-Skowronnek, 615; Henri Bernstein, 510; Meyer-Förster, 477; Hauptmann, 476; Hebbel, 409; Lessing, 370; Grillparzer, 369; and Molière, 185.

Sardou's books, engravings, and various effects will be sold in Paris in March and April by Lair-Dubreuil & Baudoin.

Music.

Beethoven's unsterbliche Geliebte. Von La Mara. Leipzig: Breitkopf & Härtel.

Beethoven died in 1827. After the funeral his brother and several of his friends carefully searched in his apartments for documents that might be of value, particularly some bank-stock certificates which it was known he intended to leave to his nephew. Disappointment seemed probable, when one of the searchers saw the head of a nail on the side of a bureau. Seizing it, he pulled out a secret drawer, containing the desired certificates and also a letter in Beethoven's handwriting to a woman, not named, whom he called his "*unsterbliche Geliebte*"—his "immortal beloved"—a letter which has been made the subject of countless newspaper articles and several brochures. It begins with the words: "My angel, my all, my ego," and continues throughout in this ardent style:

> I weep at the thought that you will probably not hear from me before Saturday—however much you may love me—my own love is stronger still.

The letter is dated July 6, but without year or place; incidental references indicate, however, that it was written at a bathing resort difficult of access, for the writer says he would have hardly got there alive had he not had an exceptionally good driver.

Schindler was the first to print this letter, in his biography of Beethoven. He advanced the view that the "immortal beloved" was the Countess Giulietta Guicciardi, who for a time was Beethoven's pupil, and to whom he dedicated the "Moonlight" sonata when she was seventeen. This view prevailed for thirty years, until the American biographer of the great master, Thayer, applied his ingenuity to the problem and made it seem probable that, not the Countess Guicciardi, but her cousin, Theresa Brunsvick, was the "immortal beloved." There were a few weak points in the argument, and, while the writer of one brochure, Mariam Tenger, sided with Thayer, another writer, Dr. A. C. Kalischer, tried hard to prove that it was Giulietta who was Beethoven's "angel, all, and ego." One thing is certain, Thayer was wrong in giving the year 1806 as the date of the letter. Kalischer, in his complete edition of Beethoven's letters, dates it 1801; but the real date was 1807, as is made apparent by La Mara in the little book of 136 pages now before us. With an ingenuity worthy of Sherlock Holmes, she spent more than a decade in tracking the truth, searching family archives, interviewing relatives and descendants of the various *dramatis personæ*, and, finally, with the aid of the Pressburg town-librarian, Johann Batka, removing all reasonable doubt (see p. 34) that Theresa Brunsvick was the "beloved." And Theresa was worthy of the honor, for she must have been a young woman of unusual charm of mind as well as body. She spoke four languages. She never married, devoting her life largely to charitable work, especially in behalf of children. At the age of seventy she began to write her memoirs, which La Mara was so lucky as to secure for her book. They give interesting glimpses of her time, in various countries, for she was a great traveller. In one respect only are they disappointing: there is no direct reference to her love for Beethoven, but she writes concerning one proposal she received after his death: "I remained cold, an early passion had consumed my heart." On an earlier page she prints an account of the lessons Beethoven gave her. Instead of one hour, he remained four or five, and never missed a lesson during the fortnight she was in Vienna. La Mara's book is illustrated with a portrait of this remarkable woman, a facsimile of a Beethoven letter, and other documents.

Art.

THE PENNSYLVANIA ACADEMY.

An exhibition of the Pennsylvania Academy is a sort of clearing-house for American art—or at least for painting. Conservative and select standards prevail, in keeping with the historic dignity of the institution. The present show is said to be the best in average quality ever offered here. Of the oncomers there are many close to the leaders, and one finds the ensemble most stimulating. To note standards we elim-

inate extremes. Works beyond art's gracious ministry to life or out of touch with general culture, problem-plays in the visual field or attempts to reform the world or stagger humanity, are happily absent. Radical departures from accepted modes, archaistic motives, Whistlerian "arrangements," fictitious romance, fond sentiment or bald illustration, have little place in the gallery. The two religious paintings by Henry O. Tanner, which might be classed as sentimental or illustrative, cannot, however, be summarily dismissed, for they are able and sincere. Yet they do not seem quite simple or immediate. Several pictures have a sort of religious potential; we can make a Madonna at will out of the noble Mother and Child (of 1902) by George De Forest Brush, or out of Charles W. Hawthorne's good and sympathetic picture of the same theme, because the idea is simple and eternal: *C'est assez d'un enfant sur sa mère endormi.* Even landscape of elemental suggestion and with a subjective background, like Winslow Homer's Early Evening, may be on the way to a votive mood. In sculpture, which seems with us in a less flexible state than painting, our exhibition deserves a closer examination than we can give it. The technical standards here are very high; there is no improvisation or uncertainty, and we have some interesting works which transcend a too inveterate precision and finish, coming from late renaissance inspiration, and which suggest freer tendencies in design.

Confining ourselves mainly to pictures and passing over some academic experiments, we come first to the so-called realists. Of records in this literal kind the powerful and often sentient landscape of Edward W. Redfield is typical; but we might take some less familiar instance, as the Westfield River by George L. Noyes, where there seems a more flexible vision. Something in the construction here, as in the foreground flora and stones, goes beyond the near and tangible, and is on the way to revelation. A landscape by George Bellows, hung high in the New York Academy, improves on acquaintance, and has, without a secure style, a touch of passion. He has studied Winslow Homer to some purpose. Another promising realist, if not yet important, is Paul Cornoyer, who has a moving human theme. In sheer truth of literal presentation, with a more conventional style and without atmosphere, Frederick J. Waugh's deep-sea piece is impressive. Theodore Wendel, for all his fresh and vivid outlook, seems less actual, more forced in color, than several artists of realistic tendency whom we might mention. Figures or portraits may be literal even where they approach a decorative impulse, as with the two brilliant examples of William M. Paxton and the facile portrait of Miss Townsend by John S. Sargent.

To come to the ideal category, we may note tentatively some bold essays, and conclude with what seems indubitable. Abbott H. Thayer attempts beauty in The Virgin, but fails of actual performance. In Marcelle, an ambitious, if still academic, nude, as in two landscapes, Frederic Carl Friesike is distinguished, but not yet secure. The same may be said of Paul Dougherty's White Tide, which only needs a style corresponding to its idea and its design to be impressive. Among the landscape luminists truth in this kind sometimes becomes poetic. It is hard to choose, but one feels in Walter Griffin an ideal mood and a clear utterance. The Red Peppers of Alice Mumford Roberts have an intensity, fervor, and insight which seem like the "sudden matter" of the lyric muse. In the same brilliant room one notes two works by W. W. Gilchrist, jr., a Renoir- and Besnard-like Model's Rest, and A Study in Lavender, the latter tender as Gainsborough. For what seems definite achievement and high originality we may cite—besides the Brush and the Winslow Homer already mentioned—the fine portrait of Edward A. Schmidt by the veteran Thomas Eakins, a genre-piece by Edmund C. Tarbell, and good examples of the art of J. Alden Weir and Childe Hassam. In sculpture an idealized portrait by Charles Grafly and a figure for a Fountain of Youth by Bela A. Pratt should be noted.

WILLIAM RANKIN.

"The Acropolis of Athens," by Prof. Martin L. D'Ooge, and "Greek Architecture," by Prof. Allan Marquand, are promised for this spring by the Macmillan Company.

Perhaps the most interesting article in the January number of the *Burlington Magazine* is that on "Whistler and Modern Art," by C. J. Holmes. Mr. Holmes remarks that the neglected masters of the immediate past are now the "object of universal praise and eager competition; the popular favorites of the century are, almost without exception, worthless." The result of this "salesroom collapse of Academy reputations" is that amateurs have become frightened, and that "modern paintings are rarely bought" at all. In order to remedy this state of affairs Mr. Holmes proposes to instruct the possible picture buyer how, in sporting phrase, to pick the winners, and so avoid wasting his money; and he does it in this wise. The painters now in vogue were all innovators, consequently innovators should be chosen for patronage. But imitation of nature can be carried no further, truth of detail having been pushed to its limit by the Preraphaelites and truth of effect by the impressionists. Innovation can no longer come by addition of new truths—it must come by the suppression of old ones, and the true novelty will be "the omission of something which has never been omitted before." The result will be "oddity, incompleteness, ugliness"; and the collector is practically bidden to "back" (the word is Mr. Holmes's) the odd, the incomplete, and the ugly. In the present state of modern painting this should leave him plenty of room for choice. In all this, of course, there is an element of truth, but Mr. Holmes seems to us to neglect some important considerations. In the absence of sound traditions, the nineteenth century was an age of experimenting in art, its strongest men innovators; but it has not always been so, and it does not follow that it will always be so. Even in the past century there was that high priest of classicism, Ingres, whose reputation is to-day greater than ever it was, and there was Millet—an ingrained conservative whose "innovation" consisted in a return to the eternal principles of the grand style. Who shall say that the next revolution of a generation wearied of clever imitation of nature shall not be a frank reaction to the point of view of the great classic masters of painting? Their methods are not exhausted because they are inexhaustible, and there is infinite scope for the development of real individuality within the limits of what they would have recognized as sound art. This is the attitude taken by Kenyon Cox in his article, in the same number of the magazine on "The Recent Work of E. C. Tarbell," that artist being praised for "such simply beautiful painting" as is "rarer to-day than it has been in the past." The number also contains an interesting appreciation of the late Charles Eliot Norton by Henry James.

A somewhat bumptious little book is "The History of Engraving, from Its Inception to the Time of Thomas Bewick," by Stanley Austin (imported by Charles Scribner's Sons). A gift of fine words the author evidently regards as an important part of his equipment. To him "Art is the child of romance which cradled in dreams has ripened into undying reality. It is the Aphrodite of the imagination, and, like its parent, is possessed of undying charm." Mr. Austin also has knowledge of some of the facts of his subject, although it is questionable if he possesses a clear idea of just what constitutes engraving. A considerable portion of the book, for instance, is devoted to book blocks and other wood cuts, which can hardly be called engravings at all. Wood cutting is a knife process, whereas wood engraving, which came in with Bewick, is a process of true engraving. One is tempted to quarrel with the proportions allotted to the different topics, but doubtless in a popular manual for English readers it is necessary to give much space to those branches, such as mezzotint and stipple, that British collectors have affected. The perfervid eulogies of Bartolozzi and Bewick, while not altogether unmerited, are lacking in restraint and sense of values. It is an unpardonable exaggeration to say that "Language can hardly err in praise of Bewick, for he was, in a sense, to Art what Shakespeare was to Letters." Apropos of the mooted question whether Holbein personally cut any of the blocks bearing his designs, the author holds it probable that it was his practice to draw directly upon the wood, and that both he and Luetzelburger were responsible for the cutting. This opinion is not held by the best authorities.

Jacques Reich of this city has added to his series of etched portraits of authors a

Robert Louis Stevenson, fourteen inches by eleven and a quarter. The picture represents Stevenson at a desk with pen in hand, but looking up, as if to speak. And it is a speaking likeness—the marvellously keen, bright eye in a face curiously touched with melancholy. It is a portrait which, like the style of Stevenson, becomes more fascinating as one studies it—in spite of the fact that the cheeks are fuller, less gaunt than most persons had supposed them to be in Stevenson's later years.

Prof. A. H. Sayce has discovered the true site of the ancient city of Meroe, which had hitherto been placed near the temples of Naga, about twenty-five miles inland from the Nile. The ancient remains found and identified by Professor Sayce are about three miles from Kabushia Station, near Shendi, which is half-way between Khartum and Atbara. The identification was made possible by the discovery of the great wall of inner defences, and the remains of the Temple of Amon mentioned by Strabo, as well as the Avenue of Rams, leading up to the temple. There were also found a life-size statue of a king, scarabs, seals, pottery, a slab with Greek inscriptions, etc. —material dating from 700 B. C. to 300 A. D. The determining of the true site of Meroe is of special importance, since the buried cities of Ethiopia, mentioned by early historians, can be approximately determined by their known distance from Meroe.

The systematic excavation of the Phœnician settlement of Motya, an island off Sicily, is now in active progress. The walls, partly composed of huge unworked rocks in "Cyclopean" style, and partly of well-wrought masonry, have been carefully explored. Both the northern and southern gates with their massive battlements are fine survivals of the Phœnician fortifications. Two stone staircases in the line of the walls have been disclosed. A remarkable find is a rectangular enclosure, substantially built of stone, at the southern end of the island, which evidently served as a small inland harbor with a narrow channel leading to the sea. A necropolis has also been discovered at the northern extremity of the island, which seems to have been in use both in prehistoric and early Phœnician times. The remains of the buildings of Motya, which we know from the account of Diodorus to have been both numerous and magnificent, have not as yet been properly investigated, but are likely to yield a rich harvest.

Among the exhibtions at the dealers' galleries in this city are textiles, embroideries, and Persian and Racca faience at Bauer-Folsom's, till February 20; miniatures by Helène Paulini and etchings by Whistler and Jacques Reich, Katz's, February 22; old pewter, M. Johnson Brown & Co.'s, March 1; engraved portraits of Lincoln and Washington, O'Brien's, March 9.

A Société pour la Reproduction des Dessins de Maîtres has been formed in Paris for the publication of little-known drawings in private and public collections.

Maurice Roy, in a paper read before the French Académie des Inscriptions et Belles-Lettres, has made out the existence of two artists, instead of one, by the name of Jean Cousin. He has not determined their relationship.

In the death of Russell Sturgis on February 11, the *Nation* has lost a contributor whose ready pen and whose wide knowledge of architecture and of various minor arts were constantly and generously at its service. Mr. Sturgis was born in Baltimore County, Maryland, in 1836. After graduation from the College of the City of New York he studied architecture here and in Munich, his first master being Leopold Eidlitz, who was prominent in the Gothic revival. As a practising architect Mr. Sturgis designed a number of important buildings, including the Yale Chapel, at New Haven, and the Farnham and Durfee dormitories. In 1880 ill-health compelled him to give up active business, and for a while he resided in Europe. On his return to this country he devoted most of his energy to the work of connoisseur and critic, and despite the disadvantage of weak eyes, wrote largely for the leading magazines and for various dictionaries and encyclopædias. Besides revising Lübke's "History of Art," he had undertaken a general "History of Architecture," to be completed in three volumes (volume I reviewed in the *Nation*, July 4, 1907, p. 20); it is to be hoped that he has left manuscript for the completion of this which promised to be his greatest work. Other books by him are: "Manual of the Jarves Collection of Early Italian Pictures" (1868), "European Architecture, a Historical Study" (1896), "Annotated Bibliography of Fine Art" (1897), "How to Judge Architecture" (1903), "The Appreciation of Sculpture" (1904), "The Interdependence of the Arts of Design" (1905), "The Appreciation of Pictures" (1905), and "A Study of the Artist's Way of Working in the Various Handicrafts and Arts of Design" (1905). In all his writing, as in his intercourse with men, he was steadfast for what is fine and of good report.

Finance.

ASPECTS OF THE FINANCIAL SITUATION.

The fact that the opening weeks of 1909 have been marked by general lack of activity and enthusiasm in American finance has disconcerted the markets in which there had been many predictions of such revival. Two opposite opinions have all along been held by experienced financiers, regarding the exceptional nature of the markets of 1908—one, that the panic of 1907 was really no such serious affair as people imagined, and that the rapid return to "booming markets" merely reflected the quick restoration of trade conditions which never ought to have been interrupted; the other, that the Stock Exchange demonstrations of 1908 must be classed as psychological rather than economic phenomena, and that while a steady betterment of industrial conditions, as compared with the close of 1907, was undoubtedly in progress, the greater part of the Wall Street speculation was based on pure illusion.

The exact truth probably lies somewhere between these two extremes. The view of a neutral observer is presented in the review of finance for 1908 issued by the London office of the Swiss Bankverein, an institution of high standing:

> The leaders of American finance and industry have, with shrewd instinct, taken in this crisis the very action most conducive to the fostering of confidence. They bought boldly, assiduously, and profusely. They bought railway shares on heavy declines and thereby raised the credit of their companies; they bought bonds and thus encouraged and attracted investment capital. . . . It is scarcely necessary to state that the entire economic fabric could not at once be restored to its former activity; that many had to contend with financial difficulties; that works still remained closed, and even those financially sound were only partly employed; that numerous hands continued idle; but the fact has been established beyond disproof that by their timely and determined action, the magnates checked pessimism, which was gaining ground, and enabled a more hopeful disposition to prevail.

In this view there is no doubt some force. But it must be obvious that, if expectations are raised to a pitch where the actual events in trade and industry do not and cannot justify them, disappointment and unwarranted pessimism are the penalty. This is precisely what has happened. The extraordinary outburst of hope, jubilation, and speculation, in November, was based on an outright fallacy—namely, that trade depression, business losses, and damaged credit could be instantaneously swept away by the fact of Mr. Taft's election. The review already cited closes with the remark:

> Now that the first burst of enthusiasm over the result of the Presidential election has subsided, it is generally admitted, apparently even in America, that a more sober view should be taken of the prospects of trade and industry.

What, then, will be discovered by those who now take this "more sober view"? First, that so far from a great "trade boom" having burst forth instantaneously the morning after election, in no subsequent month have the volume and activity of business equalled the record of October. Even the earnings of the United States Steel Corporation reached in that month their high level of 1908, and have since shown slight but continuous decrease. At the moment, it is probable that the steel industry, which is usually typical, is working at about 60 per cent. of normal. At the close of 1907, the ratio was declared on good authority to be 28 per cent.; last summer it was something like 50. This, in a general way, sums up the position of things in the majority of trades. The exception, possibly, is dry goods, where the present activity probably exceeds that of most other industries, largely because of last year's prompt readjustment of prices to altered conditions.

If, in reading the account of an old-

time financial panic of the first magnitude, one were to learn that from 28 per cent. the volume of trade had recovered within fifteen months to 60 per cent., one's verdict would be that recuperation had been remarkably satisfactory. That, in our judgment, is the reasonable way to look at the present condition of American industry. It ought to be understood that the October panic of 1907 was not a "Wall Street flurry," not an accident due to a slip in the arrangements of one or two New York trust companies, not merely a senseless outbreak of distrust among depositors, and not a sudden flight for safety by people who had all at once become dismayed over President Roosevelt's attitude. By this time we have surely had enough of pointing to incidents and symptoms, and declaring that they were causes of the malady. What sensible people now know is, that the whole financial world had been over-exploiting credit, during 1905 and 1906, precisely as it did in 1871 and 1872; that the strain had grown too great; that eminent financiers and economists had in advance warned not only our markets, but Europe's also, of what was overhanging; that the collapse began in countries thousands of miles away from us, before it came in the United States; and that the particular violence of the crisis in this country was the penalty for the particular extravagance of our great speculators' use of credit.

Recovery from a downfall of this sort must in the nature of things be gradual; conservatism must take the place of rashness, and economy of waste. Such has been the nature of our recovery to date. Illusions fostered by Stock Exchange manipulation cannot really hasten the progress of convalescence. That will pursue its normal course. Nor does the present effort to place on the tariff discussion the blame for the seeming stagnation in producing markets help the matter. The *Iron Age*, which will hardly be accused of "free-trade sympathies," dismisses this argument contemptuously, assigning present conditions to "lack of demand and growing domestic competition," and intimating plainly that manufacturers who, at a juncture such as this, are standing out for the prices of prosperity, are themselves responsible for the present particular slowness of improvement. With this view we cordially agree; the fact is that, up to the present time, the pace of recovery has been more rapid than there was reason to expect fifteen months ago. That this gradual recovery will continue, and that it will be no less sure and genuine because it is gradual, we are fully convinced.

HENRY HOLT & CO., 34 W. 33d St. NEW YORK

Ready To-day.

The Century of the Child
By ELLEN KEY
$1.50 net

Some of Miss Key's ideas are strongly revolutionary, but in educational questions she shows originality, and her writings have a wide appeal among progressive people. In the matter of the education of children she is the foe of mechanical methods and recommends a large liberty in the bringing-up of young people.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 25, 1909.

The Week.

There have been many complaints recently that the "Nation" comes late in the mails. In most places within 250 miles of New York it should be delivered not later than Thursday noon. The publisher wishes to be notified of delays in order that he may take the matter up promptly with the postal authorities.

For the successful ending of our fleet's spectacular cruise around the world, every American will give thanks. An undertaking of this kind involves so many possibilities of accident that the absence of serious mishap reflects great credit alike upon officers and men. That there had been moments of danger appeared at the recent court-martial in Gibraltar, when there was testimony that the accused officer had repeatedly shown coolness and skill "in critical situations." As a whole, the conduct of the men has been excellent. The only really grave lapses have been due to the navy's old enemy, intoxication, and these have been summarily punished. With the whole performance the country has, therefore, every reason to be satisfied. So far as the political effects of the cruise are concerned, there is even greater cause for gratification. The *Nation* was one of the journals which looked upon the venture as ill-timed and rather hazardous, in view of the anti-Japanese agitation by demagogues on the Pacific Coast. Furthermore, it must not be forgotten that the foreign press regarded the cruise as a direct menace to Japan. Some of our own newspapers gayly announced that the mere prospect of the voyage had completely silenced the "hectoring Japanese." But the most significant single event of the entire cruise was Japan's invitation to the fleet to visit Japanese waters. This simple act of courtesy and friendliness took overnight from the fleet's voyage all appearance of hostility, and proved for all time how inferior the most powerful battleships are to the conquering influences of international kindliness and good-will. Furthermore, William H. Taft added greatly to the cordiality of this display of amity by his admirable address at Tokio, in which he emphatically declared that war between the United States and Japan would be a "crime against civilization," and its mere discussion an "infamous suggestion"—words that promise from March 4 on a cessation of at least one of the alarums of war which have vexed us so steadily these last four years.

As to the navy, we cannot feel that it has gained much from the cruise. Its officers have navigated fleets before, not in quite such dangerous waters, perhaps, or with quite so many big ships in line. But, with all deference to the contrary views of Rear-Admiral Mahan, the best professional opinion is that fourteen months have been lost for the drilling of the fleet—longer, in fact, because preparations for the cruise and repairs now to be made will take out another six months. It has been a cruise of the line ships without, however, those accompanying vessels, such as destroyers, scouts, and fast cruisers, which are necessary if there is to be a real simulation of war conditions. But those naval officers who see in the cruise only a waste of time and effort, like those persons who lament the enormous cost, will be little heard to-day. As Senator Hale and Senator Tillman put it, the country has gone navy-mad, and for the moment is bound as unduly to exalt the voyage as it did the battle of Manila Bay.

The passage by the Senate of the naval bill, with its enormous appropriation of $137,000,000, now throws that measure into the hands of a conference committee. We wish that this sum, voted in the face of a Treasury deficit which bids fair to be slightly larger than the naval appropriation itself, might be reduced in committee; but of this there is no prospect, particularly as the return of the battleship fleet and the shouting over it coincide with the discussions in conference. About $137,000,000 will finally be settled upon, or $15,000,000 more than last year, and no less than $121,000,000 more than twenty-five years ago, 1884. In 1885 we devoted $9,242,496.82 to the navy—yet no nation insulted us, ravaged our shores, or carried off our women and children. Even in 1898 the amount was $32,574,082.43. If the next year, with its aftermath of war, took us over the hundred-million mark, we none the less spent only $55,623,422.30 as late as 1901. In the eight years of peace, therefore, during the Presidency of Theodore Roosevelt, we have increased our naval expenditures nearly two and one-half times. But the waste is not to stop here—even though industry is still prostrate everywhere, and the Treasury surplus shrinks ominously. We are not to retrench in this item if times are bad, for Senator Hale, the chairman of the Senate committee, solemnly assures us that next year the bill for the fleet will be $160,000,000, and in 1911 not less than $200,000,000. If an armed enemy were at our doors, we could hardly do more. Moreover, the army authorities, who have spent hundreds of millions on coast defences, inform us that our coasts are impregnable to battleship attack—if any fleet, save the British, could venture hostilities so many thousand miles from its base. In view of these figures, the American nation, so mighty in its extent, its resources, and, above all, its moral power, seems suddenly to have turned coward. We are apparently too frightened or too captivated by the notion of a big navy to mark well Senator Hale's words of warning: "This means that it will soon be the unescapable duty of Congress either to borrow money or greatly to increase the taxes."

As the naval bill now stands, the marines will be restored by vote of Congress to the battleships from which they were withdrawn by Presidential order. This action we cannot but regard as unwise, because the most progressive officers favor removal of the marines. As we have heretofore pointed out, the marines are employed only on battleships with English, American, or Dutch crews. Everywhere else there are regiments of marine light infantry affiliated with the navy, for use in oversea expeditions, in landing parties, and in garrisoning navy yards and stations. On battleships marines are in many respects anomalous, because, under modern conditions, the bluejackets can po-

lice their own craft quite as well as the marines. The trouble is, however, that everything Mr. Roosevelt now urges, no matter how desirable, is suspect in the eyes of Congress.

We do not think that any one can successfully controvert the arguments advanced at the Indianapolis convention in favor of a permanent tariff commission. If we must have a tariff, let us at least be semi-scientific. At present, the whole subject is thrown into the hands of a small committee, which drafts a bill in private in the course of a few months, though in any other country the statute would be written by experts after years of study. This method gives the beneficiaries of the special privileges the best possible opportunities to get not only their feet, but their bodies, into the trough. When the bill is passing through Congress there are further opportunities for helping those pitifully needy American industries, like the Steel Trust, that cannot live without government pap. It is, therefore, refreshing to have an avowed protectionist like J. W. Van Cleave, president of the National Manufacturers' Association, denounce the present tariff-making machinery because the Ways and Means Committee is a partisan body, lacks scientific knowledge and the requisite time to readjust schedules, and is, finally, as Mr. Van Cleave said, compelled to consult selfish persons whose views of their own industry are wholly biassed—he might have added, by their desire to get what they can out of Congress for their own pockets. But this is the very reason why there should not be any protective tariffs. Selfishness and sordid bargaining are the primal forces behind each schedule. And they make it probable that the efforts to obtain a tariff-making commission or a merely advisory body will fail. The tariff is in politics because it was conceived in politics, nourished by politics, and reared by politics. It will stay in politics because it is the best asset the Republican party has had. It wins victories by the sale of favors. The only way the tariff can be taken out of politics is by a general realization that it spells corruption.

In his letter to Senator Hale discussing the Hemenway report on the secret service, the President is more vehement than convincing. He asserts a set of facts different from those set up in the reports of the committees in Congress, while his denials and theirs do not relate to the same thing. In a word, issue is not clearly joined between the two parties to the dispute. "Not one case," affirms Congress, "in which the detective work of the government has been hampered by our restrictions on the use of the secret service, has appeared on inquiry. The heads of all the departments have admitted that we have provided them men enough and money enough for this kind of work." "Yes," rejoins the President, "but if the restriction had been put in force before the Department of Justice had organized its own secret service, criminals would have escaped detection and prosecution." Obviously, this sort of recrimination could be kept up forever. As for the figures of the number of detectives employed by the government, and the money paid out on that score, so much depends upon the definition, shading off a detective from a mere inspector, that the controversy is barren. Before deciding in our haste that all men are liars, it is well to know whether they understand what they are talking about.

Indictments of the New York *World* for criminal libel would have caused no great excitement if the case had not been treated in so excitable a fashion by the President. He vehemently asserted that the *World* had committed "a libel upon the United States government." The Grand Jury, however, found indictments for libel only of specified persons. Mr. Roosevelt's violent attack upon the newspaper has enabled it to assume the air of a victim of political persecution, and to take the heroic pose of a champion of the freedom of the press. But for all this extraneous Presidential fury, it is not probable that the *World* would have found much sympathy. It has admitted that it was not able to justify its assertions, or insinuations, against C. P. Taft and Douglas Robinson; and W. N. Cromwell now states that the *World* had direct and explicit notice from him, before the stories were published, that they were the concoction of blackmailers and were false in every respect. A newspaper that coolly "takes the chances" of that kind of freedom of the press cannot complain if the law has something to say about it.

It is clear that the first effect of Gov. Hughes's speech giving, as he had not given before, the details of his plan for direct nominations, has been to confuse people's minds. Some of his supporters are left in doubt; his enemies appear to waver. But whatever else may be said of his plan for primaries, this must be said: it is the conception of an honest and independent man, logically developed after much study and thought. For our part, we frankly state that we are not wholly satisfied with the Governor's proposals. They seem to us to multiply political machinery rather unhappily. We should have better liked the application of the principle of the direct primary, pure and simple. As for giving first place on the primary ballot to the nominees of the party committees, or organization, we should have preferred to see them take their chances with all other nominations, in alphabetical order; but this does not seem a vital matter. It is purely a question of numerical order. No designation of "regular" or otherwise is to be allowed with the names. All the committees—district, county, State—he would have elected in an open, legalized, and direct primary. The nominations of these committees are, in turn, to be submitted to the verdict of the voters. It is a kind of informal referendum within the party. The thing is not the entire novelty it seems. In Prof. C. E. Merriam's recent book, "Primary Elections," he refers to a scheme of this kind, and, as it is worth while to note, intimates that the tendency is towards such a system:

> In many cases the direct primary is likely to take the form of a referendum, or a list of candidates proposed by the party managers. The leaders will present a candidate for each office, and the verdict of the party voters will indicate the degree of their confidence in the organization officials. Such a plan was presented to members of the Republican Committee of Cook County in 1902 by Professor Judson of the University of Chicago, but was not adopted. A similar plan was advocated by Dr. Robert H. Whitten in the same year. Although comparatively little attention was given to these proposals at the time, the course of recent events indicates that a system much like this is likely to develop out of the direct primary.

Conceding that the new plan has weaknesses, we must grant also that it

is at least a great improvement over the present method. The Governor does not mince words, or exceed the facts, in describing the convention system as broken down and discredited. To vitalize party management, and to make it truly representative, by compelling it to draw its power from the direct vote of the party membership, cannot fail to replace, for a time at any rate, many tools and puppets, with real men. And the power of actually making nominations by open vote of all enrolled members, instead of by secret bargaining—the man seeking the boss, as Gov. Hughes puts it—is highly valuable. Even if left in disuse, ordinarily, it could be caught up as an effective weapon in times of crisis. It is undeniable, then, that the Governor has proposed a substantial improvement in party management, even if it be not so far-reaching as might have been hoped. We ought, indeed, to make our political machinery as good as possible, but we ought never to forget that our salvation cometh not of machinery. Professional politicians, who work at the trade all the year round, will make themselves, in the end, masters of any party machinery that may be devised. They can doubtless use and flourish under direct nominations, just as they annexed the convention system, and made it malleable to their purposes. The ultimate remedy lies elsewhere. As Gov. Hughes clearly pointed out in his Brooklyn speech, the true escape from mismanaged parties is to be found in the existence of a growing body of independent citizens, who, by the right of nomination by petition, and by means of a secret ballot safeguarded by law, can put the better man in the majority, regardless of party.

From the Journals of the Continental Congress and the Federal Constitution to the 128 enormous volumes of the War of the Rebellion and the still flowing stream of Philippine reports, the government has been active in compiling the record of our own deeds. Yet several of our leading historical writers, working for the Committee on Department Methods, recently undertook to measure the gaps in the American historical record, due to the failure of the government or historical societies to have accessible documents reprinted. The results of the survey are amazing. Scarcely any of the commissions, warrants, and instructions issued by the British government to its pre-revolutionary colonies are in type, either here or abroad. Not one-tenth of the correspondence of the British Secretaries of State with colonial officers has been published. The letters of John Adams, Marshall, Bayard, and the Federal Pinckneys—invaluable in studying the major wing of the Federalist party—have been even more neglected. The Library of Congress has practically all Jackson's letters, most of Van Buren's, and many of Webster's, Polk's, Davis's, and other statesmen's known only to the occasional archive-grubber—and then imperfectly. Political and constitutional records for the Civil War period simply do not exist in any coherent form. An unofficial compilation was once made, but, in addition to being hopelessly defective, it is now out of print; and yet it is "practically the only collection that can be depended upon for the documentary history of so important a policy as that of emancipation and abolition." War and politics have ever been the historian's favorite themes; but, if these have been treated so shabbily, we must expect utter indifference toward the even more significant annals of commerce, industry, and finance. Statistics there are in limitless quantities, and moderately accurate, too; but the unabridged official story of the tariff, currency legislation, internal taxation, public lands, and many other vital economic and social matters has not been accessible.

True, colleges and similar agencies have lately assumed several large contracts: one scholar is said to be collecting, on his own venture, all the British statutes relating to America; the American Antiquarian Society is publishing royal proclamations of the colonial and revolutionary periods; and the Carnegie Institution is doing the same with the American proceedings and debates in Parliament. But it is out of the question to leave more than a few of the hundreds of documents to unofficial compilers. No, there are lost and secret chapters in our national biography simply because the writing of the latter has been left to chance or whim. A more rational scheme is necessary. In recommending, therefore, the creation of a permanent commission on national historical publications, the distinguished historians advising the Committee on Department Methods favor an obvious plan for which there is an excellent precedent. Such a commission was instituted six years ago by the Queen of the Netherlands, and the directive work it has already accomplished amply proves its usefulness. The *lacunæ* in Dutch history have been marked and are being filled in.

The resignation of James Burrill Angell removes from active life an educator whose problems and his way of handling them have been unique. Thirty-eight years ago, when he took the reins at the University of Michigan, he inaugurated a policy which was destined to influence the development of American higher education profoundly. He undertook to teach rustic lawmakers that a State university should be as well equipped as any other. In educating Michigan up to his ideals, President Angell inspired the Middle West—not to mention Ezra Cornell—and, through the example of his own success, brought to flower a dozen great schools. The man with this programme had to be more of a missionary and diplomat than a pedagogical theorist—and, to the good fortune of the country, he was. In handling surly, stingy legislators, in pleading with farmers, in swaying business men and county-fair audiences, President Angell was the archetype of the old-school "all-round" college president. Even more than the Harvard succession, President Angell's withdrawal discloses the scarcity of available men. The list of candidates at Cambridge was virtually limited to Harvard graduates, and to those graduates, moreover, who were pleasing to Boston. In Michigan the field is so open that even Senator Beveridge is mentioned for the post. There are no hard-and-fast traditions to break; there is no stubborn, influential body of alumni to pacify. All this creates an unusual opportunity; and yet, with all the world to choose from, where is the unusual man? Good administrators, excellent teachers, and shrewd financiers are being named, but where are the three in one?

Representative McCall's decision to leave Congress in order to accept the presidency of Dartmouth, inevitably carries with it a sense of loss to the pub-

lic service. He has been a type of Congressman whom we can ill spare. Able, studious, conscientious, and independent, he has been one of the men in Congress whom the intelligent and moral sentiment of the country has thought of with great comfort as a fit representation of our best. Never blinded or carried away by popular hysteria, he has kept his head and freed his mind. Early an open critic of some of the harmful tendencies of the Roosevelt Administration, he has had less to say recently on such subjects, because hundreds are now found to utter what he was one of few to declare from the first. But regret at losing him from public life must not make congratulations to Dartmouth less hearty, or render us unmindful of the great opportunity which awaits Mr. McCall as the head of that college. His very selection is a tribute to the fine qualities of citizenship which he has illustrated. In honoring him, Dartmouth has honored herself, and given plain notice that she regards him as a fit product of education applied to public affairs, and as the kind of man she would wish to go on giving to the country. The accession of Mr. McCall, a layman, to a chair which clergymen have traditionally held is another sign of the times in the educational world. Inspiring personality, knowledge of men, a vigorous mind producing sane ideas, intellectual and moral leadership, all devoted to great civic needs—these are the qualities which colleges are more seeking in their direction. Dartmouth has found them in Samuel W. McCall.

The New York motor boat show, which closed this week, has afforded a fresh revelation of the usefulness of that extraordinarily beneficent invention, the gas engine. The public is generally inclined to think of it chiefly as a motive power for land automobiles. But the water automobile counts its users by the thousands, too, and is within the means of many who could not afford the cheapest motor car. For the maintenance of the motor boat involves no such expenses as tires and tubes; a chauffeur is usually unnecessary. At the price of a fine touring car, one can, moreover, buy a boat which will give comfortable sleeping accommodations for four or five. Upon such a craft, a man of slender means may spend a summer out-of-doors at astonishingly slight cost and roam our coasts and rivers at will. For the price of a fine foreign motor car, one can have an eighteen-knot boat, made of excellent woods and fitted with all luxuries. In it, the marvellous little engine which produces this high speed is tucked away in a space so small as to leave plenty of room for the owner and his guests, while the one-man crew manœuvres the craft by an automobile wheel with the ease of a child on a velocipede. From this touring car of the water down to the $200 launch is a long way, but the possibilities of pleasure in the latter are also very great. No one complains because of reckless driving on the waters, and few accidents are reported in the season when thousands of these pleasure craft swarm on our lakes and rivers and seas.

A Canadian Minister of Foreign Affairs—Prime Minister Laurier has announced his intention of adding one to his Cabinet—would satisfy local pride, arouse some anxiety among timid souls in England, and produce no very radical change in Canada's future relations either to her neighbors or to the Empire. Since the medium of communication between Washington and Ottawa will still be the British Minister, and since the Imperial veto will, of course, be retained, the innovation only means that Canada will henceforth be in a position to give her diplomatic business a greater share of preliminary attention than it receives now, and to enforce her views more directly upon the British representative at Washington. That would be gain enough if the British Foreign Office were really as indifferent to colonial interests as discontented Canadian opinion would make it out to be. Yet it is best that even such discontent should be done away with. Mr. Bryce, in his negotiations concerning Canadian waterways and the Newfoundland fisheries question, has made the consent of the colonial governments concerned necessary to the validity of the engagements he has entered into. In the settlement of the Japanese immigration question a year ago, a Canadian commissioner coöperated with the British Ambassador at Tokio. The double system is practicable, though anxious people in England may discern in it a step towards complete diplomatic independence for the colonies.

The Balkan war scare is being worked with mechanical regularity. No sooner has Bulgaria consented in principle to pay Turkey an indemnity, than Turkey's financial negotiations with Austria enter troubled waters. No sooner has Austria consented to the principle of an indemnity for Bosnia, than Bulgaria takes up a menacing attitude on the question of the exact amount to be paid. No sooner has Bulgaria been satisfied, than Austria assumes a menacing attitude on the details of *her* indemnity payments. A few weeks ago, when a supposedly violent speech by the Servian Foreign Minister made the war clouds gather in unusually heavy masses, it was reported that the Servian Minister's speech had been inspired by French bankers who wished to frighten Russia into accepting a lower price for the loan she was just about to issue. Some secret interests at least would seem to be behind the present swift succession of chills and fever in the Balkans. The latest Balkan fright has to do with Austria's supposed intention to overrun and annex Servia. Just where this precious idea started it is impossible to imagine. By all accounts, the danger of war between Servia and Austria these past months has consisted solely in the fact that Servia might get out of hand and bring on a conflict which Austria, no less than the other Powers, was most anxious to avoid. For Austria had secured what she was after, and it is notorious that the person who has got the better of a bargain is content to let things be as they are. Why, then, should Austria threaten war, now that Servia has been quiet for months and Austria's quarrel with Turkey is as good as settled? The answer given is that Austria is bound to press on to Salonica, and that she will pick up Servia on the way. The Western Powers are said to be indifferent to the possible fate of Servia. But Russia is not indifferent; Bulgaria, whose Czar is now fraternizing with his fellow-Czar, must be far from indifferent to Austria's intrusion in the Balkans; and the new Turkey, whose very life will be threatened by Austrian ambitions, cannot remain indifferent. Such a combination is already quite sufficient to make the suggested seizure of Servia by Austria seem nothing less than folly.

OUR RECORD AT PANAMA.

We know, for we have often been told, that the country ought to feel tremendously proud of its work on the Panama Canal. We were to make the French look like children. Their vacillation, delays, and changes of plan, with the cost running far beyond estimates, were to be things of the past when the Americans took hold. This was all very glorious, and we should now feel patriotic thrills, were it not for one thing—the ugly facts. Huxley called it a tragedy of science when a fact killed a beautiful hypothesis. Chauvinistic boasting has its tragedies, too, and the cold recital of our record at Panama discloses one of them.

First, take the figures of outlay. The Spooner Act of 1902 appropriated $10,000,000 for construction, and authorized continuing appropriations, year by year, "not to exceed in the aggregate the additional sum of $135,000,000." To date, Congress has appropriated for canal purposes the sum of $170,000,000. That is to say, deducting the $50,000,000 paid for canal rights and for the canal strip, we have already expended on construction $120,000,000. In a word, all the money which was provided by the Spooner Act, and which was guaranteed to be sufficient, has now been practically expended, and the canal is one-third done. Three years ago, the minority of the board of consulting engineers, whose plans were adopted, assured Congress that the complete cost, not including sanitation and the expense of governing the Zone, would not exceed $139,705,000. On this they staked their professional reputations. Yet in January, 1908, the chairman of the Canal Commission had to admit to Congress that the total would not be less than $250,000,000, and might even be $300,000,000. That was sufficiently staggering, but now comes Mr. Taft's board of engineers with the cool estimate of $360,000,000!

To be entirely fair, we give the engineers' explanation of these enormous figures. The profession is not entirely to blame. The engineers show that the expense of actual construction, as severed from other expenses, will be "only $143,000,000" in excess of the original estimate—that is, only 100 per cent. out of the way! But they justly point out that nearly one-half of the increase was due to changes of plan, made since the beginning, and to the "higher unit cost of the different items of work." By this is meant that the employees have been given shorter hours of work and higher pay than had been calculated on. The engineers did not foresee this, but anybody who knows the waste and extravagance of government enterprises might have expected such a result. Yet whatever the explanation, the fact remains that the United States has started to build a canal which will cost four times the French estimates, and three times the sum which we were at first solemnly assured would suffice—and we shall be lucky if we get off with that. It is safe to say that if the Spooner Act had carried $360,000,000, it could not have passed Congress.

On the technical side, President Roosevelt now seeks to stop the mouths of all critics, by asserting that any one who speaks against the present plans, as re-revised and once more made absolutely perfect, really shows that he is against any canal at all. But the thing cannot be disposed of thus cavalierly. When eminent engineers radically differ, laymen will have their doubts. Mr. Roosevelt himself refused to abide by the majority report of his international committee of engineers. Why should he now think that he has discovered infallibility? Sensible men have great respect for scientific experts. To set up an unskilled opinion against theirs would be folly. But the fact which the President ignores is that highly skilled opinion is disturbed about the present plans for the canal, or is positively hostile to them. It ought to be known, for example, that the sudden sinking of the toe of the Gatun Dam, a few weeks ago, was commented upon in engineering circles in Europe as "the catastrophe" at Panama. Nor is the dam at Gatun the only feature of the project which distinguished experts look upon with concern. In the flight of locks there they see a cause of grave disquiet. Both the possibility of safe construction, at that point, and safety of operation, if constructed, have been gravely called in question. In this connection, we may recall one ghastly blunder of Mr. Roosevelt's infallible experts which was exposed before the Senate committee. The plans called for locks of a usable length of 1,000 feet, but Lindon W. Bates demonstrated that, probably because there was not room to locate three such locks at the site chosen, the engineers had really provided for locks of a usable length of only 820 feet. This was gravely passed off as "a draughtsman's error," but as one Senator asked: "If we are misled in an important matter like this, have we any security at all?"

It is, indeed, a little too absurd to try to make the canal engineers exempt from criticism. They have been their own chief critics. To write down their own condemnation of their own work, in the changes which they have successively ordered, would be to exhibit a sad record of uncertainty. They selected Bohio for the site of their great dam, but were driven to abandon it. They began to build a dam at La Boca, on the Pacific side, but afterwards carried it back to Miraflores. And just now, in this final and sacrosanct report, it is admitted that former equally sacred reports were all wrong as respects the channel and location of the breakwaters in the harbor at Colon, and a complete alteration of plan is announced, at a cost of $10,000,000. Thus do messieurs the infallibles change from year to year.

We have not a word to say against the spirit in which the work on the Isthmus has been carried on. In sanitation and administration, we have commanded the admiration of the world. Nor is there any reason to doubt the fine organization of the laborers on the spot. But the facts we have cited show how serious is the problem yet before us, to which our best wits should be invited, instead of being warned away; and how little justification we now have, after seven years, for all our preliminary boasting.

THE CONSTITUTION FOR SOUTH AFRICA.

After four months of deliberation in secret at Cape Town, the National Convention to bring about the closer union of the British colonies in South Africa concluded its labors on February 9. It thereupon authorized the publication of the Constitution drafted, of which the full text is now at hand. It is, of course, in the form of an act, to be passed by the Imperial Parliament, after the colonies shall have assented to it; but in substance it is a great charter of government for that vast stretch of splendid country which holds so much of the future in fee. Hence it may properly be called the South African Constitution.

In general terms, the instrument follows the Australian model, which in turn was powerfully influenced by American experience. There is to be no unitary republic in South Africa. A federal government of large powers is to be erected, but the local government of the constituent provinces will continue to be nearest to the citizen in many of the relations of life, and will retain functions not unlike those of our States. There is to be a Parliament of the federation, but the power to determine the right of suffrage is to be left, under certain general safeguards, in the hands of the separate colonies as before. It is provided that "no person who is registered as a voter shall be removed from the register by reason only of any disqualification based on race or color." This does not mean indiscriminate enfranchisement of the natives, but only that, where they have been admitted to the suffrage, as in Cape Colony, it cannot be taken away from them. It is hoped, however, that in time the Cape franchise will be extended to the whole of South Africa.

With so many diverse and conflicting interests to harmonize, it was inevitable that compromise should be written plainly upon several parts of the Constitution. There was, naturally, a warm contest over the seat of the new government. Each local capital wanted it. The upshot was an agreement whereby "the seat of the government of the Union shall be at Pretoria, and the seat of the Legislature, Cape Town." On the other hand, the Supreme Court is to sit in Bloemfontein. These provisions remind one of the struggles over the location of the capitals, penitentiaries, and insane asylums, at the formation of some of our Western States. The South Africans may, at least, be glad, as *Punch* suggests, that their new government is not to be at Pretoria on Mondays, Wednesdays, and Fridays, at Cape Town on Tuesdays and Saturdays, and at Bloemfontein on Thursday and Sundays. More important differences were those over the basis of representation in the new Parliament. As with us, the equality of the provinces in the Senate was determined upon; each is to have eight Senators elected by the Legislatures of the colonies; and eight Senators are to be nominated by the governor-general. All Senators are to hold their seats for ten years. Of the eight nominated, it is provided that "one-half shall be selected on the ground mainly of their thorough acquaintance with the wants and wishes of the colored races." This speaks for itself. In the new Legislative Assembly, Cape Colony is to have fifty-one members; Transvaal, thirty-six, and Natal and Orange each seventeen. Strictly on the basis of population, the representation should have been: Cape Colony, fifty-eight; Transvaal, thirty-seven; Orange, fourteen; and Natal, twelve; but the larger provinces gave up eight members to the smaller. Provision is made for the increase of representation with the growth in population, but the total number of members in the lower house shall not exceed 150.

The temptation to try experiments in government-making was obviously before the delegates at Cape Town, but they have introduced few novelties. The chief innovation is the provision that "the election of members of the Legislative Assembly shall be according to the principle of proportional representation, with the single transferable vote." This seems to be an echo of recent discussions of that method of voting, and informal demonstrations of its results, in England. Another thing strange to our practice is the arrangement made to break a deadlock between the Senate and the Assembly. The Governor-General may convene them in joint sitting, when the disputed legislation may be carried by a majority of all present. This plan obviously favors the Assembly, with its larger membership, in any case where it is practically united against the Senate. The scheme is a modification of that already provided for Australia. It would be interesting to know how it has worked there.

One of the general provisions is that "both the English and Dutch languages shall be official languages of the Union, and shall be treated on a footing of equality." The adoption of such a Constitution for Dutch and English, within nine years after Dutch and English were fighting each other in a desperate and lamentable war, will be a remarkable triumph of peaceful statesmanship; and that the whole instrument should be conceived in a spirit of such large amity, with so brave and keen a look to the coming years, is a wonderful tribute to the capacity and patriotism of the men who did the work. In this, the Dutch were not behind the English. High praise has been given to Gen. Botha for his statesmanlike attitude, while the conciliatory and self-sacrificing position taken by ex-President Steyn has been such as to lead to his being called the Washington of the South African Constitution. We are ready, then, to believe that the government which is thus to be set up will be one of the finest, as it is certainly one of the most extraordinary, proofs of the British genius for administration.

MAKING SCHOLARSHIP ATTRACTIVE.

The *Yale Alumni Weekly* and the *Yale Courant* have been discussing ways and means of fixing the attention of undergraduates "on the value of success in scholarship." The trouble seems to have begun when President Woodrow Wilson of Princeton—as a bishop *in partibus infidelium*, so to speak—gave a Phi Beta Kappa address at Yale last year. "I have heard," he said, "sounded once or twice to-night, a note of apology for the intellectual side of the university"; and he added:

> You hear it at all universities. Learning is on the defensive, is actually on the defensive among college men, and they are being asked by way of concession to bring that also into the circle of their interests. Is it not time we stopped asking indulgence for learning and proclaimed its sovereignty? Is it not time we reminded the college men of this country that they have no right to any distinctive place in any community unless they can show it by intellectual achievement? that if a university is a place for distinction at all, it must be distinguished by the conquests of the mind?

These be bitter words. They must come home to the heart of all university men. "Here at Yale," says the *Courant*, "scholarship *per se* has no social attractions, is hardly known and rarely discussed." The *Weekly* is even more severe: "Probably only a handful of the undergraduates of any one class could name their chief scholarship or prize-winner or half the philosophical-oration men." But we would not imply that Yale undergraduates are sinners above all men that dwell in our academic Jerusalem, President Wilson has found the note of apology "everywhere."

The *Alumni Weekly* has suggested an Honor Day in which the winners of prizes, scholarships, and the like shall publicly come into their own. This plan has been tried in various schools and colleges—at Harvard, for example—and

it is all very well so far as it goes; but as the *Yale Courant* points out, it does not go very far:

> A typical American institution, with its plethora of extra-curriculum activities, its over-emphasis on popular attributes of character and physical superiority, will not be metamorphosed in a day into a scholarly college.

The *Courant* would therefore make scholarship a "social asset." Time was when the two highest men in each class at Yale were elected to a secret society; but to-day, says the *Courant*, that plan would be regarded as "absurd"; "only one fraternity, the least recognized of the five, can be said to be at all distinguished by scholarship." The *Courant*, then, wants to see accomplished students secure recognition from the fraternities; partly because the effect on the fraternities would be good; and partly because in the fraternity the man who is often regarded as a bore and a grind would be developed socially, would acquire *savoir-vivre*, and would become "a good fellow at the end." This sounds attractive. At Amherst, some years ago (perhaps the custom has continued to the present time), the societies used to compete for the leading scholars of each class, with happy results for all concerned. But it is hard to see how under existing conditions at Yale and Harvard, for example, the societies can be persuaded to take any vital interest in scholarship.

The colleges reflect the tone of the community—a community which has been growing rich very rapidly, and which seems more and more concerned to spend money lavishly. Every wealthy man wants his son to enjoy the advantages of a college education. Our colleges, therefore, contain too large a proportion of spoiled, lazy boys, whose hours of labor have been cut down to the irreducible minimum. Their fathers wish them to be "gentlemen"—that is, possessed of superficial graces of manner but agreeably destitute of ideas. A writer in the last *Harvard Monthly* succinctly describes these undergraduates as "rich parasites." Now, it is certain that with their fathers and families being what they are, these young idlers will never have any pressure from home put upon them. The interest of the indulgent parents will be chiefly centred on the social and athletic victories of the lads. Indeed, it is almost inconceivable that a man or woman in the so-called "smart set" of New York should even comprehend the ambition of a son who, by some accident, might wish to gain intellectual distinction at college.

Under these circumstances, the duty of setting an intellectual tone really rests on the college authorities and chiefly on the faculty. It cannot be shifted to the undergraduates or to their parents, or even to the alumni. "The object of a university," as President Wilson has put it, "is to educate." That is what it is for; and the member of the faculty who does not lend his help in this task has no excuse for holding his job and drawing his pay. If the teachers at Harvard, Yale, and our other colleges, had, as a whole, sufficient backbone and energy to do their work as it should be done, they could keep the undergraduates up to the mark, the society elections would take care of themselves, the excesses of athletics would disappear, and we should have no committees reporting that "the average amount of study is discreditably small." But the cold truth, as every one familiar with the facts can testify, is that many of our colleges are honeycombed with soft courses. We could, were this the place, print a list of the very men who, at Harvard, Yale, and elsewhere, run the big elective courses, crowded with loafers from the "gold coast"—courses that are a disgrace to any institution that professes to stand for the higher learning. These amiable but incompetent instructors whose names will leap to the lips of every alumnus that reads these lines, whose shortcomings as teachers are known to every college president and every vigorous member of their respective faculties, are the men who make it possible for boys who ought never to be in college to stay in, to lounge their way through, and finally to secure a degree. These benevolent gentlemen who conduct the "snaps" are largely responsible for that low intellectual tone of which President Wilson complains. Until their demoralizing influence is checked, until we devise administrative methods that will put an end to such shallow pretences of teaching, and compel professors to discharge their duties with reasonable efficiency or else accept a retiring pension—in short, until our colleges themselves firmly assert the sovereignty of intellectual interests, serious parents will continue to feel misgiving as to the moral and mental welfare of their children who go to college.

THE CRAZE FOR MEMOIRS.

Something, we know, is always "displacing the popular novel." Macaulay's "History" did it; Green's "Short History" did it; Drummond's "Natural Law in the Spiritual World" did it; people even asserted that the momentarily great but now forgotten Benjamin Kidd did it, with his newspaper scraps pinned together to make a revolutionary philosophy. The novel, however, does not stay displaced. Like Nature flung out with a fork, it is bound to come back. Still, the fond hope persists that people can be got to read books other than novels. Just now Englishmen seem much encouraged over the increasing vogue of biography. Once more the novel is displaced. We read in a letter from London:

> Ladies began to find that memoirs were often quite as exciting as novels and rather more scandalous. The result of this is beginning to be noticeable. At dinner parties and in drawing rooms the casual man home from a long time abroad would be rather struck by the apparently learned interests of his neighbors. I suppose that when such a man came home twenty years ago, he would have found himself in a network of names and allusions which would have bewildered him entirely until he had caught up with the novels of the day. But now he would hear names more familiar, but more astonishing. He would hear talk of Queen Charlotte, the Holland House circle, George Sand and Gamhetta, Coke of Norfolk and the Duke of Buckingham, the Panmure Papers and the Duke of Newcastle, the amusements of Napoleon's sisters and the gossip of the Comtesse de Boigne.

The immense and legitimate interest of biography need not be argued. A real man is better than a hero of romance; and authentic letters, diaries, conversations, and descriptions of those who have been famous in literature, art, science, or statesmanship, must always make a powerful appeal to lovers of their kind and students of their time. And it is true that the English press has turned out, within the past twenty years, an extraordinary number of important or absorbing biographies and memoirs. When one thinks of the letters of Lord Acton, the correspondence of the Brownings, the lives of Tennyson, Gladstone, Huxley, Parnell, and Randolph Churchill, the recollections of Gavan Duffy and Sir Algernon West, the memoirs of John Delane and

the half-autobiography and half-history of Lord Cromer, it is easy to understand how there may be enthusiasm, if not a craze, over that kind of reading. The novel might gracefully concede first place to it.

We must confess to grave doubt, however, whether there can long be a "craze," or even a moderate zeal, in taking up memoirs, on the part of those who look to them to furnish an intellectual excitement alternative to that provided by novels. In some respects, the two classes of books are alike: they deal with human interest, they arouse curiosity. But there is one difference, and it is fatal. A good biography is a genuine addition to knowledge. It illustrates a generation; it lights up a period. But it does this only for those who have some antecedent knowledge, and who are eager to add to their stores of it. Right here appears the disability of the inveterate novel-reader. He (take notice, ladies, we did not say *she*) may find much in biography to whet and satisfy his curiosity about persons, but will all the while be running upon things utterly blind to him. For the memoirs of prominent men and women are filled with evidence that they thought and read, were deeply interested in the politics and religion and literature and art of their time, and were all the time making allusions which would be Greek to the novel-drenched reader. Such an unfortunate would all the while be crying out: "What on earth was the Gorham judgment? What was the matter with Colenso? Why was there a Fourth Party, and who were in it? What does the fellow mean by quoting French poetry so often, to say nothing of his confounded Latin?" Obviously, a man thus easily thrown off the track in biography, would soon get over any passing craze for that kind of entertainment, and would presently be found clothed and in his right mind, and reading the very latest novel.

It is only fair to add that the writers or editors of memoirs have much to do with repelling people from biographical reading. If the "memoir craze" were not killed by anything else, it would be by the bad construction of so many memoirs. As a rule, they are far too long and far too indiscriminate. Amorphous masses of matter are flung together in haphazard arrangement. The important and unimportant are jumbled together hopelessly. The elder De Morgan's indictment of German—too many lines in a letter, too many letters in a word, too many words in a sentence, too many sentences in a chapter, too many chapters in a book—might be brought, *mutatis mutandis*, against the over-long memoirs with which the bookshelves have literally groaned during the past few years. It is not necessary to desire or expect a popular mania for biography, but, in order that there may be even a due popular interest in this branch of literature, it is time to insist upon the duty of selection and compression in the writing of memoirs.

THE AUTOBIOGRAPHY OF JOSIAH FLYNT.

The writer of this interesting narrative,* perhaps best known as the author of "Tramping with Tramps," thought that an apology was due from a man who wrote his own biography before the age of forty. He justly felt, however, that his case was exceptional. He had tried an unusual experiment with his life, had obtained some novel results, and now purposed to record them and close that chapter. Before he had completed his task, death closed the book. On January 20, 1907, alone in his room in a Chicago hotel, Josiah Flynt (Willard), life-long vagabond and recently emergent author, succumbed in his thirty-eighth year to disease, drink, and we know not what of dissipation. As Arthur Symons relates with some gusto in his characteristic introduction to this volume:

> He shut himself away, . . . as Dowson shut himself away in his lodgings in Featherstone Buildings, and Lionel Johnson in his rooms in Gray's Inn; as a sick animal goes off into a lonely corner in the woods to die in.

This grim and sordid ending, of a piece with the main stuff of his days, will doubtless help hold back his memory from oblivion. It invests his brief career with a kind of sorry solemnity. He is now become one of the little body of adventurers who have been in forbidden lands and have brought back something strange at the cost of their lives.

The autobiography does not suffer much from the fact that its author left it incomplete. The few important details of his life which he might have been willing to add are supplied by his cousin, Bannister Merwin. We are informed that Flynt intended to conclude his work with some chapters of sociological and philosophical comment. These we do not greatly miss. In spite of his sojourn at the University of Berlin, in spite of his dippings into Mill and Lombroso, and his interviews with Ibsen and Tolstoy, he was neither a sociologist nor a philosopher. His views about crime, vagrancy, and pauperism lie on the surface of all his tramp books. His final opinion of the wisdom of his own career he discloses again and again in the course of the pages of his life that he was spared to write—vagabondage does not pay. The narrative does suffer somewhat on the side of richness and color from the fact that he had already used much of his most picturesque material in his other writings. But the thing that hindered him most from producing a book of intense and absorbing interest was his own invincible reticence.

The spirit masked behind the youthful, hard, expressionless face of the frontispiece, with its premature lines in the forehead, its thick eyebrows, fixed level eyes, insignificant nose, its firmly set mouth and chin, is inscrutable. This reticence is part of what is unique in the man. It distinguishes him from all the literary vagabonds who claim him as brother. It is no literary reserve; it is the genuine reticence of the tramp. This man has wandered so long in shady and devious ways that sealed lips and unrevealing eyes are his unalterable habit. Only with his fellows of the underworld is he at all at ease. Chance contact with a young literary Bohemian suggests that he turn his untreasured adventures to profit by his pen. The stuff is so rare that no lack of style can spoil it. By practice he acquires a certain freedom, power, and crude veracity of expression. But he has neither the gift nor the taste—so marked in his literary father—for self-confession. "I have given them my insides," he said to Bannister Merwin, when he had nearly completed "My Life." And Merwin seems to think he was successful. "The mere facts of life," he says, "did not seem very important to him; feeling was everything." With due deference to Mr. Merwin, the exact contrary of this was true. So far as his "confession" shows, the mere facts are everything—the rest is silence.

The forces that drove the boy to the road are clearly enough displayed in the comparatively ingenuous portion of the biography dealing with his early life. He tries, to be sure, to make it appear that he was not a tramp by parentage, education, or surrounding, but by some mysterious call of the blood; it is hardly necessary to seek the first cause in that obscure source. It is true that there was nothing prophetic of a tramp in his immediate family. His father, Oliver Atherton Willard, was editor-in-chief of a Chicago newspaper. His mother was a woman of education and refinement—her father a professor of divinity in the Biblical Institute of his home town. His

**My Life.* By Josiah Flynt. New York: The Outing Publishing Company.

aunt was the noted temperance reformer, Frances Willard. The father died when Josiah was eight years old and left the boy with two distinct impressions of the paternal character. One was associated with an occasion on which the elder Willard had interrupted the family prayers with the exclamation, "Damn the cats!" The other was associated with innumerable "whalings" administered on every possible occasion. The only permanent affection that the boy ever had seems to have been for his mother. He registers in his autobiography his remorse for the persistent "cussedness" with which he treated her. Yet he does not fail to record that her hand was heavy upon him, and that upon one occasion she washed out his mouth with soap and water for simply ejaculating "Gee!" On the whole, it is not strange that he struck the keynote of his career by running away at the age of five and being locked up in the engine-house. This is his earliest memory of childhood.

For their domestic rigor, he does not blame his parents very severely; after all, they were products of larger and equally hostile forces from which he could not escape so long as he stayed in town. Though he was born in Appleton, Wisconsin, his youthful recollections are all connected with the little Methodist "Athens," where the Northwestern University is situated, at Evanston on the southwestern shore of Lake Michigan. Even to-day, qualified as it is by the higher criticism, by the increasing number of wealthy suburbanites, and by the nearer neighborhood of creedless and tolerant Chicago, the atmosphere of Evanston preserves something of the strong religious flavor of Wesleyanism. Thirty years ago, Josiah Flynt found it an extremely difficult place in which to be a natural boy. He insists that in those days he was merely an ordinary youngster, with lively spirits and some bent for mischief, and his attractive portrait, taken at the age of thirteen, lends support to his contention. But the strenuous moral and religious discipline of the place perverted him. It wished to hold him forever upon the cold heights of holiness; he found life at that level tedious and unnatural. On several occasions, as he says with a suggestion of scorn, he experienced "conversion," and was scared and persuaded into joining the "mourners at the mercy seat." But a violent reaction soon followed. The desire for a more unconstrained and highly colored life gave rise to secret foregatherings with other backsliders and unregenerates in caves hollowed out under the low bluff overhanging the lake. Here the weary little Christians refreshed themselves with dime-novels, took up cigarette-smoking, and acquired what Flynt inelegantly calls "a working vocabulary of cuss words." In order to conceal this buried life from an unsympathetic world, it soon became necessary to resort to an elaborate process of "explanationing." By the time he was ten years old Josiah was an experienced smoker, swore freely, lied readily, and stole or "pilfered" at need. There did not appear to be any promising opening in Evanston for a boy of his talents, and he made several more or less abortive attempts to run away.

Before he finally reached the open road, however, his relatives appear to have made several ineffectual attempts to straighten him out. He had arrived at the critical period of adolescence in a fairly crooked state, and a strong and wise hand was needed if any reform was to be accomplished. Unhappily, his mother was then living in Germany, and none of his other relatives seems to have had any salutary influence over him. Something, they thought, might be effected by sending him out of town. Accordingly, he was matriculated in a college in Illinois, where he worked his way diligently for two years, and tried to keep "on the level." The account of this academic course is exceedingly scanty. The reason given for its termination is almost fantastic. Disgruntled because of his failure in an essay contest, if we may trust the autobiographer, the young collegian ran home. After a short visit in Evanston, he was next shipped off to a farm in western Pennsylvania, where, for a few weeks, he worked contentedly enough in the open air. There he met the first and last woman who inspired in him a genuine passion. He refers to her by the romantic soubriquet, Jeminy Jowles, and devotes nearly two pages to an account of her undistinguished conduct. When he discovered that she had jilted him, he "hopped" a freight train which landed him in Buffalo. A good-natured yardmaster gave him a place as car-reporter, which he held for just a week.

From this point his descent into professional vagrancy is swift. One has a feeling that he supplies only just enough details to outline the passage. Though he has thrown out some hints of youthful pilfering, we are a little surprised to find him suddenly a full-blown horse-thief. One day, seeing a horse and buggy standing idle in a street in Buffalo, he jumps in, drives down into Pennsylvania, and disposes of his plunder to an old acquaintance. A few weeks later he tries the same game only ten miles away at a fair, is caught, and sent to a reformatory. In due season he leaps from a window twenty feet to the ground, eludes his pursuers, travels all night, and with his regained liberty passes at length over the frontiers of "Hoboland." He dates the period of this *Vita Nuova* from the moment when he crawled to the top of a coke oven and called "'Hello' to some men who were cooking their coffee in a tomato-can over one of the oven openings." To the eight solid months of tramp life which follow—the eight months which constitute the marrow of his literary capital and the core of his life—he gives less than twenty pages. There is only a hint here of the fierce vicissitudes of box-car travel, only a few random specimens of the grimy whimsicalities of the jail, only a lurid flash upon the squalor of thieves and drunkards brawling by night. Yet he seems to have slipped into this ragged society as into his native element, and to have left no corner of it unexplored. The critical sense of the most experienced roadster could find no flaw in his character. "Before quitting the Road," he says, "I could have at any time claimed and secured the respect due to the 'blowed-in-the-glass' wanderer."

Though this period of professional vagrancy terminated in the neighborhood of his twentieth year with a trip to Germany as a coal-heaver, Flynt remained in some sense a tramp to the end of his life. The distinction between the earlier and the later wayfaring is that in the first instance he was a fugitive from justice, in the second a voluntary explorer of trampland. He had not, as he supposed, really conquered the *Wanderlust;* he had rather legitimatized it. Enrolled at the University of Berlin as a candidate for the doctorate in *Theoretische und praktische Nationalekonomie*, his fancy was still straying to the open road. When one of his professors asked him what he had in mind as the topic of his thesis, he replied that he contemplated something which should consolidate his knowledge of geography and vagrancy. When the old restlessness became too strong for him, he made an excuse of his studies, and dived again into the underworld. He did it then on a grand scale; he became a pioneer in comparative vagrancy, wandering suitably disguised in Russia, Germany, and England. He had meanwhile made a start as a contributor to magazines. But when, about the time of the Spanish war, he returned to America he could not resist the temptation to revisit his old paths—though this time in the rôle of a railway inspector. His brief literary career was diversified by detective work, slumming, tramping, and thief-chasing from New York to Oklahoma and Indian Territory. The recently popular interest in "muckraking" enlisted his well-qualified pen, and made it profitable for him to renew his acquaintance with former haunts. Just before he died he was investigating pool-room gambling in Chicago.

Probably no writer of fiction ever had less assistance from his imagination. Nearly everything that he wrote seems to have been a transcript, comparatively little altered, from his own experience or from that of his acquaintances. Ruderick Clowd, in the rogue novel to which he gives his name, almost exactly

repeats the reformatory experience of Flynt as described in "My Life." "The Little Brother" is a not very skilful, though occasionally very effective, elaboration of an incident recounted in "Tramping with Tramps." "The Itinerant Policeman" and "The World of Graft" betray frankly the raw material. He could not get away from his tramps, pickpockets, sharpers, burglars, and grafters. His talent was rather that of a reporter and special correspondent than that of a novelist. Indeed, literature as such had very little attraction for him. He seems to have cared as little for his own books as for those of others. There is nothing more noteworthy in his autobiography than the casual reference to his "other writings," without even mention of their titles. There is no evidence in the book that he ever went through the struggles of literary composition, or knew the feeling of literary pride or ambition. He knew a circle of young writers in London and in New York; the only point on which it occurred to him to compare them was their proclivity for drink. Of the Americans he says almost nothing. In 1892 he used to meet at a tavern with Symons, Lionel Johnson, Ernest Dowson, and others, and enjoyed their company, but not especially the topics of their conversation. To quote his own words: "What Swinburne, Pater, Wilde, Verlaine, and others were doing and saying was not half so interesting to me as what some haphazard pick-up might say to me and Symons, during our stroll after the Crown meeting was over."

It was a purely fortuitous circumstance which brought this Methodist runaway under the literary auspices of Mr. Symons. With the gaseous romanticism of the poet of "London Nights" and the ill-starred young men whose obituaries he has written, Flynt had no fundamental relationship. Mr. Symons's introduction to "My Life" is a valediction from a vagabond of the mind to a vagabond of the body. The overlapping of their experiences was extremely slight. Of that moral emancipation and that restless histrionic errancy among the misty ways of the spirit which distinguish the one, the other shows no sign. Flynt ran away from whalings, and Methodism, and reformatories, but he never ran away in spirit from the established social order. Whatever his practices may have been, his ideas of morality were absolutely conventional. He was skeptical before the virtuous, but not before the virtues. He judged his own conduct as one to whom good and evil are facts. He was singularly free from the enervating sense of illusion so prevalent among the so-called decadents. He believed in a real world, and to him the real world was fixed, tangible, external. When tramping in England he was puzzled and amused by the fact that "Symons was inveterately on the scent for 'impressions and sensations,' while I found happiness merely in roving." He supposed that he received these "impreshuns and sensashuns"—so he spelt them later in mild derision—as well as his companion; but when he came to describe them, he found that they lacked "literary dignity"—that they were not the thing that his more exquisitely organized friend produced. The truth is, the external world underwent no elaborate metamorphosis in his temperament. His pleasures were not imaginative, but crude, elemental, immediate. He could not make capital of his impressions, because he did not analyze or understand them. Beside the intimate and voluptuous sensibility of his literary mentor's work, Flynt's "confession" is a mere record of facts.

Little as there was in Flynt of the literary decadent, there was still less of the romantic wanderer. Some of his friends would like to have us believe that he was of the fraternity with such poetical vagabonds as Robert Louis Stevenson and George Borrow. So one might think who had read the dedication of his "Life" to all those "under the spell of that will-o'-wisp, *Die Ferne*, the disappearing and fading Beyond." But the glamour ends with the dedication. This celebrant of *Wanderlust* cannot tell why *Die Ferne* lures him. He is singularly insensible to the beauty and terror of the natural world. For him, Lake Michigan is only a bathing-place. He has not a word of its waves rushing in under the wind like sea-surf, not a word of the black ships that smoke dimly across its veiled and shifting horizon, not a word of the long, dusty roads that wind over the rolling prairie into the sky. For him there is no sunrise nor sunset, nor "clear night of stars." No birds carol to him from dewy hedge-rows, and no startled rabbit crosses his path. He hums no old French song, he dreams no dreams, he builds no castles in Spain. He lies in no fragrant twilit dingle teaching Armenian numerals to a gypsy lass. To him the forest is not a greenwood, but a hang-out for hoboes, and the highway not the path to *El Dorado*, but the beggar's marketplace. He lives in a world of discouraged criminals, whose rendezvous is the watering-tank, whose thoroughfare the railway, whose destination, the jail or the penitentiary. "Whatever else you do or don't do," wrote an anxious friend—perhaps thinking of Lavengro and Isopel Berners—"don't forget to get some romance into the story." He responded with Jeminy Jowles and an account of his first imprisonment. Commenting on Symons's "glorying in the beautiful moonlight," he says: "I got pleasure out of Symons's romantic appreciation of a trip which reminded me very mundanely of other nocturnal tramps at home." Here speaks the Cervantes of romantic vagabondage. This book is not a romantic testament; it is rather a purge or—to borrow an expression of Lyly's—a "cooling-card" for all fond romanticists.

Its place is with the literature of the rogue or *picaro;* it is very much nearer to "Jack Wilton" and "Moll Flanders" than to "Lavengro." Neither a truant literary artist nor a soured Roussellian poet and philologist, he does not attempt to make intelligible a rare and highly individualized personality. He aims rather to delineate himself as one of a common, widespread, but imperfectly known social group. Whenever it is possible he represents himself as a detached spectator at drinking-bouts and hang-outs. Concerning his own fatal indulgence in intoxicating liquor he maintains a curious silence. Only rarely does he betray the possession of other passions than that which led him to follow the piper over the hills. Yet he is so thoroughly at home in the underworld that he ignores many things in it which would impinge sharply on the consciousness of an outsider. Whether by the early and excessive use of narcotics or by long-continued roughing it, his sensibilities have become so blunted as to be almost indifferent to physical hardships. Cold, filth, wetness, hunger pass with little comment. Beggary and theft have become the day's work. Though he does not write of these things with the unblushing candor of De Foe, his sense of life is similar, and his style has the same matter-of-fact sincerity. There is something wholesome and manly in his declaration that he has discovered nothing precious for the spirit in the Beyond of the vagabond. Mr. Symons may speak unctuously of life among tramps as Flynt's novel and special "form of culture"; Flynt himself sums up his impressions thus: "Laziness, loafing, *Wanderlust*, and begging are to-day what they ever have been—qualities and habits passed on from generation to generation, practically intact." The value of his work is in the clear, unrefracted light which it sheds, not over civilization on a romantic truancy, but over civilization going quietly, furtively to the dogs.

STUART P. SHERMAN.

Urbana, Illinois.

NEWS FOR BIBLIOPHILES.

The sale by the Anderson Auction Company of the J. Chester Chamberlain collection of first editions of American authors was another exemplification of the fact that in general it is only the rarest books of any author which are increasing rapidly in price and the purchase of which might be warranted by him who buys solely for investment. After the Arnold sale in January, 1901, when American first editions almost without exception showed a remarkable advance upon previous records, book stores and libraries were ransacked

for first editions, with the result that some books previously regarded as rare have been comparatively common; that is, copies turn up several times every season. Such, for example, are Emerson's "Poems," Hawthorne's "Scarlet Letter," Thoreau's "Walden," and Longfellow's "Evangeline." The great nuggets of the Chamberlain collection, however, brought wonderful prices, some in excess of what the most optimistic would have dared to predict. Who, for instance, among those critics who of late years have been crying down Longfellow's poetry would have imagined that $2,200 would be paid for a printed book of his dated as late as 1860, and absolutely lacking in autographic or association interest? No book by Thackeray, Tennyson, Keats, or any other of England's nineteenth century authors (with the exception of two of Shelley's pamphlets), has, so far as we can recall, ever reached such a price in the auction room. The Chamberlain collection was particularly rich in Longfellow rarities. Mr. Chamberlain had made his Hawthorne as perfect as he could, and had prepared the bibliography for the Grolier Club exhibition. During the last year or two of his collecting he made a special effort to complete his Longfellow series, in view of the approaching centenary. From the Longfellow family, who were never before known to part with a book, he secured, partly by exchange, several rarities, including the prose "New England Tragedy," put into type in 1860, the book which brought the remarkable price of $2,200. It is a little volume consisting of title, one page of Dramatis Personæ, and 130 pages of text, printed on thirteen signatures, varying from two leaves to eight, three signatures ending with a blank leaf not included in the pagination. The two known copies are in the original sheets, unsewn and unbound. Eight years later, now entirely rewritten and put into verse, and a second tragedy added, "The New England Tragedies" was published. The book was set up in the spring and ten copies taken off privately; one of these, the copy given to George W. Greene by Longfellow, brought $500. Mr. Chamberlain was also fortunate in securing from the descendants of Greene, who was perhaps Longfellow's most intimate lifelong friend, all the books and letters which they owned. The collection of 508 autograph letters and 37 postal cards, perhaps the most extensive Longfellow correspondence in existence, brought $5,100; the first edition of "Outre Mer" (1833-34) in the two parts, in the original paper covers, with an interesting letter inserted, $795. The identical copy (but without the letter) brought $310 in the Arnold sale, though it had cost Mr. Arnold only $60. Another copy, the two parts bound in one, old half calf, with presentation inscription to G. W. Greene, went for the very moderate price of $250; a privately printed leaflet containing Longfellow's poem in French, "Noël," written to accompany a basket of wine sent as a Christmas present to Agassiz, five copies known, $510 (this identical copy, $55 in the Arnold sale, though it had cost Mr. Arnold $30 and $5.95 for binding); an unauthorized publication of "Excelsior," issued as an advertisement by the Excelsior Life Insurance Company in 1872 (with an A. L. S. relating to the poem inserted), $160; another leaflet "From My Arm Chair," addressed to the children of Cambridge, and printed by Longfellow for presentation to the children who came to see him and sit in the chair which had been made from the "spreading chestnut tree" (with A. L. S. inserted), $150; a private issue of "Kéramos," put into type before publication in *Harper's Magazine*, six copies known, four in the possession of the Longfellow family, $400.

Several of the rarer first editions of James Russell Lowell's books made new records: "A Year's Life" (1841), with inscription in Lowell's autograph, "To Alfred Tennyson from the Author, Boston, U. S.," $375; "Poems" (1844), a large and thick paper copy, $330 (this copy at Anderson's in April, 1901, $150); "Conversations on Some of the Old Poets" (1845), presentation copy, $140 (Arnold sale, 1901, $52.50, though it cost Mr. Arnold $20); "A Fable for Critics" (1848), first edition, presentation copy, $150; "Mason and Slidell" (1862), a separate reprint from the types of the *Atlantic Monthly*, $255; "The Biglow Papers," Second Series (London, Trübner & Company, 1864), $71; the "Commemoration Ode" (1865), presentation copy with two autograph letters inserted, $875; Address, delivered in Birmingham (1884), afterwards entitled "On Democracy," the private issue printed on one side only, before the lecture was delivered, with corrections in Lowell's autograph, $420; Poe's "Al Aaraaf, Tamerlane, and Minor Poems" (1829), original paper boards, edges entirely uncut, $2,900. This copy, as we pointed out a few weeks ago, was sold privately in this city to Frederick W. French of Boston for about $175. A presentation copy of Poe's "Poems" (1831) brought $410; a similar copy without the presentation inscription, $315. The only Whittier item which brought more than $125 was the first edition of "Moll Pitcher" (1832), in the original printed blue paper covers, probably the finest copy in existence, $500. The Holmes collection included three remarkable pieces, of which the Chamberlain examples are the only ones known. These three books, all printed in 1863, and presented by Holmes to the late George Livermore, are "New England's Master-Key," $750; "Lecture—1863," $745; and "Oration Delivered before the City Authorities of Boston," $490. "Fanshawe," Hawthorne's first book, is apparently becoming common, for the copy offered in the Chamberlain sale brought only $500; "Time's Portraiture," a single page broadside distributed by the carriers of the *Salem Gazette* in 1838, $550; "The Celestial Railroad," a miniature book (1843), $380; and several books from Hawthorne's library, prices ranging from $110 to $390. In point of price there was only one notable Bryant item, the "Oration delivered at Stockbridge, July 4th, 1820," $175. The total of the sale, 882 lots, was about $32,000.

At the auction of Part ii of the John G. Heckscher library by the Merwin-Clayton Sales Company February 15-18, Rafinesque's "Ichthyologia Ohiensis" (Lexington, Ky., 1820), sold for $253. This is the first perfect copy of this exceedingly rare pamphlet to be offered at auction, although at private sale it has changed hands at a considerably higher price. The first edition of Walton's "Angler," in morocco, by Riviere, the margins considerably worked over and repaired, brought $3,900, the record price for a copy in modern binding; the second edition (1655), $780; the second issue of the third edition (1664), $545; the fourth edition (1668), $400; manuscript document in Walton's autograph, $650. Other important records were Sage's "The Restigouche and Its Salmon-Fishing" (1888), $180; Gervase Markham's "Pleasure of Princes" (1614), a poor copy, $105; Leonard Mascall's "A Booke of Fishing with Hooke & Line" (1590), $100; John Taverner's "Certaine Experiments Concerning Fish and Fruite" (1600), $125; and John Whitney's "The Genteel Recreation" (1700), $351.

On March 1, Stan. V. Henkels of Philadelphia will sell books belonging to the late H. Rush Kerver of West Chester, Pa. Included is a copy of Poe's "Al Aaraaf, Tamerlane and Minor Poems" (1829), in the original binding, pink paper boards, muslin back, but with the edges trimmed, although the bottom margin shows a few proof leaves. Included also are McKenny and Hall's "Indian Tribes" and Lewis's "Aboriginal Portfolio," two important books with colored plates.

On March 1 and 2, in three sessions, the Anderson Auction Company of this city will sell a miscellaneous collection, including books on the drama, a few specimens of early printing, first editions of Sir Walter Scott, Charles Lamb, Swinburne, and William Morris; and several works illustrated by George Cruikshank.

On March 2, 3, and 4, the Merwin Clayton Sales Company of this city will sell the third and last part of the Heckscher library. This portion is divided into five sections. The first includes books on fisheries, fish commission reports, laws relating to fisheries, etc., 121 lots; the second, books on sporting as distinguished from fishing, including a number of "Nimrod's" (Charles James Apperley's) works, with illustrations in color by Henry Alken; Pierce Egan's books with colored plates by Cruikshank, Lane, Alken, and others; and Surtees's sporting novels; the third, books on ornithology, including a set, 7 vols., of the first edition of Audubon's "Birds of America" (1840-44); Edwards's "Natural History of Uncommon Birds" (1743); and Yarrell's "History of British Birds" (1843-56), large paper; the fourth, duelling literature, 53 lots, including several pamphlets relating to the Hamilton-Burr encounter.

On March 4 and 5, C. F. Libbie & Co. of Boston will sell the library of William H Rollins of Portsmouth, N. H., including early American almanacs, bibliography, books on Indians, and genealogies.

Correspondence.

A NEGLECTED AMERICAN AUTHOR.

To the Editor of The Nation:

Sir: Under the above title, I published in the *Nation* for December 8, 1904, an article on Isaac Mitchell, author of "The Asylum, or Alonzo and Melissa," a two-volume novel, printed at Poughkeepsie in 1811. This book apparently was not a success, but its main episode, brought out in a single volume, under the title of "Alonzo and Melissa," went through edition after edition, in all parts of the country, and obtained a success that may rightly

be described as phenomenal. Strangely enough, "Alonzo and Melissa" is never attributed to Mitchell, but, on the title page of every copy I have examined a certain Daniel Jackson, jr., is named as the author. I explained this fact by asserting that Jackson was a plagiarist. (See the *Nation*, February 2, 1905.)

Previous to the publication of my article, H. Bradley Jackson of Grand Isle, Vt., had written to the New York *Times* Saturday Review of Books, September 3, 1904, that his grandfather, Daniel Jackson, jr., born May 31, 1790, had most assuredly written the novel.

While he was teaching in the Plattsburgh Academy, in about 1808-10, he became acquainted with two officers stationed at Plattsburgh, who were from Connecticut. They told him about Alonzo and Melissa, gave him the points of the story, and wished him to write it out and have it published in a book. The eldest officer of the two said he was a cousin of Melissa and knew the facts he gave, and this was the way he came to write the story. . . . Previous to the death of my father in 1889, he told me he had the original manuscript somewhere among his papers, but it has never been found, although, in the attic, there are several old chests which have never been disturbed since his death.

Sidney S. Rider of Providence supported this statement, and finding a copy of "Alonzo and Melissa," dated 1811, the year of the publication of the two-volume "Asylum," concluded that Mitchell was the plagiarist, in spite of the fact that Mitchell had copyrighted his book in 1810, and had proved himself to be a writer and a man of prominence who could not reasonably be supposed to steal in this fashion. My contention for Mitchell's authorship of "Alonzo and Melissa" was supported by Edmund Platt, the author of the "History of Poughkeepsie." Recent investigations by Mr. Platt have settled this matter beyond controversy and with his permission, I quote from the material he has kindly placed at my disposal.

Mr. Rider discovered in the Poughkeepsie *Political Barometer* of March, 1811, a set of proposals by Joseph Nelson for publishing "The Asylum, or Alonzo and Melissa, an American tale, founded on fact, in two volumes, by I. Mitchell." In the course of these proposals, it is stated:

> The historic part was moulded into form by the writer in the leisure hours of his juvenile years; methodized and delineated, it appeared heretofore, in the *Political Barometer;* it will now be published on a more ample and extended scale.

Taking a hint from this statement, which is one more confirmation of Mitchell's authorship, Mr. Platt consulted the files of the *Political Barometer,* owned by Mrs. C. M. Nelson of Poughkeepsie (whose husband was a grandson of the above-mentioned Joseph Nelson) and found in the first number of Volume III, June 5, 1804, "Alonzo and Melissa, a Tale," with the following preface:

> In the interim of Congressional and other legislative proceedings and the recess of elections, we cheerfully devote our attention to the more fanciful portion of our readers. The following story is founded on fact; the principal characters are still living; the incidents are yet in the memory of those acquainted with the circumstances. The names, for obvious reasons, are fictitious.—It has never appeared in print.

To quote from a letter of Mr. Platt to me: At the end of the story as published in the *Barometer*, namely, in the issue of October 30, 1804, is appended "A Note to Alonzo and Melissa," which contains much that is interesting. It begins with an apology for the mistakes in the story and continues:

> But for mistakes and deficiencies the writer has excuse. The incidents from which the tale was founded were only to be found in his memory. It was written also from week to week, amidst the hurry of his avocations and more generally put to press without revision.

Then follows the statement that a good many of the scenes are hurried over and shortened more than they should be:

> To this the writer answers that it was his first intention that those scenes should be fully completed. . . . All these errors will be corrected, deficiencies filled, should the work be published in a volume or volumes as is now projected. It will then be carefully revised, altered, amended, and considerably enlarged. This is particularly mentioned now for the following reasons:
>
> Although we are perfectly willing that contemporary papers should extract the story into their papers, yet it is our request that they will not publish it in a pamphlet or book; and should they do this before they are legally prevented, he cautions the public against purchase of them, as in due time they will be presented with a more perfect and complete edition greatly enlarged. Besides, the novel as extracted into the papers we have seen is materially incorrect and not agreeing with the original.—What we mean by legal prevention is that we design at an early day to anticipate a copy-right of not only "Alonzo and Melissa," but the other two original tales which have hitherto appeared in the *Barometer*, to wit, "Albert and Eliza" and "Melville and Phalez," all of which will be revised, amended and much enlarged. The first of these novels, written under similar circumstances with the two last, was no sooner completed than a neighboring printer with whom we exchange papers whipped it into a pamphlet and had it peddled through various parts of the State and the State of Connecticut. Another printer, more distant, published it and had it bound in a book. . . . "Melville and Phalez" shared the same fate, though from another printer.

Comparing "Alonzo and Melissa," published under Jackson's name, with the story as printed in the *Barometer*, Mr. Platt writes:

> The story is identically the same, with only the occasional change of a word and a little occasional change in the paragraphing. I did not read it all, but read the beginning and the end and the first lines of paragraphs. Jackson did not even attempt to divide it into chapters, but cribbed it from the *Barometer* just as Mitchell had written it, except that he naturally left out Mitchell's references to previous issues of the paper.

It only remains to add that the natural reason why Mitchell did not take legal action against Jackson is that Mitchell died November, 1812.

There is still an interesting point in connection with "Alonzo and Melissa" on the purely literary side. Published in 1804, it had been written some time before this, presumably shortly after the appearance of the "Mysteries of Udolpho," 1794, of which it is a delightful imitation. I believe that Franklin's first appearance in fiction is in this novel, and certainly Alonzo is one of the few Yale heroes who is *not* an athlete:

> Alonzo was about twenty-one years old; he had been esteemed an excellent student. His appearance was manly, open, and free. His eye indicated a nobleness of soul; although his aspect was tinged with melancholy, yet he was naturally cheerful. His disposition was of the romantic cast!

Walter Scott himself would have envied Mr. Mitchell his Gothic castle on the banks of the Sound. It was "of real Gothic architecture, built of rude stone and battlements," with a deep moat and drawbridge. It is here that Melissa, imprisoned for her devotion to Alonzo, hears voices calling, "Away, away!" and once a "hand cold as the icy fingers of death grasped her arm which lay outside of the bed clothes." Poe himself is outdone, when, one tempestuous night, she is aroused by flashes of fire, followed by strange peals of thunder. She hears "horrible, hollow groans reëchoing through the castle"; a tall, white form glides past her bed; the doors of the building open and shut alternately "slapping furiously"; she listens in terror to the sound of heavy bodies falling and "the crash of furniture." Then comes the blood-curdling cry of "Murder!" followed by the report of a pistol and groans, greeted by "peals of ghastly laughter." At this juncture Melissa proved her worth, for, writes Mr. Mitchell, "she arose, lighted a candle, and looked under the bed." Alonzo's wild ride from New Haven to New London, his adventures in London and Paris, and his final discovery of the lost Melissa, should be among the classic pages of the American novel. The book must be read in its entirety, and certainly should be reprinted.

There remains one question that thrusts itself upon the reader of "Alonzo and Melissa." What is the secret of the book? Why did it attract so many generations of readers? The answer is not hard to find. American literature had been practically limited to two subjects—theology and politics. In the mass of sermons and controversial tracts, in the numerous appeals to patriots —and to voters—there was little to satisfy the love of romance and adventure, and yet our forefathers were none the less eager to find in their own lives and in this new land the glamor of that romance which had adorned the world they had left. "Alonzo and Melissa" is but another witness to the inborn desire to escape from the trammels of every-day existence, or rather, to idealize that existence, and to render it in some degree heroic. Viewed in this light the book is more than an amusing imitation of Mrs. Radcliffe, it is a veritable *document humain.*

THE LEGEND OF THAIS.

To the Editor of The Nation:

Sir: Doubtless not a few of those who have enjoyed the performances of Massenet's opera, "Thais," are familiar with the version of the story given by Anatole France in his novel "Thais." Perhaps a word or two about the ancient legend on which these modern works are based might be of some general interest.

An account of the life and conversion of Thais, an Alexandrian beauty and favorite of the fourth century, was written by an anonymous Greek, and may be found in a Latin translation in the "Acta Sanctorum," Mensis Octobris viii (Volume IV, p. 225), "De Sancta Thaide pœnitente in Ægypto." In the same volume (pp. 226-228) stands a poetical version in hexameters by Bishop Marbod of Rennes. As might be expected, the narratives touch only hastily on the more dramatic episodes, in order that more stress may be laid on

Thais's penitence and conversion, which she proved hy hurning all her worldly goods and allowing herself to he immured in a narrow cell for three years, from which she emerged with her sins forgiven, only to succumh to death.

Hrotsvit (Hrotsvitha), that interesting nun of Gandesheim, who flourished in the middle of the tenth century, has used the legend for "Paphnutius," her fifth moral "comedy," if so it may he called. In the opening scene the hermit Paphnutius is introduced as unfolding to his disciples, in frigid scholastic fashion, various irrelevant matters, after which he explains his sorrow over the life led hy Thais in their neighhorhood, and asks their prayers for his success in his plan to hring ahout her conversion. Then follows a dialogue hetween the hermit and some young men ahout town who politely direct him to her house, offering to accompany him. As Paphnutius desires a personal interview with her, Thais converses with him in a private room, "known to none other save God alone," as she says. This remark gives the holy man an opening, and in less than thirty words, hy a frank allusion to hell-fire, he fills Thais with remorse, so that she at once hurns her accumulations of gowns and gew-gaws, and meekly enters a convent. Paphnutius returns in triumph to his disciples in the wilderness and three years later liherates the forgiven woman, whose dying words end the drama.

It is a far cry from Hrotsvit to Anatole France and Massenet. No contrast could he greater in form, motive, and effect, than that hetween the nun's crude dialogue intended for the edification of her sisters, and the hrilliant musical spectacle of to-day, with its varied appeal to the senses and not always to the nohler side of man's nature. GEORGE DWIGHT KELLOGG.

Princeton, N. J., February 17.

A QUESTION OF LITERARY PROPERTY.

TO THE EDITOR OF THE NATION:

SIR: The old question of literary property rights has arisen in a form which it may he well to refer to the general puhlic for discussion and decision. The present case is as follows: Some time ago Miss Alice E. Foote and I were engaged to investigate the conditions among women in the Pennsylvania coal fields hy the National Board of the Young Women's Christian Associations acting through Dr. Annie M. MacLean, who was paid director of the larger investigation under which ours fell. We agreed that the data ohtained should belong to the National Board, and it was understood that ultimately our facts and those ohtained hy other investigators should he printed hy the hoard in one complete report. This, of course, would have been entirely proper, the work of a puhlisher heing one thing, that of an author another. Miss Foote and I sent in reports on individual towns as we visited them, and at the end I wrote and sent in a general report. In the Novemher (1908) numher of the *American Journal of Sociology*, this report of mine appears almost verbatim, under Dr. MacLean's name, with no quotation marks and no reference to Miss Foote and myself. The eight pages of tahles are in the main our reports on single towns, alphahetically arranged; and the fifteen pages of text are almost word for word from my report, except the first two, which were added hy Dr. MacLean. Nearly nine of these pages I can prove are taken verhatim from me.

Now, I wish to suhmit that in selling our data we sold them as an author sells his hook to a puhlisher The author does not sell the puhlisher the right to claim the hook as written hy him. Two questions naturally arise here: First, what is the custom in such cases? Second, what is right?

As to custom, government precedent has the most weight, especially as the government does more of such investigating than any private hoard or individual. Accordingly, I have written to the Hon. Carroll D. Wright and the Hon. Charles P. Neill, the former and present commissioners of lahor, asking them what the custom is. Mr. Neill says: "Practically every report is puhlished under the name of the person making the report." President Wright says:

> In most cases now when a puhlic document is issued as the result of the investigation of a single commission or individual, when the report is printed, the name of the one doing the work is given. Instances such as you suggest are rare indeed.

This would seem to determine the custom.

The question of right is simply this: Does the fact that an investigator sells certain facts or written articles to a hoard or individual, justify that hoard or individual in claiming the fact as discovered or the article as written hy them? Or is it plagiarism? AMY E. TANNER.

Worcester, Mass., February 9.

TO THE EDITOR OF THE NATION:

SIR: I wish to thank you for your courtesy in suhmitting to me for comment the ahove letter.

Certain of the points raised are open to criticism as to fact, hut it is not my purpose now or at any time to make them matter for puhlic dehate. I wish simply to state that two years ago I was commissioned hy the National Board of the Young Women's Christian Association to conduct an investigation as ahove intimated, and instructed to employ such assistance as I needed within certain prescrihed limits. A number of women were engaged upon agreement that all material resulting from the investigation was to helong to the National Board, the board reserving the right to use said material in any way it saw fit. I was not informed as to plans for its final disposal. That was not my task. My instructions were to present a report to my organization. The point therefore was to furnish a digest of the investigation into which the personal equation of the investigators did not enter. These women did what I instructed them to do, and in the majority of cases they did it admirahly. As organizer and director of the work, I neither claimed credit for details nor denied it to suhordinates, hut simply discharged my ohligation to my superior officers.

Last spring, I was authorized hy the National Board to puhlish in specified places the reports I had suhmitted. The article in question is one section, and states clearly that it is a part of a larger study made under my direction with two people in the field for a period of six and one-half weeks. It was not deemed of importance to name the two people in this preliminary article.

I may say in passing that the names of all the investigators, together with the sections of country in which they worked, are given in the complete report which will he issued soon. It might, therefore, seem wise to suspend judgment until this appears.

A. M. MACLEAN.

Brooklyn, February 16.

A PLEA FOR A NEW COLLEGE CHAIR.

TO THE EDITOR OF THE NATION:

SIR: In a recent conversation with a prominent college professor I was struck with his pessimistic view as to the outlook for general culture under the present educational systems, whether elective or compulsory, prevailing at American colleges. He deplored alike the insufficient preparation of the average freshman and the intellectual narrowness of even the *summa-cum-laude* graduate. The fact is, as he put it, the college student either cannot read, from lack of time, or will not read, from lack of inclination. As a result, he leaves college ignorant of the great facts of human achievement and of the great men whose names are identified with the world's progress. May I suggest, in the *Nation*, whether it would not he possihle to graft upon the present courses in our leading colleges a compulsory course in "Geschichte der allgemeinen Kultur" (History of General Culture seems hut a lame adaptation of the German suhject), which in one or two years would acquaint even the dullest student with the principal currents of human development? It has heen said that the entire story of human achievement can he grouped around five hundred names, and while teachers of encyclopædic knowledge are scarce anywhere, there are in America not a few men of encyclopædic hreadth of view and international sympathies who would he competent to fill such a chair, and would know how to awaken in their hearers a general interest in matters of culture. Such a course, so far from weakening the discipline of the mind which must he the chief aim of education, would supplement it in fields which disclose now such lamentahle ignorance. Let us horrow a hint from Huxley, who, in speaking of a truly liheral education, emphasizes the need of joining to the clear, cold, logical intellect "a knowledge of the great and fundamental truths of Nature and of the laws of her operations" as well as a love of "all heauty, whether of Nature or of art." If it he ohjected that such a hird's-eye view of human progress in science, art, and all the other activities typified in the greatest of our race would encourage the dreaded "smattering," fear of which keeps so many ignoramuses in their narrow grooves, let us rememher the stimulus given hy the delightful ramhles of the late Professor Norton to hundreds of eager minds that owe to him a permanent interest in things higher than those provided in the usual college curriculum. The inspired teacher would find in a course such as I have suggested a thousand suhjects that would serve the ends of a liheral education in the truest sense, and would create the living interest

without which the best disciplined mind is a lifeless machine. "Greift nur hinein in's volle Menschenleben! . . . Und wo ihr's packt, da ist's interessant." G. P.

New York, February 18.

CERTIFICATES OR EXAMINATIONS FOR COLLEGE ENTRANCE.

To the Editor of The Nation:

Sir: The recent communication in your columns (February 4) from Miss Elizabeth Forrest Johnson on the subject of entrance examinations encourages me to outline briefly a plan that occurred to me some time ago, and that has been commended by teachers of experience with whom it has been discussed. The two competing systems —the certificate plan and the examination plan—will not, I suppose, find unqualified support among reasonable people who have had enough experience to discover the great defects inherent in both. We all know how unsatisfactory is the mere examination; let the examiners be never so skilful, unworthy candidates will be passed and some worthy ones refused. A few months ago a college professor of long experience, who has for years been a member of the committee on entering students, told me that he would be glad to see the certificate plan adopted in the institution with which he is connected. On the other hand, no one who has had a glimpse of the weaknesses of the certificate plan, and who realizes the power it gives to invertebrate school principals, as well as the persecution at the hands of unscrupulous and ignorant parents to which it subjects principals of more tender conscience, can presume to defend this method as being more than approximately satisfactory. Now, the combination method —certificate *plus* examination—proposed by your correspondent, while admirable for some theoretical reasons, seems to me to be weak for the same practical reason that the certificate plan is weak, except that it rather increases the pressure put on principals to recommend a doubtful boy on the plea that "he may make good in the examination," to which the real responsibility would inevitably be shifted. As a matter of fact, I know that certificates of character and attainments were long required by at least one college, and that they were nothing but an empty form—since abolished, I am inclined to think.

The plan I humbly propose is, not the combination of certificate *plus* examination, but certificate *or* examination. The certificate would be watchfully guarded as a gateway open only to candidates whose scholarship could be enthusiastically endorsed by principals of unquestioned independence: the examination would then be held as at present, but it might be made more rigorous, and especially adapted in a number of ways to test severely candidates whose fitness had been called in question by their school teachers. But, on the other hand, the entire responsibility for a boy's failure would not be thrown on the principal; he could always reply to the angry parent: "If your son is fit to enter college he can easily prove the fact by taking the examinations. I have simply expressed my doubt, not my conviction to the contrary." That this combination plan would make approval of principals and the consequent exemption from examinations a thing to be striven for, and would thus help to tone up our preparatory schools, I firmly believe. I am none the less sure that it would reduce the labor connected with entrance examinations, would help us more easily to exclude the unfit, and would prevent the occasional unjust exclusion of boys who have worked well in school, but whom a momentary lapse has caused to make a poor showing in an examination. Philip H. Churchman.

Clark College, Worcester, Mass., February 13.

LEIBNITZ PAPERS IN AMERICA.

To the Editor of The Nation:

Sir: The first-fruits of the search for Leibnitz papers which you kindly aided in your issue of February 18 are already at hand. Our Harvard librarian, W. C. Lane, calls my attention to a letter, dated at Paris, April 15, 1673, from the then youthful philosopher to Pierre Daniel Huet, afterwards the Bishop of Avranches. It forms a part of the Charles Sumner Collection in the Harvard Library and is kept in our new treasure-room in a portfolio with other autograph pieces, notable among which are those of Queen Elizabeth of England, of Louis XI, Charles IX, Henry IV, Louis XIII, and Louis XIV of France, Cardinals Richelieu and Mazarin, and Catharine de' Medici. The letter is a long one (of about a thousand words), in Latin, and in clear handwriting. A clipping from a bookseller's catalogue conveys the amusing information that it is "very rare."

Its subject-matter is of no little interest for the history of classical studies. It was only about a year before that the Duke of Montausier, who projected, "for the use of His Most Serene Highness the Dauphin," the famous Delphin edition of the classics, appointed Huet to undertake the management of the series and to select men of erudition to edit the several authors. To these and related facts the letter makes allusion. Leibnitz ends by proposing that he should edit Martianus Capella for the series. He speaks of Capella as "the only extant ancient writer of what may be called an encyclopædia of the liberal arts"; but adds that Capella is "exceedingly hard and uncouth" (difficillimum et deformatissimum) and is, withal, "throughout of a style so rough and harsh, so affectedly given to archaisms, and so overlaid with the faults of a degenerate age, that you may fairly say that he needs to be translated into Latin" (ita perpetuo salebrosus est, et horridus, et affectator antiqvitatis, seqvioris ævi vitiis incrustatæ, ut jure dicere possis, versione Latina indigere Martianum). Leibnitz laments over the decay of classical studies, and says that he first ascribed it to Huet's kindness rather than to his own fitness that Huet should have judged him worthy to take part in the Delphin edition; but that, when he saw Huet (of whose penetrating judgment he had no doubt) so persistent, he thought it time to reconcile his own scruples with Huet's hopes; and adds:

For I must confess that, albeit I lay no claim to talents or learning, I have at times won the praise of fair-minded critics for my diligence. And what else do you look for in a German, a man of that people to whom, of all the endowments of genius, industry alone is left (Id enim fateor, tametsi neqve ingenium neqve doctrinam mihi arrogem, diligentiæ tamen laudem aliqvando apud æqvos censores consecutum; et qvid aliud expectes a Germano, cui nationi inter ingenij dotes sola laboriositas relicta est).

Oddly enough, the superscription, Roberto Danieli Huetio, contains a plump error. The whole tenor of the missive leaves no shadow of a doubt that it was intended for Pierre Daniel Huet. The rationale of the blunder is, I think, clear. Leibnitz was a Saxon, born in Leipzig (Mei' Leibz'ch is e glee Baris, mel' Leibz'ch low' ich mer). To him the distinctions of surd and sonant were naturally hazy. In 1673 he had not been long in the "big and real Paris," and his ear was still unwonted to spoken French. It was easy to mistake *Pierre* for *bert*, and, under these conditions, not difficult to mistake the combination Monsieur Pierre for Monsieur Robert.

Charles R. Lanman.

Harvard University, February 19.

A CAUSE OF IMMIGRATION.

To the Editor of The Nation:

Sir: Why do we have undesirable immigration in California? An answer to this question is not far to seek, but the truth is not agreeable, and no one seems to have the courage to proclaim it.

One can cross almost any one of the northern countries of Europe without seeing a Chinaman, Japanese, or negro. Take England as an example. Every one knows that the United Kingdom is a kind of centre in Europe on which converge the main lines of trade from all the world. When one sets foot on British soil and behaves himself there, he has all the rights of an Englishman, land-owning excepted. The sentiment is, What do you know, and what can you do? Never mind where you were born or what the color of your skin. A fair inference is that here would flock all of the immigrants who seek employment and good wages; but they do not; the reason is that the British *excel and do their own work*. They cook their food, wash their clothing, operate their own factories, build their railways and houses. The same remark applies to France, Germany, Sweden, Switzerland, Belgium, Holland; indeed, to the countries of northern Europe generally.

I speak from observation in all these countries, and a further experience of a quarter of a century on the Pacific Coast with the "yellow peril." The fact is that the white man, especially the "native born," almost a term of ridicule, will not work. That is the secret of the situation, and the end is not hard to predict. The people declaim against Asiatic labor that is "taking the bread from their mouths," at the same time vigorously pursuing the courses that induce the immigration of the Japanese, Chinese, et al. The efforts of State Legislatures will accomplish little. When a people cease to do their own work, some other people must do it; and if with that labor is introduced an intellectuality equal to the domestic standard, the control of industry, the ownership of land, and even the political management of the country will pass to the most capable.

In the East, especially the extreme Eastern States, we see the converse. Asiatic labor does not trouble Maine, nor in any other part of the United States does it interfere with pursuits efficiently conducted by our own people. Forty years ago, when laundry work in this country was done in

a slovenly manner, Chinamen came in and introduced a great improvement in the art; but after a while our own people took up the business and have displaced the Chinese. When the native-born will cook their food, gather their fruit, clear the land, and do their housework, then the problem of the "yellow peril" will find a solution.

OBSERVER.

San Francisco, February 12.

THE DISPUTE AS TO HETCH HETCHY.

TO THE EDITOR OF THE NATION:

SIR: In your issue of February 18, Warren Olney replies to my letter on the use of the Hetch Hetchy Valley as a storage reservoir. We differ radically upon the facts, and our difficulty in the East is that no two of our California friends, as the correspondence in your columns plainly proves, seem to be able to agree upon what the facts are. I may point out that Frederick P. Stearns, chief engineer of tbe Boston Metropolitan Water System, in the *Journal of the Association of Engineering Societies* for December last, gives it as his opinion that the nearby supply is far preferable, both in cost and quality, to the Tuolumne. Mr. Olney reiterates that San Francisco must go to the Tuolumne, because the waters of "all other streams" are already monopolized, and yet he was present at the hearing in Washington when Mr. Englebright, the member of Congress in whose district Hetch Hetchy lies, called attention to the middle fork of the Yuba River, where 100,000,000 gallons a day can be had, and where the water is now "used for nothing."

The situation has now been admirably summed up by Herbert Parsons of New York city, in his report to Congress as a member of the Committee on Public Lands. He says:

> The real difficulty with San Francisco is that it does not wish to consider any other supply. Others might cost more. . . . Certainly, the Federal government is not bound to give up to San Francisco two-fifths of a national park, simply because it is cheaper. Why is it cheaper? It is cheaper because, having been made a national park, it has not been possible for private interests to file upon the water in the same manner that they could have if there had not been a national park. . . . San Francisco now desires to use it for itself by spoiling the very purpose which has made it cheap. . . . Unwilling though I would be to deny to San Francisco and the other cities on the Bay of San Francisco the use of Hetch Hetchy if it was essential . . . for a municipal water supply, . . . I believe that we owe it to all the people to preserve Hetch Hetchy uninterfered with for the use and enjoyment of all the people, and to carry out the policy intended when it was included within the boundaries of the Yosemite National Park.

EDMUND A. WHITMAN.

Cambridge, Mass., February 19.

Notes.

E. P. Dutton & Co. will soon bring out a new volume of critical essays by Arthur Symons, entitled "The Romantic Movement in English Poetry." The completeness of the work is indicated by the fact that there are appreciations of eighty-six writers who were born in the last eighty years of the eighteenth century. Mr. Symons is at his best in writing of this kind.

There is to be a new "Life of Clarendon," by the Rev. John Willcock, already known for his biography of the Earl of Argyle, Monmouth's friend. Considerable fresh material has been discovered in regard to Clarendon since Lister's "Life" was published.

Some of the difficult problems which the Young Turks have to solve in establishing a constitutional government are shown in Ellsworth Huntington's account of the Turks, Armenians, and Kurds inhabiting the mountainous region of the upper Euphrates and Tigris Rivers. His experiences, as narrated in the *National Geographic Magazine* for February, gave him abundant evidence of the hatred of the three races for each other. Fierce and untractable as are the Kurds, they are, nevertheless, a people of true strength of character; but, being wedded to their patriarchal system of rule, they are a menace to the reform movement. Additional information in regard to Asiatic Turkey is to be found in the profusely illustrated account of the Damascus-Mecca Railway and in the series of quaint pictures of the people and country.

The January issue of the *American Journal of International Law* opens with a 45-page paper by Prof. Paul S. Reinsch, University of Wisconsin, on "International Administrative Law and National Sovereignty." He considers the status of such organizations as the Postal Union, the Sugar Commission, and the International Institute of Agriculture. Another important paper, by Prof. J. S. Reeves of Dartmouth, discusses the origin of the Congo Free State from an international point of view; and the Supplement of Official Documents accompanying this number gives about ninety pages to treaties, conventions, etc., relating to the Congo. Mr. Crocker's Chronicle of Current Events shows a remarkable series of treaties, agreements, and conventions that provide for arbitration between nations. It gives the impression that the entering into such agreements is decidedly on the increase. Among other matters are the notes that passed between the Japanese minister and Secretary Root last November, expressing, in very specific terms, the pacific disposition of the two nations toward each other.

Lovers of Lafcadio Hearn will be glad to know that his translation of Théophile Gautier has been reprinted as a volume in the World's Story Tellers (E. P. Dutton & Co.). Another new volume in this series contains "The Cremona Violin" and "Mademoiselle de Scudéry" of E. T. W. Hoffmann. To each book the editor, Arthur Ransome, contributes an introductory essay.

The chief aim of G. D. Oswell, author of "Sketches of Rulers of India" (Henry Frowde), is to demonstrate the principles on which the English administer India. This he does by giving the salient facts in the careers of some of the most distinguished civilians and soldiers. He condenses his sketches so that they may be used as lectures in schools and colleges, especially, no doubt, in India. In the first volume he confines himself to the era of the mutiny, the accounts of Dalhousie, Canning, John Lawrence, and Mayo showing the governor-general's work during that trying period. The suppression of the revolt is described in the lives of the great commanders Clyde, Strathnairn, Henry Lawrence, Nicholson, and Havelock. Interspersed in the narratives are some of the most striking incidents of those days, deeds of unsurpassed heroism and self-sacrifice at the call of duty which cannot fail to appeal to young men of every country. Though all the leaders impressed upon their subordinates the one preëminent duty of seeking the welfare of all the people, the despised outcast no less than the Brahman, and of understanding their needs and the best methods of governing them, the sketch of Lord Mayo shows most forcibly how a viceroy acted up to his own instructions. Another hero, John Nicbolson, for his devotion to the people, was not only respected, but, in the true sense of the word, adored. He was raised to the position of a demi-god, and "a new cult arose called the cult of Nikal Seyn." In fact, on the tombstones of all the men of this volume might have been engraved, with only a change of name, the epitaph of the hero of Lucknow: "Here lies Henry Lawrence, who tried to do his duty." The period, 1786-1856, during which India was freed from the chronic anarchy which had prevailed for centuries through the raids and wars between the states, is described in the third volume of the series. Tbe principal leaders of this conquering and organizing time were the great legislators, Cornwallis, of Yorktown memory, and Bentinck, and the distinguished soldiers Wellesley and Hastings. The noteworthy incidents of their careers are given, as well as those of Amherst, Auckland, and Hardinge. Though there are not so many exciting episodes and heroic deeds narrated as in the first volume, yet in some respects it has a higher value in that it shows the great race and governmental problems forced on these men and their success or failure in solving them. Some famous incidents of Indian history are the subject of the fourth volume, beginning with the reign of the Buddhist monk and Emperor, Asoka, 272 B. C., and closing with the Sikh ruler, 1780-1839, Ranjit Singh. The rise of the Mogul Empire is told in the sketches of Babar and Akbar, the greatest of India's foreign rulers, and its decay in the reign of the "great Puritan of India," Aurangzib. The Hindu reconquest under Scindia is described, and the struggle with Haidar Ali and Tipu Sultan, 1717-1799, the leaders of the southern Mohammedans. Here again as in the other volumes, a wise choice of interesting incidents and anecdotes gives a vivid personality to the subjects of the various skcaches. Considering the educational aim of the work it is strange that none of the volumes contains maps or indexes.

We cannot guess to what sort of readers Edgcumbe Staley would address his book, "Tbe Tragedies of the Medici" (New York: imported by Charles Scribner's Sons). It is plentifully equipped with adulteries, stranglings, stabbings, and poisonings; but the messenger boy or the shopgirl who devours stories of crime will turn rather to the yellow dailies or to the successors of the dime novel than to Mr. Staley's expensive pages. A verbatim report of tbe Thaw trial beats these somewhat antiquated crimes hollow. The renaissance murderers had no "brain-storm," and they usually went about their business with a directness and precision that would have given a criminal lawyer little scope to

display his ingenuity. There is in these stories just enough historical allusion to frighten readers who are in search of thrills; while on the other hand, there is not a page which the searcher for historic facts would dare to accept as trustworthy. For Mr. Staley indulges in astonishing flights of rhetoric and romance. He describes ladies whose husbands' "love ceased to peep into" their heart; he tells of "two virgin souls . . . winging their flight to join their murdered sister Maria in the Paradise of Peace"; he assures us that "romantic attachments, full of thrilling pathos, ran then like golden threads through the vulgar warp and web of woe and death." In other words, there is too much of the trappings of cheap fiction for the historical reader, and too much genealogy and pseudo-history for the lover of shilling shockers. The illustrations, chiefly portraits of the Medici, are well chosen, and remind us that the greatest of the renaissance families in Italy was also the ugliest.

Lina Duff Gordon (Mrs. Aubrey Waterfield) has produced a charming book in "Home Life in Italy" (The Macmillan Co.). It is evidently based on letters, touched up and amplified where necessary, but keeping the freshness of a sympathetic, observant woman's correspondence. She is one of the few English who not only live in Italy, but penetrate into the life of the natives. She had an old country castle near Carrara, and saw intimately the peasants and villagers, and occasionally the more conventional dwellers in the towns. So her pictures are life-like, and they are drawn of folk that have been unspoiled by foreigners. She mingles everyday scenes with the humor, and sometimes with the tragedy, which seems never far off in Italy. From her, the stranger can learn how hard the life of the lower classes is, and how naïve and sympathetic they are, with all their faults. Such chapters as those on the Evil Eye and Messer il Diavolo go deeper, and leave one wondering at the persistence of Pagan legacies and at the strange mixture of fetich worship and Catholicism of which the popular religion is compounded. But Mrs. Waterfield shows us all sides without prejudice or controversy, and with unfailing good humor. Here is the best book of the kind we have seen for a long time.

In the production of serious, scholarly works on Dante, England keeps well abreast of Italy. Even if the poet had really visited Oxford, as some have believed, his memory could hardly be more cherished there. Gratifying evidence of his ever growing popularity on English soil is afforded by a new, revised edition—after eight years—of William Warren Vernon's "Readings on the Paradiso of Dante" (The Macmillan Co.), in two stout volumes. The general plan of the book is unchanged: it consists of a discursive paraphrase of the poem (following the method of Benvenuto da Imola), interlarded with the original text, in small bits, with prose translation, and accompanied by copious footnotes. It might seem, perhaps, to the ordinary reader that the poetry was almost submerged in the commentary; but the "Paradiso" certainly demands a deal of explanation. and the matter presented is all so interesting that one would be reluctant to discard any part of it. In the second edition, numerous improvements of detail have been made in the light of recent studies, and a section on the Bargello portrait has been added to the preliminary chapter. An excellent index concludes the second volume.

In "The Niagara River" (G. P. Putnam's Sons), Prof. Archer Butler Hulbert offers a literary treatment sufficiently elaborate, one would say, for the Nile. He admits, however, in his preface, following Mr. Howells in candor, that he has not succeeded in the attempt to remain "overpowered" by the magnificence of the cataract and the rapids during the entire two or three years he has been preparing the book; and the sanity thus admitted into the work goes far towards making it worth while. There is a good résumé of the movement to protect the scenery about the falls, a discussion of the entire question of utilizing the water power, and a history of the Niagara frontier. Perhaps the most readable chapter is the one on "Niagara Cranks," beginning with Blondin, the tightrope walker. There is less quotation than one expects from Niagara literature. Some of the views are excellent.

The first volume of Edward Westermarck's "Origin and Development of the Moral Ideas" (reviewed in the *Nation* of June 13, 1907, p. 545) gave his theory of the nature and origin of the moral emotions, and described customs of homicide (including human sacrifice), the duel, charity, and hospitality, and the subjection of various classes of human beings. The second volume (the Macmillan Co.) treats of the right of property, regard for truth and good faith, altruistic sentiments, suicide, industry, ascetic practices, the relations between the sexes, regard for the lower animals and for the dead, cannibalism, and the relation of gods to morality. The characteristics of the first volume appear also in the second: astounding profusion of examples (always with precise references to authorities), clearness and ease of presentation, broad sympathy, accuracy of discrimination, and soundness of judgment. Ethical practices and ideas are traced from the lowest communities to the highest, with the result that the elementary moral sentiments and usages appear to be the same in all stages of society, social progress consisting in an increasing limitation and depression of the bestial impulses and a rational definition and expansion of the better instincts. The work is an impressive survey of the ethical history of man; the mass of facts is enormous, and, while most of them are familiar to general readers on the subject, some of them, as, for example, those relating to homosexual relations, will be new to all but specialists. A desideratum in the work is a clear exhibition of the development of ethical ideals, and for this reason L. T. Hobhouse's "Morals in Evolution" (see the *Nation* of June 20, 1907, p. 568) will be found useful as complementary to Westermarck's discussion. At the close of the present volume the author restates and illustrates further his theory that moral concepts are ultimately based on emotions of indignation or approval, and that these are always retributive. His position is thus sharply opposed to theories of the transcendental origin of ethical feeling, which, at the same time, he regards as having its root in human nature and as being an indestructible element of human life. The proof of this position is furnished by the facts he adduces; the conclusions are left to the reader to make. It need hardly be added that his view is compatible with a theistic conception of the world, though it does not enter into the plan of his work to insist on this point. What he does set forth clearly is the actual course of human experience—ultimate forces he does not consider.

In "Luke, the Physician" Prof. William M. Ramsay has chosen for the title of a miscellaneous collection of essays on the history of religion the subject of one of the least of the dozen papers comprising the volume (A. C. Armstrong & Son). Doubtless the popular interest is greatest in what Professor Ramsay has to say as a critic of Harnack, whose volume of the same name he reviews in the first essay; but in this field he has less of first-hand information to contribute, his conclusions are more largely founded on doubtful deductions, and his well-known prejudices come most prominently to view. In brief, his argument is that, since the book of Acts is found to embody authentic facts as to political, social, and religious conditions in Asia Minor in the Pauline era, facts which have been strikingly confirmed by recent archæological discoveries, therefore Luke is a trustworthy historian of personal affairs and spiritual movements in apostolic Christianity. One does not need to question Professor Ramsay's archæological accuracy, or the value of his investigations in the geography and history of Asia Minor, to stumble somewhat at his conclusions concerning matters on which literary documents are our only source of information, to be tested, therefore, by literary criticism. A learned archæologist may be a most indiscreet historian. The bias of Professor Ramsay's estimate of Luke, however, does not detract from the great value of his careful descriptions of the physical conditions of Asia Minor and their influence on its political and religious history, nor from the indebtedness under which all students are placed by his study of the monuments and inscriptions of that interesting meeting-place of East and West. The essays, "Asia Minor: the Country and Its Religion," "The Peasant God; the Creation, Destruction, and Restoration of Agriculture in Asia Minor," and "The Church of Lycaonia in the Fourth Century," are productions of a patient and experienced explorer, and a brilliant, if not always cautious, scholar. It is a pity that these papers could not have been expanded into a volume on the historical geography of Asia Minor. Side by side with essays which approve the assignment of dates of the parables by their references to the weather, they will hardly pass for their true worth.

The Newark, N. J., Public Library has begun the issue of a series of handbooks on American Library Economy, setting forth in detail the methods and tools in operation in that library (Woodstock, Vt.: Elm Tree Press). The first of the series, treating the work of the registration desk, gives in 32 pages the fullest exposition of the function of this department that has yet appeared. Copies may be obtained from the publishers.

Of all the library aids, numbering twenty-five or more, that have been published by the American Library Association, it is said that only two have proved financially profitable, "Subject Readings for a Dictionary Catalogue" and Kroeger's "Guide to the Study and Use of Reference Books." The first edition of this latter work appeared in 1902, consisting of a classified, annotated list of all the more important reference works in the English language. At the close of each year since 1902 Miss Kroeger has prepared and published in the *Library Journal* a similar list of the important reference works issued during the year. These supplementary lists have now been consolidated with the original in a new edition containing about a third more material than the old. A valuable feature of both editions is the analytical index, indicating the best source for information on many difficult or obscure subjects.

"The History of the New York Society Library," by Austin Baxter Keep (De Vinne Press), an elaborate and sumptuous work, was projected five years ago, when the Society Library celebrated the one hundred and fiftieth anniversary of its founding. The volume, containing 607 pages, is itself sufficient explanation of the time taken to complete the undertaking. Had the subject been one of national importance or interest, sources could not have been studied more carefully. No less than one hundred and sixty different authorities are cited or quoted in the body of the work, some accessible only in foreign archives. Moreover, Mr. Keep has brought to his task a good style, a mastery of historic method, and an engaging enthusiasm. But for all his literary skill and his long array of facts and personages, one is conscious throughout the narrative that there is something decidedly artificial about it all—that the author is engaged in a kind of *tour de force* to lend interest and importance to events which, after all, have no great significance, and which therefore appeal chiefly to those whose ancestors are named in these annals.

From "The Primitive Aryans of America," by T. S. Denison of Chicago, author and publisher, one may learn that "wig-wam" and Latin "vicus," "clan," and Sanskrit "kulu" (family), Mexican "chica" and Sanskrit "adhika" are cognates; that "*skye*-terrier" is comparable with "ska-ha" (dog, in a Puget Sound dialect); that "Mexitli" "is beyond any reasonable doubt simply the Persian Ahura-*Mazda*"; that "Tla-loc" is "In-dra-loka"; and that another Vedic deity, Pushan, is immortalized anew in "Pushita," the name of an Ohio township. In deriving "Chichi-meca" from Mexican "*chi*," Sanskrit "*dhi*," and explaining it as "pious or brave people," Mr. Denison has modestly omitted to compare the obvious cognate Chicago. His modesty is indeed as great as his bravery. "Where others have held back I have boldly entered," he says, yet he adds immediately, "I am but a pioneer and others may improve my work." We venture to doubt this. Room may be found for additions, but could any one improve on the suggestion that Manitou is connected with Babylonian Anu, that Mexican Ipal is Babylonian Bel, or that Vedic Aditi is "teteo innan, mother of the gods"? Nevertheless, much is due to exceptional advantages, and it is only fair to other scholars, who have failed to find all these good things, to add that Mr. Denison, in preparing his Hindu and Babylonian parallels, has had the unique privilege of using a book hitherto unknown, "The Religions of India, by Morris Jastrow, jr." We had supposed the only work of that title was by E. W. Hopkins.

"Frau Pauline Brater: Lebensbild einer deutschen Frau" (Munich: C. H. Beck), by Agnes Sapper, is one of those portraits of a type, which through their intimate details and historic background become almost as important as a document. This book is the life of a daughter of Wilhelm Pfaff, professor of mathematics and Sanskrit scholar in Erlangen, who should be remembered as Rückert's collaborator in the translation of "Nal und Damajanti." As the wife of Karl Brater, prominent in journalism and politics of Bavaria, she was brought into contact with eminent men and women and rose to be a power in her little circle by her independence of judgment and steadfastness of purpose.

One of the most singular of recent German books is an anthology of poems, "Poesie im Zuchthaus: Gedichte von Verbrechern," collected and edited by Dr. Johannes Jäger, a prison-chaplain in Amberg (Stuttgart: Max Kielmann), which furnishes ample material for the student of crimes and criminals.

The Hilfe publication house, Berlin, has begun a new series, Moderne Philosophie, under the editorship of Dr. Max Apel. The first volume, "Die Weltanschauung Haeckels," discusses principally the Jena zoölogist's relation to such scholars as Darwin, Virchow, Du Bois Reymond, Kant, and Spinoza. The second volume is a "Kleines philosophisches Wörterbuch," by Rudolf Odebrecht; and the third, by Walter Goldschmidt, "Der Wert des Lebens," treats of the happiness or misery of such men as Nietzsche, Schopenhauer, Wagner, Lord Byron, Heine, and Lenau. A fourth volume is announced on Darwin by six German specialists.

An interesting biography and just vindication of the much maligned wife of Frederick the Great, and therefore a desirable contribution to the history of Prussia in the eighteenth century, is Eufemia von Adlersfeld-Ballestrem's volume of 219 pages (Berlin: A. Schall), entitled "Elisabeth Christine, Königin von Preussen, Herzogin von Braunschweig-Lüneburg: Das Lebensbild einer Verkannten." It is well known that Frederick as crown-prince was wholly unappreciated and brutally treated by his father, who forced him to marry the young Duchess of Brunswick without consulting him or even seeking to obtain his consent. This dictatorial procedure in such a delicate personal matter naturally excited a decided aversion to the bride, a feeling which was sedulously fostered by the British faction at court, who wished to have him wed an English princess, and spoke with contempt of Christine as "an ugly and stupid bigot." In a letter to Gen. Grumbkow, Frederick wrote that his betrothed would be "the most unhappy princess in the world." Four years after his marriage he confessed to the Austrian ambassador, Seckendorf, that she had a gentle disposition, pleasing manners, and fine mental qualities, which caused her to take a lively interest in his intellectual pursuits. On his death-bed he declared that she had always been kind and sympathetic and that her preëminent virtue entitled her to reverence and love. This recognition of her noble traits renders his cold and cruel treatment of her for more than fifty years almost inexplicable. He condemned her to a lonely and isolated life and even excluded her from the court festivities in which she should have taken the principal part. As a compensation for this ruin of her domestic and social career as queen she devoted herself to literary work and published in French several volumes of genial meditations and reflections on human affairs. The present biography is the result of thorough research, including, among other sources of information, the letters of Queen Elisabeth Christine to her brother Karl, now preserved in the archives of Brunswick. In this connection we may state that Eufemia von Adlersfeld-Ballestrem is the author of several biographical and historical works and is also distinguished as a writer of German fiction. Her numerous novels, all of which have passed through several editions, are very popular and remarkable for psychological insight and a fine sense of humor.

The Prussian Academy of Sciences in Berlin has, through its philosophico-historical section, voted the sum of 2,500 marks toward defraying the expenses of publishing the new edition of the Septuagint, which the German academies have decided to bring out jointly, and which is now in process of preparation.

Prof. Alfred Bertholet of the University of Basel, in "Das religionsgeschichtliche Problem des Spätjudentums," the latest addition to the series Sammlung gemeinverständlicher Vorträge und Schriften (Tübingen: J. C. B. Mohr), discusses the religious beliefs in the last years of the national life of Israel. He explains that, notwithstanding the exclusive character of post-Exilic Judaism, Israel yet received from other religions a large number of ideas, and accepted them voluntarily and knowingly, and not unconsciously, as Professor Gunkel and others have tried to show. The book is an interesting chapter on the historical background of the New Testament.

Prof. Louis Havet, the Latinist of Paris, recently celebrated his sixtieth birthday, on which occasion thirty-six of his pupils and friends joined in the publication of a volume of investigations in the departments of philology and literature, "Philologie et linguistique: Mélanges offerts à Louis Havet par ses anciens élèves et ses amis" (Paris: Hachette et Cie.).

The "Selected Poems of Pierre de Ronsard" have been well chosen by St. John Lucas and published in delightful form by the Oxford University Press. Of all poets Ronsard needs most to have his spontaneous living work set apart from his endless machine-made verse. Writing before the critical spirit was matured, he has at his best the advantage of a naïve freshness, and at his worst the dulness of unchecked prolixity. Due consideration of this mixture of qualities ought to have prevented Mr. Lucas from making an ungracious fling at Malherbe and Bolleau in his otherwise excellent introduction. It is quite true that the

former by example, and the latter by precept, fostered a school of writing in which Ronsard's naïveté is the last quality to be found, but they also made it less excusable for a poet to ramble endlessly and aimlessly in verse. To each age its virtue, as each age follows the art it knows. Ronsard was by no means spontaneous by deliberate choice, but was really eager to introduce critical canons into French poetry. Ease like his in the days of Racine, when that criticism was fully developed, would have meant, not graceful spontaneity, but rude indifference to art. Malherbe and Boileau were simply criticising the old method as it worked in their own age. To sneer at their lack of the historic sense is to repeat their error to-day. However, this is but a small point in Mr. Lucas's introduction. The story of Ronsard's life, the analysis of the mediæval and renaissance elements in his poetry, and the brief account of the Pleiad are excellently written in exceptionally good English.

A beautiful book, in which art and scholarship have vied to good purpose, is "Lirica Italiana nel Cinquecento e nel Seicento fino all'Arcadia," edited by Eugenia Levi (Florence: Leo S. Olschki). It contains some 400 lyrics, 70 illustrations, and nearly 40 pieces of music. The illustrations are photogravures of famous paintings, or reproductions of drawings, etchings, and engravings. The music scores, many hitherto inedited or unearthed from forgotten collections, add greatly to one's appreciation of the madrigals, *frottole*, and other lyrics which were written to be sung. Signorina Levi has added brief notes, bibliographical as well as critical, together with the dates of composition, and the opinions of well-known art critics on the paintings and drawings. The choice of poems is equally satisfactory. She seems to have overlooked nothing: with the result that, besides the selections which are found in almost every anthology, there are many rare and many novel pieces. Some of these last she has drawn from manuscript copies. Nor has she scorned dialects. Some of the most striking minor poems, like the "Perchè miseru mia, perchè ristai?" (p. 260) of Bishop Rau, are in Sicilian. The great names—Tasso, Ariosto, Chiabrera (the forerunner of Herrick), Trissino, and Caro—are well represented; and the effect produced by them is of a sophisticated and highly cultivated society, amid which passions and emotions even—so far as lyric poetry can utter them—are sinking into conventionality. But Michelangelo's poignant and beautiful laments redeem much that is conventional; and scattered through the volume are many other genuine outbursts, less powerful, but not less natural, than his. The book is small and convenient in size, beautifully printed, on real paper, and bound in parchment—a fine specimen of what an artist-printer can do to supplement and exhibit the taste of an artist-editor. (Imported by G. E. Stechert & Co., New York.)

A contribution to the Ghazal literature is furnished by the convenient edition of the Persian text of "Baki's Diwan," prepared by Prof. Rudolf Dvorak of the University of Prague (New York: Lemcke & Buechner). The text is based on the manuscripts of Leyden, Leipzig, Munich, and Vienna; various readings are given, but there is no account of the manuscripts or of the author, and there are no philological notes.

The committee of award has announced its decisions in the Hart, Schaffner & Marx contest for 1908 as follows: The first prize of $1,000, to Prof. Oscar D. Skelton, for a paper entitled "The Case against Socialism"; the second prize of $500 to Mrs. Emily Fogg Meade for "The Agricultural Resources of the United States." Among the contributions restricted to college undergraduates, the first prize of $300 was won by A. E. Pinanski, Harvard, 1908, for "The Street Railway of Metropolitan Boston," and the second prize of $150, by William Shea, Cornell, 1909, for "The Case against Socialism."

The Verdun Prize (3,000 marks and a gold medal), which every five years is awarded to that scholar who has, in the past half decade, made the most notable addition to German historical literature, was recently given to Dr. S. von Riezler of Munich, in recognition of his "Geschichte Bayerns."

The historian, Dr. E. Gagliardi, in cataloguing the manuscripts of the city library in Zurich, has found a valuable Reformation Chronicle, by a Swiss writer of the sixteenth century, Johannes Stumpff, a confidential friend of Zwingli. The manuscript, composed between 1535 and 1538, covers 600 closely packed pages.

Carroll Davidson Wright, president of Clark College, died February 20, at the age of sixty-eight. He began the study of law, but was soon drawn from this into the Union army by the civil war, where he rose to the rank of colonel. After the war he settled in Boston, serving in the Massachusetts State Senate in 1872-3, and acting as chief of the State Bureau of the Statistics of Labor until 1888. Meanwhile he was appointed in 1880 supervisor of the United States census for Massachusetts, and in 1885 Commissioner of Labor, retaining this national office until 1905. During this time he also directed the eleventh United States census, 1893-7. In 1902 he accepted the presidency of Clark College, Worcester, Mass. Besides many pamphlets and monographs on social and economic topics, he has to his credit a considerable number of books: "The Factory System of the United States" (1880), "Relation of Political Economy to the Labor Question" (1882), "The Social, Commercial, and Manufacturing Statistics of the City of Boston" (1882), "History of Wages and Prices in Massachusetts, 1752-1883" (1885), "The Industrial Evolution of the United States" (1887), "The Public Records of Parishes, Towns, and Counties in Massachusetts" (1889), "Outline of Practical Sociology" (1899), and "Battles of Labor" (1906).

From Torquay is reported the death of H. R. Fox Bourne, a well-known editorial writer of London. Besides his journalistic work he published a number of books on commerce and trade, a history of "English Newspapers" (2 vols., 1887), and a life of "Sir Philip Sidney" in the Heroes of the Nations Series (1891). Of late years his principal interest had been in the native races of Africa, as shown by the titles of his books: "The Other Side of the Emin Pasha Expedition" (1891), "Matabeleland and the Chartered Company" (1897), "The Bechuana Troubles" (1898), "Blacks and Whites in South Africa" (second ed., 1900), and "Civilization in Congoland: a Story of International Wrongdoing" (1903).

Dr. Johann von Kelle, professor of the German language and literature in the German University of Prague, has died at the age of eighty. His chief work is the edition, with translation and glossary, of "Otfrid's Evangelienbücher," on which he was engaged from 1857 to 1883. Besides this he published "Speculum Ecclesiæ Altdeutsch" and "Geschichte der deutschen Literatur von der ältesten Zeit bis zum dreizehnten Jahrhundert."

THE SOURCE OF "THE RING AND THE BOOK."

The Old Yellow Book: Source of Browning's "The Ring and the Book," in complete photo-reproduction, with translation, essay, and notes, by Charles W. Hodell. Washington: Carnegie Institution.

The story of the Old Yellow Book and of its transmutation into the greatest of Browning's poems is itself one of the romances of literature. As Professor Hodell rightly observes, we have here an incident comparable to the use of the old Italian story-books by the Elizabethan dramatists, with the added interest that in the modern instance all the details are before us, and there is no possibility that some other source unknown to us was employed by the poet. Outside of this collection of legal documents bearing on the Roman murder trial of 1698, which were bound together at the time by some one apparently friendly to the accused—outside of this and one or two other documents, all of which are here reproduced, there was no other source. We know, too, just how the poet found the long-forgotten volume amid the rubbish of a market barrow that day in June, 1860; how he read it through with absorbed attention, laid it aside for five years, and then, from 1865 to 1868, set himself to converting its mass of legal pedantries into a living human drama. That process of alchemy can now be followed step by step, although, paradoxically speaking, the real mystery of the transmutation may seem more remote than ever.

By the kindness of Balliol College, Oxford, where the book was deposited after Browning's death, Mr. Hodell has been permitted to publish a complete photographic facsimile of the documents. To this he has added a translation, which saves the labor of drudging through the crabbed Latin and Italian (though minute exactness will require frequent reference back to the originals), together with explanatory material of his own. The plan of the work can be heartily commended. To facilitate comparison he has prepared a series of topical notes, focussing, by refer-

ence to page and line, all the corresponding matter in The Yellow Book and the poem. At any point in the text of the book or of Mr. Hodell's essay all the corroborative or contradictory passages may be found by turning to the indicated note. To enable one, while reading "The Ring and the Book," to reach the same material, a full alphabetical index is given, besides a "Line Index to Annotations." Thus, to take an example, one is reading the "Caponsacchi" and stops at the lines:

There she stood—leaned there, for the second time,
Over the terrace, looked at me, then spoke:
"Why is it you have suffered me to stay
Breaking my heart two days more than was need?"

What authority, one asks, had Browning for interposing this delay of two days? By means of the "Line Index" and note one finds there is only a single allusion in the "Yellow Book" (Francesca's Deposition, p. 71) to the delay:

Then he told me he would secure the carriage, and when that had been arranged he would give me a signal by letting his handkerchief fall in passing before our house, as he had done before. But the next day went by, and although I stood at the blinds, he did not give the signal. When the day following had also passed, I spoke to him again as above, and complained to him that he had broken the word he had given me. And he excused himself, saying that he had not found a carriage in Arezzo. I answered him that, at any rate, he should have procured one from outside, as he promised to do.

On this point Professor Hodell here remarks that "Browning has made this delay of two days [which plays no further part in the documents] take a profound meaning in the life of his hero, a time of rapid growth to the full stature of Christian heroism." Following the editor's reference to "The Ring and the Book," vi, 937-1,062, we read:

In rushed new things, the old were rapt away;
Alike abolished—the imprisonment
Of the outside air, the inside weight o' the world
That pulled me down. . . .
Sirs, I obeyed. Obedience was too strange—
This new thing that had been struck into me
By the look o' the lady,—to dare disobey
The first authoritative word. 'Twas God's.

For this spiritual struggle and conversion there is not a word in the documents, and indeed it is not likely that any Italian of Caponsacchi's day would have felt the kind of conflict described by Browning between the dead service of the church and the living inspiration heard in a woman's words. And following the scene in the poem a few lines further, we find that in place of the simple excuse of the document, "He had not found a carriage in Arezzo," Browning's hero indulges in such general language as this:

. . . Lady, waste no thought, no word
Even to forgive me! Care for what I care—
Only! Now follow me as I were fate!

So, step by step, we get a notion of Browning's method; we learn that the hero of the poem is not quite the Caponsacchi of the documents, and, being curious to see how far this transformation extends, we turn to the Subject-Index, where, by means of the references *s. v. Caponsacchi*, we can answer the question in all its details. And, by an extension of the same process, the whole creation of the poem is laid before us.

In his Essay Mr. Hodell has summed up the substance of the matter with considerable skill, although not every one will go with him in his excessive admiration for Browning, or set the emphasis just as he sets it. Thus, to magnify the poet's creative genius, he speaks of the Yellow Book as "a mass of chaotic, unpromising material"; it seems to us, on the contrary, as it seemed to Browning himself, that no more splendid material has often fallen into a poet's hands. It is no doubt chaotic in form, but the story within is palpitating with life and offers a plot at once novel and susceptible of the most passionate development. One cannot read through the works of Tennyson without feeling how desperately he was driven to find suitable themes and how often he fails simply because his theme was trivial. After all, as Aristotle said long ago in good Greek, the plot's the thing; and Browning in stumbling on his Yellow Book was lucky beyond the fortune of his brothers. This is not to belittle his genius, if a large part of genius is just the cunning to wring all its capabilities from chance.

Of Browning's skill in manipulating the incidents of his story there can be no doubt; but in regard to the so-called spiritual element added by him, we are not quite so sure as is the editor. Browning himself, to take one instance, has said of his Francesca Pompilia: "She is just as I found her in the Book." Now, Mr. Hodell cannot find her in the Book, save perhaps in the evidence of Fra Celestino, who ministered to her while dying. For our part, with some knowledge of the priestly habit of magnifying the sanctity of death-bed scenes, we fail to recognize even there the poet's "lily-thing to frighten at a bruise." As we read the documents, she appears a good-looking but fairly commonplace young woman, not over-sensitive or nice, who was driven to desperation by a brutal husband. Her transformation into the saint, as Caponsacchi's change to the love-rapt champion, is wholly the poet's work—his own creative impulse, we take it, rather than any deeper insight into the facts of the actual case. The poetic value of this transmutation, including the whole motive of the "Platonic" love between the two runaways, will be accepted by most readers, as it is by Mr. Hodell, without a question. After some pondering over the original story, as we now have it, we cannot escape a certain doubt. At least it would be interesting to see that renaissance story treated in the full human manner of the renaissance used by Shakespeare for his "Romeo and Juliet" and other Italian plays. We confess the heresy of finding some of Browning's "spiritual" interpretation not quite true to spirit or flesh. But that is a matter of the personal equation, and Mr. Hodell will have the majority on his side.

CURRENT FICTION.

The Pulse of Life. By Mrs. Belloc Lowndes. New York: Dodd, Mead & Co. $1.50.

Never was a book more unluckily named; the title serves as a perpetual reminder of just what this long, solid, carefully written novel lacks—the pulse of life. The principal characters are only four, and we are told a great deal about them; they are moved about and lighted up from various points of view, but they never move of themselves. Sabine, the Austrian Archduchess, fleeing from a repulsive marriage, is a delicately tinted replica—a miniature in water-colors—of the youthful Marie Antoinette, easily visualized by the reader on account of this frequently mentioned likeness, but without individuality of her own. Francis Domville, heir of an ancient and impoverished Catholic family, wears the costume of Count Fersen when he falls in love with her, and continues to play the part. The atmosphere of a fancy-dress ball, in fact, surrounds this couple throughout, and airs from Ruritania—though that kingdom is expressly ruled off the author's map—play about their graceful forms. A shade more of interest attaches to the second couple, whose fortunes, by the way, are quite unrelated to those of the first by any but the arbitrary ties of blood-relationship. Anne Leycester, gentle, *recueillie*, endowed with a mysterious gift of healing, and silently enduring the long strain of an unselfish, undemanding love, is a gracious and touching, if somewhat dimly outlined, figure; and there is something tragic, even perversely noble, in the equally unselfish but passionate and ruinous devotion of the object of her tenderness, her Russian cousin, Paul Feyghine, to a heartless little dancer, evidently studied from the portrait, at least, of "Carmencita."

A clever realist would make us know these characters intimately; a vigorous romancer would at least make them *do* something, might even so thrill us by their emotional and dramatic life that they would pass with us for real. Mrs. Lowndes can do neither; her story does

not "march"; with all its elaboration of detail it remains a preparatory sketch —*mémoires à servir*. The one successful bit of portraiture is the character-sketch, slightly caricatured one may hope, of a Russian grand duke. The combination of the primitive animalism of the man with the artificial but undeniable dignity of the personage is cleverly accomplished and remains easily the most memorable thing in the book.

The Passer-By. By Prince Pierre Troubetzkoy. New York: Doubleday, Page & Co.

The way of the transgressor is hard. Hard too is the way of the reader who has to accompany the transgressor "as she is written" in modern fiction. Her sins are so detailed! Her conversion so incidental to the main current! And the sins of the party or parties of the second part are so prominent that the loftiest flights of reasoning and rectitude achieved intermittently by parties of the third part do not avail to color the production as a whole. In this story a Russian saves the situation, and succeeds in holding back from a precipice the chameleon who figures as heroine, with a "spell of affinity" for A., and a "chain of affinity" for B., her husband being F. It is true, too, that this Russian renounces his own chances of felicity. Therefore, any objector to the book could well be answered that decency asserts itself in the end. Remains the fact that the end is only a small part of the story.

In the school readers of our fathers, there flourished a certain Orator Puff, who had two tones in his voice. The same richness may be found in the style of Prince Troubetzkoy's book. At times, the text is set to the terse, curt, monosyllabic scale of Russian fiction. At other times, under the spell of "the gracility of adolescence," or "accidental exteriority," or "supreme acuity," or of trying to "congruously deviate the conversation," the reader, in fancy's eye, sees the Sunny South, flowering lushly, and invaded by the dictionary. And he turns back to the dedication:

> To you Amélie, who wrote "Augustine the Man," I dedicate this book because it is due to you as the light is due to the flame.

The Dark Corner. By Zach McGhee. New York: The Grafton Press.

Both within and without this is a little book. Its close fine print is yet neat and clear; its size and shape and weight are of a comforting fitness to the hand. Of its contents something analogous may be said. They are limited and often crude, but there is a reality, a sincerity that impart positive quality. Its naïveté is overtopped by the actual substance. The burlesque humor is forgotten in the real. The tasteless is forgiven for the sake of the genuinely aspiring. It offers a picture of educational conditions, or the lack of them, in a benighted part of the South, where the presence of the school as it existed was worse than its absence. The hero, Jim Thompson, becomes a "perfesser" in a military institute, conducted on principles of arrant quackery. He soon offends the powers of charlatanism and takes his leave. Then moved by pity for the ignorance in a poor white region known as "The Dark Corner," he decides to give up a cherished plan of becoming a lawyer and devotes his life to building up better ideals of education and of living. There is a nice little story of love connected with that of civilizing, and a nice little tale of chivalry to offset extravaganza. There are engaging glimpses of child life, and striking passages of realism from "poor white" life that go far to counteract the elsewhere overdone in manners, customs, and speech. With many rawnesses and roughnesses, it is in some inscrutable way a very likable little story.

The Climber. By E. F. Benson. New York: Doubleday, Page & Co.

Mr. Benson evidently believes there is still a serious novel-reading public. He has written a solid book which refuses to be skimmed, and which might even bear a second reading. Yet it exploits no virgin field, has no dubious scene, no purple patches, and no apparent purpose other than the dramatic representation of character. The social group to which most of the persons belong is a cultivated section of the English upper class, or—more democratically speaking—of the "smart set." The Climber, Lucia Grimson, is a near spiritual relative of Mr. Pinero's Iris and Mrs. Wharton's Lily Bart. Living in quiet boredom with her two tea-drinking, patience-playing maiden aunts—capitally drawn and differentiated—she nourishes a dream of luxurious self-realization. She finds her opportunity in the priggishly æsthetic, very correct young Lord Brayton, who is not only affected by her personal charms, but is also persuaded that she can make his home the centre of a "New Set" devoted to a very refined type of culture. This æsthetic lord seeks the beautiful in life and art with curious self-conscious and humorless gravity. Lucia, clear-headed and hard-hearted, conducts a Napoleonic social campaign, winning every battle, fulfilling every self-indulgent desire, till at last real passion touches her. Then, relentlessly, as she took Lord Brayton from her best friend, she takes away her best friend's husband. High tragedy cannot befall the two diversely fervid egotists of the drama; but such disaster as their souls are capable of comes swiftly upon them.

No other novel of Mr. Benson's shows such sobriety and maturity of workmanship. The story moves firmly, harmoniously, if somewhat slowly, forward under the conduct of a critical intelligence. The earlier chapters, indeed, make one a little impatient. The author is in no haste to get into action. He describes his field with excessive particularity as if assured of an attentive hearing. He has the bad habit of explaining the precise significance of every important speech, and he gives the reader a sharp nudge when the speech is clever. He has worked with such laborious conscientiousness that he cannot bear to let any good stroke pass unnoticed. Yet his characters are complexly alive, they develop, and they meet in sharp dramatic conflict. One may detest them all; but they survive the closing of the book.

The Catholic Church in the United States of America: To Celebrate the Golden Jubilee of His Holiness Pope Pius X. Vol. I: The Religious Communities. New York: The Catholic Editing Co.

The publishers of this work, which is to appear in six large folio volumes of 460 pages each, containing in all nearly 7,000 illustrations, have made a strange choice in form. The book is simply impossible to handle on account of its size and weight, and it fits in nowhere in an ordinary room of these flat times of living.

Offered as a history, it must be judged by modern critical standards, and by these this first volume may be set down as a remarkable collection of pictures, valuable and novel in their extent, rather than a record comprehensive in detail, exact in statement, and complete in scope. From the hour that the great-hearted and far-seeing friar of La Rabida put new hope and vigor into the fortunes of the dispirited and dejected Columbus, down to the present time, the religious communities have played a large part in the progress of the Catholic Church here. In this volume the Rev. Dr. John Talbot Smith devotes a very comprehensive introduction to an exposition of their general history, work, aims, and character. There are now about 5,000 priests, 7,000 lay-brothers, and 56,000 women working in the various Catholic religious communities in the United States. To each group of 3,000 Catholics there are two diocesan priests, one community priest, and nine brothers and nuns. The special work of each religious community, its foundation here, and the extent of the territory and the operations therein, make up the volume. The illustrations consist of portraits of prominent members of these orders and congregations and pictures of institutions under their charge. In going over this list of com-

munities several serious omissions must be noted. There is no mention of the Fathers of Mercy, the Basilians, or the Servites, for instance, among the men; or of the great foundations of the Sisters of Charity at Mount St. Vincent-on-Hudson, New York, and at Madison, N. J.; or of the Sisters of St. Joseph in Brooklyn, among the women. These probably will be given the space denied them in this volume in one of the succeeding four which are to be devoted to diocesan records.

Dumouriez and the Defence of England against Napoleon. By J. Holland Rose and A. M. Broadley. Illustrated. New York: John Lane Co. $5.00.

The aim of the writers of this volume was twofold: first, to complete the study of the defence of England against Napoleon by an account of the last phase of it, in which Dumouriez took a prominent part; and, second, to offer a life of Dumouriez that should supply a more just estimate of his acts as a public man than had hitherto been written. In carrying out the first purpose they have published in full, occupying about one-third of the volume, a detailed *mémoire*, prepared by Dumouriez in 1803-1804, for the defence of England. The history of this document is most interesting:

> Some four years ago, a French MS. of 397 pages, bound in thick vellum covers strengthened by a metal clasp, came into the possession of Mr. Bertram Dobell, in whose sale catalogue it was described as an "Important Military Manuscript Dealing with the subject of a French invasion of England." The book was purchased by Mr. Broadley, but it was not until the researches for the publication last year of "Napoleon and the Invasion of England" were far advanced, that its present owner became aware of its authorship and important character. It has now been ascertained, beyond the possibility of doubt, and by external as well as internal evidence, that every word of this MS. is in the handwriting of General Dumouriez, about the earlier part of whose career so much has been written, but of whose twenty years' residence in England so little is known.

Such a discovery was surely sufficient justification for a supplementary volume in which Dumouriez should be the central figure, with special stress laid upon his life in England. Although the detailed plan of defence was not executed, it is a monument to the military science and industry of the writer. It was the most important, but not the only, military document prepared by Dumouriez for the English government during his twenty years' residence in the island. The material found in letters that passed between Dumouriez and prominent Englishmen, such as Pitt, Nelson, Wellington, and others, enables the writers of this volume to furnish us with a valuable new chapter on the life of the famous Frenchman in England, a chapter that places him in a most favorable light, and that undoubtedly led to a study of his earlier career and to the conclusion that he had been much maligned. An attempt to rehabilitate him was, naturally, the next step. To this undertaking, the major part of the volume has been devoted. Whatever we may think of the judgment of the authors upon the conduct of Dumouriez, they have certainly prepared the most satisfactory and complete life of him that has appeared in English.

To those who look upon Dumouriez as a mere adventurer, these later chapters are likely to prove a revelation. The respect shown him by English statesmen, generals, and others prominent in the social life of England, the pension granted to him by the English government, the position that he occupied of military adviser to the government, his employment on important missions, and the favorable opinion of him expressed by those who met him—all this would seem to indicate that he possessed real ability, and suggests the idea that the rôle played in his earlier years was not wholly an accident. What that rôle was it is the aim of the first—and least valuable—part of the volume to show. This portion (pp. 1-215) contains little that is new, and in the handling of evidence leaves much to be desired. This is especially true as to the "Mémoires" of the general upon his early life. Dumouriez was born in 1739; he wrote his "Mémoires" not earlier than 1793. But what can a man of fifty-four recall with certainty about his youth? It tends to discredit a work if the historian persists in stating as fact what is only untrustworthy recollection; yet this is precisely what the authors do, and without the slightest critical reserve, for Dumouriez's first forty years. If no new material could be discovered—and it is not at all certain that something might not be found, if the right places were searched—the matter should be given for nothing more than what it is—Dumouriez's account, probably highly colored, partisan, and more or less inexact.

With 1778, when Dumouriez becomes commandant at Cherbourg, documentary evidence is available to control, to some extent, the recollections of the general. To this evidence the authors add a *mémoire*, prepared by Dumouriez in 1779, on the capture of the Isle of Wight. This period has been studied locally by French historians, and the results of their investigations are here utilized. Upon this passage of their hero's career the authors lay stress, and with good reason; for his work at Cherbourg would seem to justify the statement that the revolution simply offered an opportunity to a man who had already won his spurs. From 1789 to 1793, the only new material consists of two manuscript letters of Dumouriez, but the authors draw upon the latest monographs and the best printed sources.

It should not be forgotten, however, that it is not the purpose of the writers to treat exhaustively the life of Dumouriez, but to describe it fully enough to make clear that he has suffered from his critics. For the severest of them, "as far as his public career up to April, 1793, is concerned, are compelled to admit his courage as a soldier, his sagacity as a strategist, his shrewdness as a diplomatist, his energy as a man of action, his foresight as a statesman, and his high-mindedness in private life. Few Frenchmen of his time were endowed with greater versatility of talent or practical knowledge of nations and languages; but no sooner is the word *traître* uttered than all the rest is at once ignored and blotted out." Lafayette had tried to lead his army against the Assembly, had failed, and fled from the country, but no such odium has ever attached to his name as to that of Dumouriez. The explanation may not be far to seek. Dumouriez offered to place certain French fortresses in the hands of the Austrians; Lafayette committed no such blunder. After 1793, Dumouriez did not return to France; Lafayette did return, and played a prominent rôle in French history until the day of his death. If Dumouriez "erred and failed, it was from impetuosity and presumption." The authors add:

> To depict him as some sleek, designing Jacob, ever intent on his own advancement, even at the cost of the betrayal of his kin, is ludicrously to distort his character. Rather does his restless, brusque, diffuse, and impulsive nature stamp him as an Esau. This it was that turned all parties against him in the months of March-June, 1792, and left him an impecunious outcast in April, 1793. The born intriguer and traitor seeks to ingratiate himself with all factions and ever to keep open a golden bridge for retreat.

The volume is enriched with many fine portraits—among them, six of Dumouriez—photographs of Dumouriez's residences in England, facsimiles of manuscripts, maps, and battle-plans. It is well written, excellently printed, and an important contribution to the literature of the Revolution.

The Æneid of Virgil. Translated into English Verse by Theodore C. Williams. Boston: Houghton Mifflin Co. $1.50 net.

A prose translation of the Æneid, it would seem, is best adapted to the needs of our generation, with its demands for historical exactness. It should be an accurate version, with the grace and buoyancy of Prof. J. W. Mackail's renderings of the Eclogues and the Georgics —not that detestable thing, a prose-poem, but real prose with poetic poten-

cies, prose which with the slightest difference in the handling, would become real poetry. For we have suffered long enough from metrified English Æneids, ranging from pretty poems that are not Virgil to barbarous experiments with barbarous hexameters. H. H. Ballard's recent version in hexameters is not barbarous; in many passages it is surprisingly effective. But whatever further experimentation may produce, the English dactylic hexameter is not an heroic measure; Matthew Arnold in his essay on the translation of Homer proved that it was, only to spoil his proof by giving illustrative renderings. The only English equivalent of the classical hexameter is, as Milton showed once for all, blank verse. But blank verse is a special danger to the translator: since it is the easiest of measures to construct, it most easily lapses into prose.

Mr. Williams has attempted the impossible with high success. He has built the lofty rhyme of blank verse and kept it lofty. His version is essentially exact; few important meanings are lost, and few intruded. The quality is poetic throughout, and the movement is sustained. We have tested the work minutely for important points, and have read large sections at a stretch; it reads. The rendering of a famous passage from Book iv will illustrate the difference between this version and an earlier essay at blank verse, C. P. Cranch's, which, striving for absolute literalness, misses the real goal of translation. This first is Cranch's rendering:

'T was night; when every weary frame was sunk
In placid sleep; when woods and seas were still;
When in their middle courses rolled the stars;
When every field was hushed, and all the flocks,
And all the gay-winged birds, whether they fly
Abroad o'er liquid lakes, or haunt the fields
With bushes rough, in night and sleep reposed.
Cares were smoothed down, and hearts forgot their woes.
But not the unhappy queen. She finds no rest;
Nor with her eyes or heart receives the night.
With double weight her cares increase. Love wakes
Again, and rages, on the swelling tide
Of anger fluctuating.

Mr. Williams turns it thus:

Soon fell the night, and peaceful slumbers breathed
On all earth's weary creatures; the loud seas
And babbling forests entered on repose;
Now midway in their heavenly course the stars
Wheeled silent on; the outspread lands below
Lay voiceless; all the birds of tinted wing,
And flocks that haunt the marge of waters wide
Or keep the thorny wold, oblivious lay
Beneath the night so still; the stings of care
Ceased troubling, and no heart its burden knew.
Not so the Tyrian Queen's deep-grieving soul!
To sleep she could not yield; her eyes and heart
Refused the gift of night; her suffering
Redoubled, and in full returning tide
Her love rebelled, while on wild waves of rage
She drifted to and fro.

Neither translator quite catches Virgil's "oculisve aut pectore noctem accipit," of which Tennyson's "Ever failed to draw the quiet night into her blood" is a brilliant variation. Other defects in detail occur in the new version, but it would be unjust to its high merits to point them out: the vital element is here.

Mr. Williams prefaces his translation with a brief essay on Virgil, with part of which we are forced to disagree. He finds in the poem "a too visible erudition, an unconvincing epic scheme, a perplexed and perplexing hero." How any success is possible for a work with such failings is hard to see, but the failing is rather in the view of the critic. Virgil's epic scheme and the nature of his hero become apparent when we appreciate that he was writing tragedy as well as epic. But Mr. Williams may think what he will of the purpose of the Æneid, if he can give us such a translation as this. It should reveal Virgil's secret to many who hitherto have been kept away by the barrier of a "dead language."

Science.

Notes of a Botanist on the Amazon and Andes. By Richard Spruce; edited and condensed by Alfred Russel Wallace. 2 vols. New York: Macmillan Co. $6.50 net.

It is not easy to select from the voluminous notes of a specialist matters which will be of general interest, and the task becomes more difficult when the observations of more than fifty years ago are to be freshened into new life. But Mr. Wallace, who shares with Darwin the distinction of having offered to the scientific world the most stimulating suggestion of modern times, has given to the most special matters a great attractiveness, and he has made them seem like notes taken during the past year instead of half a century ago. Few persons could have done the editing so well. He has chosen the most important and interesting memoranda, and has connected these by luminous comment.

Richard Spruce, born in 1817, received a good but rather desultory education. By the time he was of age he was fitted to act as tutor in a school at Haxby, and a little later he became mathematical tutor in a collegiate school. He had a fair knowledge of Greek and Latin, a good working acquaintance with French, Spanish, and Portuguese, and as explorer he acquired colloquial familiarity with aboriginal languages. Owing to infirm health, he gave much time to outdoor occupations, and fell naturally into the practice of collecting and studying the plants of his native country, Yorkshire. In this work he was very successful, both as an observer and as an identifier of doubtful species. Mosses and their nearest of kin, the liver-mosses, or hepatics, soon became his speciality, in which before long he was an authority. He made a journey of exploration through a part of the Pyrenees, with fruitful results, the most notable of which was the improvement of his health. Finally, he resolved to visit the valley of the Amazon. Arriving in 1849 at Pará, he devoted the next fifteen years to arduous work in collecting plants. With treacherous health and scanty means, he made long journeys and counted all his perils and sufferings as trifles compared with the scientific results obtained. He had a singular knack of getting into serious difficulties and of extricating himself after a fashion, frequently with loss of collections, but seldom with loss of his patience.

The districts explored by Spruce were in part those which were visited by Humboldt, Wallace, and Bates, and which have inspired some of the most vivid descriptions of the luxuriance and prodigality of the tropics. Among these graphic descriptions, some of Spruce's notes deserve a place. Here and there we come upon a hint of the activity of speculation which kept Spruce always on the alert for unusual forms of plants and for exceptional phenomena. For instance, he says:

> A few sorts of trees, including some palms, are supported on exserted . . . roots. . . . In England, an old willow or other tree standing by a river, whose floods have washed away nearly all the earth from its roots, may give an idea of this form; which, however, is constant in many Amazon trees whose roots have never been exposed to denudation by the action of water, whatever may have been the case with the prototypes of those trees. These examples led me to conjecture, at first, that the sapopema form itself might have taken its rise from denudation in the remote ancestors of the existing types of trees; or at least that sapopemas were at first a sort of scaffolding to raise the crown of the root above the reach of inundations: and I am still willing to believe that to this cause their origin may be partly traced (Vol. I, 22).

This was written in 1849. The Wallace and Darwin essays, setting forth the theory of evolution, were not read at the

Linnean Society in London till 1858. In 1871, after Spruce's return to England, he lost all doubt as to the origination of adaptive and connecting forms, as will be seen by the following quotation from a letter to a correspondent:

I have gone thoroughly over all my South American plagiochilas [certain hepatics], have described all the forms, and have made up my mind as far as possible about the species. The result has been to make me more Darwinian than ever. I feel certain that if we had all the forms now in existence and that have ever existed, of such genera as rubus, asplenium, bryum, and plagiochila, we should be unable to define a single species; the attempt to do so would only be trying to separate what nature never put asunder; but we should see distinctly how certain peculiarities had originated and become (temporarily) fixed by inheritance; and we could trace the unbroken pedigree of every form.

The reader can now understand why Wallace is a sympathetic editor of Spruce's notes.

To botanists the author's notes about plants possess uncommon interest on account of their accuracy and suggestiveness, but the pages devoted to travel and adventure will attract every reader. Spruce passes lightly over all his dangers and discomforts in a surprising manner, and inspires his readers with a strong wish to accompany him in his short excursions into places wholly unexplored. Probably, however, it is the ethnologist who will be likely to gain most information outside of the field of botany. To indicate the author's method of dealing with uncommon matters, a single citation must suffice, from a chapter devoted to the stimulants and narcotics of the Amazon Valley and the Orinoco. Some of these inebriants have been long known and well described, but the following account will strike many of our readers as quite new. The drink under consideration is made from a plant, banisteria caapi, a woody climber belonging to a family having over six hundred tropical species, and none in the temperate zones:

In November, 1852, I was present, by special invitation, at a *dabocuri*, or feast of gifts, held in a *mallóca,* or village house, called Urubú-coará (Turkey-buzzard's nest), above the first falls of the Uaupés . . . We reached the mallóca at nightfall, just as the *botútos*, or sacred trumpets, began to boom lugubriously within the margin of the forest skirting the wide space kept open and clear of weeds around the mallóca. At that sound, every female outside makes a rush into the house, before the botútos emerge on the open; for to merely see one of them would be to her a sentence of death. We found about 300 people assembled, and the dances at once commenced. . . . The cup-bearer—who must be a man, for no woman can touch or taste caapi—starts at a short run from the opposite end of the house, with a small calabash containing about a teacupful of caapi in each hand, muttering "Mo-mo-mo-mo-mo" as he runs, and gradually sinking down until at last his chin nearly touches his knees, when he reaches out one of his cups to the man who stands ready to receive it, and, when that is drunk off, then the other cup. In two minutes or less after drinking it, its effects begin to be apparent. The Indian turns deadly pale, trembles in every limb, and horror is in his aspect. Suddenly, contrary symptoms succeed; he bursts into a perspiration, and seems possessed with reckless fury, seizes whatever arms are at hand, . . . bow and arrows, or cutlass, and rushes to the doorway, where he inflicts violent blows on the ground or the doorposts, calling out all the while, "Thus would I do to mine enemy (naming him by his name), were this he!" In about ten minutes the excitement has passed off, and the Indian grows calm, but appears exhausted. Were he at home in his hut, he would sleep off the remaining fumes, but now he must shake off his drowsiness by renewing the dance. . . .

White men who have partaken of caapi in the proper way concur in the account of their sensations under its influence. They feel alternations of cold and heat, fear and boldness. The sight is disturbed, and visions pass rapidly before the eyes, wherein everything gorgeous and magnificent they have heard or read of seems combined; and presently the scene changes to things uncouth and horrible.

"Gardens, Past and Present," by K. L. Davidson, is imported by Charles Scribner's Sons. The absurdly thick soft paper on which this book is printed gives it a serious handicap in competition with garden works of similar size; but the illustrations on the paper required for half-tones are really good, and the text is above mediocrity. The little historical sketch of gardens and gardening is well done, especially the account of the new and important experimental garden at Wisley. It appears that G. T. Wilson, a hard-worked business man, had at Weybridge one of the pleasantest forms of avocation, namely, the care of a garden with a spacious orchard-house. His leisure was so scanty that he had to prune his trees by candle-light. After having succeeded well with fruits, Wilson turned his attention to the growing of lilies with such assiduity that he soon was nicknamed by his admirers "Lily Wilson." On retiring from active business, he purchased an estate of sixty acres, at Wisley, six miles or so from Weybridge, and here he began with characteristic vigor to found a wild garden. The soil was exactly what was needed, for even our capricious trailing-arbutus, or mayflower, could be made to "grow rampantly in the oak-wood." It is said that thousands of species and varieties of plants were speedily introduced, and all were made to feel at home. Wild plants and cultivated grew side by side, and this continued until the death of the founder, about twenty-five years after. Then the garden at Wisley began its new life. Instead of falling into unsympathetic hands, it became the property of Sir Thomas Hanbury, the owner of the celebrated garden at Mentone, and was soon conveyed by him to the Royal Horticultural Society, for experimental purposes. The author of this little treatise does not give minute directions in regard to the cultivation of plants, but offers rather a broad and often suggestive discussion.

The centenary of Darwin's birth is celebrated in Germany, together with the seventy-fifth birthday of Ernst Haeckel (February 16), by several publications reminding the student of the great English *Naturforscher.* Dr. Heinrich Schmidt of Jena has translated for Alfred Kröner (Leipzig) Darwin's well-known work under the title "Geschlechtliche Zuchtwahl." *Die Hilfe* (Berlin: Schöneberg) publishes under the editorship of Max Apel a series of papers dealing with Darwin and his time. To this series Wilhelm Bölsche contributes "Darwins Vorgänger"; Bruno Wille, "Wie die Natur zweckmässig bildet"; Eduard David, "Darwinismus und soziale Entwickelung"; Max Apel, "Darwinismus und Philosophie"; Rudolf Penzig, "Darwinismus und Ethik"; and Fr. Naumann, "Religion und Darwinismus." Still another publication, "Kosmos: Handweiser für Naturfreunde," contains, besides a *Gedenktafel* and portraits of Darwin, Cuvier, Lamarck, Nägele, Haeckel, Pauly, De Vries, and Weismann, essays by R. Francé on "Darwin der Forscher," by Dr. Kurt Floericke, "Darwin als Ornithologe"; Dr. H. Dekke, "Darwins Einfluss auf die medizinische Wissenschaft"; J. H. Fabre, "Wissenschaft und Charles Darwin"; and Wilhelm Bölsche, "Darwin als Reisender." There are also papers on "Darwins Vorläufer" and Darwin's personal life.

Dr. William Tillinghast Bull of New York, in his prime one of the most distinguished surgeons of America, died at Savannah February 22, in his sixtieth year. He was born in Newport, R. I., was graduated from Harvard College in 1869, and from the College of Physicians and Surgeons in this city in 1872. Later he studied abroad. At one time and another he was attached to various hospitals in New York and for many years he had been professor of the practice of surgery in the College of Physicians and Surgeons. He was a pioneer in some of the now common operations in abdominal surgery, such as that for appendicitis. He had also devoted much attention to cancer in its various forms.

Dr. Frederick Irving Knight, a specialist in diseases of the throat and chest, and for many years professor in the Harvard Medical School, has died in his sixty-eighth year. Besides his work in the Massachusetts General Hospital and in various societies, he contributed a number of papers to medical journals.

Drama.

There is no more interesting and fruitful literary topic than a comparison of the Greek and English dramas. And notwithstanding the excellent treatment of the question by Paul Stapfer and others, there is still much that may be said. One is naturally, therefore, well-disposed toward such a work as L. M. Watt's "Attic and Elizabethan Tragedy" (E. P. Dutton & Co.), and would like to say of it all the good possible. But what can be done with an author who writes habitually in such a style as this?——

Thus, the hellish terribleness of the crime in "Macbeth" is made immeasurably more

a red-hot burden upon us by the washing of the hands so late imbued in Duncan's blood, and by the soul-chilling, pulse-arresting knocking at the gate, than if we saw the dagger driven home into the sleeper's heart.

Whatever else may be done with such a book, at least it cannot be read. Probably Mr. Watt has at heart to reproduce the rhythm and rodomontade of Swinburne's prose, but he falls far short of the true dithyrambic fury.

A new one-act play by Arthur Schnitzler, the Austrian dramatist, "Komtesse Mizzi oder Das Familienfest, has had a successful initial performance in Vienna and is ready in book form (imported by G. E. Stechert & Co.). It relies for its humor mainly upon deftly complicated situations, but the language has the usual distinction of the author and the characters are convincingly drawn.

"This Woman and This Man," written by Avery Hopwood for Carlotta Nillson, and produced in the Maxine Elliott Theatre on Monday afternoon, is another of those pieces, of which we have had a good many lately, in which bald frankness of speech and extravagance in situation are offered as substitutes for a plausible story and genuine dramatic interest. Professing to deal seriously with one of the most difficult problems of sexual responsibility, it starts from inadmissible premises and proceeds through the grossest unlikelihood to flat absurdity. A young woman, betrayed and discarded brutally by an unscrupulous lover, compels him to marry her at the muzzle of a pistol and then promptly leaves him to his own resources. Half a dozen years afterward he discovers her living happily with her boy in the country, and, after a violent scene, demands the child, pleading his marital rights. When she refuses, with passionate vehemence, he carries off the boy by force, the mother following, and in the final act man and wife are domiciled together, but farther apart than ever. Then the husband, hitherto the personification of heartless selfishness, is suddenly transformed, by the subtle influence of the parental instinct, into a perfect pattern of self-denying conjugal affection, and the curtain falls upon the usual reconciliation. Nothing feebler, sillier, or more futile could easily be imagined. The inequality of the penalties exacted from the sexes in cases of this kind is an old and legitimate subject of dramatic treatment, and the point of law raised by Mr. Hopwood is ingeniously emphasized, but, as it stands, his story is as incredible as it is insignificant. With all its disagreeable and often minute realism in minor details—showing a useful faculty of observation—it rarely reflects life either in its personages or incidents, unless it is in its nursery episodes. In construction it is slovenly and inconsequent, and it contains much irrelevant padding.

On March 11 there will be a performance of Henry James's comedy, "Disengaged," in the Hudson Theatre of this city, for the benefit of the St. Andrew Convalescent Hospital. Miss Dorothy Donnelly will head the list of players. The experiment is one of considerable interest, for the piece has never been played in this country.

Music.

Joseph Haydn und Breitkopf & Härtel. Von Hermann von Hase. Leipzig: Breitkopf & Härtel.

Haydn. By John F. Runciman. London: George Bell & Sons.

Haydn's wife had so little appreciation of his genius that she tore up his manuscripts for curling papers. Is it a wonder that when Breitkopf & Härtel, in return for something Haydn had done for them, proposed to make her a present, he wrote in reply ?

I formally protest against that; I love my wife, she needs nothing, but she has done nothing that deserves a reward. I ask nothing, and do not like to put myself under obligations; but if you gentlemen are in the position to requite my insignificant services without inconvenience, I shall, to be sure, not hold off.

So the publishers gave him a diamond ring. This interesting incident is related in Hase's brochure, which gives a detailed account of the dealings of the famous music publishing concern with Haydn. The relations began as early as 1786, when C. G. Breitkopf paid the great composer a visit in Vienna, and they continued till Haydn's death, twenty-three years later. To the admonitions of these publishers the world owes most of the works of Haydn's last years; they sent him texts and suggestions. His last work was a quartet of which he could not complete the last movement, so he wrote in its place a simple melancholy canon, with the words: "Gone is all my strength! Old and weak am I." Among his last labors was the revision of some of his earlier works for a complete edition of all his compositions. But although the plan for this undertaking dates back to the eighteenth century it is only now being carried out systematically.

The centenary of the birth of Chopin and Mendelssohn is also the centenary of the death of Haydn. The best monument to that centenary is the complete edition of Haydn's works just referred to. As a minor contribution in his honor we may welcome the little volume by Mr. Runciman, which is worth more than the shilling it costs, for it is a lucid compendium of much interesting information about the composer who, born a peasant, became the friend of princes, and, while he remained a peasant intellectually, led music into entirely new paths.

The eminent Austrian conductor, Johann Herbeck, declared in 1857 that while the Bohemians were excellent musicians, they had never done anything worth while in the creative way. This remark was overheard by Friedrich Smetana, who forthwith made up his mind that he would remove that reproach from his native country. He had previously, encouraged by Chopin's fame in giving Polish dances an artistic standing in concert halls, endeavored to do the same for the Bohemian polka, but without success. With the exception of Liszt, who had a keen eye for budding genius, the professionals continued to ignore him, until 1866, when his opera, "Prodaná Nevesta" ("The Bartered Bride"),won for him national fame, which became international when the piece was produced during the Vienna Exposition of 1890. London heard it in 1895 and again in 1907; but New York, which is usually far ahead of London in its appreciation of operatic novelties, had to wait for its first performance till last Friday, when the piece was produced with great success at the Metropolitan Opera House under the supervision of Mr. Dippel, with Mr. Mahler as conductor and a strong cast, including Mmes. Destinn, Mattfeld, Wakefield, and L'Huillier, and Messrs. Jörn, Reiss, Didur, Blass, Mühlmann. In this opera Smetana succeeded in doing what he failed to achieve with his piano pieces: he made the world acquainted with the polka, the *furiant*, and other Bohemian rhythms in an artistic setting. This national coloring, emphasizing a village love story, had much to do with securing a vogue for the opera; but the coloring alone would not have availed had not Smetana shown also a genuine dramatic vein. The fact that his opera has a happy ending differentiates it from most productions of more recent date. The dances introduced at the Metropolitan are genuine Bohemian village dances, and as the two principal artists concerned in the production—Destinn and Mahler—come, like the dancers engaged, from Bohemia, the performance took the audience into the very heart of that land.

The performance of Paderewski's new symphony at Carnegie Hall last Thursday and Saturday by the Boston Symphony Orchestra did not prove so interesting an event as had been expected. Heretofore this eminent pianist's compositions have had one important feature which has distinguished them favorably from most modern productions: they have been built on themes which were strikingly original, individual, and at the same time unmistakably Polish; this is true of his songs and his short piano pieces as well as of the sonata and the elaborate set of variations which he played here last year. The symphony not only lacks this thematic individuality, but it has little Polish color, although it is intended to commemorate the unsuccessful revolution of 1863-4. One gets the impression that Paderewski had to suppress his originality in order to adapt his themes to the exigencies of the symphonic form. That he has shown a thorough mastery of that form is not sufficient compensation for the lack of those fascinating melodies which he had previously given the world. That there are many interesting pages nevertheless, it is needless to say; and the reception of the work, which was brilliantly played under Mr. Fiedler, was enthusiastic.

Report comes of the death of Mlle. Clothilde Kleeberg, the pianist, who was born in Paris in 1866 and made her début at the age of twelve. She was very successful in her appearances at Berlin and in the Philharmonic Concerts at Vienna. She was probably at her best in Bach and Schumann and the works of the old French

clavicinistes. She married, in 1894, the sculptor Charles Samuel.

Art.

THE CASE OF THE ART SCHOOL.

In a recent *Craftsman*, the sculptor, Gutzon Borglum condemned vehemently the present methods of teaching art. A certain impetuosity in his argument tends to conceal the weight of an opinion that seems to us essentially sound. Mr. Borglum ridicules an education that does not teach the elements of the matter in hand. On theory, a sculptor or a mural painter should as naturally turn to the graduated student of art as does a civil or mining engineer to the graduate of a scientific school. But this is the last thing the artist does. Practically, a sculptor finds the accredited art student ignorant of casting and marble cutting, and unable to set the supports for a large work. In short, the neophyte is prematurely in the position of the master sculptor who expects chiefly to model, leaving the reproduction of his work in bronze or marble to the trained artisan. In painting, the same condition holds. The "finished" art student could not be trusted to convert a sketch into a working cartoon, to design a decorative border, hardly to "dead color" a tracing on the wall. Both sculptors and painters preferably choose their helpers from the artisan class—the class from which in the past most of the great artists themselves were drawn.

But, it might be urged, these beginners have been trained in the central branch of the art, drawing or modelling the figure. It is assumed that they will learn readily enough the lesser matters. Just so a college graduate enters business ignorant of bookkeeping, but he picks it up at need in a fortnight or so. Whoever takes such a view simply underestimates the difficulty of mastering a handicraft. But we have an easier way of testing the efficiency of modern art education. Let us ask merely how many former students of our best schools are earning their living by the practice of their art. An insignificant fraction. The rest have given up, have become teachers, or have engaged in some form of industrial art, after taking the longest and least practical road to that end. And if it should be said that the percentage of failure is large in all professions, we have only to consider what would be thought of a school of law or medicine that turned out only a small percentage of successful practitioners. Let us concede that a large contingent of students is made up of young women working off a restlessness that subsides with marriage, of dilettanti of both sexes who can well afford the waste of time and money. But eliminating them, how few great modern painters have openly expressed the slightest gratitude or privately will admit the slightest respect for the system under which they were taught? Again, how many of our best artists are virtually self-trained, some saving instinct having kept them aloof from the scholastic treadmill?

The causes of such an anomaly can only be hinted at here. The schools thrive mainly because of the false glamour with which since the advent of romanticism the artistic life has been invested. They fail to achieve good results chiefly because that fine growth we call art cannot be rooted in herding young people together under rare and perfunctory criticism. Virtually, the art student learns not from a master, but from the handful of cleverer students in his class. Held chiefly to a stupid routine of drawing the human body by a sort of mensuration, he has no time or inclination to saturate himself with the great art of the past. Thus the entire process is infected with a cheap contemporaneousness. The prescribed task of doing large academy studies was never invented until the decline of Italian painting. The great masters of the figure followed the method of swift and frequent sketching. They studied the body not as an inert and bulging mass, but in its multiform actions and fugitive graces.

Something might be done by reforming the methods of the art schools, but the evil, we think, lies deeper. We are afflicted by a misleading analogy between training in art and in the learned professions. All history teaches that the road to art is through fine handicraft. The real fellow to the sculptor is not the young lawyer or physician, but the 'prentice stonecutter. Sham notions of gentility have sapped the vitality of art. Unreasoning democracy has made easy of access what should be hard. Until fairly recent times, the only way to learn the practice of an art was to bind one's self for a long period to be the helper of some artist. One had to be serious enough to subject one's self voluntarily to many years of practical servitude. But consider the advantages that such a servant enjoyed! In his early twenties, a precocious student had acquired competence in his art and was ready to become a paid assistant or a partner—honorable positions, in which, according to his ability, he might spend a few years or a lifetime. His work always had its value; his genius might bring him fame and wealth before his beard was grown.

What is the use of citing bygones that we cannot hope to revive? The use is to gain a sound theory of the education of the artist, upon which we may hope to erect an effective practice. And the lesson of all the past is clearly that fine craftsmanship underlies all art. In the shop or studio, even in the school, we may hope to make competent craftsmen in painting, sculpture, modelling, metal work, and decorative design—in all the fundamentals of the fine arts. But to do this, we must give over the delusion that we can in any sense make artists. If we produce artisans of skill and taste in numbers, the ablest of them will become artists as surely as the finer goldsmiths of the renaissance grew into great painters and sculptors. Meanwhile the rank and file will find pleasurable and gainful employment, and the public will benefit in the improvement of all the minor arts and of manufactures generally. This, we think, is the aim of a rational education in art. Train the craftsman and the artist will take care of himself, and all the better because of the elimination of those without creative vocation.

One cannot, of course, summarily convert the art schools into those of manual training. The main thing for the present is to fix our ideal, to acquire a sense of aims and limitations, to admit the varied discipline and experience that must precede artistic proficiency of any sort. Some day, such an ideal will be wanted as a working principle. And that day may be nearer than one would think, for even the docile frequenters of the art schools are beginning to perceive how much of this so-called training is based on vicious doctrine or sheer pretence.

Though it is a good piece of writing one cannot say that Octave Uzanne's introduction to "The Drawings of Watteau," in the Newnes Series (imported by Charles Scribner's Sons), gives much enlightenment as to the quality of the art discussed. But the drawings are the thing, and they are as wonderful and delightful as ever.

Two books on Scotch painters have recently appeared: "Scottish Painting, Past and Present," by James L. Caw (Edinburgh: T. C. & E. C. Jack), and "John Pettie," by Martin Hardie (London: A. & C. Black). Both are somewhat elaborately illustrated, the latter in colors. An inspection of the former volume conveys the impression that while it deals with some works and some artists of real distinction, it is over-weighted with mediocrities. From the publisher's point of view the reason of the second volume was undoubtedly the opportunity for brilliantly colored plates. Pettie was a clever painter, but not a great one, and hardly needed a biography. He was, however, an apostle of "the great British subject," and his coloring was powerful, if not very subtle, and for these reasons the book should readily find a public.

Hugo Prinz's "Funde aus Naukratis: Beiträge zur Archæologie und Wirtschaftsgeschichte des VII und VI Jahrhunderts vor Christi Geburt" (Leipzig: Dieterich) offers more than its title promises. While it fully discusses the economic conditions of this Greek colony in Egypt, a discussion based largely on recent archæological discoveries, the body of the book is devoted to a systematic account of Greek ceramics

during the seventh and sixth centuries before Christ. The materials, secured largely from Miletos, Clazomene, Samos, and Lesbos, consist chiefly of vases and the like.

Under the direction of Dr. Arvanitopoulos explorations have been continued on the site of the ancient city of Pagasæ, in northern Greece, with marked success. Five more towers have been discovered, which date from about 50 B. C., and for the construction of which an adjacent cemetery was used for a quarry. More painted grave *stelæ* have thus come to light, which promise to be as interesting as those discovered the previous year. Besides the towers, the excavators discovered the remains of a large *stoa*, about 170 feet long, dating probably from the fourth or third century B. C. The walls of this building were lined with a thin layer of fine plaster, which appears to have been covered with pictures. Near the *stoa* were found the foundations of a temple, about 15x10 yards. The neighboring area was apparently the *agora* of the city. The extent and thickness of the city walls show that Pagasæ was a town of considerable importance. From the inscriptions on the gravestones we learn that it contained inhabitants from all parts of the world. It is, therefore, probable that Pagasæ was once an important seaport of northeastern Greece. The finds of Pagasæ, as well as the prehistoric antiquities recently discovered throughout Thessaly, will all be placed in a museum at Volo. The building is already in course of construction, and is to be completed by next May.

Excavations on the Mons Janiculum in Rome have led to the interesting discovery of an ancient courtyard with a sanctuary formed by a cell, having an altar in the centre. An inscription commemorates the victories of the Emperors Antoninus and Commodus, and thus supplies us with a date. There were also found a small statue of Jupiter, a fragmentary statue of Bacchus, an Egyptian statue, and three skeletons, placed in line in front of the cell. In the middle of the courtyard a small well came to light, at the bottom of which lay a small bronze statue representing Kronos with a serpent. All these objects are in a good state of preservation.

Steady progress was made in 1908 by the French government service of Historic Monuments of Algiers in the work of excavation and conservation. The remains are chiefly Roman of the first centuries of the Christian era; but certain gaps have also been filled up in the history of Mussulman architecture. At Announa the streets of ancient Thibilis have been laid bare for more than 7,000 square metres. The disposition of the civil basilica; inscriptions dedicated to Faustina recalling by name the town physicians; the house of an important personage—*magister pagi*—and three linear measures engraved on stone in the house of the ædile are of interest. At M'daourouch an inscription has been found mingling curiously the pagan *diis manibus sacrum* and the Christian *in pace fidelis* on the sepulchral stone of one of Punic name. At Guelma the Roman amphitheatre was sufficiently repaired for the representation of four classical plays in May by actors of the Paris state theatres. Roman waterworks, with conduits several kilometres long and reservoirs almost complete and ready to be utilized by the modern towns, have been discovered at Chemora and Sétif (Sitifis of the Byzantines). At Kalaa particularly interesting Mussulman remains have been disclosed by Gen. de Beylié, known from his excavations in Mesopotamia and Birmania. This city, founded A. D. 1007, was the Berber capital of Central Magreb (present Algiers). Arab authors describe the splendor of its schools and palaces. It was destroyed by the Almohads of Morocco in 1152; and the remains which have been discovered belong undoubtedly to the second half of the preceding century—the period of Mussulman art which is least known. The triple palace of the emirs (for official receptions, for the emir, and for his harem) was 300 metres long by 170 deep. The wall ornamentation in blue and white faïence, stalactites, sculptured and painted plaster (red, blue, white, and gilt), incrusted marbles, and glass, are three hundred years earlier than the Alhambra. They show that Berber art, which is simply a branch of Mussulman, had an Asiatic and Persian origin, and was not derived from the art of the Moors in Spain, as is often said. The immense Roman camp of Lamboesis is being excavated; even the havoc wrought by the notorious French prison of Lambèse does not destroy the value of so unique a site. Among museum objects found are fifty small silver coins dating from Nero to Antoninus Pius. The great work done at Timgad, where the French authorities are making a veritable African Pompeii, is too extensive to be more than noted here. New streets; an eastern gate, with an inscription where Marcus Aurelius seems to be styled "Armeniacus"; new houses, the Christian monastery and baptistery; mosaics, inscriptions, and museum objects divide up the year's acquisitions. The disposition of the ancient shops presents considerable interest; also the cells and galleries of the Byzantine monks who, contrary to accepted ideas, had a small but complete hot and cold bath establishment. The baths were conveniently close to the baptistery, with its great basin, which was scarcely deep enough for total immersion, but to which steps led down; the sides were ornamented with marbles and paintings of symbolic design, which are to be kept in place.

Great special erudition, which did not "feed its man," has come to a tragic ending in the Paris courts. In 1908 the director of the Belgium Museum, Jean Capart, an eminent Egyptologist, announced the acquisition of stone scarabs from Bubastis, with hieroglyphic inscriptions relating the *periplus* of a Phœnician navigator under Nechao. They were forgeries made in Paris by the learned son of the late Egyptologist Bouriant; his mother managed the sale. The son has been condemned to two years, the mother to eight months of prison. M. Capart receives back, if he can collect it, his 15,000 francs.

Among the exhibitions at the dealers' galleries in this city are water colors by John S. Sargent and Edwin Darley Boit, at Knoedler's, till February 27; pictures by Alexander Schilling, Montross's, February 27; illustrations and drawings by J. H. Gardiner Soper, Powell's, February 27; portraits, Charles Frederick Naegele, Bauer-Folsom's, March 3; paintings by Arthur B. Davies, Macbeth's, March 4; water colors by Dutch masters, Klackner's, March 15.

William Appleton Potter, younger brother of the late Bishop Potter, died at Rome, February 19. He was in his sixty-seventh year. After leaving college Mr. Potter studied for some years at the Beaux-Arts in Paris. He held a high international position as an architect, and drew the plans for many important edifices in this country. His works included St. Agnes's Chapel, the original building of the Teachers College, and the main building of the Union Theological Seminary in this city. He also designed the library and chapel of Princeton University. In 1874 he was appointed supervising architect of the Treasury at Washington. Owing to ill-health, he was compelled to go abroad seven years ago and take up his residence in Rome.

Charles Conder, the British artist, has died at the age of forty-one. He had studied in Paris and was an associate of the Société Nationale des Beaux-Arts, and *sociétaire* of the Société Nouvelle, as well as a member of the New English Art Club. Besides his larger work as painter of landscapes, he was known for his exquisite decoration of fans.

Finance.

THE CUT IN STEEL PRICES.

During many weeks, it has been evident that the steel trade had come virtually to a standstill. Under the insistent lead of the United States Steel Corporation prices were held, throughout the last half of 1908, nearly up to the high level of the "boom times" of 1906, and actually above that of such very prosperous periods as 1905 and 1901. As the effect of this policy on demand for the product in hard times grew more and more manifest, the so-called "independents" began to cut prices secretly; the natural result was that they got the lion's share of the business. This fact forced the hand of the great corporation; last week it announced its purpose of openly meeting all such cuts. The price of steel has since then fallen, in the tentative efforts to fix a market, all the way from $3 to $10 a ton; the Stock Exchange price of shares in the steel-producing companies, which were raised to extravagant heights in the excited speculation of

last November, have fallen 10 per cent. or more within a week, and the rest of the speculative market has come down with them.

No one likes the violent slashing of values which has accompanied old-time "price wars" in periods of trade reaction. While such things were done, even the man whose business made him a purchaser of steel found his trade disorganized; because, though he himself might buy steel at an inviting price today, he had no assurance that his competitor might not buy it to-morrow on still better terms, and undersell him on the finished goods. Such collapses as the fall in steel rail prices from $120 per ton in 1873 to $68 in 1875, and in steel billets from $22 in 1893 to $15 in 1895, were a gravely disturbing influence. Judge Gary in his statement announcing the "open market" last Friday, was quite within the facts when he said that such a cut immediately after the panic of 1907 would probably have meant bankruptcy to many an unlucky merchant. But to say that one or two corporations dominant in steel manufacture should exert their influence to prevent complete demoralization of prices is one thing, and to say that such corporations shall stand out against any concession whatever to the reduced purchasing power of hard times is another and a very different thing. In publicly assuming this attitude a year ago, the Steel Corporation took an unreasonable and, in the long run, an impossible position.

If high or low prices mean anything, they mean that the producer's charge is adjusted to the prevalent conditions of trade—the capacity and needs of the consumer and the margin of profit between the manufacturer's raw material and his finished goods. High prices ordinarily mean that consumers' needs are urgent, their capacity to buy unusually great, and the cost of raw material and manufacture rising. All these conditions existed in 1906; not one of them existed in 1908 or exists in 1909. Last year consumers of steel, in the face of a volume of trade more than cut in two, were in no urgent need; the narrowed market for their own products had impaired their capacity to buy, and the open market price of iron, the raw material of the steel trade, had fallen no less than 30 per cent. within a year. Under such circumstances, the announcement last April of the policy of standing out for the very prices asked in the days of high prosperity and unlimited demand was, to say the least, an economic paradox. It justified the question, if no concessions were to be allowed under such conditions, when would they ever be allowed?

The textile manufacturers, as has been more than once noted in this column, faced the situation in a very different way. They, too, were confronted with merchants loaded up with goods bought at the high prices of the "boom times"; yet, as soon as the real conditions of 1908 were visible, the mills at once reduced wages and production, and cut prices all the way from 25 to 50 per cent. The result we see in the present condition of the dry goods trade, which, almost alone among our standard industries, is moving now on lines of normal activity. Probably, then, it will not be long before the steel trade, too, has passed through its inevitable ordeal of price readjustment, and is on the way to real recovery.

"Die Finanzen der Grossmächte," by Friedrich Zahn (Berlin: Heymann), treats of the finances of Germany, Austro-Hungary, Italy, France, Russia, Great Britain, the United States, and Japan. The work includes reports on the income, expenditure, and indebtedness of these states. The compiler calls his work "Eine internationale finanzstatische Untersuchung."

NEW YORK, THURSDAY, MARCH 4, 1909.

The Week.

On Saturday, the House of Representatives voted to reduce by one-third the size of the chamber in which it meets. Benches or chairs are to replace desks. With its present too vast space cut down to something like the oratorical range of the ordinary voice; with the transaction of private business on the floor made less conspicuous than that of public business; and with the two sides of the House brought physically closer together, so that issues may be more closely joined in debate, we are likely to see a more marked effect upon the bearing and the law-making of the Representatives than any mere alteration of the rules, such as is so much clamored about. These proposed changes had the strong advocacy of Speaker Reed, during his later years. After inspection of the House of Commons and the Palais Bourbon, he came to the conclusion that our House of Representatives could do its work better in a smaller room. The French Ch[illegible] with its practice of compelling Deputies to speak from the tribune (though they make interruptions and hurl insults from below), conduces to more serious discussions than are common in our great hall, with voices struggling vainly out of the depths. Small as one knows from books and pictures the House of Commons to be, its actual proportions bring amazement to the eye of the American who sees it for the first time. That a body with a membership so much larger than our House of Representatives should do its work in a space so much smaller, cannot fail to astonish. Yet we know that across that table between the Ministerial and the Opposition benches, close-knit debate and high eloquence have for years winged their way; while the amount of public business done has not been kept small by the size of the room.

Nothing will really be done about the tariff, of course, till the extra session, but some of the preliminary work is significant. Probably no item is more important than the recommendations of the special committee on wood pulp and printing paper. Appointed last year as a means of staving off action on the President's recommendation that wood-pulp be admitted free of duty, and the rates on paper cut down, the committee has made long inquiry and has felt bound by the evidence to urge that wood-pulp be put on the free list, practically, and that the duty on printing paper be reduced from $6 a ton to $2. This shows that the facts can at last penetrate even the triply-protected heads of protectionists.

The action of Congress finally provides the means by which justice may be done to the negro soldiers discharged from the army by the President. Decision as to who was innocent is to be taken entirely out of his hand, a board of army officers is to pass upon the evidence against each man, and when satisfied that no proof of guilt exists, is to certify to that effect to the Secretary of War. If that official approves the findings, the soldier will be reinstated, with back pay and rating, as if he had never been discharged. Thus, tardily but surely, Congress has taken steps to undo the wrong. It was in August, 1906, that the shooting occurred in Brownsville, and after the November elections in that year Mr. Roosevelt issued his order. As time has elapsed not one shred of conclusive evidence against any particular soldier has been discovered.

We have so often criticised Congressman Hobson for his wild predictions that war with Japan is imminent, and for his big-navy mania, that we take particular pleasure in calling attention to his speech on Saturday for the bill to restore the negro soldiers. Most of the South's Representatives in Congress have supported the President, because the soldiers concerned were black. Mr. Hobson seems to have been the only one who dared to vote for the bill. "This speech," he said, "will cost me a contest in my district, and may cause my defeat for reëlection." But having been an officer of the United States navy for eighteen years, he knows that the procedure adopted by President Roosevelt was wholly irregular. Instead of ordering a court of inquiry with a subsequent court-martial, the President "scattered the guilty and the innocent to the four winds and prevented the execution of justice." Mr. Hobson then recalled that a black man took his wounded father from Chancellorsville; that black men took care of his mother and grandmother after the Emancipation Proclamation had set them free; that he had seen the black man fight in Cuba and the Philippines. In his belief, the white man would remain supreme in this country, but this, Mr. Hobson added, "makes it all the more imperative that he should give absolute justice to the black man." These generous and brave words deserve full recognition.

Among the benefits of the direct-primary plan is the opportunity of the voters to consider the candidates for the less conspicuous offices. At this point it is that the control of the bosses over nominations is most evident. Seldom has a more thoroughly machine-made ticket been put before the people than the remainder of the one which Gov. Hughes headed last fall. From White to Dunn it was the product of the conferences of a small group of the leaders. When Frederick Skene and Julius Hauser were nominated for State Engineer and Treasurer, respectively, by the Buffalo Democratic Convention in 1906, hardly a delegate in the hall had ever heard of either of them; the nominations were made in the closing hours of a sensational convention, everybody was tired out, many of the delegates had actually left the hall. If the people had anything to say about candidates for important public office, is it conceivable that a Jackson would ever be nominated for Attorney-General or a Gaus for State Controller? Such men as these get on the ticket under cover of the fight for the place at the top. According to the plan proposed by Gov. Hughes, both organizations would be obliged to announce nearly two months before the election precisely whom they intended to favor for each office. The enrolled voters would have opportunity, first to influence the party committee, then to propose contesting nominations, and to support

them in the primary; and the people of both parties would have a chance to see what manner of men the machines seriously talked of putting in office.

No public man could ask for a more spontaneous or more generous greeting than was given to Mr. Root at the dinner of the Peace Society last week. The demonstrations of gratitude for what Mr. Root, as Secretary of State, has done for international amity were in themselves notable proof of the ever-growing public interest in doing away with war. Mr. Root has been so little of a self-advertiser, however, that in these days of skilled press agents and publicity managers, his achievements have not received the attention they deserve. The signing of a great arbitration treaty continues to be of less moment to the press than an attack upon some unoffending foreign resident in some Western city, and the months of anxious and difficult negotiation which lie behind the treaty are seldom revealed. In this field Mr. Root's services will, for at least a generation to come, be a spur to his successors to win some of those bloodless victories for peace which are so infinitely superior to those won by that "sum of all evils," the resort to arms.

The demonstration of the woman suffragists at Albany last week was the most impressive yet made in this State. If there was a delegation of women in opposition, that was but one proof more that the movement has now to be taken seriously. The old way of dismissing it with ridicule is no longer possible. And it is now a country-wide and world-wide movement. People talk of it as revolutionary, but the main revolution—that in the economic status of women—has already come. One speaker against the franchise gravely argued that sound political ideas could be acquired only in shops and offices and the professions, and that, therefore, women could not be expected to have them; but the fact is that shops and offices and the professions are swarming with women. All this new stirring of theirs for political rights is the inevitable result of their having to go out into the world to make their own way. It is doubtless only a question of time when democracies will find it expedient to give them the ballot to go with their bread-winning.

The demoralization of the steel trade may easily be explained, without recourse to the theory of "tariff agitation." No one denies that a proposed change in the rates of duty will have some effect in activity of trade. Manufacturers are not likely to stock up five or six months ahead with raw material, when a chance exists that they may be able to purchase for lower prices. Such conditions would naturally mean deliberate and cautious buying. But when one compares the influence of these conditions with the influence exerted by a schedule of prices artificially held at so high a level that it was difficult for manufacturers, in the present reduced consumption, to figure out a profit, it will be seen at once which consideration is paramount. Not only was the recent price of steel—higher than in 1905 or 1901—justly regarded as exorbitant, but all previous experience taught the buyer that the artificial prices could not be long maintained. In the case of an outright "corner," the simplest man knows beforehand how violent the readjustment of prices is bound to be; and it is impossible to escape a similar reckoning in such cases as the artificially bolstered market for copper in 1901, or steel in 1908. That conditions in the steel trade should be used as an argument against reduction of excessive tariff duties, illustrates curiously the mental processes of the high protectionist. Artificial prices, with the inevitable confusion and relapse which follow them, are largely made possible by the height of the tariff barrier. Supposing steel prices to have remained under control of the "stand-pat" interest, indifferent to the consumer's plight, there was no limit to the possible marking-up of prices, short of passing the level where the tariff excluded foreign competition. No more convincing proof has ever been given of the extent to which our present protective system plays into the hands of Trusts. In the case of steel, it is the consumer's good fortune that economic law still operates in this country, even in the face of accumulated capital and an absurdly high rate of duty on imported merchandise.

The third annual report of the president and the treasurer of the Carnegie Foundation for the Advancement of Teaching, shows how steadily, under the pressure of its retiring pensions to professors and their widows, our colleges are abandoning denominational tests in every form and are raising requirements for entrance and graduation. Every year makes it clearer that the college which offers the great inducement of the Carnegie pension, is in a position not only to hold its own most competent teachers, but also to pick the flower of the institutions that are less favorably situated. Thus the maintenance of sectarian requirements, which are often merely nominal, is becoming altogether too costly. Within the period covered by the report, Drake University of Des Moines, Central University of Kentucky, Drury College of Springfield, Mo., and Franklin College of Franklin, Ind., have changed their charters so as to abolish all denominational tests in the choice of trustees, officers, and teachers. Bowdoin turned over to Andover Theological Seminary $50,000 that it received on condition that the president and both college boards should "always be in doctrinal and religious sympathy with the Orthodox Congregational Churches of New England"; and in the case of another gift with similar stipulation, Bowdoin secured a release from the sole heir of the donor. Furthermore, the pensions are given only to institutions which demand fourteen "units" for admission; and there is an interesting table showing how colleges in all parts of the country, but particularly in the South and West, are steadily advancing their standards, in some cases from as low as 5.5 units. Many of these colleges are not yet up to the requirement, but they will doubtless reach it in a few years. This means, obviously, a great increase in the efficiency and usefulness of the colleges, a stimulus also to the high schools and academies that do the preparatory work, and a general "toning up" of our educational system, from the professional school down to the kindergarten.

The resignation of the Bond Cabinet in Newfoundland will necessitate a readjustment of the world's mental attitude towards that tight and rather hard little island. Newfoundland without Bond is almost as inconceivable as Mexico without Diaz. Sir Robert is an excellent fighter, as this country has good

reason to know. But the people of Newfoundland know it, too, and so do the rulers of the British Empire whom the Prime Minister of its oldest but by no means most important colony never spared his plain speaking. He dies hard. His Ministry goes down in an absolute deadlock with the Opposition, and it may require a new general election to break the tie. A career like that of Sir Robert Bond illustrates the innate conservatism of the British spirit, which is perhaps displayed quite as strikingly in the colonies as in England itself. Let a good man come into power in a British dependency, and he seems uncommonly secure against that sudden undermining of popularity and power which statesmen must fear in most democracies. Sir Robert Bond came to office in 1900. The late Richard John Seddon, Premier of New Zealand, ruled that colony from 1893 to 1906. When Sir Wilfrid Laurier has completed his third term, he will have guided Canadian destinies for eighteen years, of which thirteen have already passed.

The British Admiralty, not content with leading the world in battleship construction, in the advance of submarine tactics, in torpedo-boat destroyers, in turbine engines, and in almost every other branch of naval development, has now laid the keel of a funnelless battleship to be propelled by internal-combustion gas engines. If the bureaucrats of our Navy Department follow precedent, we shall see that in about two years our chief naval constructor will begin to talk about the subject; in three years the matter will be referred to a special board of officers for a report; at the end of four years, six months will be spent in an animated departmental discussion, pro and con, of the gas engine; and in five years we, too, shall lay the keel of a funnelless battleship.

The satisfaction in Germany over the new patent treaty with the United States should find its echo in this country. If this enlightened agreement is ratified by the Senate, it should be followed by similar treaties with other countries—France first, we hope. But not with England, for the treaty with Germany is based on just the opposite principle of the law recently enacted in Great Britain requiring foreign holders of English patents to manufacture in England or forfeit their patents. That such an essentially protectionist measure could have been fostered by a Liberal government devoted on principle to free trade, is one of the anomalies of recent English politics. If the Senate approves, inventors in the United States and Germany will stand on precisely the same footing. This will be another important step forward in wiping out international boundaries, by means of a compact drawn in an admirable spirit of friendliness and for the mutual advantage of both countries.

Chancellor von Bülow is again on a precarious footing. He has been able to make little or no progress with his bills providing new revenue, and finds that in the proposal for death-duties he is in the extraordinary position of being supported by only the Radicals and Socialists and the National Liberals—the three Left parties. For any Chancellor to receive the aid of the Socialists whom the Emperor has denounced as traitors, is almost in itself enough to alienate the Conservatives. The Centre is, of course, still at odds with Bülow and still pretending to enjoy its isolation in the Reichstag. But this situation with the Centre alieniated and the Chancellor in the arms of Radicals and Socialists is too unnatural to last. Undoubtedly, the Centre would welcome a dissolution, but the chances are that, as hinted in the dispatches, a compromise in regard to the death duties will be effected, by which Von Bülow will recede from what he declared was positively his last stand. In his desperation he declared, the other day, that it had become a matter of national life and death to get these proposals through the Reichstag. But even this warning would not make the Conservatives and Clericals yield on the deatn duties.

The question of Russia's administrative policy at Harbin in northern Manchuria turns up in very much the same form it assumed last year when there was some inclination to regard Russia's action as constituting an attack on Chinese sovereignty. For that view, there is, on the whole, little basis. The Russian concession at Harbin, covering some hundred square miles and running for ninety-nine years, was obtained, of course, some years before the war with Japan. The treaty of Portsmouth has nothing in it that invalidates the provisions of the grant made by the Chinese government to the Russo-Chinese bank. The right to erect a municipal government and impose taxes, as claimed by Russia, is not connected with the right of policing the Manchurian railway. The Harbin grant carried with it the ownership of the land and the right to sublease. Hence it is probable that the taxes which the Russian authorities are now reported to be forcing upon Chinese merchants in Harbin may turn out to be only a form of rent. Russia's right to erect a separate municipal government at Harbin is far more dubious, though even here the question is a complicated one. That explains our government's somewhat cautious attitude in the matter.

If it is a disappointment that the International Opium Commission at Shanghai has adjourned after more than three weeks' deliberation without having accomplished anything it set out to do, it is no less discouraging to read that it was the attitude of the British delegates which rendered the efforts of the Commission nugatory. There were at Shanghai representatives of China, the United States, Great Britain, France, Germany, Holland, Japan, and Portugal, and their object was to arrive at "definite suggestions of measures which the respective governments may adopt looking to the gradual suppression of opium cultivation, traffic, and use within their Eastern possessions, thus assisting China in her purpose of eradicating the evil in the Empire." On England naturally rests the main moral responsibility. Her reprehensible share in fastening the opium habit on China has never been explained away. On the other hand, England has during the last two years supported China in her war against the drug. The British Government has agreed to abolish opium in all forms in Ceylon, the Straits Settlements, and Hongkong, while India is to reduce its export of 51,000 chests of opium by 5,100 chests every year for the ten years ending 1917. That would seem to be evidence enough of England's sincere desire to help China; and we find it hard, therefore, to understand why the attitude of England should have made the Shanghai Commission a failure.

POLITICS AND WEST POINT.

Congressman Slayden of Texas has done excellent service in calling the attention of Congress and the country to the manner in which the discipline of West Point and the authority of its officials are being steadily undermined by politics. Proof appears in the documents transmitted to Congress by the Secretary of War, Mr. Wright, in response to a House resolution of February 10, asking for information in regard to the cadets who have recently been brought to book for deficiencies in conduct or studies. Some of the correspondence Mr. Wright declined to give, or forwarded only in part, on the ground that the matter was confidential.

The most important discovery is that the two worst offenders are Secretary Wright and the President himself, avowed enemy of the politicians. When the question of punishing certain cadets for hazing came up last summer, it was speedily made plain that Secretary Wright was wholly unable to realize the serious nature of the hazing at West Point, or the gravity of overruling the Superintendent of the Academy and his officers. The compromise at that time—the dismissal of two cadets and the suspension of the others for eight months—was adopted in spite of the united protests of Col. Scott, the Superintendent, and the Academic Board. As if to show his contempt for their attitude, Mr. Wright even went so far as to inform Congress that he had no objection to the bill introduced with the purpose of reappointing the dismissed cadets—no objection to overriding the laws against hazing, no objection to seeing the hazers return in triumph to flout their officers and inform their fellows that it is easy to get round a colonel when you have a Secretary on your side!

Bad as that case was, the more recent one is even worse. Now it is a clear case of failure in studies and in conduct of two first-class men, Cadets Fletcher of Providence, R. I., and Pendleton of South Ballston, Va., and three of the third class, Gonser of Elmira, Holliday of Kirkwood, Ill., and Thompson of Chattanooga. The Academic Board, after carefully going over their records and giving each one an opportunity to state whether the demerits against him were due to injustice or malice, ordered dismissal from the Academy. Some men are dropped in this way every year; sometimes the derelictions are slight, from the point of view of the civilian, but the number of demerits—108 end the cadet's career—is usually plain evidence that the cadet is too slack to have in him the material of a good officer. Hitherto, such findings of the Academic Board, or of the special board appointed in certain instances, have always been final. To the amazement of the entire Academy, as soon as the political friends of the cadets could reach Washington, a reconsideration was ordered, and the President himself on January 4 wrote an autograph letter to the Secretary of War, as follows:

> There are five young men who have been recommended for dismissal by the Academic Board at West Point for what seems to me insufficient reasons. . . . Cannot the Academic Board be reconvened to consider again its action so far as relates to these men? It seems to me that the needs of the service can be met by some arrangement less than discharge. I think it would be an entirely needless hardship to turn these boys out. If necessary, let them each go back one year.

The Academic Board pointed out that these cadets were not boys, but men over twenty-two years of age, two of them well into their twenty-fourth year, and that:

> It has been the practice of the Academic Board heretofore to regard a deficiency in conduct as final, and as one of the most satisfactory proofs that can be secured of the unfitness of an individual for the military career.

The board then voiced this earnest protest against the subordination of the Academy to politics and the undermining of its own influence:

> The Academic Board, with a long and intimate experience of the disciplinary methods of this institution, and the effects upon the cadets of unusual leniency, respectfully asks an earnest consideration of the very serious effect upon the morale of a body of young men who are being educated to high standards of conduct and of honor in seeing the disciplinary standards of the institution set aside in spite of the warnings of experience and the admonitions of their superior officers. If the young gentlemen of the corps feel that upon every occasion when they have brought upon themselves the penalties of failure, and when, after the administration of the institution has conscientiously sat in judgment upon their status, a reversal can be obtained by an appeal to higher authorities, the administrative authority of the institution is brought into contempt and the powerful influences which an impartial operation of the governing mechanism of military education should bring about is nullified.

Unfortunately, however, the board, "in deference to the judgment of the wishes of the President of the United States," recommended "with reluctance that Cadets Fletcher and Pentleton be suspended without pay and allowance until January 1, 1910," and suggested a similar mitigation of the sentences of the others. The President insisted upon this being done.

Why should there be an Academic Board if somebody in Washington is to overrule it? Why should any cadet obey its laws if he has behind him an able Congressman? Will the cadets not read the memorandum prepared for the Secretary of War in which the Chief of Staff says?—

> Herewith will be found requests on behalf of these cadets, as follows:
>
> For Cadet Pendleton, from Senator Daniels and Representative Glass.
>
> For Cadet Fletcher, from Senator Wetmore and Representative Granger.
>
> For Cadet Gonser, from Representative Fassett; also verbal request from Representative Landis.
>
> For Cadet Holliday, from Representative McKinney (both verbal and written).
>
> Representatives Fassett, McKinney, and Landis called in person to see Gen. Oliver during your absence.
>
> Cadet Thompson of Tennessee, who belongs to the third class, was found deficient in mathematics and drawing. There is a request on his behalf from Senator Frazier and Representative Moon.

Will not the cadets draw the proper inference that these visits were successful? Will they ever see, on the other hand, the statement in Theodore Roosevelt's annual message of 1901?—

> Every promotion and every detail under the War Department must be made solely with regard to the good of the service and to the capacity and merit of the man himself. No pressure, political, social, or personal, of any kind, will be permitted to exercise the least effect.

THE GROWING DREAD OF WAR.

The most cheerful news of the fortnight is the report that the Powers signatory to the Treaty of Berlin have practically agreed to impose upon Servia a policy of moderation with respect to Austria-Hungary. "To make representations at Belgrade," is the formal phrase; but, actually, intervention at Belgrade means also intervention at Vienna. If Servia is persuaded to keep the peace by refraining from impossible demands, it follows that Austria will not be allowed to endanger peace by further exasperating the feelings of the Servian people. It is to be noted that among the Powers that signed the

Treaty of Berlin is Germany, which hitherto has refused to exercise on its ally pressure of any kind. That Germany should now actively intervene means that the end of the Balkan trouble is in sight. The agreement between Turkey and Austria concerning Bosnia-Herzegovina was signed at Constantinople last week. The difficulties between Turkey and Bulgaria are as good as settled. It remained for this latest declaration of Europe in favor of peace to scatter definitely the war clouds that have hung over the Continent since October. Now, as at the outbreak of the difficulty, the chief merit of working for harmony is due to the French government.

The behavior of Europe during these months of bewilderment and anxiety should give deep satisfaction to all friends of international peace. The idea has been so long dinned into us that Europe is a powder magazine, ready to go off at the slightest flash; the nations have been so continuously pictured as panting to fly at one another's throats; the Near East has been regarded for so many years as the world's peculiar danger spot; and we have been told so often that the slightest political readjustment in that devoted area must sweep all Europe into a general catastrophe, that we cannot but wonder that the course of Balkan history during the last five months should have been what it is. According to our prophets of glory and slaughter, the nations were so eager for war that an insignificant island in the Ægean, a fracas in a Macedonian village, a dispute between two frontier officials, might be enough to start a general conflagration. Instead, the Near East has passed through great changes and war has not broken out. The Turkish sovereignty in Europe has been seriously curtailed, Austria and Bulgaria have seized upon their long-coveted territory, a section of the Slav population in the Balkans has been thrown into violent commotion—and the result has been that on two important occasions a concert of the Powers has taken its stand squarely on the side of peace, and that the international politics are probably more amicable now than for years.

Only one deduction is possible from the facts: Europe is not the lurking place of sanguinary ambition that the Jingo and professional alarmist in every country would make it out to be. The madness of military and naval competition, of course, is there. The intensity of nervous, often unreasoning, suspicion is also there. But undeniably in this mad striving after more field batteries and Dreadnoughts, the nations of Europe stagger on with a good deal of sickness at heart. It is easy to find a cynical reason why the Powers should intervene for peace in the Balkans. France traditionally wants peace; Russia is still crippled from its Manchurian adventure; Italy is torn between its Balkan ambitions and its duty to its allies, and would rather wait; Great Britain is this, and Germany is that, and so on. True in part; but equally true, and patently true, in the entire course of the Balkan disturbance has been the sincere dread of war that has been a sombre undertone to the daily shiftings and variations of the professional diplomats. The old diplomatic language of bluster and covert threat has been heard, but it has sounded as if spoken by men who were repeating the ancient warlike phrases while their minds were working in new habits of peace.

For all right-minded men in England and Germany who view with horror and disgust the stupid game of mutual exasperation in which the two leading Powers in Europe are now blindly engaged, the settlement of the Balkan difficulty cannot come too soon. It will be as a clamp upon the mouths of the preachers of hatred. Englishmen who have been taught to go to sleep trembling at the thought of German invasion, Germans who wait daily for news that the British have fallen upon the Kaiser's fleet, should find enlightenment in the events of these last five months in southeastern Europe. If Germany is bent on a trial of strength with England, why has she neglected the Balkan opportunity? If England wants to destroy the German fleet, why has she counselled Turkey to peace and labored with France towards the same end? The Jingo, of course, can never be permanently silenced; but men of common sense of both nations should conclude from the successful weathering of this general European storm that on neither side of the North Sea is the passion for blood so strong as evil report has painted it.

And for us, too, there is a lesson in the latest turn in the Balkans. It was brought out forcefully by Mr. Root at the dinner of the Peace Society. When we see how Europe passes safely through severe and infinitely trying complications, we should awake to the full absurdity of the cry that a war with Japan is inevitable and imminent. Europe, a mass of huddled, jostling nationalities, a conglomeration of age-old rivalries, jealousies, and hatreds, a complex of units that touch each other at a thousand sensitive points, this Europe which is, in truth, one great armed camp, can yet find the path of peace through myriad difficulties. We, on the other hand, who have grown and thriven within limitless spaces, whose temper should have escaped all the irritations that international competition brings with it, no sooner meet a serious international problem than our Hobsons begin to talk as if there were nothing for it but war. Europe, being close-packed elbow to elbow, finds a way out. But the United States and Japan, with nine thousand miles of the Pacific between, are not far enough apart to avoid quarrelling. Never has the clamor of the international blackguards—the word is Mr. Root's—rung so empty.

THE NEW HOPE IN INDIA.

The Society for the Advancement of India has addressed an open letter to Mr. Roosevelt in which it takes exception to the President's eulogy on the British administration in India delivered last January in the Metropolitan Memorial Methodist Episcopal Church at Washington. The Society for the Advancement of India is a militant anti-British organization, whose motto is "Thorough." Naturally it protests when Mr. Roosevelt says that "in India we encounter the most colossal example history affords of the successful administration by men of European blood of a thickly populated region on another continent"; or that "the mass of the people have been and are far better off than ever before, and far better off than they would be now if English control were overthrown or withdrawn"; or "that England does not draw a penny from India for English purposes"; or "that the part England has played in India has been to the immeasurable advantage of India." The Society's letter then goes on to state—and forcibly—the case against British

rule in India, in its severest form. The burden of the charge is familiar: India is a slave Empire, subjected, according to the belief of some, to a "worse than Russian despotism"; its inhabitants are taxed to death by an unrepresentative government; there is now neither freedom of the press nor the right of trial by jury; more than one hundred million dollars a year goes to England annually in the form of pensions, savings from salaries, profits from business enterprises, interest on English investments, and military expenditure. Crushing taxes, insufficient irrigation works, the discouragement of domestic industrial development, have made India a land of chronic famine. There were, in the first three-quarters of the nineteenth century, thirteen famines, with an estimated loss of 6,500,000 lives; there were in the last quarter of the century, eighteen famines, with an estimated loss ranging from 15,000,000 to 26,000,000 lives.

Whether India as it is to-day is Britain's glory or Britain's shame, is a matter, however, less capable of demonstration, and, on the whole, of less practical importance than the fact that India to-day is Britain's great responsibility. The picture evoked by the uncompromising critics of British rule, though it may be true in most of its sad essentials, is yet incomplete, because it leaves out of account the immensely difficult nature of the problem with which England has had to deal. On the other hand, England's great argument that she has given India peace and stability does not wear so well as it used to. Of what avail is the boasted Pax Britannica, if with peace cometh not contentment, or even the certainty of daily bread? Translated into political terms, the practical impossibility of England's withdrawing from India, or even bestowing full Parliamentary government, faces the other impossibility of refusing any longer to yield the people of India that proper share in the management of their own affairs which their own needs and qualifications and the spirit of the age demand. And fortunate it is that, after nearly a half-decade of great unrest, the necessary spirit of compromise appears to be establishing itself in India among rulers and subjects alike.

The open letter from which we have quoted dismisses Lord Morley's plan of reforms contemptuously:

> A few more Indian gentlemen would be made advisers of the Government, but they would have no power over taxation or expenditure or anything else.

Yet "a few more Indian gentlemen" is hardly a fair summary of the new provision that henceforth in the provincial legislative councils the non-official element shall constitute an absolute majority. An absolute majority with the right to bring forward "supplementary questions," or to interpellate the government as we should call it, ought not to leave the natives without influence, if the Hindu's shrewd genius for politics is what both the critics and supporters of the present system admit it to be. Moreover, the objection that it is not the legislative, but the executive councils that wield the real power in India, is specifically met by the provision, under the new plan, for the admission of natives to the executive councils. Note, too, the attitude of concession in the last Indian National Congress at Madras, where Lord Morley's plan was commended as granting the natives a fair share in the government of their own country, without "placing the ideal of absolute autonomy before undeveloped minds, 'those too young to be wise and too impulsive to be rational.'" When the representatives of the soberest native thought in India can speak in this fashion; when, on the other hand, the Tory London *Times* can admit that "the claim advanced by many sections of the Indian peoples to a larger share in their own affairs is now admitted by most competent authorities to be reasonable and just," the ground for a peaceful settlement seems more than clear.

The question of complete self-government for India under a Parliamentary system cannot become an immediate one. England may scarcely be blamed if she waits till the system for Asia has been tested in Persia, in Turkey, and even in China. At the same time every concession made now must lead in that direction. We need not hold with the members of the Society for the Advancement of India that that country is now able to rule itself, in order to dissent from Lord Morley's view that "a Parliamentary system in India is not the goal to which I, for one, would aspire." The general trend is toward the Parliamentary system, which seems bound to come in time. The struggle for rights is a preparation for citizenship, and diverse ethnic and political elements may be hammered into a nationality by the very sense of a common wrong or need.

HUMOR AND STATESMEN.

Mr. Taft "had his little joke," we read now and then in the papers. And he takes with infinite good-nature the jests that are made, and the stories that are told, at his expense. He did this in the campaign, and he has done it since. Evidently, he is not a man whom the awful dignity of the Presidency will congeal. His hearty enjoyment of a good laugh raises, however, the question whether a strong sense of humor is a valuable asset for a public man, and what are the due limits of its display. Mr. Taft does not, for example, crack any jokes in his inaugural address. But why not? Why should we think it indiscreet or improper if he did?

Lincoln's instinct and Lincoln's example in this matter are safe guides. Privately, he was a man who "jested with all ease." His stories, his odd and homely sayings, were retailed about the country, giving offence to some, it must be remembered, but pleasure to most. They showed that we had an approachable, human President, and the people liked to know that. What they did not know at the time was that Lincoln's humor was often a safety-valve, preventing the pressure under which he quivered from becoming too terrible. But in his public addresses, in his communications to Congress and the people and the press, Lincoln was never jocose. He was aware that even a humorous democracy wished its public affairs to be discussed with high gravity. Public men who forget this, work their own undoing. A really able man, Proctor Knott, could not live down his unfortunate reputation as a humorous speaker. Depew's jokes palled, long before he himself became a joke. It is, as a rule, the grave and earnest and even ponderous men who go farthest in political life. The late Abram S. Hewitt intended to pay a high compliment to Grover Cleveland, when he said of him: "The greatest master of platitudes since George Washington." That was certainly not the only reason of Mr. Cleveland's success, but it is plainly impossible to think of his doing what he

did if he had been merely a jolly man.

The duty of not mixing up levity and statesmanship is illustrated afresh in the recently published Life of George Canning. He was a wit as well as a scholar, and his quips at table or in club or in the *Anti-Jacobin*, gave merriment to many. As Minister of the Crown, he could assume the stately manner with the best of them, though there was one occasion when, it has always been said, he let his humor get the better of his instinct for public business. This was the time when he sent his famous "rhyming dispatch" to the British Minister:

> In matters of commerce the fault of the Dutch
> Is offering too little and asking too much.

This was, it now appears, merely a practical joke on his old friend, the Minister, but Canning sent along on the same day an official dispatch in sober diplomatic form. The Minister wrote back to him privately:

> I could have slain you! but I got some fun myself, for I afterwards put the fair decypher into Douglas's hands, who read it twice without moving a muscle or to this hour discovering that it was not prose, and returned it to me, declaring that it was "oddly worded, but he had always had a feeling that the despatch must relate to discriminating duties."

One law of parsimony, in regard to humor in English public men, has lately been brought to attention in connection with Mr. Lloyd-George: it is that a Chancellor of the Exchequer must never publicly jest about finance. But Mr. Lloyd-George has unhappily done this. When some one in the Commons asserted that a certain financial measure would deprive the Exchequer of its "nest egg," the Chancellor gayly replied that, in such an event, he would be obliged to "rob another hen-roost." The horror which this provoked at the time has deepened, if anything, since. To make a joke about taxes at all was bad enough, but to throw it into the form of a threat of confiscation was almost to undermine the throne. Mr. Lloyd-George's difficulties in framing a budget, great as they must be just now in any case, have undoubtedly been enhanced by what was regarded as his ill-timed levity. Englishmen may damn the North Pole, and speak lightly of the Equator, but they must ever be severe and solemn in the presence of Finance.

The conclusion of the whole matter is very simple. We should pity a public man who had no capacity for fun-making—who could not take a humorous view of the political pageant, including his own part of it. The statesman who can privately relax, and warm himself by the fire of genial talk, is ordinarily better fitted for his work than the one who keeps himself perpetually tense. But humor overdone or misplaced is fatal to men in great office. Not to judges alone is Bacon's counsel applicable, that in their public appearances they should be "more learned than witty."

RECENT FRENCH FICTION.

PARIS, February 20.

In fiction the publishing season has so far given us no masterpiece. Three of the best written novels have appeared in a cheap series (Fayard) at 1.35 francs a volume—an attempt at breaking through the tradition of the 3.50 book. "Le Meilleur Ami" is by René Boylesve, who for mere prose has for a dozen years been all but the first of living French novelists. His stories are never puritanical, but this one is less cheery than usual. His hero, like Cyrano with Roxane, as best friend, has to listen to the love confidences of the heroine, whom in honor he can love only in silence. "An old story, yet always new, and he to whom it happens gets a broken heart from it," says the motto from Heine. This author has another short novel soon to appear, which is the deepest, lightest, most spectacular, and readable exhibition of that phenomenon in which French middle-class society centres—"La Jeune Fille bien élevée." "La Colère," a story of temper, by a new writer, Henri Pagat, is well spoken of. "Les Doigts de fée," by Marcel Boulenger, in spite of its popular exterior, gives astonishing pictures of that ultra-worldly Tout-Paris which is farthest removed from the people—that for which life is play-actoring to fashion. The author is one of the younger writers who has done most to keep up the high standard of the French language in books of light literature. His hero is unsuited with a wife who goes in too much for fashionable painting and general modernism; her first sister is too sociological to relieve his lot; her second sister, coming up old-fashioned from the provinces, he loves; but the mission of her fairy fingers, which bring a semblance of happiness, is to patch up as best may be the too-modern match.

Paul Laccur, a new writer, pleases with "Sœurette" (Perrin)—the story of one who could be happy with any one of three charmers, each of whom is willing; but he decides which one only when it is too late for any. "L'Otage" (Plon), by Henri Buteau, also a coming man, is serious, often tragic, in its study of the would-be emancipated woman held fast by the web of customs, manners, laws, opinions of the world into which she was born; the law gives the hostage, the child of free love, into the lawful husband's hands, and she finally follows it—a conservative position which the author evidently approves. The society lady who writes under the pseudonym of Claude Ferval, one of whose books was crowned by the French Academy, has a new novel, "Ciel rouge" (Fasquelle), agitating the same spectre of the community's control over unhappy matrimonies. The prosaic husband kills the poet lover of his wife in a duel; and, for the rest of their natural lives, the two must sit together at their haunted hearth, making a brave show to the world—to save the innocent daughter.

Francis de Miomandre received the 1908 prize of the Goncourt Academy for a novel with a title from Keats's "Écrit sur de l'eau"; he had secured a publisher for it only in Marseilles (H. Falque). It is the diary of a young *méridional*, who tries to "do literature" with all the young coteries of the day. He has abundant humor, pitiless for those of his own age, and his father is a Marseilles Micawber. The writing is free in style—and in ideas. The author has hastened to use his success in an equally free and easy novel on Parisians of to-day, "Le Vent et la poussière" (Calmann-Lévy). Claude Farrère, the pseudonym of a naval lieutenant who carried off the Goncourt prize in 1905, takes for his new novel "La Bataille," the popular form of publication (Fayard).

Among writers of old standing, Léon de Tinseau publishes "Sur les deux rives" (Calmann-Lévy), in which a ruined gentleman transplants his family from the Old to the New France, which is Canada. After his death his son, with the traditions of his race, returns to serve his country as an army officer; but he resigns with heartbreak when he finds the chief services demanded of him under the present régime are to combat striking workmen and expel nuns from the homes which they have built up with their own money, but which the state takes from them. The qualities which have so long made this author one of the best sellers among proper people will be aided by this touch of conservative actuality. Georges Ohnet is also sure of his usual sales in the Philistine world for his new novel, "Un Mariage américain" (Ollendorff). Jules Claretie, Académician, administrator of the Comédie Française, and for nearly half a century writer of unnumbered books, attacks a youngish problem in his latest novel, "L'Obsession"

(Pierre Lafitte); it is the trouble between *Moi et l'Autre* as they alternate in a double personality. Maurice Barrès pursues the even tenor of his manhood's ways in "Colette Baudoche" (F. Juven)—the history of a young girl of Metz under German rule. The close, merciless, but not unsympathetic, portraiture of the Pomeranian professor, who comes to Teutonize Lorraine and finds himself in the end thrall to the refinement of the civilization which France implanted there, might prove instructive even to German minds, whom it is not intended so much to offend as to edify the French. The style has all the perfect limpid adequacy which even this Nationalist author's most Radical enemies acknowledge. With all the still remembered faults of a dilettante youth, Maurice Barrès, most radical enemies acknowledge. ing a leading influence over cultivated Young France.

The literary firm of brothers signing J. H. Rosny has now dissolved, at least enough for a novel, "Marthe Baraquin" (Plon) to appear under the sole signature J. H. Rosny *aîné*. It has all the acrid power of the combined work, which long ago won a public of its own. It is a brutally frank, heart-rending story of a Paris working girl, exposed to all the temptations of the great, wicked city civilized to the point of primitive savagery in its lack of what we once called morals. Perhaps the pathos of it is still moral. S. D.

NEWS FOR BIBLIOPHILES.

The Essex Book and Print Club of Salem, Mass., recently organized, has just issued its first publication, a reprint of the first book on Salem, "New England's Plantation," of which three editions appeared in 1630, all very rare. Besides a photographic reproduction of the first edition, the volume includes a type reprint of the third (which contains considerable additional matter), as well as several other contemporary papers partly printed from manuscripts. The editor has made unusual efforts to trace existing copies of the three editions, and is able to find ten of the first, of which six are in public libraries and four in private collections; he finds five copies of the second edition, of which two are in private collections; and seven copies of the third edition, all but one in public libraries. One hundred and seventy-five copies only of the book are printed in the best manner at the Riverside Press.

On March 8 and 9, the Merwin-Clayton Sales Co. of New York will sell a collection of Americana, including a long list of American periodicals. Among them are the first twelve numbers of the *Harvard Register*, in which Oliver Wendell Holmes's first contributions were printed; and the Boston *Miscellany of Literature and Fashion*, Vols. I and II (1841-42), a magazine of which James Russell Lowell was one of the editors, and which contains numerous contributions by him. There are books on John Brown, books and pamphlets relating to the South and Southwest, and to the Indians.

On March 8 and 9, the Anderson Auction Co. of New York will sell a collection made up partly of books from the libraries of Dr. Martha Bunting and A. G. Browne, jr. Included is the longest series of books, 114 numbers, relating to Africa, offered in any recent sale; upwards of 40 lots on China, and a number of works on the North American Indians. Among the latter is a copy of Penhallow's "History of the Wars of New-England, with the Eastern Indians" (1726), with a portion of the title and last leaf in facsimile. The first edition of Beverly's "The History and Present State of Virginia" (1705) in the original calf binding, is another notable item.

C. F. Libbie & Co. of Boston announce the sale, probably in April or May, of the library of the late Amory L. Hollingsworth of Mattapan, Mass. Mr. Hollingsworth's collection is one of the largest and best known of those in New England. Americana, first editions, club publications, books illustrated by Cruikshank, Rowlandson, and Alken, and books in special bindings are some of the classes to which he gave particular attention.

The Lenox branch of the New York Public Library has on view for the winter and spring months a little selection of books remarkable in the progress of printing. The earliest known book printed with movable metal types is represented by a beautiful copy of the Gutenberg, or Mazarin, Bible, supposed to have been printed by Gutenberg, assisted by Fust at Mentz, 1453-55. There are two leaves from the "Recuyell of the Histories of Troye," printed by William Caxton, probably at Bruges about 1474, the first book printed in the English language. The first complete Bible in English is the Coverdale, 1535. No perfect copy is extant but the exhibition contains one of the library's two excellent copies, both of which have been supplied with facsimile leaves for those missing. The first book printed in America in the English language is the "Bay Psalm Book," 1640. The first book in Roman type, printed by Nicholas Jenson (Venice, 1470), is a beautiful specimen of the printer's art, entitled, "De Præparatione Evangelica," written by Pamphilus Eusebius. The first book in Italic type, an imitation of Petrarch's manuscripts, is a Virgil by Aldus, Venice, 1501. The inventor of stereotyping was William Ged, and the book in which he first employed the new method is entitled "C. Crispi Sallusti Belli Catilinarii et Jugurthini Historiæ," Edinburgh, 1739. The first monthly magazine published in England was the *Gentleman's Journal: or the Monthly Miscellany*, London, January, 169½. Benjamin Franklin established the first monthly magazine in English America, the *General Magazine and Historical Chronicle*, Philadelphia, January, 1741.

Correspondence.

THE ÆNEID TWENTY YEARS AFTER.

To the Editor of The Nation:

Sir: After ten years of forced labor in modern literature, I have at last been able to go back to the Æneid. It is twenty years since I left school, cocked and primed for the college entrance examination, and confident that what I did not know about the first six books was not worth knowing. All the trick lines had been scanned, the mythology worked up, and in trochee, dactyl, synecdoche, indirect question and relative clause of characteristic there was no mystery for me. Such was my Æneid twenty years ago—a text-book of Latin syntax and prosody—and such it is to the average boy of eighteen, to the shame of our schools be it said! Why don't we all—we who have once drunk of this rich Latin poetry—go back in after years to revel in the stately verse, to tune ourselves afresh to the pitch of its noble lessons? "Quam multas nobis imagines non solum ad intuendum, verum etiam ad imitandum fortissimorum virorum expressas scriptores et Græci et Latini reliquerunt!" (Pardon the Latin, Mr. Editor. I know there are still some of your readers who enjoy the flavor of the original.)

Last summer, stretched out upon the sand, I read over the first six books—the narrative of the sea voyage of the Trojan exiles—and as I looked out across the bay it was easy to imagine the little ships of Æneas scudding through the blue waves of the Mediterranean, the water curling under the prows, and the Nymphs as escort. The last six books have been more appropriately read these winter evenings before my study fire. For the Æneid is one of those matchless books of which Cicero might have said: "Delectant domi, non impediunt foris, pernoctant nobiscum, peregrinantur, rusticantur." Here I have watched those hand-to-hand fights of the Rutulians, Latins, and Trojans for the possession of the fair Italian land; here I have sorrowed for the gallant men on either side who knew not what surrender was, but who, fighting to the last gasp, accepted the decree of Fate:

Stat sua cuique dies; breve et irreparabile tempus
Omnibus est vitæ: sed famam extendere factis,
Hoc virtutis opus.

Great souls they were, and worthy epic ancestors of those mediæval knights who, when laid low, took communion of the greensward, uttered a last prayer for mercy to the Cross on their sword-hilt, and then—well, then their souls were borne off by the angels to the flowery fields of Paradise.

There is a Christian Rome and a Pagan Rome; and there is a Christian Virgil and a Pagan Virgil. But whether we regard him as the wonder-working magician of mediæval legend or as the court poet of Augustus, it is a joy to find that Virgil was a man with feelings and emotions like our own. Could anything be more exquisitely pathetic than Andromache's tears over the boy Ascanius as he recalls to her by his face and bearing that little son of hers, the cherished replica of her lost Hector:

O mihi sola mei super Astyanactis imago,
Sic oculos, sic ille manus, sic ora ferebat:
Et nunc æquali tecum pubesceret ævo.

Yet, I do not recall that any teacher ever directed our attention to such lines as these, where the poet has stamped the image of a mother's heart.

The whole of the second, third, and fourth books should be read as a love story. The pageant of Dido's broken heart has been trailed through the world's classrooms for centuries; yet, the ministrations of sister Anna are as solicitous, the tragic grief of Dido is as poignant, and the easy faithlessness of Æneas is as unpardonable as they ever were. For this Æneas, as I see

him to-day, is more admirable as a builder of empires than in the guise of a lover. This "Fate business" is a weak argument! You cannot clear your skirts of duty quite so easily nowadays. If the gods had kept their fingers out of it, Æneas would have tarried in Carthage and married Dido. Then, mayhap, Carthage and not Rome would have been the Eternal City. Ah! but in that case we should have had no Virgil and no Æneid. And so I put down my book and fall to thinking of all we should have missed if there had been no Rome.

A. C. Benson has written nothing more to my fancy than his remarks in "The Schoolmaster":

> To omit intellectual enjoyment from our programme, to pass over one of the strongest of boyish faculties, seems to me the kind of mistake that will be regarded some years hence as both pitiable and ludicrous.

I thought of these words when I came to the Trojan games in the fifth book. It is counted a hard bit of translation, and an examiner is apt to include a passage from it in his paper. But how easily a boy's interest could be aroused in the outcome of the "events" as they are run off on sea and land! What fierce contests, what heart-breaking finishes! Would it not be a fairer test of the boy's knowledge and appreciation to ask for his comment upon the conduct of this classic "meet"? I can fancy that eyes would brighten when they fell upon such a question. So little human interest is expected from our Latin teachers. It would be so easy for them to rouse us, if they would give us at times just a little literary appreciation.

After the sixth book, it was all new to me. There is a great deal of fighting—too much for one who is sated with mediæval swashbucklery and tournaments. I am not sure that Virgil can describe a fight any better than the French epic poets. Probably he did not know so much about it at first hand; for if the middle age writers speak with authority about anything, it is about fighting. I like Virgil better when he descends to the intimate details of personal emotions. It may be heresy to say so, but I am a layman, and may speak as I feel. My sympathy for the helpless, the bereaved, the defeated, the slain, is far more intense than my share in the thrill of victory and dominion. There is a wonderful simplicity and domesticity in the picture of "poor Evander" and his little city. Like the Cid's father, Evander laments his inability to defend himself: old age has robbed him of his sometime strength; he must place the defence of his honor in the hands of his son, Pallas. The depth of the old man's love for his son is measured by the clinging embrace at separation, the prayers to the gods, and the swoon in which the interview is ended.

I trust it will not sound morbid to say that there is nothing better in the poem than the death scenes and the emotions which are their inevitable accompaniment. No more dignified attitude in the presence of death can be found than the stoic calm of these old warriors as they answer the last summons. Antenor, for example,

> coelumque
> Adspicit, et dulces moriens reminiscitur Argos.

For a parallel, we think of Roland dying at Ronceval and harking back to *douce France*. Or again, the declaration of Turnus, who, according to his lights, like Saint Paul, had fought the good fight and could say without boasting:

> Descendam, magnorum haud umquam indignus avorum.

In fact, these last six books are full of wisdom for the living as well as of inspiration for the dying. Anchises in his prophecy to Æneas, bids him be ever true to the principles of his ancestors: to spare the weak, to hand out lilies, to fight the proud, and to keep within wise limits. What more might Rome not have been, had she hearkened in her later days to such counsel? And shall not we heed it in our day and generation? For each of us, like Æneas, may still be said to be

> Attollens humero famamque et fata nepotum.

Æneas, at least, never forgot the injunction, for he passed on the words to Ascanius:

> Tu facito, mox cum matura adoleverit aetas,
> Sis memor et te, animo repetentem exempla tuorum,
> Et pater Aeneas et avunculus excitet Hector.

And so Virgil was able to make this love of country, this stoic defiance of misfortune, these multifarious strifes and passions, live on eternally through all the flotsam and jetsam of later literature. He has made good his promise to keep alive by his song the memory of his heroes:

> Si quid mea carmina possunt,
> Nulla dies umquam memori vos eximet aevo.

To us, too, the injunction comes, not in a narrow sense to decorate the graves of our defenders, but to cherish warm the lesson of their death:

> Egregias animas, quae sanguine nobis
> Hanc patriam peperere suo, decorate supremis
> Muneribus.

THE HANGING OF ANIMALS ON A GALLOWS.

TO THE EDITOR OF THE NATION:

SIR: Toward the end of Queen Elizabeth's reign, there was a certain German, Count Mümppelgart, who, being of an inquiring mind and restless disposition, set forth in 1592 to visit England and its great Queen. He gained his object; and immortality in addition. In him, Charles Knight detected "the Garmaine Duke" and "the cosen garmombles" of "The Merry Wives of Windsor," in the Quarto of 1602. Halliwell followed up with ardor this conjecture of Knight, and discovered so many references in the play, all tending to prove that Doctor Caius and Sir Hugh Evans have in mind this Count Mümppelgart (who, in 1593, became the "Duke of Württemberg") that he deems "the way in which [this conjecture] is unravelled" to be "one of the most curious circumstances, in its way, in Shakespearean criticism." Staunton refuses to follow Knight and Halliwell, but his argument is weakened by his confusing the Dukes of Wirtemberg. He mistook the son for the father.

"His Serene Highness, Prince, and Lord, Lord Frederick, Duke of Württemberg and Teckh, Count Mümppelgart, Lord of Heidenheim, Knight of the two ancient Orders, of St. Michael in France, and of the Garter in England in 1592" (thus is he designated on the title page of his travels), was really a noteworthy man; albeit the persistence with which, for ten years, he pestered Queen Elizabeth to confer the Garter on him, was surely worthy of a better cause.* His assumption of that honor in the foregoing list of his titles is a grace snatched beyond the bounds of truth; but, to be perfectly fair, I should add that it is printed in very, very small type, as though to minimize the untruth. His investiture did not occur till 1604, after Elizabeth's death. In all his travels—he visited Switzerland and Italy, as well as England—he was accompanied by a private secretary, whose duty it was to keep a journal of his lord's wanderings. During his travels in England, this secretary was Jacob Rathgeh, or Rathgehen—the Germans of aforetime had an uncomfortable way of declining proper names; in the present instance "Rathgehen" is preceded grammatically by a "von." To the honest Jacob's account of his master's English journey, we are almost incalculably indebted for details of English manners and customs, nowhere else, I believe, to be found. On the return home of the duke, Rathgeb's journal was published as an account of a "bathing-trip"—a stroke of humor so mirthful as to need an explanation. On the return voyage from England, the ship Sambson encountered a storm so furious that all gave themselves up for lost; and small wonder, when the captain, the pilot, and the sailors became so tired that they all threw themselves down on the deck in any corner they could find. Three times his Serene Highness and all the passengers sat up to their waists in water. Herein lies the joke of the title-page; for a day and a night the trip was one prolonged bath.

Amid the mass of details in this volume, there is one trifling item which may prove afresh that Shakespeare is always exactly right. On p. 24 *recto* (my copy is dated 1604, and is, I believe, the second edition) we read as follows:

> At midday your Highness had dinner at a pleasant little village called Winsello [Winslow], and by night at Bethore [Bedford?]. Between these two places there is chiefly a sandy plain or heath where are many wild rabbits, not confined in gardens, but running free, so that fifty or sixty of all colours are seen together, but run quickly into their burrows. In such regions they catch wild-cats, polecats, or birds of prey which harm the rabbits. All these, after having been skinned, are *hung on a gallows, as they do wolves.*

Here we have an authority for Gratiano's address to Shylock:

> Thy currish spirit
> Gouern'd a Wolfe, who hang'd for humane slaughter,
> Euen from the gallowes did his fell soule fleet.
> iv, 4, 141.

In Shakespeare's time, then, wolves were hanged on a gallows. We infer from the faithful Jacob that the wolves were hanged for killing rabbits; if this be so, *a fortiori*, would they be hanged for "human slaughter," which is Gratiano's specific crime.

I have just called Jacob "faithful"; I varied the adjective from "honest," which I used a few lines above. Can I call him *honest* when, on p. 54 *recto*, in his summary of the game in England, he says,

*For our knowledge of this portion of his life, we are indebted to the truly admirable volume by W. B. Rye, "England as Seen by Foreigners," London, 1865, p. lv.

"There are no black wild-boars, *nor any wolves*, on this island." For a second time Rathgeb confirms Shakespeare: "There is nothing but roguery to be found in villanous man!"

MORE NOTES ON SHAKESPEARE.

TO THE EDITOR OF THE NATION:

SIR: I hope that the following excerpts from the note-book of a young student of Shakespeare may prove of interest to Dr. W. J. Rolfe and to other Shakespeare scholars who may have read his letter in your issue of February 18, p. 163. I touch upon only two of the points which he raises.

In the passage from "Twelfth Night" (iii, 1, 21):

Clown. . . . But, indeed, words are very rascals, since bonds disgraced them.
Violet. Thy reason, man?
Clown. Troth, sir, I can yield you none without words; and words are grown so false, I am loath to prove reason with them.

I favor the meaning "contract" for the word "bond," and would compare "Philaster," v, 3, where Dion includes in his curses the following:

May they know no language but that gibberish they prattle to their parcels, unless it be the goatish Latin they write in their bonds; and may they write that false, and lose their debts.

As for the old-time practice of hanging animals which had offended against the law, I can cite sundry passages from Shakespeare and his contemporary dramatists to confirm it. In particular it would appear that sheep-stealing was a crime punishable by hanging, and that the punishment was meted out to man and beast alike. Note in "Much Ado About Nothing" (ii, 3, 79):

Benedict. An he had been a dog that should have howled thus, they would have hanged him.

and *Ibid* (iii, 3, 60):

Verges. You have been always called a merciful man, partner.
Dogberry. Truly; I would not hang a dog by my will, much more a man who hath any honesty in him.

Compare furthermore Ben Jonson's "Every Man Out of His Humour" (iii, 1):

Puntarvolo. If thou losest my dog, thou shalt die a dog's death; I will hang thee.

and "Philaster" (iv, 1):

Dion. Oh, he's a precious lime-hound; turn him loose upon the pursuit of a lady, and if he lose her, hang him up i' th' slip.

and "Rule a Wife and Have a Wife" (v, 4):

Perez. How like a sheepbiting rogue, taken i' the manner,
And ready for the halter, dost thou look now!
Thou hast a hanging look, thou scurvy thing!

LOUIS N. FEIPEL.

Annapolis, Md., February 20.

"WIT, WHITHER WILT?"

TO THE EDITOR OF THE NATION:

SIR: With regard to Dr. W. J. Rolfe's comment in your issue of February 18 on the phrase, "Wit, whither wilt?" ("As You Like It" iv, i, 168), I would call attention to the fact that "The Shirburn Ballads" (Clarendon Press, 1907), pp. 268f., contains a complete ballad beginning:

Wit, whither wilt thow? woe is mee!
alwayes musinge, fye for shame!
Sorrye I am the same to see,
that love hath brough[t] the out of frame—
Out of frame and temper, too;
This can Love and fancye doo!
Out of frame and temper, too;
This can love and fancy doo!

In my review of the book for the *Nation* (April 25, 1907, p. 385), I remarked on the confirmation of Malone's impression which this ballad gives.

The application of the phrase in the song whose first two lines (in slightly varying forms) Robert Greene and Thomas Adams have preserved appears to have been different from that which we find in the Shirburn ballad. To be sure, the fragment is too brief to make this certain. It is possible, however, that the phrase having become popular as the beginning of one ballad was afterwards used for others. J. DOUGLAS BRUCE.

University of Tennessee, Knoxville, February 20.

SCHOOLGIRLS IN SHAKESPEARE.

TO THE EDITOR OF THE NATION:

SIR: Dr. W. J. Rolfe, in a letter in your issue of February 18, p. 163, raises a question as to Shakespeare's allusions to schoolgirls, in "A Midsummer Night's Dream" and "Measure for Measure." May it not be that Shakespeare did not have in mind English customs, but rather certain passages in early or classical authors whom he had read either in the original or in translation? For example, in Martial's epigrams, ix, 68, we read:

Quid tibi nobiscum est, ludi scelerate magister,
Invisum pueris virginibusque caput?

In the Metamorphoses of Apuleius, ix, occurs this passage:

Ad haec ultima pistoris illa uxor, subjiciens, Quidni? inquit, novi diligenter, Areten meam condiscipulam memoras.

The "Golden Ass" of Apuleius had been translated into English by W. Adlington as early as 1566. JOSEPH DE PEROTT.

Worcester, Mass., February 22.

RIGHTS AND LEFTS IN SLIPPERS.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* of February 18, Dr. W. J. Rolfe speaks of the eighteenth century editors being mystified by the reference in "King John" to the tailor,

Standing on slippers which his nimble haste
Had falsely thrust upon contrary feet.

That nearsighted Dr. Johnson should say "Shakespeare seems to have confounded his shoes with his gloves" is comprehensible; but that men with ordinary vision should "suggest that ancient slippers might possibly be very different from modern ones" or "quote from writers between 1580 and 1797 to prove that shoes in former times were often rights and lefts" seems passing strange, when the marble effigies on old tombs in the cathedrals so often have such shoes. It first struck my eye in one of the northern cathedrals: I noticed that the fashion was not universal, but would vary with the towns, on tombs of the same age.

Cincinnati, February 21.

THE ANCESTRY OF CHARLEMAGNE.

TO THE EDITOR OF THE NATION:

SIR: Your correspondent, "A. R. W.," asks, in your issue of December 24 last, what grounds I have for the "amazing" assertion that Charlemagne's descent, on the paternal side, was Latin. I am happy to oblige him.

The family of Ferreolus was a great family of Senatorial rank in Narbonnese Gaul, under the Roman Empire, and the Ferreolus of the fifth century was established at Narbonne itself. His son, Ansbert, was attached to the palace (in what capacity we are not told), and was the father of Arnoald, whose son was the St. Arnulph Bishop of Metz, contemporary of St. Augustine, the Apostle of England, and of Gregory the Great and one of the chief figures of the end of the sixth century in Gaul. The descent of the Carolingians from St. Arnulph is common knowledge—his son, Ansegius, was the father of Pepin of Heristal, whose son, Charles Martel, was the father of Pepin the Short, and the grandfather of Charlemagne. It is all quite clear and simple. Charlemagne was the representative in the eighth century of the old Roman noble family of Ferreolus, just as Lord Salisbury was the representative in the nineteenth century of the old Tudor noble family of Cecil.

For St. Arnulph's descent let me refer "A. R. W." to "Vita Clodulfi," a Carolingian document incorporated in the acts of the Benedictine order (II. p. 1044), and published, I think, by Pertz (who comments on it), and certainly by the Bollandists, under the date of June 8. This gives us Arnoald as the father of Arnulph and Ansbert as the father of Arnoald, and is confirmed by manuscripts, Paris 5294, and manuscripts St. Germain 440. The "Vita Firmini" which "A. R. W." will find in the Bollandists under October (Vol. V., p. 640) gives us Ferreolus as the father of Ansbert and his brothers. There are, of course, many confirmatory documents, such as the three manuscripts, Carolingian genealogies of London, Munich, and Vienna, the "Vita Ferreoli" (Boll: supplement to January 4), the "Vita S. Goerici" (Boll: Sept. 19), manuscripts, Paris, 8303, the Metrical Genealogy, published by Pertz (Scriptores: II., p. 308-312), etc., etc.; all of which reinforce the filiation of the family.

I can quite understand the "amazement" of "A. R. W." In Protestant societies the long transition of the empire from a Pagan to a Catholic polity must be very bewildering, and I look back myself with some amusement to the highly imaginative theory of "Period I," which I was taught at Oxford, and at the time devoutly believed: anyhow, Charlemagne's paternal stock was civilized and not barbaric. It is a small point, but quite fixed by this time.

H. BELLOC.

Kings Land, Shipley, Horsham, England, January 17.

MEMORIAL TO "OUIDA."

TO THE EDITOR OF THE NATION:

SIR: It is desired to bring to more general notice in this country the project of the memorial to "Ouida" (Louise de la Ramée) in her birthplace, Bury St. Edmunds, Suffolk, England. Funds have been collected in Italy, her home for many

years, and in England, and contributions have generously flowed in, but about $500 is still lacking to the sum required for the proposed memorial, and it is felt that opportunity should be given to those in the United States, who may be interested, to lend their aid. Surely there must be among us many who, even failing in admiration for Ouida as a writer of fiction, may still feel drawn toward her as an ever active worker in the cause of animal protection, and may care to aid in perpetuating the memory of the lover of horses and dogs in the appropriate manner proposed; namely, the erection of a drinking fountain by the roadside for the benefit of all passing beasts. It is to be placed at a much-frequented cross-roads outside the town, and near the cottage where Ouida was born. A number of prominent English men and women have been active in this project; Lord Curzon has written the inscription. Any one who may feel disposed to help the work, by ever so small a sum, may send contributions direct to the chairman of the Ouida Memorial Committee, G. Milner-Gibson-Cullum, F. S. A., Hardwick House, Bury St. Edmunds, Suffolk, England; or, for convenience, to the undersigned, who will forward remittances to their destination.

(Miss) Katherine Renée Cortazzo.

Meadville, Pa., February 23.

THE TROUBLE WITH THE PH.D.

To the Editor of The Nation:

Sir: The editorial, "The Ph.D. Again," in your issue of February 11, provokes a frank expression from one of the group you were discussing. I may say that I am a "doctor" of some fifteen years' standing of an institution at the very front of the few that you place in the first rank of the universities in this country conferring that degree. From my experience as a student, from my work as teacher since then, and from my continued observation of my comrades, I think you are justified in using such terms as "disrepute," "scandalous," "grotesquely incompetent," when you are describing the different conditions. Even more heartily do I agree with you in your condemnation of one-half of our theses as valueless. With the aid of my perspective judgment on my own, I am inclined to put the ban as high as 90 per cent.

I cannot see any hope from the modifications of the course that you mention as having been proposed. I seriously doubt whether the writing of good English can be taught, but if so, it can be done only by actual authors who have command of style. Very few such are in the educational field. They find much better compensation or more congenial employment in connection with periodicals or publishing houses. Another degree, the "non-research," would complicate the case without any compensating advantages that I can see. It would be looked on as either above or below the present "doctorate" and hence would be productive of jealousy, envy, antagonism, and with our tendency to extremes, the superior one would soon become the goal for all. One would absorb the distinguishing features of the other, and leave it as formless as the A.M. is now, the final result being a longer course. Nor, to my mind, would much good come from compulsory work in the educational department. Generally, so far as I know, the instructors in pedagogy so-called have not served a solid probation as genuine teachers, but have stepped from the student's chair to the lecturer's stand with perhaps an intermission of two or three years only. The suggested remedies, as it appears to me, would only add to the bottom cause of all the trouble.

The fundamental fault, in my opinion, is very plain, that the universities do not shape means to ends. As you quote from the Chicago University circular, the bulk of us are teachers—in college and secondary school. We should get guidance for that career, but we do not. We cannot until a different standard is adopted for filling the university chairs. The most of the staff have all trod the same route, that of graduation as "doctor," appointment to the lower grade, thence gradual promotion. They have virtually never taught, as lecturing does not come under that category. They can direct only over the same trail they have followed, and consequently all of us are instructed with the unconscious expectation of the same destiny. So far removed is this training from the actualities of life outside, that we naturally delude ourselves into fancying that our poor dull monographs are of worth, or we blunder when we have to take charge of a classroom. As I look behind and around me at the teaching of history, my own subject, in our universities, it seems an unreal atmosphere in which are constantly exchanged such terms as "manuscripts," "documents," "sources," "primary data," "judicial attitude," "exhaustive investigation," "original material," "scientific history," "addition to knowledge," etc., as if we are to ignore human nature when we study the past. If some of us emerge from this fantastic wonderland with our heels in the air and our heads downward, are we to blame? I must confess that I had visions of extensive research into dim corners of history and the production of volumes that should "widen the realms of the known." My ambition kept me at the task, and I have written enough to get my name in several of the most dignified biographical dictionaries, but my comfortable salary, furnishing food and raiment and the means for summer trips in this country and abroad, has come from daily teaching. For this useful vocation, which is besides both remunerative and enjoyable, I got substantially no preparation from my preceptors. On the other hand, I believe I should have failed instead of succeeded if I had not had some helpful experience before going to the university. Among those who were not blessed with this balance wheel, I am never surprised to learn of reckless experimentation with immature pupils.

I cannot credit my position to my Ph.D., as the most of my colleagues never went beyond the A.B., thus saving themselves three or four years of hard work, and the attendant expense. But in spite of the loss of time and money for me, I am glad I won the degree, to prove to myself the hollowness of it in many instances if nothing more. Besides, unpractical as the environment was I got a breadth and firmness of grasp that I could have hardly obtained otherwise. A general course of reading and study would not impart the fibre and tendon that the striving for a definite goal would. If while leading me along this clear-cut road, my instructors had been able, only incidentally, to show me the main direction and difficulties of the path I was already headed for, I could have progressed in months what it took me years to do. I would not have them give up their high ideals of research, but pay more attention to fitting their students for the life ahead, not in the rigid drill fashion of the normal school but in the comprehensive manner of a great scholar who preserves the attitude of a teacher of embryo teachers. I would not have the structure of the course changed much but I would have the character of the men in charge of it changed radically.

H. D.

February 24.

THE SITE OF MEROE.

To the Editor of The Nation:

Sir: In the issue of the *Nation* for February 18, p. 179, I find an announcement that Prof. A. H. Sayce of Oxford "has discovered the true site of the ancient city of Meroe"; further that "the ancient remains *found and identified* [italics mine] by Professor Sayce are about three miles from Kabushia Station, near Shendi, which is half-way between Khartum and Atbara"; and finally, that "the *identification* [italics mine] was made possible by the discovery of the great wall of inner defences, and the remains of the temple of Amon mentioned by Strabo, etc."

In the autumn of 1906 the University of Chicago Egyptian Expedition made a complete and exhaustive epigraphic survey of the monuments surviving at the place now reported to have been "discovered" and "identified" by Professor Sayce. In my report on that work ("The Monuments of Sudanese Nubia," Chicago, 1908, pp. 5-14) at Meroe, the identification of the place as Meroe is accepted as an established fact long known. The energetic Frenchman Cailliaud, who visited the city on his Nile voyage (1819-1822), at once recognized it as Meroe (see his "Voyage à Méroé," texte, II, pp. 146 ff.), and has left us a plan showing three temples (ibid, planches, II, 150), one of which is, of course, that seen by Professor Sayce, unless his be a *fourth* temple, discovered during our work there and mentioned in my report (p. 5). In 1844, Lepsius spent some time at the place, always recognizing it as Meroe (see his "Briefe aus Aegypten, Aethiopien und der Sinai-Halbinsel"); and its identity has never been questioned. Your correspondent is entirely in error, in stating that the ancient site of the city "had hitherto been placed near the temples of Naga. about twenty-five miles inland from the Nile."

It must be supposed that in transmitting the account to or from London, some newspaper correspondent has misunderstood Professor Sayce's report of his visit at Meroe.

James Henry Breasted.

University of Chicago, February 20.

[Our correspondent informs us that the note was based on a Reuter dispatch.—Ed. Nation.]

THE BASIS OF FAITH.

To the Editor of The Nation:

Sir: May I say a few words upon the subject of your article of January 28 entitled "No Refuge but in Truth"? Possibly

a somewhat different statement of the theological problem will help to illustrate the position of at least some of those whom you say you "urge as our spiritual guides to face the truth boldly," and who have at least tried to think out to an issue the deep problems of life.

To such there is no more question about the Bible. The dogma of canonicity, as an *à priori* assumption, is gone forever. Whatever conclusion we may come to as to the position of the Bible in the world's literature, it will be reached as the result of induction and accepted as a corollary of our faith. But to the inquirer the books of the Old and New Testaments stand absolutely on a par with any other historic document, to be used under the canons of historic research in the judgment of the events which they narrate, more particularly those told in the Gospels. Even Bishop Lightfoot, when he published his monumental work on the Apostolic Fathers, tacitly recognized that for the student of Christianity the line of the canon had banished.

What principles do we then contend for? I assume, we contend for two truths, absolutely necessary to life: the belief in a loving God, and the belief in immortality. It will help to clarify the situation if we realize that these are the essential truths for which religion stands; that without these "the Christian ideal of character" will not only be "seriously challenged," but will be lost to mankind. This is, of course, denied by some, and here is our first crux.

Thomas Huxley was one of those who repudiated this dependence of morality upon religion. Just after he had lost his child, he wrote to Charles Kingsley that when at the funeral the officiating clergyman read the sentence, "What advantageth it me if the dead rise not? Let us eat and drink; for to-morrow we die," he could have laughed out. It seemed to him preposterous that the dignity of man's life should rest upon his immortality. Eighteen centuries separate St. Paul from Huxley. The former would to-day be classed as ignorant, he knew nothing of science; Huxley stood at the summit of modern intellectual and scientific culture. Yet, not all our admiration for the achievements of modern science can efface the conviction that the apostle saw deeper into the realities of life than the modern scientist. We may safely leave our case for the dependence of morality upon religious belief where St. Paul left it. Were it possible that the belief in God and in a future life should utterly die out among men, what would result? Morality would gradually lose its power. Its place would be taken by cunning, craft, subtlety as guiding principles of life, those qualities which give the reins to selfishness, but in a manner preserve appearances. And the end—who can tell what stage above the truths society would find its new equilibrium?

The belief in a good God and in a future life are not distinctively Christian articles of faith. What, then, does Christianity claim as its own? As I have said, it is a question of certain events alleged to have occurred. These events constitute a revelation. Christianity is a revealed religion, if it is anything. Its revelation is not a book or code of laws, but a Person. In behalf of this Person an extraordinary claim is made; He made it Himself. This claim presents itself to our reason for its justification. Into the question enter various elements, among which, I make bold to say, miracle has both a legitimate and necessary place. The question, however, is a very personal one, as it touches the most delicate springs of character. We stand here upon sacred ground, and it is unnecessary in this place to pursue the inquiry further. It is rather the bearing of revealed religion upon the truths of a loving God and immortality that we wish here to keep in mind. The philosopher may reason himself into a belief in God and immortality, but to most of us weak mortals the longing for faith, the desire to believe in the reality of the soul's aspirations, which Nature so often seems to mock at, finds its satisfaction only from One who spoke with authority. Robert Browning's Rabbi Ben Ezra expresses the difference in his matchless way:

> So the all-great were the all-loving, too.

I am writing under the shadow of perhaps the greatest calamity the world has ever known. A nurse who took care of the injured in Naples tells me that a man who was brought to them wounded, all of whose relations had been killed, refused to receive comfort. They might save their pains, he told them; as soon as he got out of the hospital he would blow his brains out. Life was too terrible; to believe in a loving God, when such things happened, was impossible. Have not many felt the distressing question calling for an answer? And have not many also thankfully turned from the dark mystery to One who trod this earth in bygone years, who spake as never man spake, the doctrine of whose Divinity fashions itself into two words, full of comfort: He knew.

What animates us, then, is the same ideal that has animated prophets and seers since the world began. The struggle for Christianity is the struggle for the spirituality of life against the allied forces of materialism and superstition. That in this struggle the principle "No refuge but in truth" should prevail will seem to most of us a truism hardly worth wasting many words over.

Rome, February 11.

TRAINING FOR CONSULAR SERVICE.

To the Editor of The Nation:

Sir: At the suggestion of the Industrial Club of Chicago, Frank O. Lowden of Illinois, a member of the House Committee on Foreign Affairs, has introduced a bill to provide for a college, under government auspices, for the education of future consuls. Provision is made for a course of four years, in modern languages, political economy, law, geography, and other branches suitable for aspirants to the service, who are to be nominated by Congressmen as are cadets at the military and naval colleges. It is said that such a measure meets with the approval of Mr. Root. I suggest a scheme which will accomplish the same result, and at infinitely less expense, by simply giving direction to the use of means already in existence. In this country we waste far too much money in the cause of education upon brick and mortar and in the duplication of intellectual effort. It would be an easy matter to make it the duty of an officer of the Department of State to study the lists of courses offered by our colleges and universities, to select in the offering of each institution such courses as would afford a proper training for the consular service, and to advise students of such courses. A bulletin could be issued describing the work offered in various colleges, and the officer I suggest could make periodical visits to seats of learning and give lectures to students, who are always keen to learn of possible occupations; the colleges would readily welcome such public lectures and invite the lecturer to speak before courses which give training suited to the service. His advice might profitably be printed in the catalogue or the announcement of courses, and be spread by freshman advisers. He could keep his eye on promising students, who at graduation might be offered situations or invited to take examinations looking to the consular service.

Such an officer should be a man of great intelligence, knowledge, and *savoir faire*, but he could accomplish by his coöperation with the universities a large service to the government and the business interests of the country, and this at a trifling expense. His work might take a far wider scope than the consular service, so that, as in England, many of the picked men of the universities might be called to government occupations. He could select for the consular service, at any rate, a body of picked youth far superior to that to be gathered in a college where the candidates were selected by the random methods likely to be employed by Congressmen, who would naturally look on the choice as a bit of welcome or unwelcome patronage. The men he would choose would be proved successes among all our academic youth; their education would cost the government nothing, whereas the students in a national college would probably get their training at the expense of the state, and this cost would be for both the successful and unsuccessful.

Such a preparation as will make useful consular officers is already offered by some of our universities, and could readily be arranged for by others. Harvard, for instance, could easily make training for the service a branch of her new School of Business Administration.

There is no need of special legislation to provide for such an office. Section 1753 of the Revised Statutes of the United States and executive orders of President Roosevelt make ample provision. After once the work of proper coördination and coöperation had been settled the office might run itself.

W. F. Harris.

Harvard University, February 19.

AMERICAN FREE TRADE LEAGUE.

To the Editor of The Nation:

Sir: Every day some one dolefully asks why it is that at hearings upon tariff revision many speak in support of protection; scarcely any one in opposition. The question is not hard to answer. Although those who desire high protective duties are the few, yet the interest of each is direct; although those who are opposed are the many, yet the interest of each is indirect, if not less real. But in the aggregate the

benefits to be gained from free trade far outweigh the benefits that come from protection. In order that these aggregate interests may be represented, organized action is essential. It is only through organization that the special interests of the few can ever be made to give way to the larger interests of the many; and against organized action they must give way.

The American Free Trade League is making an earnest effort to fill the need of such an organization. Will you assist, by the publication of this letter, in calling to the attention of as many of your readers as believe in the principles of free trade the fact that the league exists; and in urging them by becoming members to increase its strength, to the end that future tariff hearings may not be *ex parte*, and that statistics cited and arguments presented may not be sent broadcast over the United States without a question raised as to their accuracy and worth?

CHARLES F. LOVEJOY.
Acting Secretary, American Free Trade League.

No.6 Beacon Street, Boston, Mass., February 18.

LINCOLN AND THE NEGRO.

TO THE EDITOR OF THE NATION:

SIR: The following quotation from your editorial article of February 18, "The Negro Problem in Foreign Eyes," in the opinion of some of your readers does injustice to Lincoln, whose views on most subjects were much more sane than those of his followers:

> For Lincoln to see those same poor black creatures who swarmed about him when he reached Richmond after its fall, whose pathetic, hysterical joy over their savior from slavery he curbed with such wise and kindly advice—to see these fellow-citizens now set apart in trains, street cars, and all public places, by an iron caste, would appall the greatest apostle of democracy.

In his opening speech at the fourth joint debate, Charleston, Ill., in 1858, Lincoln says:

> I am not, nor ever have been, in favor of bringing about in any way the social and political equality of the white and black races—that I am not, nor ever have been, in favor of making voters or jurors of negroes, nor of qualifying them to hold office, nor to intermarry with white people; and I will say in addition to this that there is a physical difference between the white and black races which I believe will forever forbid the two races living together on terms of social and political equality. And inasmuch as they cannot so live, while they do remain together there must be the position of superior and inferior, and I as much as any other man am in favor of having the superior position assigned to the white race.

After reading this clearly expressed opinion—which one feels sure is shared by the great majority of us in all parts of the country—one doubts greatly if Lincoln would be "appalled" by the sights so feelingly described in your editorial.

The extreme ante-bellum views of a few Southerners, and the negro worship which has attached to the *Nation* the nickname of the "color blind" journal, are equally obnoxious to the settlement of the momentous race problem which faces this country.

L. M. PASSANO.

Boston, February 23.

Notes.

Lawrence Lewis has made a study of the advertising announcements in the original *Spectator*, which was one of the earliest magazines to carry them, and has written a book on the subject, which will be published this spring by Houghton Mifflin Co., under the title of "The Advertisements of the Spectator; being a study of the Literature, History, and Manners of Queen Anne's England as they are reflected therein, as well as an Illustration of the Origins of the Art of Advertising, with an Appendix of representative Advertisements now for the first time reprinted." Prof. George L. Kittredge furnishes an introduction.

G. P. Putnam's Sons announce a volume of essays by Prof. Guglielmo Ferrero, under the title of "Characters and Events of Roman History." They are the lectures recently given by Professor Ferrero at the Lowell Institute and elsewhere. From the same publishers are to come at an early date "The Negro Problem—Abraham Lincoln's Solution," by W. P. Pickett; "What Have the Greeks Done for Civilization," by Prof. J. P. Mahaffy, and the "Memoirs of Baron Frénilly.

Kipling's new book, "With the Night Mail," to be published soon by Doubleday, Page & Co., has for sub-title, "A story of 2000 A. D., together with extracts from the contemporary magazine in which it appeared." The main story tells of the aerial trip in postal packet, "162" from London to Quebec in one night. The accessories are advertisements of airships, rules of the air, and other such matter from a contemporary magazine.

Two interesting volumes of memoirs are promised by John Lane Co.: "The Last Journals of Horace Walpole," edited by A. F. Steuart, and "Maria Edgeworth and Her Circle in the Days of Bonaparte and Bourbon," by Constance Hill, who has written so entertainingly of Fanny Burney's circle.

Walter G. Travis is revising his book on "Practical Golf," and Harper & Bros. promise the new edition in time for the spring revival of the game.

A sixth series of "Shelburne Essays," by Paul E. More, comes from G. P. Putnam's Sons. In this volume there is a departure from the earlier issues, in so far as the essays, as shown by the sub-title, "Studies of Religious Dualism," are connected in theme, and in fact form the links of a single argument. The subjects are: The Forest Philosophy of India, The Bhagavad Gîtâ, St. Augustine, Pascal, Sir Thomas Browne, Bunyan, Rousseau, Socrates, The Apology, Plato.

A "Vest-Pocket Guide to Paris," compiled by Leonard Williams, is published by Doubleday, Page & Co. This little volume, only 3½ inches by 2¾, can be carried about without inconvenience and consulted without conspicuousness. The map is in sections arranged on successive pages. The ordinary sightseer will in this small compass find all that he needs.

In "Some Southern Questions" (G. P. Putnam's Sons), William Alexander MacCorkle, late Governor of West Virginia, has brought together six public addresses on the race question, the elective franchise, Southern industrial development, and the attitude of Southern thought to the conditions and tendencies of the times. The chief impression made by the book is that whenever Gov. MacCorkle speaks he gives his audience a display of the pyrotechnic oratory for which the South was once famous. It suggests the sparkling gush of a Roman candle, bombs of rhetoric popping forth in quick succession amid a haze of glowing diction. Nearly every page presents an example. We are asked to contemplate "a broken and impaired Constitution, which has unloosed from its Pandora's box the foul vultures of coming woe, which are always ready to flap their wings above the dying body of a free people." Nevertheless, the South is all right:

> The will-o'-the-wisp and the glow-worm light our flag at night under the palms of Florida, and by day its folds are touched by the sweet airs ladened with the incense of the orange and magnolia.

Still, there may be trouble ahead. "Along the shores of the Pacific will boil with fervid heat the great caldron of the world's selfishness and greed." Therefore, it behooves us to be careful.

> In this solemn hour, when you are booted and spurred and ready to face this crisis in your country's life and this epoch in the world's history, I implore you to cherish in your inmost heart the true ideals of the republic.

Fortunately, we are well equipped for any ordeal, for "here are the most exalted civilization, the purest Christianity, the most advanced science, the most absolute civil freedom which the world ever saw." Indeed, it is well for the world that this should be so, for "under the earth-hunger of to-day justice among the nations can only relume her torch from the shrine of virtue glowing in the heart of the great Republic of the West." Incidentally it appears that Gov. MacCorkle favors "broad political liberty for the negro," while no one can "adhere to absolute social and racial separation" more earnestly than he does. He thinks a large navy desirable and he believes that "Manila can easily become, and will become, the distributing centre of the Eastern World." But he thinks the powers which the Federal government has assumed in the Interstate Commerce act are extremely dangerous. Although Gov. MacCorkle's oratorical style may belong to a past age, his political views are decidedly modern. His account of them exhibits him as a Southern imperialist of the school of Stephen B. Elkins.

"Modern Constitutions" (University of Chicago Press) is a collection of the fundamental laws of twenty-two countries, with historical and bibliographical notes, by Walter Fairleigh Dodd. The work is well done and it supplies conveniences for which students of political institutions will be grateful. In addition to the constitutions of European countries and those of the Federal governments established in the British Empire, the work includes those of Mexico and three South American countries. Japan is the only representative of the Orient, but current events indicate that it will not stand alone in future editions of this work. It is safe to say that the present century will witness a great expansion of the area of constitutional law.

A second edition has been issued of Prof. Frank M. Anderson's "Constitutions and

other Select Documents Illustrative of the History of France" (Minneapolis: The H. W. Wilson Co.). The work covers the period 1789-1907, and in view of the influence which France has had upon the social and political reconstruction of Europe during the past century, it may be fairly regarded as a key to modern history. The new matter in this edition has been judiciously selected. It includes important documents relating to the recent separation of church and state in France.

"India through the Ages" (E. P. Dutton & Co.), by Flora Annie Steel, is a picturesque sketch of the history of the country from the earliest times to the Great Mutiny. It has this attraction that the author, long a resident in the land, is thoroughly imbued with its spirit. Evidently she is also familiar with the early literature of India. While the book is not easy reading—so much is compressed into a single small volume—it will be to many a revelation of ages and people full of interest and romance. The numerous stories of chivalrous and patriotic deeds with which the narrative is lightened bring out vividly the personality of Indian men and women of past days worthy to rank with the world's heroes. Babar, the founder of the Mogul Empire, for instance, who was poet, painter, musician, astronomer, who knew "the names and habits of every animal, bird and beast," who left to posterity an autobiography of himself, his thoughts, his acts, his failures, his successes, of bigh value as an historical record, and who at the same time was a great warrior when only in his teens—where can his parallel be found in classic or modern history? The chief interest of the history lies naturally in the first two of the three parts into which the work is divided, the ancient and middle ages; the account of the third or modern age is disappointing. It is little else than a statement of facts in which emphasis is laid more upon the mistakes of the English governors-general than upon the good they accomplished. But it affords abundant evidence that the Britisb rule brought peace to a land which had been for centuries desolated by wars and massacres. Help in tracing tbe course of the events narrated is to be found in the seven maps of the country at different periods from 231 B. C. to the present time.

"Daybreak in Turkey" (Boston: The Pilgrim Press), by James L. Barton, D.D., is an eminently timely and readable statement of the various causes which have brought about the present conditions in the Ottoman Empire. There is a personal touch throughout which adds much to its interest; for the writer has been engaged in missionary work in Turkey, and for the last fourteen years as foreign secretary of the American Board has been in constant communication with intelligent men, natives and foreigners, living in nearly every part of the land. He begins with a brief description of the country, its government, the different races which inhabit it, and their relations to each other. Then follows an account of the work of the American missionaries, the first of whom, Pliny Fisk and Levi Parsons, landed in Smyrna in 1820. They were instructed to keep ever in mind "the two grand inquiries": "What good can be done?" and "By what means?" And the story shows how intelligently and successfully these inquiries have been answered by these men and their successors. To those who think that the work of the foreign missionary is simply to found an American Protestant church among people utterly unfitted for such an institution, it will come as a revelation to learn that almost from the very beginning the single aim of the men and women sent out by this society has been the moral and intellectual uplift of Turk, Kurd, and Armenian, mainly by educational means. The concluding chapters are upon the diplomatic relations of Turkey with other countries, the standing of missionaries, American rigbts, general political conditions, and some of the noteworthy incidents connected with the granting of the constitution. While we recognize the necessity of giving scant treatment to many subjects in a volume of less than 300 pages, we are surprised that some of the most important features of the Macedonian question should be ignored and that apparently there is no mention of Servia and the Panslavic movement. In the account of the Sultan there is no reference to the fact that a little band of servitors in the palace exercise an influence over Abdul Hamid greater than that of his ministers. Ten illustrations add to the attractiveness of the book, but its value would have been increased by a map giving the different missionary stations and principal educational institutions as well as tbe political divisions.

"A Short History of Scotland," by P. Hume Brown (Edinburgh: Oliver & Boyd), is a convenient and readable summary of Professor Brown's larger work in three volumes. This abridgment is obviously intended for younger students—preëminently a narrative account told in the clearest and simplest language, copiously illustrated, and attractively put together. Like everything else that has proceeded from the pen of the Historiographer Royal of Scotland, it is a model of accuracy and sanity. Some readers may take exception to it on the score of proportion, grudge the space devoted to mediæval battles, and to the multitude of familiar though unsubstantiated stories and legends in which Scottish history abounds, and wish instead for a fuller account of the development of national institutions. Others, turning to smaller points, may wonder why the three or four pages allotted to Flodden Field omit all reference to the movement which really made the battle decisive, the bold march of Surrey to the North on the eve of the fight, which put the English army between the Scots and their homes. But for our own part, we are not disposed to question the author's judgment in matters of this sort. He not only knows his Scottish history, but also the needs and aspirations of its younger students far better than most of his critics; and we cannot forbear to add a personal expression of opinion that the tendency to return to the "drum and trumpet" style of history, at least in the schools, which characterizes this and other very recent works, is unquestionably good, in view of the excesses of the modern craze for the study of constitutional questions and "sources." Prof. Hume Brown's book will probably not find many readers in this country, as those who are interested in Scottish history at all are qualified to study it in works of a more advanced character, but we do not hesitate to predict for this admirable manual a long and successful life in Great Britain.

Neo-scholasticism, after fifteen years of rapid progress on the Continent, has at last gathered power enough in England to get its "Principles of Logic" written there by George Hayward Joyce, S. J. (Longmans, Green, & Co.). A generation which has forgotten Aristotle and Thomas Aquinas will thumb with dumb wonder tbis book, which is the thirteenth century speaking, with its own grammar, the words of the twentieth. It accepts as its starting point the scholastic philosophy and its ecclesiastical factors, God, the world, and the human soul; and, while presenting the traditional logic of this *Weltanschauung*, it gives a running criticism of its enemies from Descartes to the Oxford humanists of this day hour. Of the two parts of tbe work, the first lies beyond praise and censure, being a slightly modernized, dogmatic restatement of the orthodox "Logic of Tbought." The second part, however, has certain attractions for the student of logic, and perhaps also for the critic of human nature. Here is no longer simple scholasticism, but neo-scholasticism, the tardy scion of Doctor Angelicus wrestling with science of the revolt, striving to make its every utterance pendent to Roman metaphysics, and yet hoping to keep in running order its engines of research. Tbe Applied Logic that comes of this cannot be briefly described; but it may be imagined from two fundamental positions which the neo-scholastic takes. Touching the open-mindedness which the investigator must preserve, Father Joyce puts some religious and scientific beliefs beyond *liability* of correction. "When once absolute certainty has been attained," he says, "then the supposition of contradictory evidence becomes an absurdity." It would be cruel to ask Father Joyce bow he discovers anything to be absolutely certain; for to that he could make but one answer, without an appeal to faith, and that answer is: "By proving all supposedly contradictory evidence absurd." Unfortunately, the writer does not cite a single scientific fact confirming his view. Then there is the second thesis, that no rules can be laid down for the search after truth, all so-called rules being mere common-sense. The early Cartesians reproached the scholastics for dismissing experimental method thus curtly; but Father Joyce has not changed or improved upon his Tbomist predecessors' lame defence, which was that, in an infinitely complex universe, nobody can reckon with all contingencies by formula. Writing for beginners, Father Joyce is clear, simple, and lavish with illustrations. The student prejudiced against mediæval Latin cannot do better than turn to this book for an exposition of the subtlest, most closely knit, most treacherous of Occidental philosophies. And, if he will keep an eye open for sophistries, he will learn much about the art of clear thinking that is not to be picked up in the schools of tbe renaissance.

The usual "helps" of teachers' Bibles contain a good deal of obsolete material, and, owing to the numerous subdivisions, information is often hard to find by those most in need of it. It was a happy thought of the Rev. Jesse Lyman Hurlbut to combine in his "Handy Bible Encyclopædia"

(Philadelphia: John C. Winston Company), under one alphabetical arrangement, both concordance and subject dictionary, biographical and geographical material, a dictionary of Biblical antiquities and customs, descriptions of the books of the Bible, and translations and versions. The result is a convenient reference volume, compact in compass, in which the general reader may find readily the location of an important verse, the various passages on a particular subject, or definition and description of an obscure phrase or topic. The work is designed for popular use, but will be found convenient by almost any Biblical student.

"The Illustrated Bible Dictionary," edited by the Rev. William C. Piercy (E. P. Dutton & Co.), is a cumbersome and heavy volume of nearly a thousand pages, covering the usual ground of dictionaries of the Bible, and treating a large number of titles briefly, with many illustrations. The space allotted to important subjects is altogether too meagre. The point of view is decidedly conservative, and scant courtesy is allowed to critical opinions now generally received.

The thirty-first issue of the standard annual reference book of Kürschner has been brought out by Dr. Heinrich Klenz, under the title "Kürschners deutscher Literatur-Kalender auf das Jahr 1909." It contains eight portraits of leading writers, and in its two thousand columns prints a wealth of the latest data concerning authors and their works. It brings down all the details to the first of last October.

The complete works of Wilhelm von Polenz, who at the time of his death was one of the most attractive literary figures in the ranks of Young Germany, and who gave evidence of his mature judgment in his last work, the remarkable volume on America, "Das Land der Zukunft," are being published in eight volumes by F. Fontane & Co., Berlin, with a preface by Prof. Adolf Bartels.

A selection from the letters of Schiller's wife, edited by Ludwig Geiger, is being published under the title "Charlotte von Schiller und ihre Freunde" (imported by G. E. Stechert & Co.).

Beginners in the Russian language and literature will be helped by the new addition to the series known as Sammlung Göschen, under the special title, "Russische Literatur: Auswahl moderner Prosa und Poesie mit ausführlichen Anmerkungen und Akzentbezeichnung," by Dr. Erich Boehme. The selections are mostly short extracts from Gorky and other modern writers. Included are two manifestoes of the Czar. The explanatory notes, in many cases including literal translations, are very copious.

The third volume of the "Geschichte des deutschen Buchhandels," written, like the second, by Dr. J. Goldfriedrich, tells the story of the book trade during the classical period of German literature, the period of reprinting (1766-1804). The period is personified by Philipp Erasmus Reich, the reorganizer of the Weidmannsche Buchhandlung in Leipzig, and the Vienna reprinter, Johann Thomas von Trattner. Other men of the period are Immanuel Breitkopf, the printer and type-founder, inventor of modern music printing, Friedrich Nicolai in Berlin, J. G. Cotta in Stuttgart, Goethe's and Schiller's publisher, and others whose names still live in the firms founded by them. The rejuvenation of the German literature, the growing reading habit, and the technical development of printing go hand in hand; literary almanacks and popular calendars abound; we see the beginnings of the cheap popular literature; the first encyclopædias are published, circulating libraries come in vogue as adjuncts to the bookstores.

In a well-condensed and entertaining work (Berlin: Karl Curtius), Joh. Fr. Wilhelm writes flatteringly of "Amerikanisches Geschäftsleben," discussing the American workman's world, the preparation of the American business man, American managers, their office and factory organization, methods of sale and business monopolies, the superiority claimed for American machinery, and the relation of trusts to socialism. To the author, "business" is the paramount idea with the majority of Americans, and Americans succeed in business partly because of their greater mobility and the extent to which they move freely from one end of the country to the other, and partly because their methods, for the most part, are superior. No other country, in its public day and evening schools, and its private "business colleges," offers such opportunities for youth to start in business in a practical way, and no other country accomplishes as much through almost perfect systems for dividing labor and economizing time and energy in both office and workshop.

While the Germans are felicitating themselves over the lucky agreement reached between Germany and France, the French continue their fun at the expense of Emperor William. "Le César Allemand devant les siens et devant ses alliés" is the title of an illustrated volume, just issued at Paris, containing a hundred cartoons, with French text, reproduced from German, Austrian, and Italian papers.

Under the title "H. Taine: Pages Choisies," Prof. Victor Giroud of Freiburg in Switzerland, the author of an "Essai sur Taine," which was crowned by the French Academy, is publishing a selection from the writings of Taine. The first part contains principally letters; the second, early writings from 1853-1864. The whole is to be completed in five volumes.

Among French books which treat of current literature, we may note a posthumous volume of Albert Sorel, "Notes et portraits" (Paris: Plon). It contains a lucid study of Maurice Barrès, among other contemporaries; the sober, judicious thought of the author may here be found without fatigue, in a way to inspire confidence in his long historical works, since he so well understood those younger than himself. Jules Bertaut publishes a sort of university extension course on another interesting side of contemporary literature, "La Littérature féminine d'aujourd'hui" (Annales politiques et littéraires). Alphonse Séché edits yet another anthology, "Les Muses françaises" (Paris: Louis-Michaud), entirely devoted to French women poets of this twentieth century—about a score of names, of whom the best known are Mesdames Daudet, Delarue-Mardrus, Lucie Félix-Faure-Goyau, Rosemonde Gérard (Rostand), F. Gregh, Gérard d'Houville (Henri de Regnier), Daniel Lesueur, Catulle-Mendès, (Comtesse) Mathieu de Noailles, H. Vacaresco, René Vivien. Those who find pleasure in literature in the making will like the rather expensive two volumes (15 francs, Blaizot), "Lettres de J. Barbey d'Aurevilly à Trébutien"; this predestined correspondent of geniuses is the Trébutien of Maurice and Eugénie de Guérin.

At the instance of the Commissioner of Education, President Hadley of Yale has investigated the facilities for advanced study and research in the offices of the Federal Government at Washington. His findings, just published as a bulletin of the Bureau of Education, clear much of the ground around the proposed national university. It is clear that, were all of Washington's twenty-six Federal libraries, together with all her museums and laboratories, put down on a campus and turned over to a faculty and students, there would be a fair equipment for such an institution. Advanced students have long been received in various bureaus and given every opportunity that does not infringe upon official work. But the undertakings of the Government must first be considered; and, whereas in 1901 there were accommodations for not more than 272 students, to-day less than 100 can be favored. The enormous increase of department activities under President Roosevelt has crowded the bureaus so that there is no bench, desk, or chair left for the learner. The bureaus cannot be transformed into colleges, unless Congress doubles their floor-space and equipment. Even if room were provided, two much more serious difficulties remain. President Hadley points out that the presence of students generally reduces the administrative efficiency of a bureau:

> The labor of student assistants is, as a rule, neither very efficient nor very easy to handle. An untrained man employed at $500 rarely does half as much work for his chief as the trained man at $1,000. The work of supervising two $500 men takes a great deal more of the time and strength of the higher official than the work of supervising a single $1,000 man.

Moreover, only the most advanced investigators can work more profitably in a bureau than in an ordinary graduate school:

> Certain bureaus are first-rate training places *for some men*. The student who has chosen his line of life, and has had his preliminary theoretical training, can often spend *his last year of study* with great advantage in immediate connection with the chiefs under whom he is going to serve; and if his promotion depends upon his success in doing the work they want, it will furnish a stimulus to him and a help to them. But where these conditions are absent—where the man's promotion does not depend upon the chief under whom he is studying, where his studies are not being turned to a particular form of government service, or where he is deficient in the necessary theoretical training—the case is reversed. By all means let the government offices accommodate as many special students as their facilities and appropriations will admit; but let these students get their theoretical training elsewhere if we wish to secure the maximum efficiency and economy from the educational standpoint, as well as from the administrative one.

In brief, the trend of modern education and government is away from a national university which shall make classrooms of the offices where the nation's business is conducted. Though the United States Forest Service, for example, welcomed the neophyte for seven years, it found neither

our trees nor the neophyte benefited by the arrangement.

The announcement in the press dispatches that Representative Samuel W. McCall had accepted the presidency of Dartmouth has proved incorrect. In a letter published February 25 he declines the honor, and says, among other things:

The work which I am trying to do was not entered upon by accident, and if I have not pursued it with success it at least is not because my vows were lightly taken. And since I did not lightly take it up I cannot, in what I believe to be a very grave crisis, drop it easily and shift to something else. I may be accomplishing little of value, but I happen to be on the battle line and I should indeed be a sorry soldier nicely to weigh causes and to decide at this moment to step out of the ranks.

This is not the place for political discourse, but perhaps I should say to you that the crisis I referred to is in my opinion full of peril to our institutions, and how soon the movement is to begin toward sanity and safety I do not know. I am far less concerned by particular theories than by general methods of government—methods which have been carrying us swiftly toward a condition under which limitation upon governmental power would be done away with and favoritism and caprice of an autocrat would take the place of constitutional restraint. And some chance barbarian as an autocrat might overturn our temples and do more harm in the direction of uncivilizing the country than all our colleges together could possibly repair.

At the annual meeting of the New England Association of Teachers of English, to be held March 20, the Committee on Aids in Teaching will report on "A Class-Room Weekly Paper" (W. S. Hinchman, Groton School), "The Use of Specimens in the Class-Room" (F. W. C. Hersey, Harvard), and "Debating Clubs" (W. S. Hinchman). Prof. G. P. Baker of Harvard will give an address on "The Educational Theatre."

Ipswich and Woodbridge are to celebrate the centenary of Edward FitzGerald's birth on the 27th and 28th of this month. What will that quiet spirit feel beneath the drums and tramplings of fame?

John Boyd Thacher, formerly a member of the New York State Senate, and Mayor of Albany, died in that city February 25, at the age of sixty-one. He was born in Ballston and was a graduate of Williams College. He was a collector of autographs, rare books, and historical manuscripts. His collection of autographs, more than 25,000 in number, is said to be one of the most valuable in this country; and he also had many fifteenth century first editions, as well as manuscripts and papers on the French Revolution. His published works include "The Continent of America: Its Discovery and Its Baptism" (1896); "Charlecote: or the Trial of William Shakespeare" (1896); "Little Speeches," "The Cabotian Discovery," "Christopher Columbus: His Life, His Work, His Remains" (3 vols., 1903-4); "Outlines of the French Revolution Told in Autographs" (1905).

On February 26 the Rev. Dr. Theodore Ledyard Cuyler, the well-known Presbyterian clergyman, died at his Brooklyn home in his eighty-eighth year. He was a graduate of Princeton College and of the Princeton Theological Seminary, and from 1860 to 1890 was pastor of the Lafayette Avenue Presbyterian Church in the city where he died. He was prominent in public life, and, in 1856, helped to organize the Republican party. As a writer, his pen was indefatigable, his contributions to the magazines and newspapers having been calculated at more than 4,000. Besides these, he published a number of books: "Stray Arrows," "Cedar Christian," "The Empty Crib," "Wayside Springs," "Right to the Point," "Thought Hives," "God's Light on Dark Clouds," "Pointed Papers," "Heart Life," "From the Nile to Norway," "Newly Enlisted," "The Young Preacher," "How to Be a Pastor," "Stirring the Eagle's Nest," "Christianity in the Home," "Beulah-Land," "Mountain-tops with Jesus," "Help and Good Cheer," "Recollections of a Long Life—An Autobiography" (1902), and "Our Christmastides" (1904).

George Selwyn Kimball of Bangor, a writer on life in the Maine forests, died March 1 at Waverly, Mass., aged sixty-two. He was author of "Piney Home" (1904), "Jay Gould Harmon" (1905), and "The Lackawannas on Moosehead" (1907).

The Rev. Daniel March, for many years a Congregational clergyman at Woburn, Mass., died in that city March 2, at the age of ninety-two. He was the author of a number of religious books, including: "Night Scenes in the Bible," "Walks and Homes of Jesus," and "From Dark to Dawn."

James A. Le Roy, secretary to William H. Taft in the Philippines, and later American consul at Durango, Mex., from August, 1903, to March, 1907, died February 28, in the military hospital at Fort Bayard, New Mexico. Mr. Le Roy had made himself thoroughly acquainted with the history of the Philippines, and with the present state of affairs there, and contributed many articles on these matters to the *Nation*.

From Pau comes the report of the death of the Marquis de Saint Yves, who was born in Paris in 1842. Under the name of Saint Yves d'Alveydre, he published a number of books, including: "La Mission des Juifs," "La Mission des souverains," "La Mission des ouvriers," "La France vraie," and "Le Poème de Jeanne d'Arc."

A ROMANTIC POET REVIVED.

Joseph and His Brethren: A Dramatic Poem. By Charles Wells. With an Introduction by Algernon Charles Swinburne and a Note on Rossetti and Charles Wells by Theodore Watts-Dunton. The World's Classics. New York: Henry Frowde.

If cheapness of form and authority of sponsors can bring a book to its public, then "Joseph and His Brethren" has at last come to its own. Wells has indeed been for many years a kind of cult among a certain class of Englishmen, but in this country he has remained practically unknown. His story is peculiar. He was born in 1800. At the Edmonton school he became acquainted with Tom Keats, and through him with the poet Keats and the little circle then dreaming mighty things in London. Practical jokes were part of their poetical life, but a jest of Wells's, by which he personated an imaginary lady, "Amena," in love with Tom Keats, went too far. The discovery of the hoax had on the consumptive lad a pitiable effect, and in his elder brother, the poet, aroused immitigable wrath—he did "not think death too bad for the villain." Then, having been "cut by Keats and his group," Wells determined to let them see that "he too could make a mark in literature." The result was a volume of "Stories after Nature," published in 1822, and characterized by Mr. Watts-Dunton as "of a fascinating remoteness not to be found . . . elsewhere, save in metrical composition." No copy of this book, we believe, is now known to exist in this country, and only three or four in England. Two years later he brought out his drama—dramatic in form, but not for the stage—of "Joseph and His Brethren," which, like his prose, fell utterly dead from the press. After this he wrote a novel, "Gaston de Blondeville," which never found a publisher, and considerable verse which he destroyed in manuscript. He lived many years in France, dying in 1879.

Most of this information is given by Mr. Watts-Dunton in his really delightful "Note" prefixed to this volume, and with it an account of the place held by Wells in the creed of Rossetti and his circle:

No young poet at one time dared show his face at 16 Cheyne Walk, or at Madox Brown's great studio in Fitzroy Square, or at Westland Marston's midnight gatherings by Chalk Farm, or at Lady Duffus Hardy's At Homes, who could not utter the Shibboleth. The so-called Pre-Raphaelite poets, Arthur O'Shaughnessy, John Payne, Philip Marston, Theo. Marzials, and Edmund Gosse himself, *had* to read "Joseph and His Brethren" in order to exist. Carefully and anxiously was the copy at the British Museum thumbed by many an aspirant to poetic fame.

Mr. Watts-Dunton tells a vivid story of a long conversation about the poem with Rossetti, then living with William Morris at Kelmscott, and his own journey forthwith to the British Museum.

Some of the mysterious potency of the hardly-accessible perhaps passed away when the book was reprinted in 1876 with revision from the author's hand. Swinburne heralded the publication with a laudatory essay in the *Fortnightly Review*, which was taken over as an introduction to the new edition, and again serves the same purpose for the volume now before us. Mr. Watts (now Watts-Dunton) called attention to the work in a signed communication to the *Athenæum* (April 8, 1876), which has been incorporated in the introductory paper on "Rossetti and Charles Wells." But copies of the second edition (1876) are to-day rare in England and can scarcely exist at all in America. The new reprint from the Oxford Press will for many readers afford the first acquaintance with a poem noteworthy for its historical associations and highly interesting in itself.

It is not, of course, necessary to accept the valuation set on Wells's work by the Rossetti group. It belongs to that succession of ambitious epic-dramas including Bailey's "Festus" and Alexander Smith's "Life Drama," which by their Elizabethan echoes aroused extravagant but short-lived enthusiasms. The Elizabethan notes are clear enough in "Joseph," but, in our judgment, both of its present sponsors have missed the point in emphasizing its Shakespearean quality. "This passage," says Swinburne, "at least has the absolute ring of Shakespeare; 'pure fire indeed':

Attendant. Then, madam, you would say
That there is nothing in the world but love.
Phraxanor. Not quite; but I would say the fiery sun
Doth not o'ershine the galaxy so far;
Nor doth a torch within a jewell'd mine
Amaze the eye beyond this diamond here
More than the ruddy offices of love
Do glow before the common steps of life

And again, quoting the dismissal of Joseph by Potiphar's wife after her futile attempt at seduction, he thinks "the quiet, heavy malice of this is as worthy of Shakespeare as the elaborate and faultless music of the passage on love which precedes it:

Phraxanor. I have a mind
You shall at once walk with those honest limbs
Into your grave."

Not Shakespeare, but the later Elizabethans, or Jacobeans, inspired that note. One feels here something close and sultry in the atmosphere; that second passage particularly has the very gait and mark of Ford; and, indeed, the passion throughout is Ford's, although it may lack the illicit sting that the author of "'Tis Pity" so willingly employed. If it should be rejoined that Ford is essentially a dramatist of the chamber and closed doors, whereas Wells, as Mr. Watts-Dunton asserts, is one of the true Vagabonds, we can only submit that this critic's predilection for the gypsy world has led him to find far more of this spirit in Wells than is visible to us, and that still Wells's country is not that of Shakespeare, but, let us say, of Beaumont and Fletcher. Swinburne finds another instance of Shakespearean reserve in Phraxanor's first intimation to her husband of Joseph's imputed crime:

Phraxanor. Will you praise him, my honor'd lord?
Potiphar. Why so?
Phraxanor. Because he never must be prais'd again.

He comes nearer the mark when he adds that "touches like these occur in Webster." There is in Phraxanor's words something oppressive, something that hints of cruelty and gloating over pain, with an indirection suggestive of brooding madness; they might be found in Webster, but again they are rather the speech of Ford. A hundred epithets and brief passages remind us continually that we are in the same world from which Keats drew so much of his inspiration, not because he, and Wells, chose deliberately the successors of Shakespeare for their model, but because the attempt to imitate Shakespeare almost invariably strikes thus to one side of the mark. One feels this in Wells's

And fearful soundings in this dragon world,
To find them easy footings to their graves;
or,
And the great city like a vision sails
From out the closing doors of the hush'd mind;
or,
In this immensity
Upon the drouthy sands doth silence dwell—
And wandering winds are lost in loneliness.

The whole scene between Joseph and Phraxanor and then between Phraxanor and Potiphar is a marvellous replica of late Elizabethan work, and the earlier and later events of Joseph's life, developed legitimately from the Bible story, are curiously successful in avoiding the tedium that might be expected in such work. At times the visionary poet and the dramatist come together, producing a passage at once splendid and human, as in this speech of Joseph to his father on the envy of his brothers, which may stand as a fair specimen of Wells at his best:

They act as if the world,
And all the nations wide, and cities wall'd,
Were no such things: as if this spot of ours,
Our fields, our cattle, were the all in being.—
Would they be envious, let them then be great,
Envy old cities, ancient neighhorhoods,
Great men of trust, and iron-crowned kings:
For household envy is a household rat;
Envy of state a devil of some fear.
For me—this Bethel limits not my sight;
For in imagination I can see
Countries beyond, nurs'd by the wit of man,
Wiser in harvest, greater in defence,
With state and pomp and majesty serene:
E'en in my sleep my mind doth eat strange food,
Enough to strengthen one against this hate.
With you, my hrethren, I was binding sheaves.
When mine arose and stood in front of yours.
And yours bent grievous low unto the ground:
Nay, more (yet think me not irreverent),
The sun, and moon, and the eleven stars
Sank, and obey'd me; which is sure a sign
That I am greater than my sire and ye,
However passive in humility;
Be it in love, or act, I leave to time.
Or Heaven of purpose put this in my view,
Or else my mind heing trouhled of the grief
Of your displeasures, vain of some great power,
Might fancy this in sleep. I do not know;
But feel resolv'd no more to plague my heart,
While you, my hrothers, treat me with such scorn.

CURRENT FICTION.

The Fashionable Adventures of Joshua Craig. By David Graham Phillips. New York: D. Appleton & Co.

Mr. Phillips's excursions into polite society are always edifying. He has so obviously and complacently the air of the bull in the china shop that there is no gainsaying him his fun. Joshua Craig is a hero after his own heart. Joshua has a loudly and incessantly voiced contempt for fashion, and an instinctive appetite for it. Otherwise, he is an altogether impossible person in most senses. It is one thing to be a bold, rough man from the West, and another to have no sense of decency. Joshua is a boor as well as a bear. He literally, as well as metaphorically, puts his feet on the table of civilization. He is a composite of all the brutal young Lochinvars who have recently come out of the West to reform society as it effetely exists on the Atlantic seaboard. The gilded halls into which he is introduced resound with his braggart insolence. In real life, such a person would be expelled witnout ceremony; but Joshua bears a charmed social life, and his outrageousness seems to strike the good-natured, open-hearted "society people" of Washington as rather quaint and engaging than otherwise. He is also fortunate in love, for, having selected for his mate a girl of the most exquisite beauty and breeding, he proceeds to give her the handling of a Sal or a Sue, with perfect impunity. Joshua is as free of manner in my lady's chamber as in the marble palaces of the great, as relentlessly absorbed in his own affairs, as indifferent to the comfort of others. But the lady (who has, to be sure, reached a certain age and is anxious to marry) seems attracted rather than repelled by the hideous spectacle. He is not only ungentlemanly—he is grossly insulting, wantonly insulting, on every possible occasion before their marriage. Finally, she does half-heartedly run away from him, whereupon he follows her and sees to it that they are married offhand. We are given to understand that this serves her right, and in a sense it does, for she has little real refinement or sensitiveness of nature. She has the superficial and chiefly physical fastidiousness of the fine lady who is bathed by her maid in three waters every morning, and spends some two hours over the rest of her toilet. But she is inherently common, naturally built to be the Maggie of whatever insistent Josh might come along. Mr. Phillips evidently does not mean to give this impression of her; he tries to rep-

resent her as a person of unusual sensibility and of very strong will. Above all, perhaps, he is anxious to show that an aristocrat is human for all that. And certainly if we are willing to accept the other allegations with regard to Joshua, there is no reason for sticking at his amazing marriage.

We find him assistant to the Attorney-General, with that functionary (as well as the President) under his thumb. Both of these powers wish to get rid of him, because he is obstructing their comfortable relations with certain great corporate interests which, for political reasons, they are pretending to oppose. But Joshua will not be got rid of, and by way of compromise the Postmaster-General presently resigns, and Joshua becomes his successor—or rather, is given the appointment; for, in the eleventh hour, he decides not to take it, but to go back to Minnesota and run for Governor. He has also an offer outstanding to become a corporation lawyer at a huge salary. Indeed, the closing chapters of the story do much to atone for what has gone before. Craig displays a genuine magnanimity in really important matters, and his wife shows herself unexpectedly capable of responding in kind. Their feeling for each other is seen to deserve the name of love, and they set out for Wayne, Minnesota, with a reasonable hope of happiness in ways that count. It is a pretty problem, and if Mr. Phillips had put it less crudely and splashily, his audience would, no doubt, be more likely to dismiss it as a very old one.

Miss Fallowfield's Fortune. By Ellen Thorneycroft Fowler. New York: Dodd, Mead & Co.

Those who found this author's stories of Isabel Carnaby oppressively brilliant will have no cause for complaint on that score concerning her latest work. In these pages the moralizing spirit is almost as obvious as in the good old days of the "Wide, Wide World" and "Sandford and Merton," when no subtle coating was thought necessary for the pill of precept. The long arm of coincidence is as visible here as the hand of an operator of marionettes. Charlotte Fallowfield, beautiful, ambitious, and poor, prays for wealth. Her lover immediately inherits a fortune of a million pounds, and survives only long enough to leave the entire sum to her. She lives on alone with her orphaned niece Dagmar, against a village background of irrelevant, garrulous, and intensely wearisome supernumeraries, until the arrival of a new rector with his son Claude. After a brief courtship, enlivened by the author's pregnant asides on the evils of jealousy, Miss Fallowfield and the rector are married, and set sail on their wedding-trip. Without revealing the rest of the plot, with its elaborately arranged suspense, we may say that the story, as a whole, lacks impressiveness and challenges unfavorable comparison with Besant's handling of a somewhat similar theme in "Beyond the Dreams of Avarice."

Three Girls and a Hermit. By Dorothea Conyers. New York: E. P. Dutton & Co.

The trio of unsophisticated maidens who sally forth from wild seclusion to seek their fortune in the world, seems much the mode at present in the United Kingdom. Miss Macnaughtan has shown us in "The Three Miss Graemes" Scotland's meeting of the exigent situation, and we are now given a chance to compare their conduct with that of their Irish sisters. The three Miss Considines are by no means such patterns of propriety as blossom among the heather. One would compare them rather to the gorse—brilliant, thorny, and hard to train. But after much indiscretion and a bitterness of condemnation that exceeds their deserts, they all find the fulfilment of their hopes and of their needs—kindly and competent protectors. The book owes its charm to the pungent portrayal of Irish character, and its unexpected idioms are a source of keen delight to the reader.

The Eternal Boy. By Owen Johnson. New York: Dodd, Mead & Co.

To any one who has heard a group of old schoolmasters revivifying one another in vacation by recalling the rascal days of their boyhood, it will not be difficult to suggest the note of these Lawrenceville stories, celebrating the ubiquitous and inextinguishable Hickey Hicks and his friends. Though most of the escapades are of a mellow antiquity—stealing the clapper of the bell, hanging the skeleton in the chapel, arranging a secret prize fight—they are vitalized by fresh touches of nature, and recited with unmistakable gusto. Two or three of them are more broadly conceived, especially "The Political Education of Mr. Baldwin," in which a local campaign suggested by a member of the faculty to instil in the boys ideas of political purity and disinterested usefulness develops with surprising rapidity every form of bribery and corrupt bargaining. This imitation of mature citizenship the author appears to relish as much as the minor deviltries. It is an indication of the hearty strenuousness which is the only moral virtue much emphasized by the book. From a pedagogical point of view the disdainful treatment of the teachers is deplorable; if the "Eternal Boy" falls into the hands of juvenile readers it will amuse without edification. To teachers, however, and other discreet adults it may be commended as an entertaining and perhaps even instructive interpretation of the schoolboy spirit.

Letters of Mrs. James G. Blaine. Edited by Harriet S. Blaine Beale. 2 vols., pp. 316; 326. New York: Duffield & Co. $4 net.

Blaine has had rather too much than too little championship from his family and connections. Gail Hamilton (Miss Dodge), his wife's cousin, and for years a member of his household, wrote one undiscriminating eulogy; Edward Stanwood, also closely related to his wife, has written a "Life" which is more discriminating, but still mainly apologetic. If one merely dips into these letters of Mrs. Blaine, and goes no further, one is likely to say at once that they might better have been left unpublished. As it happens, those which come first particularly abound in domestic detail, which looks out of place, and even a trifle ludicrous, in print. Severe editing would have spared us much of the information we get concerning the children's wardrobes. But it might also have robbed us of this, which we should regret to have lost:

> Mrs. Warren Fisher has another daughter—a great disappointment to her, as they are anxious to have a son and this is the fourth daughter. I am sorry to say that Mr. Fisher seems to be fast losing in the esteem of all good men.

But as one goes on, one likes the letters better and better—and Mrs. Blaine also. True, the letters do not rise above the level of the talk and correspondence of many bright American women. The atmosphere is that of many American homes. But it is a decidedly pleasant atmosphere, and Mrs. Blaine talks out of it—usually to her children—without the least affectation or studied cleverness, and with a pleasing heartiness and common sense.

Of course, one reads chiefly for allusions to her husband and his more famous contemporaries; and these, happily, are not made as if with the slightest expectation of the public's ever seeing them. They are utterly free, and sometimes very intimate. Garfield, for instance, is frequently "Gaffy." But he does not suffer from this affectionate familiarity. The day of his assassination, Mrs. Blaine was quickly at the White House:

> I stood with Mrs. McVeagh in the hall when a dozen men bore him above their heads, stretched on a mattress, and as he saw us, and held us with his eye, he kissed his hand to us. I thought I should die.

Grant does not fare so well—as witness this:

> Friday (February 16, 1872), we had our Presidential dinner. Oh, how glad I am to have it over! . . . The President is so heavy in everything but feeding—there he is very light. He talked incessantly about himself.

Arthur fares worse still:

All his ambition seems to centre in the social aspect of the situation. Flowers and wine and food, and slow pacing with a lady on his arm, and a quotation from Thackeray or Dickens, or an old Joe Miller joke, told with an uninterfered-with particularity, . . . make up his book of life.

It is to Arthur's Administration, by the way, that unofficial Washington—particularly the Washington of teas and dinner-parties—looks back with most regret!

Naturally, Blaine himself fares best of all. His weaknesses are not spared, but if any testimony to his likeableness were needed, here it is in abundance from the bright companion of all his active years. One remembers, of course, how Macaulay disposed of those defenders of Charles I who would set against his public acts his private virtues and amiability; but our human nature refuses to be entirely put down by his sarcasm; and most of us will incline to think a little better of Blaine—at any rate, we will *wish* to think better of him—after reading a passage like this:

I miss Mr. Blaine. I cannot bear the orderly array of my life. I miss the envelopes in the gravy, the bespattered table linen, the uncertainty of the meals, for you know he always starts out on his constitutional when he hears them taking in dinner. I miss his unvarying attention, and as constant neglect. When alone with him, I am not my own. When others are in, go as you please is the rule, and the alternation suits me exactly.

Or this:

Now that I am absolutely mending, your father is in gay spirits. My attack completely broke him up. Had it not been so pathetic, it would have been amusing. He would not go to the Senate, thought himself sick, broke all his engagements, and excused himself to everybody on the ground that he could not leave me. In my room he sat on my bed or creaked across from corner to corner by the hour, making me feel a guilty wretch to cause him so much misery.

Or this:

Here your father, who cannot bear to be alone, though he prohibits talking, is devoting himself to the most difficult portion of his eulogy [the eulogy on Garfield, afterwards read before Congress], the long sickness, with its fatal termination. For the second time this morning, I see him taking from the drawer a fresh pocket handkerchief, with which he vainly tries to hide his tears, and this time, wholly overcome, he has beaten a retreat to the blue room. Oh, M., there indeed is a Douglas, tender and true!

Or even this, written when the excitement over the Mulligan letters was at its height:

You confirm what I have always said, that those who know him most, love him best. I dare to say that he is the best man I have ever known. Do not misunderstand me, I do not say that he is the best man that ever lived, but that of all the men whom I have thoroughly known, he is the best.

The last might be the testimonial of any loving wife to the virtue of any affectionate husband; but we must take it with Blaine's successful standing of a severe test; for Mrs. Blaine was thoroughly aware of his remarkably strong tendency to hypochondria—a kind of weakness women find it hard to condone in men. As Mr. Stanwood has pointed out, it grew on Blaine until, near the end, it became almost a positive dementia. That state of mind seems, in fact, to have been the chief reason why, in the winter of 1887-8, Blaine took himself out of the race for the Presidency.

There is a useless index, consisting of a list of proper names, with nothing but the pages on which they are referred to. The notes are school-girlish, and not without errors.

Napoleon and the Archduke Charles: A History of the Franco-Austrian Campaign in the Valley of the Danube in 1809. By F. Loraine Petre. With 8 illustrations and 5 sheets of maps and plans; pp. xiv+413. New York: John Lane Co. $4.

This is not Mr. Petre's first appearance as a military historian. His volumes on Napoleon's campaigns in Poland and Prussia were favorably received and will doubtless remain for a long time the most complete treatment of that subject in English. The present work deals with a topic that "has received scant notice in England and has been a good deal misunderstood. The misunderstanding has been mainly due to Napoleon's successful misrepresentation of the earlier part [of the campaign] as one of his greatest and most successful efforts." This misunderstanding no longer exists for military specialists, for the monographic work of German, French, and Austrian officers, based upon documents in the military archives of various European countries, has at last made possible a clear comprehension of Napoleon's operations. The most important of these works are by Saski ("Campagne de 1809"), Bonnal ("Manœuvre de Landshut"), Angeli ("Erzherzog Karl als Feldherr"), and Binder-Kriegelstein. The results of these investigations were, however, inaccessible to the public, and even to the many students of military history who do not read German, and it is this want that Mr. Petre has supplied. Besides the books mentioned above, he has made use of the correspondence of Napoleon and some dozen other works that treat wholly or partly of the campaign of 1809. Mr. Petre also visited the ground itself, studied the battles on the spot, and has given us some excellent photographs. The resultant volume, though serviceable to the general reader, will not fully meet the needs of the student who would use it as an introduction to a more detailed investigation of the subject; for it contains no bibliography; the footnotes are incomplete, and often lacking entirely; and some of the maps are poorly made. Clearly, the book is not from the pen of a critically trained historian, but it is so much better than anything we previously possessed in English that we should feel grateful for it.

Mr. Petre confines his attention almost exclusively to military operations, and barely touches the diplomatic complications that were so serious, especially in the interval between Aspern and Wagram. Such a limitation is, of course, perfectly legitimate. A brief introduction on the origin of the war is followed by chapters on the armies and their leaders, the preparations on both sides, the theatre and the plans of operation. Five chapters are devoted to the campaign around Ratisbon, three to the march to Vienna, and five to the battles of Aspern and Wagram. There is little fine writing; the pages are crowded with facts and figures, and at times the narrative seems in danger of being swamped by details. If the writer does not always draw order from chaos, the fault is not wholly his, for the operations were often lacking in unity.

Throughout the campaign, Napoleon was favored by fortune: his opponent generally missed his opportunity and gave the Emperor abundant time to correct mistakes. At first Napoleon displayed remarkable ability in concentrating the forces that had been so stupidly scattered by Berthier that the French army was practically at the mercy of the advancing and concentrated Austrians. But in carrying out this operation, Napoleon often acted on incomplete data, and took chances that would have been fatal had he been opposed to an energetic and well-informed general. Napoleon's whole conception of conditions was optimistic and often false. He counted, for example, on the arrival of Masséna at Landshut twenty-four hours before Masséna reached it; "he never allowed for Charles's actual movement from left to right to the eastward of Davout and then northwards to Ratisbon." As the Austrians retreated before him to Landshut, he thought that he was driving their whole army into a *cul-de-sac* to be closed by Masséna at the other end, and it was only in the afternoon of the twenty-second that he learned that he had been using the bulk of his army to defeat less than a third of the Austrian army, and that Charles had concentrated at Ratisbon. True, 42,000 Austrians were driven through Landshut, but Masséna was not there to close the *cul-de-sac*. Napoleon blundered seriously in his failure

to follow Charles across the Danube and force him to give battle. Had he done so, he would have thrown the Austrian army "into the forests of Bohemia, where it would have disbanded for want of supplies; the *Landwehr*, which afterwards furnished 60,000 men, would not have formed, our depots of recruits would have dispersed, and in a fortnight Napoleon would have become master of and disposed of all our resources." Such, at least, was the opinion of the Austrian Grünne, expressed to the Prince de Ligne at the close of the war. Equally destructive of the legend of the brilliant generalship of Napoleon during this campaign is the description of the battle of Essling. All English accounts of this battle attribute Napoleon's failure to win to the breaking of the bridge of boats over the Danube before reinforcements could cross. Mr. Petre, however, writes:

> For the defeat of Essling the Emperor had himself to blame. He had certainly been careless in his preparation for the crossing, once more a result of his unbounded pride and his contempt for the enemy. He had been amply warned of the danger of a sudden rise of the Danube. . . . Yet he trusted his army to a single bridge of boats without any protection by stockades, or by boats cruising about to arrest such floating masses above the bridge. His information about Charles's position seems to have been bad, and to have led him not to expect serious resistance immediately after the passage. Even on the morning of Essling, his cavalry had failed to detect the advance of the whole Austrian army. Napoleon was always preaching the advantages of field fortification, yet he neglected it before Essling. . . . Perhaps Napoleon's escape from still greater disaster at the battle of Essling was due as much to the Austrian failure as to his own efforts. . . . Napoleon had no justification for attributing his defeat to the breaking of the bridge.

The conclusion of the whole matter is that "brilliant as many of Napoleon's manœuvres had been, the campaign differed widely in the degree of its success from its predecessors of Austerlitz and Jena." Mr. Petre declares further:

> Its comparative failure must be attributed largely to Napoleon's preconceived idea of marching on Vienna, irrespective of the enemy's movements, an idea to which he obstinately adhered when Charles retreated through Ratisbon into Bohemia. Had Napoleon followed him to Cham with the corps of Davout, Masséna, and Lannes, it is difficult to doubt that the result must have been the defeat of the Austrian army, with its complete break-up in the Bohemian forest.

A Concordance to the English Poems of Thomas Gray. Edited by Albert S. Cook. Boston: Houghton Mifflin Co. $3.00.

This concordance is the first to appear under the auspices of the Concordance Society, organized at Yale in December, 1906. Professor Cook has been assisted in gathering the material by several Yale teachers and others, and in the proofreading by professors and teachers at Yale, Columbia, Cornell, and elsewhere; but, unfortunately, the book is marred by omissions, errors, and inconsistencies, due in the main not so much to lack of scholarship and care as to the bad mistake made at the outset in the selection of Gosse's edition (1884) as the basis for the text and the collation of the manuscripts and early editions. For his text, Gosse follows Dr. W. J. Rolfe, whom he credits in his preface with being "the first to return to the revised text of 1768," in his "Select Poems of Gray" (1876). Gosse, however, copies the one misprint in Dr. Rolfe's first edition (found in many other editions of Gray), of "Not" for "Nor" in line 36 of the "Hymn to Adversity." This has led to the omission of that "Nor" in the concordance. Another strange omission—the only one we have noted in the *text* of the poems—is "drooping" in line 107 of the "Elegy." This, however, is the only poem which we have carefully compared with the concordance, and to which we shall confine ourself here.

The entire body of the standard text of Gray's poetry is so small that it hardly needs a concordance; and the "Elegy," which we all know by heart, is least dependent upon any such aid. But the three extant manuscripts of that poem in the poet's handwriting are less accessible, and are of peculiar interest for their many *variæ lectiones*, which, so to speak, let us into the poet's workshop and illustrate the gradual elaboration of the final text. The Mason (or Fraser) manuscript was probably the earliest, as indicated by its having, in stanza 13, "Cato," "Tully," and "Cæsar," the change of which to English names is one of the most interesting and significant in the poem. Critics have given reasons for believing that the Egerton manuscript was earlier, but this change seems to settle the question. The four stanzas, beginning "The thoughtless World to Majesty may bow" are also peculiar to the Mason manuscript. The interlineations, marginal readings, and deletions in this manuscript are so numerous and complicated that it would not be possible to indicate them clearly in ordinary concordance form, without frequent explanatory notes under the entries, or, better, a detailed description in an appendix. But Professor Cook's plan might have worked much better, if he had not blindly followed Gosse's imperfect and inaccurate collation of this manuscript. A few out of fifty or more of Gosse's blunders will serve as illustrations:

In line 6 of the "Elegy" ("And all the air," etc.) Gosse says that the Mason manuscript has "Now" for "And." It reads "And now."

In stanza 4 "Village" is crossed out, and "Hamlet" written over it. Words thus crossed out might be omitted in a concordance, but Professor Cook is inconsistent in treating them. Here he omits any reference to "Village," as Gosse does; but in stanza 18, where "Burn" (in line 4) is crossed out, and "With" written over it, Gosse gives "Burn" as a manuscript variant of "With," and so does the concordance. Neither mentions "crown" in the preceding line over "at the"; or "hallow'd" (line 4) with "by" over it, and "kindled at" under it. Gray, after first writing:

> And at the Shrine of Luxury and Pride
> Burn Incense hallow'd in the Muse's Flame,

finally decided on the present reading:

> Or heap the shrine of Luxury and Pride
> With incense kindled at the Muse's flame.

The reader will see that in cases like this—which is not a solitary one—the history of the passage could not be made clear in a concordance without special note or explanation.

In stanza 8 the manuscript reading is muddled by both Gosse and Cook. The manuscript underlines "useful" and puts "homely" (underlined) in the margin; but they give "rustic" as the manuscript reading for "useful," though it is really the manuscript word for "homely" in the next line. In stanza 12 both ascribe "Reins" for "rod" to the same two manuscripts, but it is in all three.

In stanza 13 neither gives "had damp'd," the reading of the Mason, with both "depress'd" and "repress'd" over it.

In stanza 27, the Mason reads thus:

> One morn' we missed him on th' accustomd
> Hill
> By the Heath-side & at his fav'rite Tree.

"Along the" is written over "By the," "side" is crossed out, "near" put above "at," and the first syllable of "accustomd" is crossed out. The only change noted by Gosse and Cook is "I" for "we." In the next stanza, only one of four changes ("yon" for "that") is noted by them.

These specimens of the defects and errors of Gosse's edition, unluckily reproduced in the concordance, should serve as a warning to the editors of the concordances that are to follow. Let them at the start be sure of their texts and authorities. In the Gray the publishers have done their share of the work admirably, and it is a pity that the book should be so "faultily faultless."

The Life of Mary Baker Eddy. By Sibyl Wilbur. New York: Concord Publishing Co.

In telling the life story of Mrs. Eddy, Sibyl Wilbur says that she "plants herself unreservedly on the methods of St. Mark. St. Mark, I believe, was a scribe

who related what he had been able to gather from witnesses in a direct and unvarnished way." She adds that "all statements of fact made in this narrative are founded upon reliable evidence, town registers, church books, and court records." Here are two rather different historical methods; in the main, however, the writer's material is journalistic, and not documentary. This circumstance destroys its value as a presentation of the much controverted facts of Mrs. Eddy's life. The time has passed when, upon this subject, the public will accept patiently anything but sworn testimony. Mrs. Wilbur's book is semi-official, and is clearly intended as a counter-blast to the Milmine biography, recently published in *McClure's Magazine*. That work consisted of little more than a collection of documents—private letters, court testimony, extracts from contemporary newspapers, and sworn affidavits of people who had come personally into contact with Mrs. Eddy. Manifestly, any rejoinder, if it is to be made convincing, should adopt the same methods. The fact that Mrs. Wilbur, after spending many months carefully going over the ground, was unable to produce that kind of testimony in rebuttal, seems rather conclusive evidence that it cannot be found.

Miss Milmine, for example, published the affidavit of a certain Horace Wentworth of Stoughton, Mass., in which, with much circumstantial detail, he accuses Mrs. Eddy of attempting to set fire to his mother's house. In reply to this Mrs. Wilbur simply ridicules Horace Wentworth; the fact that Mrs. Eddy's theories as to the unreality of disease aroused in him, as a young man, a spirit of "jocularity" and "mockery," is apparently adduced as a reason for disbelieving his sworn statements. The Quimby controversy is an even more important and significant case in point. Whether Mrs. Eddy obtained her ideas from Quimby is of little importance, so far as the value of these ideas is concerned; but inasmuch as Mrs. Eddy vigorously repudiates any such obligation, the discussion, in its bearing upon her own character, is worth while. The documentary evidence on this point, all printed in the Milmine biography, is extensive. Among other things, there was produced an original letter, written in 1871 and signed by Mrs. Eddy herself, in which she informs her correspondent that her theory "has been practised by one individual who healed me, Dr. Quimby of Portland, Me., an old gentleman who had made it a research for twenty-five years, starting from the standpoint of magnetism, thence going forward and leaving that behind." Mrs. Wilbur absolutely ignores this pertinent document, which, of course, in itself forever disposes of Mrs. Eddy as the originator of the Christian Science idea. Quimby, as is well known, left ten volumes of manuscripts, now in the possession of his son, George A. Quimby, of Belfast, Me. Mrs. Wilbur regards these as negligible, simply because they are not in Quimby's handwriting—his wife, son, and one or two favorite pupils acting as his amanuenses. On the same ground she could prove that Milton did not write "Paradise Lost," or Benvenuto Cellini his autobiography. These illustrations, which could be multiplied indefinitely, show the futility of the present attempt to explain away the facts of Mrs. Eddy's career. In other details—in the description of Mrs. Eddy's queer nervous temperament, her "seizures," her cradle-rockings, her strange aversion to her own child, her fondness for associating with spiritualists, her colossal egotism—the present book confirms impressions received from other sources.

Before and After Waterloo: Letters from Edward Stanley, sometime Bishop of Norwich. Edited by Jane H. Adeane and Maud Grenfel. Pp. 308. New York: D. Appleton & Co.

"Before and after Waterloo" is too pretentious a title for fifty letters, some of them mere notes, written during the hurry of travel and never intended for publication. It is safe to assume that no one would have been more amused than the good Bishop of Norwich himself at this attempt to add extraneous dignity to his hasty jottings of travel. The nature of the volume is characterized much more truly by the dedication, "Echoes of Past Days at Alderley Rectory." Edward Stanley was born in 1780, the son of Sir John Stanley of Alderley in Cheshire. Graduating from Cambridge in 1802, he set out for a "grand tour" of the Continent, and passed the most of a year in Spain. On his return to England, he took orders, and in 1805 he was presented by his father to the living of Alderley, where he remained until his appointment to the bishopric of Norwich in 1837. It was in 1814 and 1816, while rector of Alderley, that Stanley made his second and third trips to the Continent. The letters are in three groups, corresponding to the three journeys.

The first (forty-five pages) contains nine letters, all by Stanley. They are sprightly and interesting, reflecting the point of view of a young man of culture, keen vision, and artistic tastes. But the historian familiar with the pages of Arthur Young will find these first letters rather destitute of new material. Here and there we encounter an incident recorded with so sure a touch and such appreciation of its importance as to fill us with regret that the young man did not follow the example of Young and keep a journal. One such event was an execution that Stanley witnessed at Lyons. The description is rendered more vivid by a sketch of the guillotine from his notebook. After the abdication of Napoleon, Stanley visited France, the Rhine country, Belgium, and Holland. He was gone about six weeks, and wrote fourteen letters, which are preceded by a collection of fourteen others written in the same year from London by Lord Sheffield, Lady Maria Stanley, Miss Louisa Clinton, Miss Catherine Fanshawe, and Mrs. Edward Stanley. At this time King William of Prussia, Alexander of Russia, and Madame de Staël were the lions of London, and the letters of the ladies, full of incidents relating to these distinguished persons, are well worth reading. For this second journey Stanley's letters are longer and meatier, and are supplemented by sixteen full-page sketches, some of them in color. His Paris letters afford illuminating glimpses of the life at the Tuileries and in the salons, with pen-portraits of Louis XVIII, Madame de Staël, Sir Charles Stuart, and the former marshals of Napoleon. On the third journey, lasting about a month, Stanley was accompanied by his wife, by his brother-in-law, Edward Penrhyn, and Donald Crawford. In this group there are sixteen letters—three by Lord Sheffield (1814 and 1815), six by Stanley, and seven by Mrs. Stanley. With Crawford, who had fought at Waterloo, the party explored the field. From Waterloo they went to Paris, where they remained about three weeks. The letters themselves, containing lively descriptions of the movements of the Stanleys, resemble much the letters of modern tourists, with only here and there a bit of fresh information. The text of this third section is illustrated by ten drawings from the sketch-book of Stanley, some of them very clever.

There are two excellent portraits of Stanley. The face is so full of "sweetness and light" that the editors might well be forgiven for believing that all the world would be as much interested in what he wrote as were those who knew and loved him.

Alaska the Great Country. By Ella Higginson. New York: The Macmillan Co.

> Hear it all, ye polar bears,
> Waltz about the pole in pairs.
> All ye icebergs, make salaam.
> You belong to Uncle Sam!

So sang the mockers forty years ago, sure that in the purchase of Alaska we were badly over-reached. Such misconceptions have long since passed away. Successive travellers record more and more wonderful stories, until now, in Mrs. Higginson's book, we seem to have touched the limit of enthusiasm.

She belongs to the class of women-travellers and explorers which includes

Lady Brassey, Mrs. Isabella Bird Bishop, and Miss Peck, the mountain-climber. They "dare do all that may become a man"—indeed, they dare do more. It is a robust, impressionable, eupeptic, peaceful-conscienced company, whose overflowing amiability and content with life are reflected in the scenes and people they contemplate, so that they give us the most favorable pictures. Mrs. Higginson's seas pass from lavender and violet into opal and sapphire; her islands embosomed in the Japan current are emerald in their greenness; gates of ice like pearl guard the entrances to sounds and straits, upon which look down the diamond stars; all stones known to lapidaries gleam and flash in the earth, sky, and sea. All the sweet things of nature are levied upon heavily for illustrations. The people whom Mrs. Higginson finds in these charming surroundings comport well with their environment. Savage and civilized alike showed her their best side. The result is an agreeable book—a record that is sympathetic and vivid—in which the world seems bright, and the souls that inhabit it cheery and likable. We must be pardoned for declaring that we think Mrs. Higginson's admirations are sometimes too glowing. Other eyes would find bleak and desolate the landscapes which her effusive enthusiasm transfigures; and there is much evidence that in the Far Northwest, there is a devil abroad to whom this record does not give half his due. It is thoroughly a woman's book, emotional, pleasant-tempered, picturesque, and (shall we say it?) in cool accuracy not quite careful, and in discrimination, not quite keen.

Science.

"REVOLUTIONIZING THE PRACTICE OF SURGERY."

The newspaper dispatches from Chicago are telling us wonderful things about "thor-rad-X," which, according to various physicians of that city, is "the most powerful therapeutic agent in the world," and will therefore "revolutionize the practice of surgery." But within the last forty years, more or less, the newspapers have announced at least forty discoveries of the most powerful therapeutic agent in the world; and, on paper, the practice of medicine has been revolutionized every six months. But we continue to go on in the old way, advancing the boundaries of knowledge inch by inch, inventing a serum for diphtheria now, and later an anti-toxin for cerebro-spinal meningitis. Our bacteriologists, pathologists, anatomists and surgeons are accomplishing wonderful results, as any one who will review the progress of medicine in the last half-century must admit. But we can not abolish disease at a stroke. And, in particular, we are still very ignorant of the exact effect of X-rays, radium, and, above all, of this new substance which is supposed to unite their qualities. The Finsen-ray has been employed in healing lupus. X-rays have proved very useful in various kinds of diagnosis, as for dislocated bones. These rays have also cured certain superficial ulcers and affections of the skin, some of which are likewise to be cured by caustics. Radium has been tried with apparent success in several of the superficial and less malignant types of cancer. But it is too soon to tell just what it can accomplish; we have not yet experimented with it long enough. Much less can we pin our faith to "thor-rad-X," the latest of them all. No competent physician would pronounce a cancer cured because it had for the moment disappeared. The cells may still be lurking dormant in the body, to start into activity again when vitality is temporarily lowered, or when a bruise, a strain, or a local irritant may act as an excitant. For some kinds of cancer three or four years must pass before a cure may be regarded as complete.

The chief effect of these widely heralded "discoveries" is to rouse false hopes and lead men to neglect or else to postpone until too late the proper therapeutic measures. Physicians in New York city can point to very recent cases in which patients have refused to undergo comparatively simple operations, under the delusion that X-rays or radium would do the work. The treatment may have checked temporarily the progress of the malady, but in the meantime the cells of the cancer have been spreading through the body and forming metastases, new centres of disease, which ultimately have proved fatal. There are various serums and treatments which may sometimes act as palliatives, and possibly cures; but the highest authorities are agreed that the best way to cure a cancer (except, perhaps, these slight and superficial forms to which we have referred) is to make an early diagnosis, and submit to a thorough operation, for the removal of the diseased tract and a considerable portion of the surrounding tissue. Cancer, they tell us, is at the beginning a local disease. If it can be taken then, the chances of complete extirpation are much greater. What is more, surgical technique in the operations for cancer has improved within the decade, and the probabilities of recovery are therefore larger than ever before. In twenty years, or even ten, an absolute specific for the less virulent forms of sarcoma and carcinoma may conceivably be found, but to-day the surest protection is still the knife.

Mrs. W. K. Vanderbilt's plan of building in New York city four model tenement houses for tuberculous families has much to commend it. It is unfortunately true that many tuberculosis patients who are temporarily invigorated and strengthened by treatment under the supervision of a hospital or some charity, go down hill as soon as the supervision is relaxed and the nourishing food ceases. Then they often return to their former conditions of living, perhaps to some of the thousands of dark interior rooms that still disgrace the city. For a long time past it has been felt that supervision of the sleeping quarters of the sick was all-important. This has been made possible for the Presbyterian Hospital ever since April, 1905, owing to the generosity of Mrs. Vanderbilt. Visiting nurses have been sent into the homes to improve the living conditions, and milk and eggs supplied both at the hospital and through the New York Diet Kitchen Association. It has been the aim of the hospital to aid, primarily, incipient or moderately advanced cases where there is a fair prospect of recovery. But as the work has progressed, the nurses and doctors have felt the hopelessness of combating the disease in foul and germ-ridden tenements. Hence this new scheme. In Mrs. Vanderbilt's model tenements the families in which there are one or more sick will remain until they can safely live elsewhere without dread of the white scourge. Doubtless there will be some persons who will wish that these tenements had been instituted under some agency more general in its activities than a single hospital. If it is asked whether Mrs. Vanderbilt would not have done better to put a million dollars into sanatoria, the answer is that there is everywhere a feeling that the importance of sanatoria has been over-estimated. "Their greatest usefulness," according to Dr. Shively, through whom Mrs. Vanderbilt will make her investment, "is in the treatment of the well-to-do and middle-class patient." They can never be a very large factor in the treatment of the poor. The particular virtue of the tuberculosis tenement is, however, its preventing the break-up of families. If the patient sent away is the mother, the children are usually dispersed in all directions, and the same is too often true if the father is compelled to give up his work. In the Vanderbilt tenements, the father or mother can not only stay with the family, be as well treated, and live as hygienically as if in a sanatorium, but can be free from the depressing influence of idleness and exclusive association with other invalids.

For the Rural Science Series (the Macmillan Co.), J. G. Lipman has prepared an attractive volume on "Bacteria in Relation to Country Life." After a rather brief but perhaps sufficient account of the organisms and the conditions affecting their growth, a number of subjects are discussed, many of them of great and practical interest both to rural and urban readers, such as water, sewage, food preservation, milk and its products, of which a particularly neat account is given. Much space, almost a third of the book, is quite properly given to the relation of bacteria to the soil and to the growth of plants. This part of the subject is very interesting reading and shows clearly how complex the problems of scientific farming have become

and how worthy of expensive experimentation. Scarcely less interesting, although exceedingly brief, is the discussion of the sewage problem. Many of the illustrations, made by some photographic process, are beautiful pictures of plant life and structure; a few, particularly those of cultures and apparatus, are quite unclear and inadequate. Misprints are so rare in the book that one suspects the hand of the printer's devil in "Diseases of Swine," which, as a headline (p. 461), marks the discussion of various bacterial diseases of wine.

"Human Foods," by Harry Snyder (the Macmillan Co.), despite its purpose of aiding students of collegiate rank, smacks of the experiment station, and is a text-book of decidedly elementary quality. The character of the different foods, their composition, preparation, and preservation—all this is exceedingly well described. This part of the book is liberally illustrated by pictures, which, unfortunately, do not always clearly show what the reader is expected to see, and some of them are quite superfluous. The explanation of the nutritive value of foods is less satisfactory; in fact, the statements as to what is really meant by nutritive value are far from being clear and explicit. Nor could pupils, otherwise suited to the book, understand the diagrams concerning the dietary standards and the cost of foods without the aid of a patient teacher. A final chapter of laboratory exercises makes no very serious demands on the knowledge or intelligence of the student, and an equally light requirement as to the teacher is indicated by the "review questions," 819 in number. This kind of book will hardly increase the respect of intelligent readers for the courses in "domestic science," "nutrition," or "food values," which are beginning to make a pretentious show in the curriculum of many colleges.

The seventh International Congress for Applied Chemistry will be held in London from May 27 to June 2. Sir William Ramsay will be chairman of the convention.

James W. Moore, professor of mechanics and experimental philosophy at Lafayette College since 1872, died February 28 at the age of sixty-four. He is the author of "The Elements of Natural Philosophy" and numerous papers on physics.

Dr. Daniel R. Brower, professor of nervous and mental diseases at Rush Medical College, and author of many monographs on insanity, died in Chicago March 1, aged seventy years. Dr. Brower attained distinction in medicine and surgery during the civil war, and later was at the head of a hospital for the insane of West Virginia.

A distinguished Orientalist is lost in the death of Lieut.-Col. Sir George King, at the age of sixty-eight. He entered the Bengal Medical Service in 1865, and six years later was appointed to the chair of botany in the Medical College, and to the supervision of the Royal Botanic Garden of Calcutta. His most valuable publication was the "Manual of Cinchona Cultivation," besides which he wrote a number of monographs on Indian flora.

Dr. Julius H. P. J. Thomsen, professor emeritus of the University of Copenhagen, has died in his eighty-fourth year. The four volumes of his "Thermochemische Untersuchungen" (1882-86) embody his best-known work.

Drama.

"A Motley Jest," by Oscar Fay Adams (Boston: Sherman, French & Co.), includes two Shakespearean experiments, which are, perhaps, more entertaining than valuable. The first, called "A Shakespearean Fantasy," is a sort of supplement to the "Tempest," in which Prospero with the aid of Ariel transports Ferdinand and Miranda, long since happily married, back to the enchanted island, which he peoples for them, temporarily, with the figures of Shakespeare's stage folk—Romeo and Juliet, the nurse, Mercutio, Falstaff, Lear, Richard II, Henry VI, and others—who discourse briefly in a fashion more or less in accordance with their theatrical moods and character. The burlesque is cleverly done, the general mimicry of manner and matter being often exceedingly apt and ingenious. It is almost needless to say that the resemblance does not extend far below the surface. But the literary exercise is both skilful and diverting. The second experiment is an imaginary sixth act to "The Merchant of Venice," in which Shylock is Christianized, officially and publicly, and openly proclaims his apostasy while secretly hugging his ancient faith and his passion for revenge. This, too, is a clever conceit, but less happy than the other.

"A Woman of Impulse," by Louis Anspacher, produced in the Herald Square Theatre on Monday evening, exhibits a certain amount of literary skill—in spots—some ingenuity in construction, and considerable acquaintance with ancient theatrical device, but is a singularly unequal and disappointing work, although it is likely to be successful. Professing to be a study of what is commonly described as the artistic temperament—often a mere euphemism for vanity, selfishness, or immorality—it starts off in promising fashion along a vein of genuine, if not very brilliant, comedy, lapses into sheer foolishness—descending even to the depth of a comic curate—passes through a term of sensational melodrama, and, after reaching an effective and fairly logical climax, closes conventionally and feebly with a happy ending. The central figure, that of a famous prima donna, an intensely wilful, whimsical, passionate, irresponsible, but intrinsically honest and generous-hearted woman, is a good conception; and there are truth and humor in the earlier scenes, which show how her husband's patience is exhausted and his jealousy excited by her irascibility and flightiness. Here a sound foundation seems to be laid for genuine comedy. But all expectations of that kind are destroyed permanently by the plunge into melodrama, which, although it is indisputably interesting in a theatrical way, with its elaborately calculated complications and its protracted suspense, is too plainly artificial to carry any illusion of reality or to have much actual dramatic value. Moreover, the sensational developments, which are the main strength of the play, have little or nothing to do with the character traits which are supposed to furnish the motive power of the action. Nevertheless, the repudiation of the husband by the outraged wife—for his indulgence in suspicions which, as a matter of fact, were not altogether unreasonable—was a logical and natural domestic catastrophe, and the piece might well have ended at that point. Miss Kathryn Kidder, as the heroine, displays her capacity as an intelligent and well-trained actress, both in the lighter and more serious episodes, but her support is inferior.

An elaborate scenic production is promised for Shakespeare's "King John," with which Robert Mantell will begin his approaching engagement in the New Amsterdam Theatre on March 8. This is well, but the quality of the cast, of course, is of even more importance than the scenic decorations. One reason why this tragedy has been so long absent from the stage is the difficulty of finding competent players for its many important parts. Among them may be noted, in addition to the King himself, Arthur, Hubert, the Bastard Philip, Pandulph, Eleanor, and Constance. Philip Faulconbridge, though a showy, is not a particularly difficult, character, but Constance and Hubert both demand special ability.

The annual series of dramatic performances at Stratford-on-Avon, beginning on Monday, April 19, will be given by Mr. and Mrs. F. R. Benson and their Shakespearean company. The special birthday revival this year will be "Cymbeline," a play not hitherto produced by Mr. Benson. Fifteen plays of Shakespeare will be presented, including the histories: "King John," "Richard the Second," "Henry the Fourth" (Part I), "Henry the Fifth," "Henry the Sixth" (Part II), "Richard the Third," and a scene from "Henry the Eighth." The programme will also include four Chester Mystery Plays, "The Belle's Stratagem," by Hannah Cowley; "Richelieu," by Lord Lytton; and "A Midnight Bridal," a play in one act adapted from the story of Halliwell Sutcliffe by Mrs. F. R. Benson and H. O. Nicholson. Among the performers will be: Miss Geneviève Ward, who will appear as Volumnia and Queen Margaret; Matheson Lang, Hamlet; Miss Hutin Britton, Ophelia; Henry Ainley, Shylock; Miss Constance Collier, Portia; Forbes-Robertson, and Miss Gertrude Elliott.

The great popular success of the recent revival of "Romeo and Juliet" at the London Lyceum has encouraged the management to try a spectacular production of "Hamlet." Matheson Lang will play the Prince, Miss Hutin Britton will be Ophelia; Halliwell Hobbes, Horatio; Eric Mayne, the King; and Frederick Ross, the Ghost. The significant fact about this performance, of course, is that the Lyceum no longer pretends to be anything but a money-making house. It cares a good deal more for cash than it does for art. Like other purely commercial theatres, it seeks to give the public what it wants, and it has decided that Shakespeare is likely to prove more profitable than modern melodrama. While on this subject, it may be noted that H. B. Irving's revival of "Hamlet" has been so successful in London that he has found it necessary to give extra performances. His appeal, it need scarcely be added, is to the audience of the old Lyceum, not to that of the new.

John Hare informs subscribers to the Henry Irving memorial that Thomas Brock,

R.A., has now practically finished the plaster model for the statue of the actor, and all that now remains to be done is the casting in bronze. There is every reason to hope that, in the autumn of the present year, the statue will be erected on the site arranged for it at the back of the National Portrait Gallery in Charing Cross Road, London.

The German Volks Theater in Vienna has just witnessed another success for Karl Schönherr (whose "Erde" recently won the Schiller prize in dramaturgy). "Das Konigreich," his fairy drama, in four acts, has been very well received.

Music.

Johannes Brahms: The Herzogenberg Correspondence. Edited by Max Kalbeck. New York: E. P. Dutton & Co. $3 net.

In 1891, six years before his death, Brahms sent to his publisher his last will, in which, among other things, he directed that all letters found in his house after his death should be destroyed without reservation. His executor, however, decided that the will had been drawn up in a moment of irritation, and was not to be taken too literally; so the letters that were of public interest were saved. Among these were 140 which Brahms had received from Heinrich von Herzogenberg and his wife. These, with 141 letters written to them by Brahms, make up a volume which quite deserves the compliment of a translation—a task excellently accomplished by Hannah Bryant. Max Kalbeck, the official biographer of Brahms, has added a number of helpful footnotes. Admirers of Brahms may obtain through this volume a more intimate view of his character than from any other book so far issued.

Herzogenberg was a German professor, who also composed—like a professor. Brahms was his idol, and his mistrust of his own natural instincts was so great that it "made him almost a slave to form and technique." He eagerly courted Brahms's approval, but that master's verdicts were usually either evasive or of oracular ambiguity. "I am sure none of their beauty and delicacy escapes me"—"I cannot make up my mind as to the claims of any one above the rest"—are specimens of what Frau Herzogenberg wittily called his "enharmonic ambiguities." She drops hints:

> Naturally my husband would have been pleased, poor devil, had you been able to say of any one movement: "I like that." You know yourself what a difference that makes.

But the inexorable idol was not to be coaxed into flattery. Quite the contrary; the moment came when he exploded:

> I have been more than usually impressed this time with the great similarity of our work! In looking over the chorals, the quartets, and the songs, I was quite agitated to find how vividly they recalled all sorts of efforts of my own. May your own agitation, when you have occasion to indulge in a similar retrospect, be of a more pleasing order than mine!

Even this bluntness did not disconcert Herzogenberg. "I could read *every* meaning into your mysterious words—pleasing or painful according to the way I turn them about," he wrote; and Brahms answered, wickedly: "I am glad my last letter shone in two colors—gray for me, sky blue for you."

But Brahms by no means had a monopoly of the fun. Frau von Herzogenberg, though she wept sweet tears over some of Brahms's works, did not hesitate to criticise others freely, and there was no "enharmonic ambiguity" about her words. She tells him concerning some of his songs that she does not like them: "The words alone are enough"; concerning others, that they simply repeat messages better delivered in previous songs; even the famous "Sapphic Ode" does not escape her censure. She chides him repeatedly for his choice of poems: "Oh, how could you think this poem worthy of being composed by you?"; and for using the human voice like an instrument: "Why are you sometimes so cruel as to turn poor women into oboes or violins?" Finally, in a long letter (pp. 352-360) she tells Brahms plainly that his truest friends are not those who greet every new volume of his music with rapture before scanning it. "I ask myself," she adds, regarding this same Brahms, "whether he does not sometimes produce things born, not of his heart's blood, but only . . . of his cleverness, his routine, his supreme skill." And again:

> I love and admire your music more than ever, but my very admiration leads me to ask why one who has coined and still can coin such gold . . . should be so sparing with it.

Brahms was not in the least angered by this frankness. He knew that Frau von Herzogenberg was competent to sit in judgment, being a good pianist and something of a composer herself; and he continued to send her and her husband his manuscripts, both songs and piano pieces, for inspection before they were printed.

His letters are usually short, and many of them are hardly worth printing—less so, certainly, than are hers, which Brahms valued for their "intrinsic qualities of wit and temperament." Occasionally he is witty, too, at his own expense. In one letter he says:

> The orchestra here play my new symphony [in F minor] with crape bands on their sleeves because of its dirge-like effect. It is to be printed with a black edge, too.

Geraldine Farrar will be the principal soloist at the Springfield, Mass., Music Festival in May.

Art.

THE COMIC ARTIST.

Caran d'Ache has a particularly valid claim on the memory of all good Americans. Wilhelm Busch and he were the two great progenitors of the comic supplement. The German artist was much the older man and the pioneer. From him Caran d'Ache borrowed the method of telling a funny story in a succession of pictures, with a minimum of text. This method has been developed to its fullest dreadful possibilities in this country, until we have now the story and the pictorial succession long after the fun has disappeared. in Caran d'Ache's work the idea was always present to animate the drolleries of his pencil. He was not a slavish imitator of Busch. He developed his own conceptions of what the human figure ought to be in the hands of the caricaturist. There were the skeleton pictures in which a man, like an island, was a certain portion of white space bounded by a single line. There were the clear-cut marionette-like figures, in which the same sharpness of line was prominent. There were, finally, the mere circles and cylinders and sacks and flaccid puddings to which a dot here and a stroke there would give an amazingly human aspect. Of American cartoonists, the late F. M. Howarth, with his animated chubby little gingerbread figures, came nearest perhaps to this style of caricature.

Caran d'Ache did political satire as well as social satire and pure comedy. In his political cartoons there is a good deal of the same mannikin physiology that we find in his comic series. There is also a good deal more lighthearted fun than European artists are accustomed to put into their cartoons of statesmen and governments. The King of Siam, home once more from his Western trip, sleeps and has a nightmare. Endless files of stiff little European soldiers clamber up and down his bed, tramp right over his royal body, and disappear. European militarism has rarely been so well shown up in both its tragic aspect and its futility. The stroke is much sharper in a cartoon depicting Wilhelm II's troubles after the dismissal of Bismarck. The Kaiser is in a trainer's cage surrounded by a pack of unruly, snarling beasts, representing the various members of the German Empire. Bismarck, the spectator, remarks, "I left him a circus; he has turned it into a menagerie." But, after all, it is a question whether Caran d'Ache's best work does not fall outside of politics. The French caricaturist declares it a merit that he can be gay without the "brutalities" of the British artist or the vulgarity of the German. As a matter of fact, French caricature, when it turns upon man's non-political failings and er-

rors, can be bitter with an intensity that we seldom find in Anglo-Saxon pictorial satire of the present day. In Caran d'Ache's work, however—was it because of his partly Russian nationality?—the real Gallic cynicism is rather uncommon. Typical of him is a series of a half-dozen pictures entitled the "Jewish Question." The pessimist is arguing that the Jews as a nation worship only money. "Nonsense," says the good-natured man, "when it comes to money, Jew and non-Jews are alike." And he throws a gold Napoleon into the gutter as two men, Jew and Gentile, approach from opposite directions. "Now observe (picture 3) how they will both be fascinated by the coin. Observe (picture 4) how they will both dive for it and come into violent collision. Only (picture 5) the Jew will manage to secure the gold piece. That is all."

A few examples would show that if Caran d'Ache is partly responsible for the comic supplement, he is not responsible for its blatant vulgarities, its emptiness of any real satiric content, and its infinite innocence of ideas. There is no inherent viciousness in the comic series. It has the very best tradition behind it. Before Caran d'Ache and Wilhelm Busch is Daumier's Robert Macaire; and still further back is Hogarth, with his various Progresses. The evil comes when the series is carried for years and years until it is the delectation solely of that dull mind which finds amusement in the mere fact of familiarity.

The pity appears all the greater when we consider how vast is the influence of the comic artist for weal or woe. When people speak of the power of the caricaturist, the habit is to think of the political cartoon. True, the political cartoon has long been an effective weapon of publicity. The history of modern Europe might be written from its cartoons as A. B. Maurice and Frederic Taber Cooper have done for the nineteenth century. But it is still an open question whether the satire that deals with us as men and women is not more permanently effective than the satire that appeals to the political animal primarily. A strong political cartoon may make an election or a ministry. The comic artist deals with the permanent traits of human nature and the common facts of life, and, in doing so, shapes our thought and standards of good or ill, subtly but enduringly.

The Macmillan Company has about ready for publication the second volume of Dr. Hofstede de Groot's "Catalogue Raisonné of the Most Eminent Dutch Painters," translated by Edward G. Hawke. Its 650 pages are devoted to Albert Cuyp and Philips Wouwerman.

The scandal over the designing of the new Sing Sing Prison bears good fruit in Senator Wainwright's bill for the creation of a New York State Art Commission. If only there had been such a body of prominent representatives of the fine arts sitting with power when a State Capitol was being planned, New York would have been spared monstrosities and millions. But it will be some gain to have future edifices supervised by a board large and authoritative enough to veto where the State architect might not trust his own solitary judgment or his courage. The men Senator Wainwright would see chosen would demonstrate that beauty and durability are not extravagances, but, in the long run, economies. This idea our country is just beginning to grasp, and the spreading activity of Federal and municipal art commissions is at once the effect and the proof of the new understanding. Simply because the art movement redounds chiefly to the profit and glory of large cities, the States should not withhold assistance. To-day concerned only with offices and hospitals and their adornment, to-morrow a State commission may become an engine in the beautification of village life.

John La Farge's Scammon Lectures on the Barbizon Painters—the first series of Scammon Lectures, delivered in 1903 at the Art Institute of Chicago—are at last published in handsome form by Doubleday, Page & Co. Mr. La Farge was himself a young man in Paris when the battle between the classics and the romantics was still waging, and he has evidently never outgrown a certain partisanship, so that his lectures have an oddly controversial air, as if it were still necessary to defend a cause, still impossible to admire both Delacroix and Ingres. But this very quality or defect, which ever it be, gives a personal charm to the book. The facts rehearsed are to be found elsewhere; what interests is the light thrown, incidentally, upon Mr. La Farge himself, his own art, and his attitude toward the art of others. And if the book is not so important as his "Considerations on Painting," yet it was impossible that its author should write anything without passages of a still wider interest—passages of sound and illuminating criticism on art in general, and justifying his title, the "Higher Life in Art."

Francis Bond, already known to students and lovers of English mediæval art by his monumental works on English gothic architecture, English cathedrals, and screens and galleries in English churches, has produced in his new volume, "Fonts and Font Covers" (Henry Frowde), a remarkably full and detailed account of extant fonts in English churches. A brief but interesting and intelligent résumé of the history of the rite of baptism is followed by an historical survey of font-design in England (to which country, as in so many other English books, the treatise is restricted in spite of its comprehensive title) and complete indexes, covering over 1,100 examples. Some 426 excellent half-tone illustrations accompany the text, and supply for the general reader and the artist the interest which only the archæologist or specialist is likely to find in the text. The text, indeed, while a monument of painstaking erudition, and crammed full of detailed information, partakes too much of the nature of a descriptive and analytical catalogue to possess any special charm or attractiveness. As a compendium of information, and as an admirable collection of historic examples, most suggestive to architect and decorative or ecclesiastical designer, this handsome book must be of great value, and must entirely supersede all previous essays in the same field.

The American Water Color Society will hold its forty-second annual exhibition at the American Fine Arts Building, No. 215 West Fifty-seventh Street, New York city, April 29 to May 3. The jury of selection consists of Carlton T. Chapman, Reynolds Beal, Leonard Ochtman, A. T. Van Laer, George Wharton Edwards, W. G. Schneider, W. H. Lippincott, F. K. M. Rehn, R. M. Shurtleff, Bruce Crane, Francis C. Jones, and Arthur Schneider. The members of the Hanging Committee are Charles Warren Eaton, H. L. Hildebrandt, and Cullen Yates.

A retrospective exhibition of the works of John W. Alexander will be held at the National Arts Club, New York city, till March 15. Among the exhibitions at the dealers' galleries here are oil paintings by John F. Carlson at Katz's, March 13; paintings and pastels by Degas, Durand-Ruel's, March 16; paintings of the "1830 School," Schaus's, March 16; etchings, Frank Brangwyn, Wunderlich's, March 20.

Last week, the pictures and other works of art collected by the late Henry Graves of Orange, N. J., were sold at auction in New York city by the American Art Association. The pictures brought $233,250, and the other objects, $161,195, a total of $394,445. The highest price, $27,000, was paid for Millet's Sheep-Shearing. Among the other important sales were the following: Corot, Mill at Ville d'Avray, $13,500; Twilight, $6,000. Daubigny, Gray Skies, $5,600; Village by the Oise, $5 000; Green Pasture, $7,500. Diaz, Edge of the Forest, $13,000. Dupré, The Old Oak, $7,900; Evening Twilight, $8,700; Return of the Flock, $9,100. Rousseau, Morning on the Oise, $14,500; Forest of Camplègne, $11,000. Van Marcke, Verdant Pastures, $8,300. Delacroix, Wounded Tiger, $8,000. Isabey, Return from the Hunt, $5,200. Mauve, Flock of Sheep, $13,200. Among the porcelains, the peachblooms, thirty-five pieces in all, averaged over $750 apiece, and one sold as high as $4,100. A *sang-de-bœuf* vase, 17½ inches high, brought $8,550.

The seat in the French Académie des Inscriptions left vacant by the death of Dr. Hamy has been bestowed on Théodore Reinach, author of a number of historical and archæological works. He is a brother of Joseph and Salomon Reinach.

Emmanuel Poiré, better known under his pen name of Caran d'Ache (Russian for "lead pencil"), the famous comic artist and cartoonist, died in Paris, February 26. His native place was Moscow, where his grandfather, an officer of the first Napoleon, was taken prisoner in the Russian campaign, and finally became a subject of the Czar. Emmanuel returned to Paris, and became connected with the Cabaret du Chat Noir, where he soon attracted attention by a series of Napoleonic "Ombres Chinoises." From that time forward his humorous and satiric pencil was constantly employed in social or political illustrations. His cartoons, which held nothing sacred, had a potent political influence in the formation of public opinion. During the Panama scandals, his "Carnet de Chèques," a col-

lection of especially biting caricatures, greatly increased his reputation. In later years he did much work for the *Figaro* and for *Le Rire*.

Ernest-Victor Hareux, the landscape painter, has died, at the age of sixty-one. He was a native of Paris, and a member of the Société des Artistes Français.

Finance.

THE RISE IN WHEAT.

While the attention of financial markets has been absorbed in the fall of prices of manufacturers' material, a rise in price, more sensational than the decline in steel and copper, has been going on in another staple market. Last Friday, wheat sold at the highest figure reached since Joseph Leiter's celebrated corner of May, 1898. That operation, which brought cash wheat to $1.85 in Chicago and $1.91 in New York was a consequence, first, of Europe's disastrously short crop of 1897; second, of the very scanty supplies in the world's storehouses; and, third, of our Spanish war, which broke out in the "corner month." The spectacular rise in wheat last week was similarly based on a small European crop in 1908, a meagre stock of wheat in the world's granaries, and the persistent mutterings of war in the grain-growing Balkan states.

Wheat sold below a dollar as recently as December; its high level of last week, on the Chicago cash market, was $1.26. This is an abnormally rapid advance. A comparison of Chicago prices in recent years may be instructive:

	High.	Low.
1908.....	$1.11, June.	.84½, July.
1907.....	1.22, Oct.	.71, Jan.
1906.....	.94¾, May.	.69⅛, Sept.
1905.....	1.24, Feb.	.78¾, Sept.
1904.....	1.22, Dec.	.81¼, Jan.
1903.....	.93, Sept.	.70¼, March.
1902.....	.95, Sept.	.67½, Oct.
1901.....	.79½, Dec.	.63⅛, July.
1900.....	.87½, June.	.61½. Jan.
1899.....	.79½, May.	.64, Dec.
1898.....	1.85, May.	.62, Oct.

Considering in detail the causes of the present price, it should be noticed, first, that the world's wheat yield of 1907 was 325,000,000 bushels less than in 1906 and 212,000,000 less than in 1905, a decline of 7 to 10 per cent.; it was, in fact, smaller than any world's crop since 1901. And in that eight-year period, not only had population been increasing, but individual use of wheat, as of other necessaries, had been increasing with the good times in trade and industry. It had been hoped after 1907 that the next year would make good the shortage. But it did not do so; America, Asia, and Australia increased their yield slightly over 1907, but Europe itself produced less than before. These are the European harvests, using Broomhall's estimate for 1908 and our Agricultural Department's for the earlier years:

	Bushels.		Bushels.
1908....	1,594,000,000	1904....	1,747,262,000
1907....	1,616,086,000	1903....	1,830,526,000
1906....	1,826,422,000	1902....	1,817,602,000
1905....	1,803,132,000	1901....	1,513,553,000

Such short yields necessarily have their effect on the amount of wheat in granaries, by which the price is largely regulated. In this regard, Europe is better off than after 1897; in August of that year, the "European visible" fell to 38,000,000 bushels, and the European and American combined, to 77,500,000, whereas last August the two figures were respectively 48,700,000 and 73,700,000. But even so, Europe's storehouses contained less by 22 per cent. than a year before; and with all the unprecedentedly rapid rushing of American wheat to market last autumn, this is the Broomhall and Bradstreet comparison of stocks on hand as of February 1:

	1909. Bushels.	1908. Bushels.	1907. Bushels.
Europe	61,700,000	76,700,000	75,900,000
America	75,600,000	67,300,000	80,800,000
Total	137,300,000	144,000,000	150,700,000

It should be observed that the present relatively large "American visible" is the result of an almost unexampled early clearing-out of farmers' bins to reach the favorable autumn market with the abundant supply of railway cars. One of the most important questions is, How much wheat is left behind in the farmers' hands? The Department of Agriculture will report on that on March 8.

What does this state of supplies, with the abnormal prices resulting from it, signify as to general conditions? There are several aspects to the question. The development is not wholly favorable to this country, for the great rise in price has occurred when home supplies have been so nearly exhausted that we have not, as in such high-price years as 1897 and 1879, a large surplus to sell to Europe at inviting prices. In a period of hard times, slack employment, and falling wages, wheat at $1.26 a bushel, and flour higher by 25 cents a barrel, wholesale, than a year ago, mean increased cost of living when the consumer is least able to meet it. The farmer who has any wheat left over is fortunate, especially since he gets these prices at the very time when the price of his wire fences and farm machinery is falling; but the farmer makes up only a part of the American community.

Prof. Alfred Manes, with the coöperation of a dozen specialists, has published through Mohr of Tübingen a comprehensive insurance-dictionary, a venture which had in the last four decades been undertaken three times by German publishers, but only to end in a failure. The work bears the title "Versicherungs-Lexikon: Ein Nachschlagewerk für alle Wissensgebiete der Privat- und Sozial-Versicherung." Naturally the work deals chiefly with the insurance matters of Germany, Austria, and Switzerland. It is published in two solid volumes of 1,682 columns, arranged after the usual manner of an encyclopædia.

Important Books on Psychical Research

In the scientific study of the question of life after death, the present day is a most significant era. For years men of science have deplored the lack of rational interest in this great problem. "How great a scientific scandal it has been," exclaimed Professor William James, "to leave a great mass of human experience to take its chances between vague tradition and credulity on the one hand and dogmatic denial at long range on the other!" The awakening of scientific interest has come at last, however, and, as a glance at the popular magazines for a twelve-month past will show, this scientific interest has in turn aroused a wide-spread and steadily growing response among the people at large. "Psychic Research," said William E. Gladstone, "is the most important work which is being done in the world—by far the most important," and the increasing number of books on the subject may be taken as a general recognition of its importance.

We call your attention to the following list of valuable works.

By JAMES H. HYSLOP, Ph.D., LL.D.

Former Professor of Logic and Ethics at Columbia University, Vice-President of the English Society for Psychical Research, Founder and Secretary of the American Society for Psychical Research.

Each volume, 12mo. $1.50 *net, or, by mail,* $1.62.

Borderland of Psychical Research

In this book are covered those points in normal and abnormal Psychology that are vital for the student of Psychical Research to know in order that he may judge the abnormal and the supernormal intelligently. The book contains chapters on Normal Sense-Perception, Interpreting and Associating Functions of the Mind, Memory, Dissociation and Oblivescence, Illusions, Hallucinations, Pseudo-Spiritistic Phenomena, Subconscious Action and Secondary Personality, Mind and Body, Hypnotism and Therapeutics, Reincarnation, Reservations and Morals.

"It treats perplexing questions conservatively, and with a view to create an intelligent public interest in the baffling problem of psychical research. It is a book none should neglect who is attracted by the recondite mystery to whose solution it looks forward and attempts to clear the way."—*The Outlook.*

"This book's aim is cautious, its method conservative, and its theme of absorbing interest. It is not a sequel to 'Enigmas of Psychical Research' and 'Science and a Future Life,' but, on the contrary, it rather leads up to them."—*The Bookman.*

"The whole discourse is enlivened and made interesting reading even for the casual inquirer by numerous illustrations and anecdotes."—*Indianapolis News.*

Enigmas of Psychical Research

An account of the scientific investigation and consideration of such well-established phenomena as crystal-gazing, telepathy, dreams, apparitions, premonitions, clairvoyance, mediumistic phenomena, etc.

"Professor Hyslop, he it observed, does not write as one who has fully made up his mind, and is determined to make others see with his eyes. On the contrary, he is careful to preserve an attitude of caution, the attitude, in short, of the trained investigator who feels that the end is not yet in sight. Perhaps this, more than anything else, is responsible for the praise his book has elicited."—*Literary Digest.*

"The new work is a treatment of telepathy, apparitions, and similar phenomena. It is probably the finest collection of authenticated experiences in these spheres that we have at our disposal. He has brought together facts which not only make extraordinarily interesting reading, but are discouragers of conservative incredulity."—*The World To-day.*

Science and a Future Life

In this volume the author discusses the scientific investigation of psychic phenomena.

"Professor Hyslop discusses the problem of life after death from data accumulated by the Society for Psychical Research. He considers the evidence scientifically, basing his argument upon experiments conducted by Sir Oliver Lodge, the late Professor Henry Sidgwick, Professor James, of Harvard, the late Frederic W. H. Myers, and a number of others, including some valuable experimental work of his own."—*Review of Reviews.*

"His argument is like the charge of a judge to a jury, clear, definite, logical, leaving no doubtful point untouched, and no interrogation unanswered. Altogether the book is one of the most important in its particular branch of literature that have ever yet been given to the public. It is the work of a clear-headed scientist who has arrived at his conclusions only after years of the most searching investigations, and who has as one of its results presented a more satisfactory argument in favor of a future life than has been wrought out by any theologian for the last century. It should have a multitude of readers."—*Boston Transcript.*

Psychical Research and the Resurrection

This volume may be considered as a sequel to Professor Hyslop's "Science and a Future Life," as it records the more important work that has been accomplished since the death of Dr. Richard Hodgson, the late leader of psychical research in America. In its pages the author proceeds step by step to show the vital importance to humanity that Science leave no stone unturned to strengthen the Christian faith.

"It is cause for scientific rejoicing that Professor Hyslop has put forth this book."—*Journal of Education.*

"The book is a deeply interesting one—an important contribution to a study which concerns humanity vitally."—*Providence Journal.*

"Useful to those who wish to keep abreast of the progress of psychical research in the United States."—*The Outlook.*

"The book is exceedingly valuable to students of psychical phenomena and to the general reader as well. The incidents related are interesting and the style delightfully simple and effective."—*Indianapolis News.*

By CAMILLE FLAMMARION.

Director of the Observatory at Juvisy.

Large 12*mo, illustrated, price* $2.50 *net, or, by mail,* $2.70.

Mysterious Psychic Forces

A comprehensive review of the work done by European scientists of international reputation in investigating psychical phenomena, written by a scientist of world-wide fame. The volume includes the investigations of Sir William Crookes, Professor Richet, Professor Morselli, Professor Lombroso, Count de Roches, Professor Porro, Professor Alfred Russell Wallace, Professor Thiory, Dr. Dariex, Victor Sardon, Aksakof, and many others.

"Flammarion's work, 'Mysterious Psychic Forces,' is valuable from many points of view; it is a careful compilation of previous researches in psychical mediumship, to which are added invaluable reports of the author's own experiments with many mediums, the most important being the Italian, Eusapia Paladino. I have also studied this medium for a long time and find myself in accord with Flammarion as to the authenticity of the facts."—*Professor Enrico Morselli,* Chair of Mental and Nervous Diseases, University of Genoa.

"If you will read his [Flammarion's] latest book ['Mysterious Psychic Forces'] with attention and with candor, you cannot but be impressed with his wide experience and his patient, persistent search for truth. I am persuaded that he has been a genuine pioneer all along. He has examined very critically the scores of psychics who have come under his observation, and his reports are painstaking and cautious."—From "The Shadow World" by *Hamlin Garland.*

"Such a book, from such a writer, is more than interesting. It is timely. And the reader must admit, whatever his prejudices or presuppositions, that, taking Professor Flammarion's book as an honest record of long and careful scientific study, which it is entitled to be considered, it amply sustains the author's conclusions."—*Literary Digest.*

"The book is one of the most interesting that have ever been written on the subject. Those who have the least liking for the subject will find it entertaining beyond expectation."—*Cleveland Plain Dealer.*

By HEREWARD CARRINGTON.

Member of the Council of the American Institute for Scientific Research, Member of the English Society for Psychical Research, etc.

Large 12*mo, illus.,* $2.00 *net, by mail,* $2.16.

The Physical Phenomena of Spiritualism

A book of incalculable value to psychical researchers. Every one knows that, while there is a residuum of the genuine, there is undoubtedly an immense amount of fraud perpetrated on credulous investigators of psychic phenomena. With rare skill and tact Mr. Carrington, who has had many years of experience, shows exactly how the tricks are done. His book is written wholly without prejudice, in a calm, courteous, judicial style, and the facts are presented with precision and orderliness. The latter part of the book is devoted to the consideration of what the author believes to be genuine phenomena.

"Mr. Carrington's book on 'The Physical Phenomena of Spiritualism' is the most important work ever published on that subject. It gives a complete account of the subject, and is invaluable for every one interested in Psychic Research. It is fair to both sides of that much controverted subject."—*Professor James H. Hyslop.*

"He writes from the point of view of one who believes that such phenomena as come within the realms of spiritualism, popularly conceived, do occur, and on that account he is particularly anxious to expose the fraud connected with them, since it is only by so doing that the world can reach the genuine which lies behind."—*Boston Transcript.*

"The paramount impression this writer conveys is that of being a fair and open-minded gentleman of excellent balance and keen intelligence."—*New York Times.*

The Coming Science

With an introduction by James H. Hyslop. 12*mo,* $1.50 *net, or, by mail,* $1.62.

This book fills a place in the literature of psychical research not covered by any other book that has thus far appeared. Its aim is threefold: (1) To form an introduction to the study of the subject, so that any one may feel familiar with the general problems and results without having previously read extensively upon it; (2) to approach the baffling questions from the standpoint of physical science, and point out exactly what the difficulties and objections are to the scientific man; (3) to summarize the various explanatory *theories* that have been advanced from time to time to explain the facts of psychical research.

"A helpful introduction to the reading of more elaborate works."—*The Outlook.*

"The great importance of the book lies in its pointing out that materialism must ultimately triumph, if no facts can be brought forward to prove it erroneous, and this would mean the destruction of the religious consciousness of the age. It is of prime importance, therefore, that the 'average reader,' if there is such a thing, should be properly introduced to the problems of 'the coming science.' "—*Boston Transcript.*

By ROBERT J. THOMPSON.

Proofs of Life After Death

12*mo,* $1.50 *net, or, by mail,* $1.62.

A collation of opinions as to a future life by such eminent scientific men and thinkers as N. S. Shaler, C. Richet, Camille Flammarion, Professor Brunot, Sir William Crookes, Th. Flournoy, Elmer Gates, William James, Dr. Paul Joire, Dr. Lombroso, Simon Newcomb, Professor Hyslop, Dr. M. J. Savage, Sir Oliver Lodge, Alfred Russell Wallace, Cardinal Gibbons, Andrew Lang, and many others. The book contains many arguments from a scientific standpoint that will interest all who wish evidence other than theological.

"Seeking for comfort in a great sorrow, the author made a collection of opinions as to a future life by some of the world's most eminent scientific men and thinkers."—*Chicago Record-Herald.*

"It should find a place on the shelf of every thinker."—*Boston Transcript.*

A special pamphlet, fully describing these books, will be sent free to any address on application.

The Nation.

NEW YORK, THURSDAY, MARCH 11, 1909.

The Week.

President Taft's Cabinet—of which the composition has not been a very well-kept secret—contains able men of the quietly efficient type. It will be the task of their chief to make of them an harmonious and working body. This can best be done by giving to each of them large powers and discretion in the exercise of their respective duties. The business of the government has grown to be too vast for the threads of it to be kept in the hands of any one man. To be a good executive means more than ever not to fret and moil personally over work that can best be devolved upon another. Even in Lincoln it was a defect that he—"the old Tycoon," as John Hay called him at the time—took too much upon his own shoulders and left his Cabinet out of his confidence. Some of the resulting jealousies and friction we see revealed in the Gideon Welles Diary, now publishing in the *Atlantic*. What the President needs from his Cabinet is real advice—not adulation—and hearty coöperation. It is not desirable that Secretaries should be dominated by a powerful and forth-putting President, but simply that they should be kept in touch with his ideas and infused with his spirit. From what we know of Mr. Taft's temper and methods, we are confident that he will magnify the functions of his Cabinet, and get more out of it by giving more to it.

One hears uncomfortable whispers about the new Administration beginning with "this unfortunate Loeb appointment." It is, obviously, the payment of an ex-President's debt. Nor is it even a new way of paying an old debt. The private secretaries of Presidents and Governors always have to be "taken care of." And we must remember that if, in this matter, Mr. Taft yielded something, he resisted more. According to confident forecasts, a few weeks ago, Mr. Loeb was to be, not merely Collector, but a member of the Cabinet. At that, however, the line was drawn. There may be some wonder that Mr. Loeb did not accept one of those flattering business offers which his vast abilities were alleged to have brought him. He may have felt that his talent for public life was too precious to be wasted.

Nature sometimes takes legislators by the nose and makes them do what mere argument cannot compel. It was the potato-rot in Ireland, not Cobden's logic, which forced the repeal of the corn-laws. If the date for the inauguration of American Presidents, and for the coming in of a new American Congress, is to be changed, it will be stress of weather that does the business. In this climate, no day could be pitched upon when meteorological uncertainties would be greater than on March 4, with the chances more in favor of inclement weather, dangerous for that "old experience" which we seek in judges and statesmen. A vague idea is afloat that there is something sacred about March 4. As a matter of fact, of course, the singling out of that day was a pure accident. The duty of starting the new government devolved upon the Continental Congress. When it met in New York, September 13, 1788, eleven States had ratified the new Constitution. Everybody naturally desired that the stronger form of government should be set up as soon as possible, and accordingly it was resolved by the Continental Congress that Presidential electors should be appointed on the first Wednesday in January, that the electors should assemble and vote on the first Wednesday in February, and that "the first Wednesday in March next be the time, and the present seat of Congress the place, for commencing proceedings under the said Constitution." That first Wednesday in March happened to be March 4. And the date was not really made use of the first time. No quorum of Congress, necessary to count the electoral vote, was got before April 6. President-elect Washington was in Mount Vernon, and to notify him and bring him back to New York took three weeks, so that he was not inaugurated till April 30. That was the true Inauguration Day of the fathers.

That it would be a much more propitious day than March 4 for inaugural ceremonies, every one now admits. To change to April 30, or to any other day, would require, however, a Constitutional amendment. The reason is not that March 4 is in the Constitution, but that the limitation of the President's term to four years is, and that the transition could not be made without Constitutional warrant for one President to hold office slightly more than four years—that is, beyond his fixed term. After that, each term would go smoothly as before. It was in this sense that, in 1886, the Senate unanimously passed the bill reported from the Judiciary Committee, and assiduously urged by Senator Hoar, to change the expiry of the next Presidential term, and of the next Congress, to April 30. The project died in the House, however, not so much from hostility as from indifference. It is a similar amendment which it is proposed now to revive. The ideal thing would be to have the new President take office on January 1, and for the Congress, elected at the same time with him, also to begin its work on that date. This would conform to the practice of most of the States, and of other governments; would be business-like; and would certainly be democratic in the sense that it would put the people's representatives in office to carry out the people's expressed will, before that will had been forgotten. The first of January, of course, would be as badly fitted as the fourth of March for outdoor pageants, but the necessary exercises could be held indoors.

We hope the defeat of the ship-subsidy bill means that there will be no attempt to force this legislation through the next Congress. The plan had the support of the President and Mr. Root, but, by a vote of 175 to 172, the bill was voted down. Party lines were broken, and no less than twenty-eight Republicans were against the measure. In the next Congress the Republican majority will be smaller and the need of economy, because of the heavy deficit, more obvious. Hence, advocates of the scheme will face heavier odds than ever. The idea of a ship subsidy is simply to put the government into partnership with certain business interests. In order to stimulate a trade which, from the economical point of view, is waste-

ful, because unprofitable, the United States is urged to guarantee the profits of some few favored steamship owners. Every one will remember the public uneasiness at the voting of a government guarantee of profits on the new Philippine railways built by private capital, and every one knows how impossible it would be to obtain such a guarantee for any railway or steamship venture within the United States. But the argument is that as Uncle Sam's pockets are capacious and have been hitherto well filled, and as it is pleasant to have American steamships going abroad, therefore every American is to be taxed to support these lines. There is still another side to a proposal of this kind. Whenever the government is asked to aid private business enterprises there is usually jobbery and corruption, however sincere and high-minded those statesmen who support the undertaking on grounds of national policy. The country has had one experience of this kind in connection with the Pacific Mail Company. Last week Congress buzzed with rumors of undue influence. Congressman Clark, in speaking of the powerful lobby which has been at work for the bill, declared that it bore "all the marks of corruption."

Everybody wishes to see the American merchant marine restored. But because our shipping is prostrate there is no reason whatever why we should commit an egregious economic blunder. The proper steps are plain enough. President Cleveland, years ago, declared:

> The ancient provisions of our law denying American registry to ships built abroad and owned by Americans appears, in the light of present conditions, not only to be a failure for good at every point, but to be nearer a relic of barbarism than anything that exists under the permission of a statute of the United States.

Yet that remains a law of the land. The next step is to reduce the tariff on shipbuilding materials, which now makes a difference, so shipbuilders testify, of 40 per cent. on "every conceivable item that goes into the cost of a ship." Far-sighted legislation as to registry and the tariff would do infinitely more to develop our shipping than any subsidy scheme yet developed.

In the new copyright law, the provisions of which we summarize in another column, the improvements consist chiefly in bringing the statute up to date. It now protects the owner of a musical copyright from unauthorized reproductions by mechanical means; and, in general, the definitions given to the various kinds of literary and artistic property are made both sharper and more comprehensive. The final abandonment of the attempt to compel books in foreign languages to be set and printed in this country before copyright can be secured, is also a gain for common sense and international fair dealing. But the continued requirement of manufacture in the United States, as a condition precedent to copyrighting books in English, is a grave blot on our legislation. The Berne Convention puts the foreigner absolutely on the same footing as the native, as regards protection of his literary property. Until we get ready to go the whole way, and sign and live up to this Convention, to which nine-tenths of the leading countries are glad to adhere, we shall justly be classified, in this particular, among the unenlightened and backward nations.

The nullification of Missouri's railway rate laws by the United States District Court confirms both the fact and the ethics upon which Gov. Hughes based his veto of the two-cent law. The scanty earnings of the smaller Missouri roads show how impossible it is to fix a flat maximum rate anywhere near the desired average. Judge McPherson's wish for two flat rates, one for strong roads and the other for weak ones, seems a curious compromise between popular sentiment and justice. The wisest course is, according to the theory on which the New York State Public Service Commission is created, to regulate each particular line in the light of conditions prevailing on its own stretch of track.

The proposed new charter for New York city, just laid before the Legislature, is primarily noteworthy because of the things it does *not* contain. In an era of municipal government by commission, of experiments of all kinds, ranging from unexampled participation by the voters to government by an almost despotic group of three or five men, the New York Charter Commission has not included in its draft a commission, or the initiative, or the recall, or the referendum. It has yielded to no craze for untested devices, but has devoted itself to reducing our present chaotic form of government to order. The guiding principle has been to centre responsibility upon the Mayor, his executive officers, and the Board of Estimate and Apportionment. Lack of this clear-cut responsibility has been at the bottom of some of our chief troubles. It has been impossible, for instance, for the Mayor to control the borough presidents, because they are, like himself, elective officials. Yet their failure, in four out of five boroughs, to perform their duties honestly or efficiently would have made it impossible for any Mayor to govern properly. Take the streets, for instance; as responsibility for their condition is now divided among five departments, it is obvious that no one person can be held accountable. Hence the Charter Commission has tried so to simplify the structure of government that each official's duties shall be clear, and the public may know who is at fault, if there is maladministration.

The commission has not abolished wholly the legislative branch. If the Board of Estimate is henceforth to be analogous to the executive committee of the directors of a business corporation, it remains in one sense an upper legislative house; while in place of the Aldermen, there is to be a council of thirty-nine members to serve without pay. Their powers are, however, to be strictly limited, for they will only pass ordinances, make the tax levy, and exercise a veto over specific appropriations in the budget. The powers of the Board of Estimate are, on the other hand, to be enormously enlarged. Its executive duties will be coördinated and distributed among seven bureaus: Public Improvements and Engineering, Supplies, Real Estate, Claims, Publicity and Statistics, Salaries, and Franchises. These are to be headed by seven experts, appointed by the board, which will itself contain, besides the five borough presidents, the Mayor, the president of the council, and the Comptroller. The desire to concentrate responsibility is also illustrated in the reduction of the Board of Education to fifteen members—still too large a number, however, for the maximum of efficiency. The City Chamberlain is to be the head of a veritable city bank, containing the Treasury, and

the bureaus for the collection of taxes, revenues, and licenses. There has been no attempt to regulate the nominations to office as in the case of the new Boston charter, no attempt to destroy the party conventions or to forbid all party nominations. In brief, then, the Charter Commission has held fast to old and well-tried methods in administration, but has endeavored to recast the present government, with as few changes as possible, to fit it to existing conditions.

Press reports of the trial of the Sugar Trust, ended last week by a jury verdict of guilty, hardly have brought out the shocking nature of the charge, and of the evidence to support it. It was a case of plain stealing of the most contemptible kind. False weights were systematically used in order to defraud the Government, so the jury found, and the verdict of guilty also included the finding that this habitual cheating could not have been carried on without the knowledge of the officers of the corporation. This makes up about the most damning case against a rich company that we have had. Here was no mere question of rebating, or secret trade agreements, but just pilfering, day after day. The fat hand of the Sugar Trust was steadily filching from the Treasury till. For depravity and sneaking meanness, this would be hard to beat.
